PREFACE.

ORIGIN. The publication of the *New Century Book of Facts* has been brought about by the constant demand of the American people for a reliable book of reference. Such a reference work requires constant revision to hold place with inventions, discoveries, events and political changes, and in keeping up with this progress lies its great usefulness. Without question the *Century Book of Facts* published in 1900 supplied a definite need, and was the most popular single-volume facts book of its time. The 1908 revision of the *Century Book of Facts* was so complete that it practically changed the identity of the book. Continual demand on the part of the public, which is witnessed by the thousands of letters desiring a later revision of the *New Century Book of Facts,* has resulted in the latest edition, which is without question the most practical single-volume reference book being sold at the present time, having behind it the prestige of a quarter of a century. The present edition will be found greatly enlarged, more adapted to practical reference and more fully illustrated than any of the previous editions of the *Century* or *New Century Book of Facts.*

PURPOSE. Consequently, as the publishers have foreseen, the decided change in the school curriculum has made it necessary to make an entirely new book, in the preparation of which there has been one supreme object; namely, the production of the best single-volume reference work in the English Language, surpassing all others in scope, quality, and adaptation to present day needs in the same degree that a modern locomotive excels the first models.

PREPARATION. Even though three years were spent in the selection, condensing and arrangement of the last revision of the *New Century Book of Facts,* again, two years have been spent in bringing it up to date and adding to it those particular subjects which experience has shown are demanded and most used by the book referring public. This has been largely accomplished by those actively engaged in the teaching profession, also, by hundreds of solicitors in the field, who are in position from daily contact to know exactly the particular kind of reference material needed in the individual home.

EDITORSHIP. This vast array of facts was brought into order, verified, and made available for instant use under the direction of Hon. Carroll D. Wright, late president of Clark College, recognized throughout the world as a statistician and economist of the first order, and eminently qualified to shape a facts book along the lines of highest usefulness. In order to maintain a uniformly high standard throughout the several departments, he personally selected a board of sixteen associate editors, composed of specialists of the foremost rank, for the most part connected with our leading universities and colleges, and representing an average of editorial competency and scholarship, not only higher than that of any other single-volume reference work, but also exceeding that of our largest encyclopedias.

In making the present edition, the publishers have kept in mind, the excellency and high standard of the previous editions of the *New Century Book of Facts.* Therefore, in the making of a new department or the revision and expansion of a department, only those qualified by experience in teaching or practicing have been employed. Consequently, the work will be found free from padding and of the utmost practical value to the user.

ARRANGEMENT. The entire work has been divided into fifteen departments, and these again are arranged in the order which experience has shown will enable the work to be of the greatest use not only to children and students but also for general reference. Each of the fifteen departments consists of one and only one general subject. By this method the great educational advantage of proper correlation of matter is gained and the unnecessary and disorderly miscellany so generally confusing in works of reference is avoided. The classification of the matter has proceeded on the basis of the Dewey decimal system for libraries, except that the large general division of sociology was divided into Government, Law and Economics. The topical arrangement of the subject matter was chosen with full realization that it imposed upon the editorial staff the necessity of a fuller and better balanced treatment of each department than would either the alphabetical arrangement or the grouping of several departments into one.

SPECIAL FEATURES. Among the special features we mention the appearance and style of type page throughout the entire volume; outstanding facts have been been placed in heavy type or italics, enabling the user to grasp important facts instantly. We mention the World's History in Graphic Outline, World War, Pictorial History and Presidents' Administrations, Pictorial Geography and facts concerning the states, line drawings illustrating the practical application of Everyday Physics, Physical Terms and Laws and a Dictionary of Chemical Terms and Elements. Parents will find in the beginning of the department of Grammar a most helpful treatise, assisting them to lay the foundation of Good English in the Home. Technical Grammar is most thoroughly covered and will be of inestimable help to the student taking Latin, Greek or the Modern Languages. The Anatomy and Physiology of the Human Body is not only covered in detail but also helpfully illustrated. The volume includes more than fifty special dictionaries, each arranged alphabetically, enabling the user to get the greatest amount of information in the shortest possible time. The Synopsis of the World's best classics in the department of Literature will be found interesting and helpful to all students. Among other special features we mention, the department of Mathematics. This includes Primary Number Work, Formal Arithmetic, Algebra and Geometry, with special emphasis upon Commercial Arithmetic, Practical Measurements and the Correlation of Arithmetic and Algebra.

TO USERS OF THE CENTURY BOOK OF FACTS. Nearly a million homes possess the *Century Book of Facts*, the forerunner of this work. This is incontrovertible proof of the popularity of the single volume facts book. The rapid growth of such organizations as The Parent-Teacher Association makes it vitally necessary that not only the students but the parents have at their disposal a volume such as this for quick reference. The true foundation of an education is acquired in the home and can only be properly fostered when parents teach and show their children how to use reference books.

INTERMEDIATE BETWEEN ENCYCLOPEDIA AND DICTIONARY. While in wealth of pertinent facts this volume fulfills the office of an encyclopedia, nevertheless, by virtue of topical arrangement, special tabulations and pictorial work, it avoids cumbrous but necessary repetition of encyclopedias, and gives relief from grouping totally unrelated subjects in alphabetical order. On the other hand, it is not merely a collection of definitions, but presents related facts in a systematic way, giving the essentials of numerous text-books or treatises on its varied subjects, and in range of available information exceeds the resources of all except the largest libraries.

EDITORIAL BOARD

REVISORY EDITOR

HENRY ADELBERT WHITE, Ph.D. Professor of English, University of Nebraska; formerly Professor of Rhetoric and Public Speaking in Washington and Jefferson College; Editor of Stevenson's *Master of Ballantrae,* and author of *English Study and English Writing, Sir Walter Scott's Novels on the Stage,* etc.

EDITOR-IN-CHIEF ORIGINAL ISSUE

CARROLL DAVIDSON WRIGHT, Ph.D., LL.D. Attorney at Keene, N. H., and Boston, Mass., 1867–1872; member Massachusetts Senate, 1872–1873; Chief of Massachusetts Bureau of Labor Statistics, 1872–1888; U. S. Commissioner of Labor, 1885–1905; President of Clark College, 1902–1909. Member boards of arbitration and investigation. Author of *Industrial Evolution in the United States, Practical Sociology, Some Ethical Phases of Labor,* and *Battles of Labor.* Died in 1909.

ASSOCIATE EDITORS

G. MERCER ADAM. Canadian Editor. Former editor of *Canadian Monthly,* the *Canada Educational Monthly;* author of *The Canadian North-West, Canada from Sea to Sea, Life of Gen. Robert E. Lee, Outline History of Canadian Literature.* Editor of *Self-Culture,* Chicago, 1896–1905, and contributor to the Werner supplements to *Encyclopedia Britannica.* Died in 1912.

HENRY CARTER ADAMS, Ph.D., LL.D. Transportation. Professor of Political Economy and Finance, University of Michigan, 1887–1921; Director of Division of Transportation for Eleventh Census; Statistician, U. S. Commerce Commission, 1887–1911. Author of *The State in Relation to Industrial Action, The Science of Finance, Regulation of Railway Rates, Economics and Jurisprudence, Description of Industry,* and other works. Died in 1921

LESLIE P. BEEBE, B.S., M.A. Geography. Assistant Professor Industrial Economics, Carnegie Institute of Technology.

S. CHATWOOD BURTON, M.A. Fine Arts. Professor of architecture, painting, composition, sculpture, University of Minnesota. Formerly instructor of architecture, etc., University of Illinois. Studied at the Academy Julian, Paris; Royal College of Art, S. K., London; artist and lecturer on art and architecture. Member of National Society of Art Masters, Chicago Etchers Society, The Print Makers, Professional Artists League, etc. Exhibits in National Academy, New York; Chicago Art Institute. Holder of first prize in sculpture.

SAMUEL PAUL CAPEN, Ph.D. Language. Instructor and professor, modern languages at Clark College, 1908–1914; specialist in U. S. Bureau of Education,

1914–1919; Director of American Council on Education, 1919–1922; Chancellor of University of Buffalo since 1922. Member various educational and advisory boards. Author of *Resources and Standards of Colleges of Arts and Sciences,* and of other books and bulletins. Editor, *Educational Record,* 1920–1922.

Sir Caspar P. Clarke, Kt. Fine Arts. Director of Metropolitan Museum of Art, New York, 1904–1910; Royal Commissioner for England to the St. Louis Exposition, 1904; Director of the South Kensington Art Museum in London, 1896–1904; Chevalier of Legion d'Honneur of France, and Commander of the Victorian Order of England. Died in 1911.

Beatrice Randolph Coffland. Kindergarten. Founder of the Coffland Kindergartens, Wheeling, West Virginia.

Wilbur Haverfield Cramblet, M.A., Ph.D. Higher Mathematics. Professor of Mathematics at Phillips University, 1915–1917; professor of Mathematics at Bethany College, West Virginia, 1917–1934; dean, 1918–1920; treasurer, from 1919; secretary of the Board, 1929–1932; and president of the College from 1934. President of Board of Higher Education, Disciples of Christ, 1937–1941.

Charles Gates Dawes. Economics. Attorney in Lincoln, Nebraska, from 1887 to 1894; Comptroller of the Currency, 1897–1901; organizer and President of Central Trust Company of Illinois, Chicago, 1902–1921; Chairman of the Board, 1921–1931; served in France and became a brigadier general in 1918; Vice President, 1925–1929; and Ambassador to England, 1929–1932. Awarded the D. S. M., and decorations by various governments. First Director of the U. S. Budget in 1921; President of the Reconstruction Finance Corporation in 1932. With Sir Austen Chamberlain was awarded the Nobel Peace Prize in 1925. Author of *The Banking System of the United States, A Journal of the Great War, First Year of the Budget of the United States, Notes as Vice President, How Long Prosperity, Journal of Reparations,* and other books and reports.

John Robie Eastman, Ph.D. Astronomy. Professor of Mathematics, U. S. Naval Observatory, 1865–1898; first President of the Washington Academy of Sciences; attained rank of Rear Admiral in 1906. Author of *Transit Circle of Observations of Sun, Moon, Stars,* and *Comets,* and edited the *Second Washington Catalogue of Stars.* Died in 1913.

Harry D. Hall, M.D. Physiology and Hygiene. Western Reserve; St. Vincent's Hospital, Cleveland, Ohio; Staff Ohio Valley General Hospital, Wheeling, West Virginia. Assistant Editor, *West Virginia State Medical Journal.*

Richard Hamer, M.A., Ph.D. Physics. Assistant Professor of Physics, University of Pittsburgh, 1924–1928; then at Acadia University, Halifax, Nova Scotia. Assistant Engineer, Research Department, Westinghouse Manufacturing Co. Author of *Low Voltage Arcs in Metallic Vapours* (with Dr. J. C. McLennan), *The Standardization of Permanent Magnets,* and others.

William Torrey Harris, Ph.D., LL.D. Education. Superintendent of Schools, St. Louis, 1867–1889; founded *Journal of Speculative Philosophy,* 1867; U. S. Commissioner of Education, 1889–1906. Author of *Introduction to the Study of Philosophy, Spiritual Sense of Dante's Divine Comedy.* Chief editor of *Webster's New International Dictionary.* Died in 1909.

Daniel S. Hartline, M.A. Anatomy. Head of Department of Biology, Bloomsburg State Normal School, Pennsylvania, for twenty-five years. Author of *Life and Life Forms,* and others.

George Milton Janes, Ph.D. Biography. Professor of Economics in University of North Dakota; Washington and Jefferson College, 1919–1925; and Kenyon College, 1925–1934. Author of *The Pilgrim Spirit, The Control of Strikes, Who Should Have Wealth,* and *Man and Society.* Died in 1936.

Emory Richard Johnson, Ph.D., Sc.D. Commerce. Professor of Transportation and Commerce, University of Pennsylvania,

since 1896; and Dean of Wharton School of Transportation and Commerce, 1919–1933. Economic expert on various national commissions; on Isthmian Canal Commission, 1899–1904. Author of various books, including *Railway Traffic and Rates, Panama Canal and Tolls, History of Domestic and Foreign Commerce of U. S., Government Regulation of Transportation,* and *Through the Years, an Autobiography.* Editor *Annals of the American Academy,* 1901–1914.

CAROLINE I. KINDELBERGER.
Number Work.
Teacher of Mathematics in Public Schools of Wheeling, West Virginia.

ALEXANDER KLEMIN, M.S., LL.D.
Aeronautical Engineering.
In charge of aeronautics, M. I. T., 1916–1917, of army research at McCook Field, Dayton, in the first World War, and of the Guggenheim School of Aeronautics, New York University, 1924–1941; and then Research Professor. Winner of army and navy airplane design competitions. Author of *Textbook of Aeronautical Engineering, If You Want to Fly, Airplane Stress Analysis,* and other works.

VINCENT W. LANFEAR, M.A., Ph.D.
Economics.
Instructor and professor in Columbia, Yale, and the University of Pittsburgh; Dean of Men, 1934–1941, and then of the School of Business Administration at Pittsburgh. Author of *Business Fluctuations and the American Labor Movement, Metal Industry of New York City,* and economic and other reports.

ROBERT LILLEY, D.C.L. Oriental Religions.
One of the editors of the *Century Dictionary, Universal Cyclopedia,* and other works. Contributor to *New International Encyclopedia.*

JESSE MACY, M.A., LL.D. Government.
Professor of Political Science, Grinnell College, 1896–1912. With the author, James Bryce, condensed *The American Commonwealth,* 1896. Wrote *Party Organization, Comparative Free Government, The Anti-Slavery Crusade.* President American Political Science Association, 1916. Died 1919.

ALPHEUS THOMAS MASON, Ph.D.
Government.
Assistant Professor and, after 1936, Professor of Politics at Princeton University. Member of editorial staff of *American Political Science Review;* on board of experts to study administration of New Jersey, 1932. Author of *Organized Labor and the Law, Brandeis: Lawyer and Judge in the Modern State, Bureaucracy Convicts Itself, The Ballinger-Pinchot Controversy.*

CHARLES HALLEN MCCARTHY, Ph.D.
Religion.
Professor of American History, Catholic University of America. Medal from Pope Pius XII, 1940. Wrote *Lincoln's Plan of Reconstruction, Civil Government in the United States,* and *Columbus and His Predecessors.*

JAMES CLYDE MCGREGOR, M.A., Ph.D.
History and Government.
Professor in Washington and Jefferson College from 1913. Author of *Disruption of Virginia* and articles on the government of the United States. Died 1940.

DANA MUNRO, M.A., L.H.D. History.
Professor of European History at Wisconsin, 1902–1915; and of Medieval History at Princeton, from 1915. Authority on the Crusades. His principal books were *Medieval History, Source Book of Roman History, German Treatment of Conquered Territories, The Middle Ages.* Died 1933.

JOHN SCHOLTE NOLLEN, Ph.D. Literature.
Professor of modern languages at Grinnell and the University of Indiana; President of Lake Forest College, 1907–1918; Y. M. C. A. service in the first World War; dean at Grinnell, and President, 1931–1940. Author of *The Warfare of Peace; God and the Nations, Outline History of Modern German.* Editor of German texts.

ROSCOE POUND, Ph.D. Commercial Law.
Professor and Dean of Law, University of Nebraska; professor at Northwestern and Chicago; Dean of School of Law at Harvard, 1916–1936. Member of many boards and commissions, and author of numerous works on legal subjects. Chief works: *Spirit of the Com-*

mon Law, Interpretations of Legal History, Law and Morals, Organization of Courts. Has written also on botany.

L. Alice Rice. Number Work. Teacher of Primary Arithmetic in Public Schools of Wheeling, West Virginia.

Charles Russell Richards. Useful Arts. Director of science at Pratt Institute, 1888–1898; of manual training, Columbia University to 1908; of Cooper Union, 1908–1923; and then of various exhibits and museums. Wrote *Art in Industry* and *The Industrial Museum.* Died 1936.

Benjamin L. Robinson, Ph.D. Botany. Professor and Curator of the Gray Herbarium, Harvard University since 1899. Editor of the *Synopical Flora* (originally by Asa Gray and others), of *Rhodora,* and of Gray's *New Manual of Botany,* Seventh Ed. Author of many scientific papers. Died 1935.

Henry Wade Rogers, M.A., LL.D. Law. Professor of Law and Dean, University of Michigan; President of Northwestern University, 1890–1900; Dean, Yale Law School, 1903–1916; U. S. Circuit Judge, 1916–1926. Member of boards and commissions; author of papers on law, and of *Expert Testimony, Illinois Citations,* and joint writer of *Two Centuries of American Law.* Died in 1926.

Joseph C. Seiter, M. Mus. Music. Head of Department of Music, State Teachers College, Slippery Rock, Pa. Professor of Piano and Harmony at Syracuse University for twenty-five years. Author of *Harmony Text Book, Modern Trends in Harmony,* and *Musical Appreciation.*

Harold Horton Sheldon, M.A., Ph.D. Physics. Professor of Physics, New York University, 1922–1941; engaged in research. Pioneer in neon tube design, cathode rectifiers, and television. Inventor. His chief works are *An Outline of Science, Space, Time, and Relativity,* and *Fuels, Heat, Distribution.*

Edward M. Upjohn, M. Arch. Architecture. Professor of Fine Arts, University of Minnesota. Lecturer on Fine Arts. Assistant to Dean Edgell and Dean Chase, Harvard University; Professor, Frost School of Landscape Architecture, Cambridge, Mass.

John Heyl Vincent, LL.D. Religion. Bishop of Methodist Church; Founder of Chautauqua (1874) and Chancellor, 1878–1920. Author of *The Modern Sunday School, The Chautauqua Movement, The Church at Home,* and other religious works. Died in 1926.

Samuel Wendell Williston, Ph.D. Zoology. Professor in the University of Chicago, 1902–1918. Author of numerous scientific papers on paleontology, entomology, and zoology. Died in 1919.

TABLE OF CONTENTS.

BOOK I.

LANGUAGE

Languages of the Nations—Universal Languages—Americanisms—Composition: Style, Narration, Description, Exposition, Argument—Simplified Spelling—Use of Capitals—Correct Punctuation—Letter Writing: Materials, Language, Parts, Examples—Figures of Speech—Structure of Sentences—Prosody—Poetry—Words often Incorrectly Used—Dictionary of English Synonyms—Antonyms—Homonyms—Heteronyms—Doublets—Prefixes—Suffixes—List of Latin Words—Words Often Wrongly Spelled—Words Often Wrongly Pronounced—Dictionary of Abbreviations—Common Words and Phrases—Class Mottoes—Pedagogical and Psychological Terms—Journalistic Terms.....Pages 7–130

BOOK II.

GRAMMAR

Our Everyday Language—Fifty Language Demons—Sentences—Phrases and Clauses—Parts of Speech: Nouns, Pronouns, Adjectives, Verbs, Infinitives and Participles, Adverbs, Prepositions, Conjunctions, Interjections—Analysis and Diagrams of Sentences—Other Complex and Compound Constructions.....Pages 131–168

BOOK III.

HISTORY

Races of Mankind—Prehistoric Man—Population of the Earth by Races—World's History in Graphic Outline—Period of Earliest Records to Abraham—Abraham to David—David to Cyrus—Cyrus to Xerxes—Xerxes to Hannibal—Hannibal to Julius Caesar—Caesar to Alaric—Alaric to Charlemagne—Charlemagne to Hildebrand—Hildebrand to Fourteenth Century—Fourteenth Century to Invention of Printing—Invention of Printing to Reformation—Reformation to Abdication of Charles V—Abdication of Charles V to Assassination of Henry IV of France—Henry IV of France to Cromwell—Cromwell to Louis XIV of France—Louis XIV to George Washington—Time of Washington and Development of Canada—Nineteenth Century to Introduction of Railway—Stephenson to Lincoln—Lincoln to Founding of German Empire—Founding of German Empire to Present Day—Events in America in Twentieth Century—Dictionary of History—Important Wars of History—Outlines of American Wars—The World War—Colonial History of United States—Pictorial History of Presidential Administrations and Important Wars.....Pages 169–420

BOOK IV.

MATHEMATICS

History of Mathematics—Primary Arithmetic—The Parent as Teacher—Number Preparation—Socializing Number Work—Teaching with Games: Second, Third and Fourth Grade Work—Formal Arithmetic: Notation and Numeration—Integers—Fundamental Operations: Addition, Subtraction, Multiplication, Division—Factoring—Cancellation—Fractions—Complex Fractions: Decimals—Aliquot Parts, Denominate Numbers, Involution and Evolution—Percentage—Commercial Arithmetic: Profit and Loss, Marking Goods, Billing and Trade Discount, Commission and Brokerage—Insurance—Interest: Simple, Exact, Compound—Negotiable Paper—Bank Discount—Taxes—Stocks and Bonds—Practical Measurements: Drawing to Scale, Graphs, Mensuration, Plane Figures, Papering, Cement and Masonry, Concrete Work, Plastering, Roofing, Shingling, Lathing, Carpeting, etc.—Dictionary of Weights and Measures—Algebra—Positive and Negative Numbers—Equations—Geometry.....Pages 421–536

CONTENTS

BOOK V.

GEOGRAPHY

Importance of Geography—History of Geography—Divisions of Geography: Bio-Geography, Commercial or Economic Geography, Physical Geography—Lithosphere—Hydrosphere—Atmosphere—Political Geography—Astronomy—Solar System—Largest Islands—Longest Rivers—Highest Mountains—Volcanoes—Seas—Rivers—Physiography—Floods—Tornadoes—Earthquakes—Ocean Routes—Canals—Physical Terms and Definitions—Commercial Geography of the World—Commercial Statistics of the World—States of the Union—Description of Fifteen Largest Cities of the United States—Foreign Cities of the World—Economic Geography—Outline of Native and Foreign Woods—Dictionary of Technical Terms—Bridges—National Parks and Monuments—Pictorial Geography of the United States.....Pages 537–668

BOOK VI.

ATLAS

The World—Europe—British Isles—Africa—Asia—Australasia—South America—North America—United States—Dominion of Canada and Newfoundland—West Indies—Hawaii—Philippine Islands—Alaska—States of United States: Alabama, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, Florida, Georgia, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, Nevada, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, Washington, West Virginia, Wisconsin, Wyoming.....Pages 669–734

BOOK VII.

KINDERGARTEN

Relation to First Grade—Method—Games—Stories—Manual Activities—Method of Using Materials—Outline of the Year's Work by Months: Topics, Stories, Games, Songs, Rhythms—Manual Activities—Result of Year's Work.....Pages 735–794

BOOK VIII.

PHYSIOLOGY

Plan of the Human Body—Functions of the Human Body—Sensory Apparatus—Motor Apparatus—Nutritive Apparatus—Reproductive Apparatus—Anatomy—Physiology—Physiology of Muscle and Nerve—Skeletal Muscle—Plain Muscle—Nerve Fiber—Central Nervous System—Sleep—Special Senses—Smell—Sight—Hearing—Blood and Lymph—Blood Plates—Lymph—Circulation of the Blood—Pulse—Heart Beat—Vaso-Motor Nerves—Respiration—Physiology of Digestion and Secretion—Intestines—Defecation—Vomiting—Food and Their Digestions—Ferments and Enzymes—Digestion and Absorption—Liver—Spleen—Kidney—Internal Secretions—Thymus—Adrenal Bodies—Pituitary Bodies—Organs of Reproduction—Pancreas—Nutrition—Heat and Its Regulations—Reproduction—Heredity—Hygiene—Table Inspection—Eyes—Tonsils—Adenoids—Hearing—Deformities—Nervousness—Tuberculosis—Contagious Diseases—Infant Hygiene—Weaning.....Pages 795–826

BOOK IX.

LITERATURE

History of Literature of all Nations—Babylonian, Assyrian, Egyptian, Chinese, Hebrew, Jewish, Sanskrit, Persian, Greek, Latin, Italian, Spanish, Portuguese, French, German, Russian, Polish, Dutch, Scandinavian, Danish, Swedish, Norwegian, Japanese, English, American, Canadian, Latin-American—Outline of the World's Literature—A Contemporaneous and Consecutive Arrangement of Books and Authors for Reference and Study—Outline of Interesting Books—Dictionary of Pseudonyms—Some Literary Terms and Definitions—Graded List of Two Hundred Best Books for Children.....Pages 827–940

CONTENTS

BOOK X.

SCIENCE

AVIATION—AERONAUTICS—PHYSICS—DEFINITIONS OF PHYSICAL TERMS—MECHANICS—SOUND—HEAT—LIGHT—MAGNETISM—ELECTRICITY—PHYSICAL LAWS—MECHANICS—HEAT—MAGNETISM AND ELECTRICITY—PHYSICAL UNITS OF MEASUREMENTS—PHYSICAL CONSTANTS—MECHANICAL INSTRUMENTS—THERMAL INSTRUMENTS—OPTICAL INSTRUMENTS—COLOR—ELECTRICAL INSTRUMENTS—AUTOMOBILE—RADIO—TERMS USED IN RADIO—TELE-TRANSMISSION OF PICTURES—RADIO-TRANSMISSION OF PICTURES—CHEMISTRY—DIVISIONS OF CHEMISTRY—DICTIONARY OF CHEMICAL TERMS—QUALITATIVE ANALYSIS—QUANTITATIVE ANALYSIS—CHEMICAL ELEMENTS—GEOLOGY—ORIGIN OF THE EARTH—GEOLOGIC DIVISIONS—MINERAL RESOURCES OF UNITED STATES AND CANADA—BIOLOGY—EVOLUTION—BOTANY—DIVISIONS—MORPHOLOGY—PHYSIOLOGY—CYTOLOGY—TAXONOMY—ECOLOGY—ECONOMIC BOTANY—PALEOBOTANY—GENETICS—PLANT KINGDOM—TABLE OF PRINCIPAL PLANT GROUPS—CULTIVATED PLANTS—ORIGIN—HISTORY—METHOD OF DIFFUSION—ORDER OF INTRODUCTION—BOTANICAL RANK—NUMBER—DISTRIBUTION—CHANGES UNDER CULTIVATION—TABLE OF CULTIVATED PLANTS: Name, Family, Character, Origin of, Years of Known Cultivation, History and Economic Importance—INTRODUCED PLANTS—ZOOLOGY—ANIMAL KINGDOM—TABLE OF PRINCIPAL GROUPS OF ANIMALS—SYSTEMATIC ZOOLOGY: Protozoans, Coelentiates, Echinoderms, Worms, Molluscoidea, Mollusks, Arthropods, Fishes, Amphibians, Reptiles, Birds, Mammals, Domestic Animals, Origin, History—METHOD OF DISTRIBUTION—ORDER OF INTRODUCTION—RANK—NUMBER—GEOGRAPHICAL DISTRIBUTION—EFFECTS OF DOMESTICATION—TABLE OF DOMESTIC ANIMALS: Name, Order, Family, Parent Wild Species, Region of Origin, Years of Domestication, History and Economic Importance—DICTIONARY OF NATURAL HISTORY—DIVISION OF PLANTS—DIVISION OF ANIMALS.....Pages 941–1118

BOOK XI.

GOVERNMENT

HISTORY OF GOVERNMENT: Family, Patriarchal, Tribal, Feudalism, Democracy, Monarchy, Republics—TYPICAL REPUBLICS—FRANCE—SWITZERLAND—GOVERNMENT FUNCTIONS—FIRST STEPS TOWARD UNION—CONFEDERATION—AMENDMENTS—DECLARATION OF INDEPENDENCE—CONSTITUTION AND AMENDMENTS—STATISTICS—EXECUTIVE: President, Elections—JUDICIARY—LEGISLATIVE BODIES: Senate, House of Representatives, Members, How Elected, Term, Salary, Apportionment, Powers, Meeting—STATE GOVERNMENT: Legislature, Executive, Governor, State Officers—DISTRICT OF COLUMBIA—LOCAL GOVERNMENT: Town, County, Municipal, Municipal Reform—PROPORTIONAL REPRESENTATION—TERRITORIAL GOVERNMENT—ITEMS OF NATIONAL INTEREST—STATES OF THE UNION—QUALIFICATIONS FOR VOTING—FACTS REGARDING PRESIDENTS—MINOR POLITICAL PARTIES—MAJOR POLITICAL PARTIES—PRESIDENTIAL ELECTIONS—VICE-PRESIDENTS—SPEAKERS—CABINET OFFICERS—JUSTICES OF THE UNITED STATES SUPREME COURT—FAMOUS INDIAN CHIEFS—BRITISH EMPIRE—THE THREE ESTATES—REPRESENTATIVE GOVERNMENTS—RESPONSIBLE GOVERNMENTS—PARLIAMENTARY LAW.....Pages 1119–1178

BOOK XII.

LAW

DEVELOPMENT OF LAW: Early Laws, Mosaic Laws, Laws of the Medes and Persians, India, Lycurgus, Solon, Draco, Roman Law—TRIAL BY ORDEAL—TRIAL BY COMBAT—TRIAL BY JURY—INTERNATIONAL LAW: Rights of Property, Intercourse, Foreigners, Naturalization Laws of the United States—EXTRADITION—AMBASSADORS AND CONSULS—TREATIES—WAR—CONSTITUTIONAL LAW—CRIMINAL LAW—COMMERCIAL LAW: Contracts under Seal, Simple Contracts, Joint Contracts, Statute of Frauds, Impossibility of Performance, Contracts in Restraint of Trade, Wagering Contracts, Quasi-contracts—NEGOTIABLE INSTRUMENTS—PROMISSORY NOTES—CHECKS, INDORSEMENTS—RIGHTS OF THE HOLDER—LIABILITY OF PARTIES—NOTICE OF DISHONOR—PROTEST—AGENCY—SURETYSHIP AND GUARANTY—PARTNERSHIP—CORPORATIONS—PROPERTY—PERSONAL PROPERTY—SALES—CHATTEL MORTGAGES—FINDING CHATTELS—REAL PROPERTY—DEEDS—LANDLORD AND TENANT—WILLS—INTEREST LAWS AND STATUTES OF LIMITATION—EIGHT-HOUR LAWS—REQUIREMENTS FOR ADMISSION TO BAR—EXEMPTION LAWS—PROPERTY RIGHTS OF MARRIED WOMEN—EPOCH MAKING DECISIONS OF THE UNITED STATES SUPREME COURT—DICTIONARY OF TERMS USED IN POLITICAL SCIENCE.....Pages 1179–1220

CONTENTS

BOOK XIII.

ECONOMICS

Capital—History of Capital—Theories of Capital—Labor—Wages—Trade Unions—Knights of Labor—American Federation of Labor—International Labor Congresses—Eight-Hour Day—Strikes and Lock-outs—Arbitration—Labor Bureaus—Labor Legislation—Unemployment—Banks and Banking—State Banks—National Banks—National Bank Notes—Federal Reserve Banks—Bank of England—Bank of England Notes—Bank of France—Bank of Germany—New Reichsbank—Clearing House—Savings Banks—Legal Investments for Savings Banks—Trust Company—Loan Institutes—Building and Loan Associations—Money—Paper Money—Monetary Standards—Dictionary of Coins and Coinage—Stock Exchange—Bonds—Insurance: Life, Fire, Assessment, Fraternal, Industrial, Accident, Liability—Public Finance: Expenditure, and Revenue—Public Indebtedness—Financial Administration—Budget—Customs Duties—United States Treasury—Sub-Treasury—Income Tax—Summary of the Leading Financial Events—Dictionary of Business and Financial Terms.....Pages 1221–1278

BOOK XIV.

BIOGRAPHY

Biographical Dictionary of Authors—Captains of Industry—Educators and Scholars—Dictionary of Financiers—Biographical Dictionary of Fine Arts: Actors, Art Critics, Architects, Composers, Dramatists, Musicians, Painters, Sculptors—Leading Inventors of the World—Dictionary of Leading Jurists—Philosophers, Theologians, and Reformers—Rulers and Statesmen—Dictionary of Scientists.....Pages 1279–1564

BOOK XV.

FINE ARTS

History of Development—Babylonian Art and Architecture—Egyptian Art and Architecture—Greek Art and Architecture—Roman Art and Architecture—Early Christian Art and Architecture—Romanesque Art and Architecture—Gothic Art and Architecture—Renaissance Art and Architecture—Modern Art and Architecture—Art and Architecture in the United States—Schools of Painting—Famous Masterpieces of Art—Music—Schools of Music—Famous Hymns and Tunes—Famous Oratorios and Operas—Stories and Plots of Greatest Operas—Dictionary of Art and Musical Terms—Landmarks in Music.....Pages 1565–1667

HOW TO USE

THE NEW CENTURY BOOK OF FACTS.

Benjamin Franklin says: "Empty your purse into your head and no one can take it from you." A little town in Massachusetts once wrote him asking for a contribution toward a church bell. Franklin characteristically replied that he was sending a contribution, but not to be used in purchasing a church bell, rather he desired it to be used in purchasing books for the town library, since he would prefer filling their heads with *sense* than *sound*. In later years a poor boy studied those books. They revolutionized his life. That boy was Horace Mann, the founder of our free school system.

Statistics show that only six per cent. of a child's life on the average, is spent in the school room. Ninety-four per cent. is, therefore, spent outside of the school-room influence, and more or less under the direct supervision of the parent. Ordinary judgment should convince any parent that the greater responsibility for the child's proper training and education is dependent upon the home influence. Proper education today must be fostered, created and developed in the home.

Imitation is a most important factor in the developing of every child's life, and should the youth seldom see the parent use a reference book, look up facts, it must follow that the old adage, "Like begets Like" will hold true. The natural tendency of the child is to ask questions, and when he is repeatedly side-tracked or refused by the parent, it is but natural, that he should develop other tendencies and capacities, in many instances harmful. On the other hand let the thoughtful parent surround the child with the proper literary environment (Food for mind as well as body), and he will find that child eventually obtaining an education, regardless of the obstacles that confront him. "A man can not leave a better legacy to the world, than a well-educated family."—Scott.

First, we call attention, to the manner in which the book has been titled throughout. On the top of each page is found the page title, showing the most important subjects treated on that page. When several subjects appear on a page, the page titles will enable you to know the first and last topics treated on that page.

Secondly, the divisional leaves, enable you instantly to realize that you have passed from one department to another. On the back of each divisional leaf can be found the most important topics treated in that department. Should more definite information be desired, as to any division of the topic, it will be found in the running titles, at the beginning of each department.

Third, Each department is alphabetically arranged. Again each department includes one or more specific dictionaries which in turn are alphabetically arranged.

Fourth, Each subject is treated individually. For example, every subject pertaining to Language is treated, in that department. Suppose the question arose, as to the proper use of the comma. Turning to the index under "C," one finds "Comma," on page twenty-five. On the other hand, suppose your first thought would be the word "Punctuation." Turn to "P" in the index and you find the word "Punctuation" on page twenty-five. This is a special feature termed "Cross-Index," and enables the user to find information under more than one heading.

The *New Century Book of Facts* is built to be used. Keep it on the reading table or on the desk. Only by using it can its value be appreciated. No finer tribute can be paid any good book than for it to be scarred and worn through constant use. Learn to use the table of contents. Become familiar with the splendid index. Johnson says—"Books that you may carry to the fire side, and hold readily in your hand, are the most useful after all."

While the index to the *New Century Book of Facts*, is indeed most exhausting and thorough, it is to be remembered that every single word and minor sub-topic cannot be indexed, else the index would be a book unto itself. We call attention as an example to the word synonyms, not only is it found in the index on page forty-three, under the word synonyms, but it is also found in the index under the term Dictionaries, as on page forty-three. More particularly, we wish to emphasize that the Dictionary of Synonyms is in itself alphabetically arranged. To render the Dictionary of Synonyms of the most possible value to the user, there is immediately following it an—Index to Synonymous terms, making the list of more than double value to the user.

The Word "Use" means act of using, the application of anything to a particular purpose and it is the hope of the authors of the *New Century Book of Facts* that this volume will be used daily by the thousands with whom it will come in contact, as the means of developing that breadth of education, that will give the user the ability to converse intelligently with folks in all walks of life and make him more appreciative of the worth while things of life. It will assist him to increase his earning power and thus enable him to compete successfully in more than one limited line of endeavor in earning his daily livelihood.

LANGUAGES OF THE NATIONS.

The several languages and dialects spoken in the world number about 2,800. These are classified according to their grammatical construction into (1) the monosyllabic or isolating languages, (2) the agglutinative or affixal languages, and (3) the inflectional languages.

The monosyllabic or isolating languages are those in which the words, all of one syllable, are each an integral sign and used to express the root idea. The best example of this class is the Chinese language.

Agglutinative or affixal languages are those in which the roots of the words do not change, but modifications of the meanings of these words are indicated by inflection or change of the terminations or affixes.

Inflectional languages are those which, as in the Latin, consist largely of stems which change the termination or suffixes to indicate case, tense, number, etc.

Historical Classification of Languages.—Languages are classified according to their origin, history, or nationality into eight large groups and one unclassified group as follows:—

A. Indo-European Languages, spoken by about 900 million people, first recorded in the Sanskrit, and used by the nations of Europe and their descendants in other parts of the world, as well as by the people of India, Persia, Afghanistan, the Kurds, Nepaulese, Caucasians, and others. These languages are subdivided into:—

1. **The Teutonic Languages**, spoken by about 300 millions.

(*a*) **English**, spoken by 185 millions all over the world.

(*b*) **German**, spoken by 90 millions in Germany (except on the northern borders), the Alpine countries of Austria, parts of Bohemia, Moravia, Silesia, Hungary, Transylvania, Bukowina, north of Switzerland, some of the Baltic provinces of Russia, in Luxemburg, United States of America, Brazil, Australia, and German colonies.

(*c*) **Swedish**, spoken by over 5½ millions in Sweden and in towns of Finland.

(*d*) **Danish**, spoken by nearly 5 millions in Denmark and Iceland.

(*e*) **Norwegian**, spoken in Norway.

(*f*) **Dutch**, spoken by 15 millions in Holland and the Dutch colonies.

(*g*) **Frisian**, in North Holland and on the islands in the North Sea, spoken by 1 million.

(*h*) **Flemish**, spoken by 3¾ millions in Belgium (Brabant and Flanders) and on the Netherland borders.

2. **Romanic-Greek** or **Romance Languages**, spoken by 177 millions.

(*a*) **French** or **the Langue d'oïl**, spoken by 75 millions in France, the west of Switzerland, Belgium, Canada, Algiers, and the French colonies.

(*b*) **Provençal** or **the Langue d'oc**, spoken by 12 millions in the south of France.

(*c*) **Walloon**, spoken by 2½ millions in the south Netherlands, Belgium, Luxemburg, and the north of France.

(*d*) **Spanish**, spoken by 60 millions in Spain, Central and South America (excepting Brazil), the West Indies, and other Spanish colonies.

(*e*) **Portuguese**, spoken by 25 millions in Portugal, Brazil, and Portuguese colonies.

(*f*) **Italian**, spoken by 45 millions in **Italy**, Corsica, south Tyrol, Görz, and the coasts of Istria and Dalmatia.

(*g*) **Rhaeto-Romanic** and **Ladin**, spoken by 100,000 in Grisons, the Engadine, and south Tyrol.

(*h*) **Furlanish**, spoken by 400,000 in Friuli (north and east Italy).

(*i*) **Roumanian**, spoken by 10 millions in Roumania, Bessarabia, east Servia, Bukowina, southeast Hungary, Transylvania, and (a dialect) in Greece.

(*j*) **New Greek**, spoken by 5 millions in Greece, European Turkey, Crete, Cyprus, adjacent islands, and on the coast of Asia Minor.

3. **Slavonic Languages**, spoken by 134 millions, of which the North Slavs number nearly 117 millions.

(*a*) **Russian**, spoken by 90 millions in Russia.

(*b*) **Ruthenian**, spoken by about 4 millions in east Galicia and north Hungary.

(*c*) **Polish, Mazurish**, and **Kassubish**, spoken by 17 millions in Poland, Galicia, and the borders of Posen, Silesia, Pomerania, and of East and West Prussia.

(*d*) **Czechish** or **Tcheckish, Moravian**, and **Slovak**, spoken by 10 millions in Bohemia, Moravia, Silesia, and north Hungary.

(*e*) **Wendish**, spoken by 100,000 in Saxony and Lusatia.

(*f*) **Servo-Croatian**, spoken in Servia, Bosnia, south Hungary, Istria, Montenegro, and Dalmatia, by 7¼ millions.

(*g*) **Slovene**, in south Styria, Carinthia, Carniola, Istria, and parts of Görz and Gradiska.

(*h*) **Bulgarian**, in Bulgaria and Turkey.

(*i*) **Albanian**, spoken by 1½ millions in Albania (north of Greece).

(*j*) **Lithuanian** and **Lettish**, spoken by 4 millions in Lithuania and East Prussia.

4. **Keltic Languages**, spoken by 3¼ millions, including: (1) Irish, (2) Gaelic in the Highlands of Scotland, (3) Welsh, (4) Manx, (5) Bas-Breton or Armorican, and (6) Cornish, which died out about the beginning of last century.

5. **Iranian Languages**, spoken by about 22 millions in southwestern Asia and the Caucasus, including New Persian, Afghan, Lesghian, Grusian, Kurdish, Pushtu, Ossetian, and others.

6. **Armenian**, spoken by about 3 millions in Armenia and in parts of Turkey, Hungary, Russia, and Persia.

7. **Indian Languages**, spoken by about 255 millions in all of the East Indies except parts of the Dekkan, Burma, and the Malay Peninsula.

The chief dialects are the Hindi, Hindustani or Urdu, Punjabi, Bengali, Mahrati, Sindhi, Gujarati, Uriya, Assamese, Nepauli, Kashmiri, Kafir, and others.

B. Ural-Altaic Languages.

1. Languages of the Finns, Esthonians, Livonians, Permians, Mordvidians, Samoyeds, Voguls, and Lapps of northern Europe, spoken by over 7 millions.

2. **Magyar** of Hungary and the language of the Szeklers in Transylvania, spoken by 8¾ millions.

3. **Turko-Tataric Languages** of the Osmanlis or Turks, Nogays, Kalmuks, Turcomans, or Turkmen, Kirghiz, Uzbeks, Yakuts, and others of Turkey and northern Asia, spoken by 23¼ millions.

4. **Languages of the Mongols**, Manchus, Samoyeds, Buryats, Tunguses, and others in northern Asia, spoken by 18 millions.

C. Caucasian Languages, spoken by the Georgians, Mingrelians, Lazisians, Circassians, Tchetchentses, Avars, and others, to the number of about 8 millions.

D. Malay-Polynesian Languages, spoken by about 35 millions.

1. **Malay** proper, spoken by the Sundanese, Tagalians, Dyaks, Alfurus, Kawis, Battaks, and others of the Malay Peninsula, the Sunda Islands, and the eastern part of Madagascar.

2. **Melanesian** and **Polynesian** or **Maori** of New Zealand and adjacent islands.

E. The Monosyllabic or **Isolated Languages**, spoken by about 450 millions of Chinese, Anamese, Tonkinese, Siamese, Cambodians, Shans, Tibetans, Talaings, Burmese, and others of southeastern Asia.

F. The Japanese-Korean Languages, spoken by about 48 millions of Japanese and 10 millions of Koreans.

G. The Hamitic-Semitic Languages, spoken by over 50 millions.

1. **Hamitic**, spoken by over 20 millions in north Africa, including the Berbers, Kabyles, Tuaregs, Copts, Gallas, Somalis, Sahos, Bejas, and others.

2. **Semitic**, spoken by 30 millions. It includes the Arabic, Ethiopic or Geez with its dialects Tigré and Tigriña, the Amharic, Harari, in Arabia, northern Africa, and some parts of Abyssinia; and the Hebrew, spoken all over the world. The descendants (around Palestine and in parts of Asia Minor) of the ancient Chaldeans, Syrians, Phœnicians, Babylonians, and Assyrians speak both Hebrew and Aramaic.

H. Bantu Languages, spoken by 27 millions in central and south Africa, including the Kaffirs, Zulus, Swahilis, Hereros, Bechuanas, Marutses, Bundas, Congos, Basutos, Matongas, and others.

I. Languages of the Interior of Africa.

1. Several **Negro** tongues, spoken by over 70 millions of Wolofs, Hausas, Bornus, Baghirmis, Nube, Fulbe, and others.

2. **The Clicking Languages** of the Hottentots and other south African races.

J. Dravidian Languages, spoken by over 60 millions in the Dekkan, southern India, and the west of Ceylon, including the Tamil, Telugu, Kanarese, and Malayālam.

K. American Indian Languages, spoken by about 10 millions.

1. **In North America** the languages of the Apaches, Iroquois, Pawnees, Sioux, Delawares, Crees, Dakotas, and others.

2. **In Central America** the Maya language, Otomi, Aztec, Zapotec, and others.

3. **In South America** the Quichua, Yunca, and other languages of the Peruvian group; the languages of the Araucanians, Obohuds, and others.

L. Unclassified Languages.

1. **The Basque**, spoken by 600,000 in the Pyrenees and around the shores of the Bay of Biscay.

2. The languages of such inhabitants of northern Asia and America as the Kamtchadales, Aleutians, Yakuts, Ostyaks, and Eskimos.

ENGLISH LANGUAGE.

Historically, English belongs to the western branch of the Teutonic languages, is in the Low German subdivision of that branch, and is most closely allied to the Frisian. Its growth is divided into three leading periods:—

1. The Anglo-Saxon Period (449-1100).
2. The Middle English Period (*c.* 1100-1500).
3. The Modern English Period (1500-the present time).

The English language was introduced into Britain (as the country was then called) in 449 by the Teutonic invaders, who came under the leadership of Hengist and Horsa to help the Britons or Celts to drive out the Picts and Scots who had descended from the north upon the lowlands. Very few words were borrowed by these Teutons from the Celts or Britons whom they drove into Wales and other parts of the island. Skeat gives only ten nouns (in his *Principles of English Etymology*) as being derived from this source. Among them are *bannock, mattock, down,* and *cart.* A few Latin words which the Celts had borrowed from their Roman conquerors came in in the same way: *street, mount, lake, castra* (as seen in *caster, cester,* and *chester*) a camp. But when Christianity was introduced by St. Augustine in 597, many ecclesiastical and general terms came in from the Latin; in all about 140 words, according to Skeat's estimate. Among them are *altar, mass, priest, psalm, temple.* Many words of Scandinavian origin were contributed by the Danish invaders of England. For example, *earl, husband, knife, take,* and *window.*

Middle English Period (1100-1500).—The early part of this period is known as Semi-Saxon. It is marked by a period of transition or breaking up of the language, to which process the Norman conquerors greatly contributed. The most noticeable change was the gradual dropping of inflections or changes in the terminations of words. Nouns and adjectives, that in the old Saxon had a distinct termination to indicate several cases and numbers, gradually but surely lost these, partly by the unwillingness of the Norman-French conqueror to observe or even to learn the inflections of the conquered Saxon, upon whom the Norman thought he conferred a sufficient favor by learning the root of the word. The introduction of an immense number of Latin words that had come through the French was another marked feature of this period. French became the language of the court, the camp, and the chase. We observe the French influence in the poems of Chaucer and Gower. The Renaissance added many Latin words.

Modern Period (1500-the present day).—The most distinctive feature of this last period of English is the remarkable enriching of the vocabulary by the introduction of words from nearly every language in the world. In the development of the mercantile and colonial policies of the empire, the language levied tribute upon all of the peoples with whom the sailors and merchants came in contact. We accordingly find in the language traces of the English contact with the Dutch in the carrying trade of the world; of the conquest of India; of contact with the Maoris of Australasia; with the Indians in Canada; with the Boers in South Africa; and of commercial relations with China, Spain, Portugal, and other nations. The ease and rapidity with which words of foreign origin are assimilated and incorporated into the English language are remarkable. The advances of science and its application to the useful arts have greatly increased the vocabulary by the introduction of scientific names and technical terms.

Richness of the Language.—Our dictionaries contain from 450,000 to 700,000 words, it is not to be supposed that all of these are by any means in common or frequent use. While Milton used but about 7,000 words in his poetical and prose writings, Shakespeare used over 25,000 words. In our daily intercourse it is possible that the vocabulary of the average educated person seldom exceeds 2,500 words; and that of the uneducated person contains less than 800 different words. Yet the extent of one's vocabulary may be regarded as a fair measure of one's education.

GERMAN LANGUAGE.

The German language ranks third among the great languages of Europe,—English first, Russian second, and French fourth. It is spoken by about 90 millions. The area in which the German language is spoken is not at all identical with the area of Germany, where there are about 63,000,000 people. Of these 6,000,000 are returned in the census as speaking foreign languages (mostly Polish). Outside of the empire German is the common language of nearly all of Luxemburg, the greater part of Switzerland, and parts of Austria-Hungary and Russia. Outside of Europe the greatest number of German-speaking people is to be found in the United States, whose population of German parentage exceeds 3,000,000, of which New York City returns 786,435, while the number of Pennsylvania Germans or "Pennsylvania Dutch" has never been accurately determined.

From the seventh century, the German language followed along two main divisions: the High German or Hoch-Deutsch and Low German or Platt-Deutsch. High German is the language of upper or southern Germany. In its development there may be traced three main periods:—

1. Old High German, from 700 to about 1100.
2. Middle High German, from about 1100 to about 1500.
3. Modern German, from about 1500 to the present time.

Low German or Platt-Deutsch is the language of lower or northern Germany and the Netherlands. It included, besides Platt-Deutsch, the Friesic; Anglo-Saxon or Saxon; Old Saxon; Dutch or Low Dutch with Flemish.

Modern or New High German.—The chief influence in determining the form of modern literary German was the translation of the Bible by Luther between the years 1522 and 1534. He chose the language of the Saxon Chancery for his translation. The diction prescribed by the several administrative chanceries or chancelleries determined the form of the language within the several jurisdictions. In the reign of Emperor Louis the Bavarian (1314-1347), the Imperial Chancery ordered its official documents to be written in German instead of Latin. While, therefore, the Midland German became a

literary language very early in the sixteenth century, it was not until after 1750 that the present form of the literary language became a national language.

SWEDISH LANGUAGE.

This language belongs to the northern branch of the Germanic family. It developed from the old Danish, which was spoken throughout the whole of Scandinavia up to the year 900. Then began a movement which slowly divided the old Danish into an eastern division of Danish and Swedish and a western division of Norwegian and Icelandic. The language between the years 900 and 1500 is known as Old Swedish. Until somewhat later than the year 1200, Swedish was written in the old Scandinavian characters known as runes. In the thirteenth century the use of the Roman alphabet began. The great difficulty which Swedish presents to a foreigner who attempts to learn it lies in the fact that the printed language abounds in silent letters. Another difficulty is the peculiar musical modulation of the voice upon which not only correct pronunciation but the very meaning of the word depends.

DANISH LANGUAGE.

The development of modern Danish dates from the year 1000, when wide dialectic differences in the common language of Scandinavia caused the formation of several languages. The Danes used Latin so extensively that their language was much affected by it in both syntax and vocabulary. The great agency in fixing the Danish vocabulary was the first literal translation of the Bible into Danish in 1550 under Christian III. By the Union of Kalmar in 1397, by which Norwegian independence was lost, the Danish language was substituted in literature and in the transaction of public business, though Norwegian was spoken in the country districts. This accounts for the slight differences between the languages of the two countries. The Danish itself underwent many changes, and that spoken in Norway is often called Dano-Norwegian and has been described as Danish with a Swedish accent. In 1537 Danish became the official language of Norway. The standard of Danish literary form was erected by Holberg (1684-1754). From 1750 until 1800 German and Danish were used in common just as in earlier days Danish and Latin were used, and German had a marked influence upon the Danish syntax and vocabulary. But in the last few years, because of the war with Germany, the German element is being rapidly eradicated and a purer Danish style obtains. The Danish and Swedish languages have much in common. The fundamental principles of these languages are the same, but the essential differences are in pronunciation. Danish pronunciation calls for the use of a peculiar closing of the glottis in some sounds which suggests to the foreigner the sound of a hiccough. Danish also lacks that peculiar musical modulation which is so marked in the Swedish. The language of the Danes in the United States is different from that of the mother country, especially in the vocabulary and in some of the syntactical forms. These are caused by the American influence.

DUTCH LANGUAGE.

This language is classified in the Low Frankish division of the Low German. It is so closely related to the Flemish language that the printed form of these two languages is practically identical. It is the language of the Netherlands. The Boer language of South Africa is a dialect of it. The Dutch call their language Nederlandsch; the Germans call it Holländisch. In its history and development the Dutch language has passed through nearly the same changes as the English language has experienced. There are three main periods:—

1. Old Dutch (to about 1100).
2. Middle Dutch (1100-1550).
3. Modern Dutch (1550-the present day).

The standard of Dutch vocabulary and spelling was erected by the publication between the years 1619 and 1637 of the *Statenbibjel* or authorized version of the Scriptures. Its spread among the people did much to fix the form of the Dutch language in its written form. In inflection and grammar the language corresponds closely to the German; the use of capitals, however, is the same as in English, and the Roman alphabet is used.

FLEMISH LANGUAGE.

The name given to the Low German language and literature of Belgium (French being also largely used in that country). It is especially spoken by the people of Flanders, Brabant, and of the provinces bordering on the Netherlands. Like the Dutch, the Flemish language is a dialect of the Old Low Franconian division of the Low German. The Dutch and Flemish spoken languages were so closely related that there was a great effort made in the sixteenth century to unite the two in one common written form. But when, in 1581, the northern provinces threw off their allegiance to the crown of Spain, declared their independence, and formed the Dutch republic, this hope was fruitless. The southern provinces, after the taking of Antwerp in 1585 by the duke of Parma, were separated from Holland, held by Spain until 1714, when they were given to Austria. Then in 1794 they were taken by France and held by her until 1815, when Belgium was united with Holland. When, by the revolution of 1830, Belgium was separated from Holland and made an independent state, French was made the official language, and all possibility of making the Low German a literary language in Belgium was apparently ended. But the "Flemish movement," begun in 1830 by Jan Frans Willems, has been successful in restoring the Low German as both a literary and official language in Belgium, where, by the laws of 1873, 1878, 1883, and 1886, it holds an equal position with the French tongue. In 1886, the Koninklijke Vlaamsche Academie was founded, which has advanced the cause of the Flemish language. It is not surprising that the Flemish language of to-day contains very many more words of French origin than does the Dutch.

FRENCH LANGUAGE.

When, in the first century B. C., Julius Cæsar conquered Gaul, the Latin language was imposed upon the Gauls or Celts, who spoke a language

similar to that of Brittany and of Wales. During the four centuries of Roman rule in Gaul, the use of the Latin language became universal. When, in the fifth century, the Visigoths, Burgundians, and Franks conquered Gaul, and the Franks ultimately ruled all of the country, the conquerors adopted the language of the people. It is remarkable that the Franks contributed only about 400 words of German origin to the common speech. After a transitional period of six centuries the language spoken in Gaul differed sufficiently from that of Rome to be distinguished by the name Romanic.

A marked difference was noticeable between the speech of the people in the north of France and that of the people in the south. The dividing line between the two peoples may be drawn from La Rochelle through Limoges to Grenoble. The word for *yes* in the north was *oïl;* in the south *oc.* The form of speech used in the north was called the *langue d'oïl,* the parent of the French of to-day; and that in the south, *langue d'oc,* the parent of what is now called Provençal, spoken by 12,000,000 people in the south of France.

Attempts to fix the language began in the sixteenth century, after the reduction of endings and of inflections which had occurred during the Middle Ages. The influence of Catherine de' Medici caused the adoption of many Italian customs at the French court, and the war with Italy caused the adoption of many terms pertaining to warfare. These two influences brought over 500 words of Italian origin into the language. In the seventeenth century about 100 words of Spanish origin were incorporated. The Académie Française was founded in 1635, and in 1694 published a dictionary which had a marked influence in limiting the language. A number of new words came in as a direct result of the Revolution; and in the nineteenth century a very considerable number of English words were introduced and naturalized. In 1878 the Académie published an edition of the *Dictionnaire* in which 2,200 new words obtained from other languages were incorporated. This came about as a direct result of the cosmopolitan influence upon the language, which has always been regarded as the most refined among the languages of the world, though English is now the most practical. This disturbance of the purity of the language is deplored by many who have followed in the ways of Voltaire in the refinement of the French language.

SPANISH LANGUAGE.

Spanish is a Romanic language that has grown out of the Latin which was imposed by Roman conquerors upon the Iberian peninsula. There are now more Spanish-speaking people in the New World than there are in Spain. There are five leading dialects in Spanish: (1) Asturian, (2) Leonese, (3) Aragonese, (4) Andalusian, and (5) Castilian. The standard literary speech is the Castilian. Of the foreign elements in the language, the words of Arabic origin are most noticeable. They were infused into Spanish during the occupation of the country by the Arabs. The majority of such words have the characteristic Arabic article *al* before them.

PORTUGUESE LANGUAGE.

A Romanic tongue derived from the Latin of the Roman soldiers. It most closely resembles the Spanish language. The influence of both Spain and France is to be seen in the vocabulary and the grammar of the language.

ITALIAN LANGUAGE.

The Italian language is a Romanic language, one of the several descendants of the Latin. Its chief characteristic is that it does not depart so far from the original Latin as do the other languages of this group. Between the spoken languages or dialects of the Italian peninsula and the written language there is a wide difference. There are to be found several hundred patois and dialects spoken in Italy, and these are in some cases so widely different that one born in the south of Italy makes himself understood only with the greatest difficulty by those in the north. The Italian of culture and of literature is based upon the Tuscan dialect, for it was in this form that Dante, the founder of the literary language, wrote his works. The Tuscan dialect has become the fixed standard of literature used by most of the great writers since Dante's time. The Accademia della Crusca published a dictionary of Tuscan in 1612 as the standard of purity of the national language.

ROUMANIAN LANGUAGE.

A Romanic language founded upon the Latin, and now spoken in three dialects:—

1. **Daco-Roumanian** by 9,000,000 people in Roumania, Transylvania, Bessarabia, the Hungarian Banat, and Bukowina.
2. **Macedo-Roumanian** by several hundred thousand people in Macedonia, Albania, Thessaly, and Epirus.
3. **Istro-Roumanian** by 3,000 people in Istria.

Owing to the Slavonic influence, the language has acquired more words of Slavonic origin (about 3,800) than there are words from the original Latin (about 2,600). It is only within the last fifty years that the language has been freed from the use of the Slavonic alphabet.

NEW-GREEK LANGUAGE.

The language of ancient Greece comprised a number of dialects. After the conquest of the world by Alexander the Great (330 B. C.) and the spread of the language, a "common dialect" based upon the Attic was generally adopted as the Greek language. It is the Greek of the New Testament, of Aristotle, Plutarch, and Lucian. This "common dialect" gradually underwent changes as a spoken language, and from it the New-Greek now spoken has descended. The differences between ancient and modern Greek are not so great as are supposed by many. Naturally there have been great additions to the vocabulary in order to keep pace with inventions, improvements, and the onward march of civilization. The alphabet is the same. The rough breathing is still written but is never used. Accents are still written, but they are now indications of stress as in English. The dual number is no longer used. Only a few verbs have the middle voice. The dative case is nearly always replaced by the genitive or

accusative with a preposition. There is no optative mood, the subjunctive taking its place. There is a strong movement to purify the language and to strive for a stricter conformity to ancient usage.

RUSSIAN LANGUAGE.

This most important of the Slavonic languages is spoken by over 90,000,000 people in Russia and by nearly 4,000,000 Ruthenians in east Galicia and in north Hungary. The alphabet now used was introduced by Peter the Great, and the present form of the language was practically settled in the sixteenth century, though Russian, as a literary language, dates only from the middle of the eighteenth century.

The three dialects are:—

1. **Great Russian,** spoken by 60,000,000 people in the north, the center, and the east of Russia, but in its greatest purity around Moscow. It is the basis of literary Russian.
2. **Little Russian,** spoken by over 20,000,000 people in the south and the southwest of Russia, and by the Ruthenians in Austria-Hungary.
3. **White Russian,** spoken by about 5,000,000 people in the west of Russia, and around Lithuania.

POLISH LANGUAGE.

The second in importance among the Slavic languages, is spoken by about 16,000,000 people in the parts of Russia which at one time formed the kingdom of Poland, and by over 1,000,000 persons in the United States. The language, like the people, has suffered many vicissitudes. When Christianity was introduced, about 965, Latin predominated. The large number of German settlers in Poland brought many of their common words into the language. The literary classes added many French words, and Russian technical and other terms have been freely incorporated. But all of this has recently been strongly and successfully opposed by the Romanticists and a greater purity in the literary standard has resulted. There are many dialects, of which the most important are: **Great Polish,** in Posen; **Little Polish,** an extremely euphonious dialect spoken in Galicia; **Mazurish** or **Masurian,** spoken in the northeast around Warsaw; **Lithuanian Polish,** used by Mickiewicz and other writers; **Prussian** and **Silesian Polish.** The alphabet is Latin, slightly modified.

CZECH OR BOHEMIAN LANGUAGE.

The Czech (chěk) or Tcheck language belongs to the Slavic group. Of the 6,000,000 who speak the Czech language, 3,650,000 are found in Bohemia; 1,500,000 in Moravia; 130,000 in Austrian Silesia; 300,000 in other parts of Austria-Hungary; 100,000 in Germany; and 250,000 in the United States. At first the Slavic alphabets were employed by the Czechs, but when Roman Catholicism replaced the Greek Church the Latin alphabet was used. As this could not express all of the sounds of the language, *c*, *s*, and *z* were made additional letters by adding diacritical marks to them, and they then took the sounds of *ch*, *sh*, and *zh* respectively.

SLOVAKIAN LANGUAGE.

This is spoken by 2,500,000 in northwest Hungary and the United States. It is very closely related to the Czech language in form, vocabulary, and syntax.

SERVO-CROATIAN LANGUAGE.

One of the Southern Slavic languages. The Servo-Croatian language is spoken by about 8,000,000 persons in Servia, Montenegro, Bosnia, the Herzegovina, Old Servia, Croatia, Slavonia, southern Hungary, Istria, and Dalmatia. Among the Croatian Catholics the Roman alphabet is used; the greater part of the Servians, who belong to the Greek Orthodox Church, use the Kirillitsa or Cyrillic alphabet, a form of the Russian introduced by Cyril. The language differs in minor phonetic peculiarities from the Northern Slavonic, and is one of the most musical and expressive among the Slavonic group.

BULGARIAN LANGUAGE.

One of the Southern Slavonic languages and spoken by about 5,000,000 persons. It has fewer inflections of words than have the other languages of the group. Its vocabulary has drawn from the Turkish, Albanian, Serbian, and Roumanian languages. Among the dialects are the South Thracian, Rhodopian, and West Macedonian. "Old Bulgarian" is the ancient church language, which was the written language. Middle Bulgarian dates from the twelfth century, but Turkish influence interfered with its development until well into the nineteenth century. The Danubian dialect now prevails as a literary language. The Cyrillic alphabet is most generally used. From the tenth to the middle of the eighteenth century, Old Bulgarian was the literary language of Russia.

NEW PERSIAN LANGUAGE.

The Iranian language now spoken in Persia. It dates from the ninth century. The Middle Persian is called Pahlavi, from which the New Persian differs but slightly. The invasions by the Mohammedans enriched the Persian vocabulary by a great number of words which have not only gained a permanent place in the language but whose use marks elegance of style. The dialects are divided into three groups: Pamir, Caspian, and Central.

ARMENIAN LANGUAGE.

The Armenian language was for a long time regarded as one of the Iranian languages; and this belief was supported by the great number of Iranian words which the language had borrowed. But, mainly through the investigations of Heinrich Hübschmann, it has been made clear that the Armenian is an independent language and is one of the great members of the Indo-European group. The language is divided into the Old or Classical Armenian, which is remarkably pure; and the Modern Armenian, of which there are many dialects. The alphabet consists of thirty-six original letters, to which two more were added in the twelfth century. The alphabet was devised and introduced by Mesrob, a bishop of the Armenian Church, in the fifth century, and it is probable that he made free use

of the Greek sources. The spoken language is marked by harsh-sounding consonantal combinations and its general effect upon a stranger's ears is guttural.

HINDUSTANI LANGUAGE.

The name given to the language of northern India. It is a dialectic form of the ancient Sanskrit much changed through the Prakrit of the middle periods. It is divided into about sixty subdialects; the standard of correct speech is the dialect spoken in Delhi, Agra, and Mathura. The language has borrowed freely from the Turkish, Arabic, Persian, and Dravidian languages. This corrupt form is the "Urdu"; the purer form is called "Hindi." The latter is written in the Devanagari alphabet, like Sanskrit and Mahrati; "Urdu" is written in Perso-Arabic script. It is estimated that the Hindustani in some form is spoken by about 100,000,000 persons within an area of 248,000 square miles.

PUNJABI LANGUAGE.

The modern language of the Punjab. It has been regarded as an archaic form of the Hindi, corrupted by many words of Arabic and Persian. It does not contain so large a proportion of Sanskrit words as do the Bengali and Uriya languages. Punjabi contains many dialects, the chief of which are the Multani in the south, Jathki in the center, and Chibhali-Dogri in the north. The official alphabet of the government is the Arabic, while there are several alphabets in popular use.

BENGALI LANGUAGE.

This modern Indian dialect is closely related to the Hindustani and to the Uriya. It is spoken by about 42,000,000 persons. Among the many dialects the Calcutta is the standard. There are more words of Sanskrit origin in the Bengali than in any other modern Indian language. The Bengali alphabet is a beautiful form of writing derived from the Sanskrit or Devanagari.

MAHRATI LANGUAGE

The language of western India, spoken by nearly 20,000,000 people. Of the many dialects, the Dakhani and the Konkani are the chief. The standard of correct speech is the Deshi, spoken near Poona, in the Dekkan. Around Goa there is to be found a large incorporation of Portuguese words. The Mahrati in form very closely adheres to the ancient Sanskrit. The alphabet is the Devanagari in which Sanskrit is written.

SINDHI LANGUAGE.

The language of Sindh is noted for the large number of Prakrit elements which it contains. It was the first of the languages of India to come under Mohammedan influence and contains a great many Persian and Arabic words. It also contains probably the fewest number of Sanskrit words. It has many dialects, of which the Sirai, near Haidarabad, is the standard. The two alphabets in use are the Arabic and the Devanagari.

GUJARATI LANGUAGE.

The language of Gujarat, in western India, is spoken by about 11,000,000 persons. It is of Prakrit origin and contains many words of Sanskrit, Arabic, and Persian origin. The alphabet is derived from the Devanagari or Sanskrit script but the bar above the letters is omitted.

FINNISH LANGUAGE.

The Finnish language, or Suomi, as the natives call themselves, is spoken by the Finns at home in Finland, in Lapland, the Baltic provinces, on the banks of the Volga, and in West Siberia. It and the Magyar, the language of Hungary, are the most highly developed of the Finno-Ugric branch of the Great Ural-Altaic family. Over 2,000,000 people speak Finnish. There are three important dialects:—

1. East Finnish or Karelian,
2. South Finnish,
3. West Finnish.

The East Finnish or Karelian is the oldest and most imperfectly developed; the South Finnish is the chief medium of the mass of Finnish literature. Though there is no article used with nouns, and gender is not indicated, yet there are fifteen cases whereby the noun expresses relations which in English are expressed by prepositions; only the present and past tenses of verbs are found, the future tense being expressed in a roundabout way. Despite the limitations which have been noted, the language is capable of expressing the finest shades of meaning.

HUNGARIAN LANGUAGE.

This language is called by the people who use it, Magyar. It is one of the Ural-Altaic languages and is one of the few European languages which do not belong to the Indo-European group. For a long time, Hungarian was thought to be related to the Turkish language, but it is now clearly decided that it belongs to the Finno-Ugric group. The roots are monosyllabic and affixes are added to the unchanged roots, though the affixes are changed to conform to very decided laws of euphony. This process of upbuilding of words may be carried to an almost incredible degree, and, though the roots are of one syllable, some of the words made from them are of very many syllables. The verb is the chief word in the sentence and is capable of being made to express the finest shades of meaning. All of which is most surprising when it is considered that there is no grammatical gender and no verb "to have" in the language.

TURKISH LANGUAGE.

The Turkish is the most important of the Finnish-Ugrian group of languages. In ancient times the Turks had alphabets of their own, but since their conversion to Mohammedanism they have used the Arabic alphabet. They have increased the 28 letters of the Arabic alphabet to 33 by adding dots to five of the characters. The root of every word is unchangeable, but prefixes and suffixes are lavishly used. Each Turkish verb is capable of over 25,000 changes to indicate all of the moods, tenses, numbers, and persons; and all of this seemingly appalling complexity is brought about by memorizing some forty-four syllables or enclitics with which singly and in combination the building is done.

The vicissitudes to which the Turks have been subjected have brought about a great number of dialects among the people who speak Turkish, so much so that while any Turk might be able to satisfy his simplest needs in any part of the empire, an inhabitant of Bokhara, beyond the Caspian Sea, would require the services of an interpreter in Constantinople.

MONGOLIAN LANGUAGE.

The language of the Mongols is one of the Ural-Altaic group, very similar to both the Manchu and the Korean. It is remarkably free from dialectic variations. The alphabet was introduced in the time of Genghis Khan, having been borrowed from the Uighur Turks who had, in their turn, derived it from the Syriac. It consists of seventeen consonants, seven vowels, and five diphthongs. The book language differs from the spoken language.

GEORGIAN, IBERIAN, OR GRUSINIAN LANGUAGE.

This is the chief of the Caucasian group of languages. The chief characteristics of the entire group are the few vowels and the difficult combinations of consonant sounds, gutturals, and sibilants. The language as written is a modified form of the Armenian alphabet, a translation of the Bible dating back to the eighth century.

CHINESE LANGUAGE.

One of few very rudimentary forms of speech that have maintained a lengthy endurance is the language of the Chinese. It is a monosyllabic language. Each word is uttered by a single effort of the organs of speech and conveys a complete idea. It has no inflections and no parts of speech. Case, gender, number, and person are indicated not by any change in the word but by the addition of another word to the sentence. Shades and changes of meaning in the one word are made by a change of tone, and some words have as many as seven separate tones. It is one of the most difficult languages in the world to learn for that reason and also because one must learn the two or three different forms of the book language and the spoken languages in their many dialects. There is a vocabulary of 24,235 separate words, and the addition of rare and obsolete forms brings the total in Kang-hi's dictionary up to 44,449. The vocabulary of daily life, however, does not exceed 3,000 words. To learn the written language the first step is to learn the 214 signs. There are only 400 sounds in the language, but these are increased to the desired number by using different tones and by the aspirates or breathings in the case of vowels. The word forms employed in the written language are not in any way an alphabet of the language for there is none; they form rather a dictionary. Two forms of writing are in general use,—the "pattern" and the "running" hands.

JAPANESE LANGUAGE.

The Japanese is not at all related to the Chinese language or the Aino language of the aboriginal inhabitants of the Japanese Archipelago. It is most nearly related to the Korean language in structure, but less in etymology. The languages of the people of Loo-choo and other islands around Japan are its nearest neighbors and closest relatives. The spoken and the written forms of the language differ so much that two sets of grammars and dictionaries are needed. Since the ninth century the learned people have spoken Chinese, just as in some other countries Latin was the language of the learned. But the Chinese spoken in Japan is based upon an obscure and rather traditionary dialect, so that it is unintelligible to both the common people of Japan and even to the Chinese themselves. Previous to the introduction of Chinese into Japan there was no writing. The Japanese use the Chinese characters in writing, but as these are representations of monosyllabic words in Chinese, their use by the Japanese in representing the polysyllabic words which their language contains only adds to the already too great confusion of both speech and writing. Among the many grammatical peculiarities which the language presents may be noted that nouns do not distinguish gender, number, or case; there are no personal or relative pronouns, or article; prepositions are placed after and not before the words with which they are connected by sense; the verb has only three tenses, present, past, and future, but an almost endless number of moods; the verb has neither number nor person; adjectives have only the one form of the positive degree, other degrees of comparison being indicated by added words; the native Japanese numerals extend only to ten, the Chinese are used as well and for the higher numbers. Every Japanese word ends with a vowel sound.

KOREAN LANGUAGE.

The Korean language occupies a place midway between the Japanese and the Mongol-Tatar. Chinese is the literary and official language but not the language of the common people. The Korean and the Chinese languages are entirely distinct, though it is inevitable that many words of Chinese origin and form should be found in the Korean language. There are eleven vowels and fourteen consonants in the Korean alphabet, which goes by the name of Onmun or the "vulgar characters." There is no indication of gender; no plural terminations; no grammatical means of distinguishing animate or inanimate objects; but the variety of form and the expressiveness of the Korean verb are almost unequaled in any other language. Over one fifth of the words in the language are verbs and they take on a variety of forms. Words may end with either a vowel or a consonant.

ARABIC LANGUAGE.

Of the Semitic group, the Arabic and some Aramaic dialects spoken in Palestine, Mesopotamia, Kurdistan, and Armenia are the only languages which may in any sense be regarded as living languages. Arabic is divided into:—

1. Old Arabic,
2. Modern Arabic of
   - (*a*) Syria,
   - (*b*) Mesopotamia,
   - (*c*) Egypt,
   - (*d*) Tunis,
   - (*e*) Malta, and
   - (*f*) Oman and Zanzibar.

3. South Arabic.
   (*a*) The Minean and Sabæan inscriptions.
   (*b*) Some dialects of southern Arabia.

The alphabet consists of 28 characters, being distinguished by 11 diacritical marks. Writing is from right to left as in Hebrew and Aramaic and the opposite of our method. The language has an exceedingly extensive vocabulary and the verbal forms are very complicated. The Arabic is the common language to-day in Palestine, Syria, Mesopotamia, Arabia, Egypt, northern Africa, and Malta.

ARAMAIC LANGUAGE.

The Aramaic, the language which Jesus spoke in his daily life, is one of the divisions of the Semitic. It was spoken over the whole range of Semitic influence, except in southern Arabia and Abyssinia. Aramaic encroached upon the Hebrew in Jerusalem as early as the return of the Jews from the Babylonian captivity, and became the popular language; while Hebrew became more and more the sacred and literary language. There is to-day a great Christian literature in Aramaic dialects produced by missionaries in the Holy Land.

AFRICAN LANGUAGES.

1. **Semitic,** Arabic and Abyssinian.
2. **Hamitic,** Libyan.
3. **Hottentot,** Bushman.
4. **Bantu Languages,** embracing nearly all of Africa south of the equator. The type is the language of the Zulu Kaffirs.
5. The **Negro Languages,** spoken by the negroes between the equator and the Sahara, present a remarkable complication of linguistic difficulties which have not yet been solved.

The only one negro dialect which has risen to the development of a writing and an alphabet of its own is the Vei, on the west coast near Cape Mount. It was invented in 1834 by a native, Doalu Bukere, and several books have been written in it. Missionaries, however, decline to use it, and it is lapsing. Elsewhere throughout Africa writing is almost exclusively confined to the white race, who use the Semitic or European characters.

UNIVERSAL LANGUAGES.

Several attempts have been made to build up an artificial language which can be most readily acquired by persons of all nations, with a view to easy and rapid communication. In the several systems which have been presented, the avowed purpose has been to facilitate business, travel, and correspondence, rather than to obtain a medium for literary expression.

In political use the French language has approached universality. In commerce, trade, and in diplomatic use English has gained ground rapidly.

As far back as 1688, Bishop Wilkins published his *Essay toward a Real Character and a Philosophical Language,* in which, by a system of characters much resembling modern shorthand. he sought to provide a common medium of communication.

Volapuk.—Johann Martin Schleyer, a German priest, in 1879, published his "world-speech," Volapük. He chose elements which were common to several languages, reduced them to their simplest forms (which often rendered them unrecognizable), and adopted an alphabet of 27 letters, to which he gave their Latin, German, or French values. A system of upbuilding upon the roots required the frequent use of grammar and dictionary. The plan attracted world-wide attention. Societies to promote it sprang up everywhere, and the language spread widely for a time. But defects, limitations, and faults were recognized by its students. The board of directors opposed radical changes proposed, and amid dissensions the scheme nearly collapsed. Reorganization gave the plan new life. Changes were made, and under the directors, Woldemar Rosenberg (1893-1898) and Rev. M. A. F. Holmes (1898-1903), practically a new language was adopted,—*Lingu international* or *Idiom neutral,* "the neutral language."

Esperanto.—An artificial language invented by a Russian scholar, Dr. L. L. Zamenhof, of Warsaw, in 1887. The essential difference between it and Volapük lies in the fact that the elements of the words are common to all of the European languages. Upon this is based the hope that it will be most easily acquired by all. The pronunciation is invariably phonetic. There are only 2,500 root words, and yet the language is wonderfully rich in power of expression, a quality which is secured by numerous affixes and by facility of combination. There are no exceptions to grammatical rules. The system was practically unknown in the United States before 1905. Since then the study has been enthusiastically taken up by several societies, and its spread has been both marked and rapid.

The Esperanto movement in New York is supported by the Society for the study of Esperanto with 2,000 members, and 2,000 others belong to the *North American Review* Society. There are probably 6,000 other Esperantists throughout the United States.

But in the latter part of 1908 a strong reaction took place in the United States against Esperanto. It was stated by many of its former strong adherents that the language inadequately met the requirements of a universal speech. In consequence many fell away in their support. Then followed the criticism that the device in no way met the requirements of a literary language, that nicety of expression could not be conveyed by it, and that it did not fulfill the demands of the best vehicle for conveying thought.

Ido.—This system, sometimes called Esperanto Simplified, or Internacione Linguo, is spoken of as the quintessence of European languages. It has been adopted by the New York Society for the Study of Esperanto as a substitute for Esperanto. In Ido all arbitrary roots and words are thrown aside and the choice of roots is in every case decided by a resemblance to the greatest number of European roots. This resemblance is called the "maximum internationality." Simplicity and regularity are aimed at; and there are no exceptions and no unnecessary rules. Already much literature has appeared in Ido and the accomplishment of its purpose is confidently predicted by its enthusiastic supporters.

AMERICANISMS.

Americanisms are not barbarisms or vulgarisms. America has made important and valuable additions to the English language. In America the English language has grown, expanding in certain directions, contracting in others, and sharing in the great process of evolution which every language undergoes. The language in America to-day is by no means the same as that brought by our forefathers from England. At the same time it must be remembered that the language in England to-day is by no means the same as it was when our forefathers left England. In the minds of some the term "Americanisms" implies undesirable, inelegant, or even vulgar additions made to the English language by Americans. This is by no means true either in fact or in definition. By Americanisms are meant those different meanings and uses of the words common to both countries which prevail in America; and also the words new to the language which Americans have introduced. Among the classes of words which are regarded by students of the language as being more or less peculiar to America are:—

1. Archaisms, obsolete meanings in England.
2. Words used in a different sense in America from that in England.
3. Words which in America retain their old meaning but have taken on a new meaning in England.
4. English colloquial or provincial or dialectic words which have been incorporated into the language in America.
5. Words which the new conditions or new products in America have required to be newly coined.
6. Contributions from the French, Spanish, and Dutch languages, which America has received but England has not, chiefly because she has neither need nor use for them.
7. Words of American Indian origin.
8. Peculiarities of negro dialect and of African words used by negroes.

It is not at all strange that there are some differences between the language of the people of England and those of the United States. The most remarkable thing is that there are so few. In the narrow limits of England, dialects exist so different from each other that it is with difficulty that some of the people are understood by others. Three hundred years of separation from England, all of the time geographically and part of the time politically, is of itself enough to account for many of the changes. Among these is the retention by Americans of the older meanings of many English words, which have become obsolete or archaic in England. Americans continue to use many words as their forefathers learned them in England in the olden time. The large influx of foreigners into America is responsible for the introduction of many words which have become naturalized in this country but are unknown in England. The settlement of new regions, the introduction of new arts, and the new political and social conditions under which Americans live are also responsible for many changes.

Literary and commercial intercourse are large and powerful factors in preserving the similarity of language. Despite these, some radical changes in the language have been brought about in America.

A List of Words or Meanings Peculiar to America, with Their Sources.

ADOBE. Sun-dried brick used in Mexico and other countries having small rainfall. Introduced directly from the Spanish.

BACKWOODS. A newly coined word used freely in the United States and Canada to designate any thinly populated or remote districts away from cities.

BAGASSE. A plantation term to describe the refuse of sugar cane after crushing and extraction of the juice. Derived from the Spanish *bagazo* and the French *bagasse*. Contributed by the planters.

BARN. An American use of this word is a stable for horses. The English use the word stable in that sense, and restrict the use of barn to a place in which to store grain, hay, etc.

BAYOU. Used in the southern United States to denote the outlet of a lake, a member of a delta of a river, or a sluggish water course. Derived from the French *boyau*.

BEAD, TO DRAW A. A phrase of western American origin meaning to take deliberate aim. Draw in the West is a mining term indicating lifting or raising; the bead is the round or globular sight on the fore part or muzzle of the barrel of a rifle or revolver.

BED ROCK. A mining term used to describe solid rock underlying loose detrital masses such as sand and gravel.

BLAZE. A white spot made on a tree to show a boundary, trail, or path in the woods.

BLOODY SHIRT. A political contribution signifying to arouse indignation or resentment by referring in a demagogic manner to murders and outrages committed by political partisans, especially by members of the Kuklux Klan during the period of reconstruction in the South. The bloody shirt is the symbol of murder or outrage.

BOARDS. In America, boards are more than 4½ inches wide and less than 2 inches thick. The English use the word deals where we use boards.

BOGUS. A trade contribution originally used to describe counterfeit money; gradually extended to apply to anything based on sham or false pretense. Much conjecture has been indulged in tracing the origin of the word, some suggesting bagasse, others tantrabogus. It was used in 1827 in the Painesville (Ohio) *Telegraph* to describe a counterfeit money apparatus.

BONANZA. A mining term denoting a rich mass of ore; hence a profitable enterprise, good luck. Derived from the Spanish *bonanza*, meaning good weather at sea, prosperity, success. To strike a bonanza.

BOODLE. A political contribution referring to the fraudulent obtaining of money in public service. Derived from the Dutch *buidel*, property, estate, etc. Largely replaced by the modern word graft.

BOSS. A Dutch contribution from *bass*, signifying an overseer or superior.

BROOM CORN. The *Sorghum vulgare* grown extensively in the United States. From its panicles brooms and brushes are largely made. A plantation contribution.

BROTTUS. A word used by the negroes of Georgia to denote a small gift. It is also used to denote a quantity added or thrown in as a gratuity or "for good measure." Often spelled brotus. The word is of Anglo-Saxon origin.

BUCCRA, BUCKRA, or **BOCKRA.** A word, supposed to be of African origin, used by the negroes of the southern United States, the West Indies, and elsewhere to denote a white man.

BUGGY. In England, a one-horse, two-wheeled vehicle without a top. In America, a light, one-horse, four-wheeled vehicle, usually with one seat, either with or without a top or hood. The word is of Anglo-Indian origin.

BUMMER. A German contribution from *bummler*, a braggart or wanderer. The word is both colloquial and slang, especially in its contraction, bum, which signifies a drunken loafer.

BUNCOMBE. A political contribution signifying empty or meaningless talk; pointless speech-making. Wheeler's *History of North Carolina* says that a member for Buncombe in North Carolina tired out the members of Congress with an unentertaining speech which he admitted was only for Buncombe. Sometimes spelled bunkum.

BUTTE. A term used on the upper Missouri and west to the Pacific to denote a hill or mountain which is so conspicuous that it may be used as a landmark. The word is taken directly from the French, and its use is in a great measure a relic of the former occupancy of the Northwest by the French.

CACHE. A word introduced by the Canadian voyageurs around Hudson Bay. It means to conceal or a place of concealment, and relates to stores of provisions.

CALICO. In England, this is white or unprinted cotton; in the United States, it is printed or figured, never plain. First imported into England from Calicut, India, whence the name.

CANYON. The use of this word is peculiar to the United States; very rarely used in Mexico; and not at all in Spanish South America. A gorge or narrow valley with precipitous sides throughout the Cordilleras.

CARPETBAGGER. A political contribution describing those Northerners who, during the reconstruction in the South, sought for political office there and to influence the negro voters for unworthy purposes. An opprobrious epithet applied to any unpopular Northerner in the South.

CAUCUS. A political contribution describing the meeting of the members of a political party for conference. The word appears in the diary of John Adams under date of February, 1763. It originated in Boston, Mass., and some have conjectured that it is a corruption of *Calker's meeting*; others think this improbable.

CHINQUAPIN. A word of American Indian origin denoting a kind of dwarf chestnut (*Castanea pumila*) ranging from Pennsylvania to Texas; also the *Castanopsis chrysophylla* of the Sierra Nevada and Cascade mountains.

CHOWDER. A dish in which the chief ingredient is clams or other fish. Supposed to be derived from French *chaudière*, a caldron.

CLEARING. A word of American origin indicating a tract of land cleared for cultivation.

CLEVER. An American use of this word is in the sense of charitable, hospitable, or good-natured. In England it is now restricted to skillful or intelligent.

COLD SLAW (properly *Cole Slaw*, or *Cabbage Slaw*). A Dutch contribution from *kool slaa*.

CONDUCTOR. This official on an American railway train is not known in England. The officer who most nearly takes his place there is called the guard; but his duties and authority are not nearly so extensive.

COPPERHEAD. A political contribution descriptive of a Northern sympathizer with the South. Derived from the venomous serpent of that name.

CORN. In the United States the word is restricted to mean maize or Indian corn; in England it is generally applied to wheat, rye, oats, and barley; in Scotland, to oats; in Ireland, to barley.

CORN SONGS. Used by the negroes in Maryland for harvest songs.

CORRAL. A term contributed by Western ranch life in America. It is the pen or inclosure into which horses or cattle are driven. A colloquial use of the verb to corral is to express the idea of capturing, making a prisoner of. The word is of Spanish origin and is accented on the last syllable.

COWBOY. A term contributed by American ranch life, indicating a man employed to care for grazing cattle and generally doing his work on horseback.

CRACKER. Used in the United States to denote the lower class of white hill dwellers of Georgia, Florida, and other Southern States. It is supposed to signify that his diet is chiefly cracked corn.

CRACKER. In the United States this is a hard, thin, crisp biscuit. A purely American use of the word.

CRACKLING. In the United States this word is used to denote the crisp residue from hog's fat after the lard has been tried out.

CRACKLINGS. A word used by negroes in the Southern States to denote a sort of bread containing roasted pork rinds.

CREOLE. A native of Louisiana of French or Spanish descent. Derived from the Spanish *criollo*.

CROW, TO EAT. A political contribution signifying doing something distasteful or humiliating; swallowing one's words; to be particularly mortified.

CRULLER. A Dutch contribution from *kruller*, to twist. It is a twisted doughnut.

DARK HORSE. A political contribution derived from horse racing, where a horse whose former performances are not known and little information can be obtained concerning it is called a dark horse. A candidate unexpectedly brought forward at a political convention about whose past career little is known.

DEPOT. An American use of this word in connection with railways was recently general in speaking of the passenger depot and the freight depot. The word station, commonly used in England, in this connection, is becoming more general in America; and freight house is also growing in use.

DIGGINGS. A mining term originally descriptive of a place where mining is carried on; but, in a colloquial sense in the western United States and in Australia, used for region, place, or locality generally.

DOUGHFACE. A political contribution describing a Northern politician who was inclined to accede to the demands of the South just before the war.

DRESS. American use of dress is often restricted to the garment worn by women which the English call a gown or robe.

DRUMMER. A trade contribution applied to a traveling salesman or commercial traveler; one who drums up trade.

EDITORIALS. The opening articles of a newspaper are called in America editorials; in England they are leaders; and in France they are *chroniques*.

ELEVATOR. In England this passenger and freight hoisting apparatus is called a lift.

FALL. Used when the English would use autumn. An old English use. It is the English people that have changed the use of this word.

FAVORITE SONS. A political contribution describing possible presidential candidates from the several states.

FENCE-RIDING or **TO BE ON THE FENCE.** A political contribution indicating a state of indecision or of neutrality concerning parties, persons, or questions.

F. F. V'S. An abbreviation for "first families of Virginia." A humorous allusion to the highest social class in the South.

FILIBUSTER. A political contribution to denote a member of the minority who resorts to obstructive or irregular tactics to prevent the adoption of a measure favored by the majority.

FIRE-EATER. A political contribution denoting a violent, bitter, Southern partisan before the war.

FIRE, TO FIGHT. An American contribution alluding to the desperate efforts of frontier settlers to prevent the spread of forest or of prairie fires.

FLESHY. The old English sense of stout, no longer prevailing in England, is preserved in America.

FOREHANDED. An old English sense of being well circumstanced regarding property or money has survived in America. The English use is now limited to the sense of early, timely, or seasonable.

FRESHET. The English use flood. An old English word, which the English themselves have changed.

GARROTE. To put to death by the garrote. Taken directly from the Spanish.

GERRYMANDER. A political contribution denoting an arbitrary arrangement or rearrangement of the political divisions of a state without regard to natural or proper boundaries, for the purpose of changing the political aspect or vote of the district. So called from such redistricting of Massachusetts in 1811 when Elbridge Gerry was governor.

GONE COON. A slang expression current in the United States and indicating one in a very bad way or in a hopeless condition or situation. Coon is an abbreviation of raccoon.

GOOBER. A term in the southern United States for the peanut; supposed to be of African origin.

GREENBACKER. A political contribution denoting a member of the party which demanded the suppression of banks of issue (1874), the confinement of currency to greenbacks, and the total or partial payment of the national debt in that currency.

HACK. In America, applied to a coach, or hackney-coach; in England a hack is a hired horse.

HALF-BREED. A political contribution denoting a member of the Republican party in New York state that in 1881 and succeeding years opposed the "stalwarts" of the party, who controlled the organization. Such was considered only half a Republican.

HATCHET, TO BURY THE. An expression denoting a cessation of hostilities or the end of a quarrel; founded on the ceremony of burying the tomahawk by North American Indians as a signal of friendship.

HEFT. In America heft means to estimate the weight of an object by lifting in the hand; in England the old sense of lifting has been retained.

HESSIAN FLY. A destructive insect, injurious to wheat; supposed to have been introduced into the United States during the War of Independence by the Hessian troops. The *Cecidomyia destructor.*

HOG-WALLOW. An American contribution to describe a peculiar kind of irregular surface upon which the clayey soil is broken up into a succession of hillocks and hollows like "cups and saucers turned topsy-turvy."

HOMELY. In America, plain-featured, not handsome; in England, homelike or unadorned.

HOMINY. A word of American Indian origin denoting hulled and ground or broken maize.

HOOK. A Dutch contribution from *hoek*, a corner; it is applied to a point of land turned landward at its outer end. Common in proper names on the New York and other coasts early settled by the Dutch.

HORSE CAR. The English speak of this conveyance as a tram.

HUNKER. A political contribution denoting a conservative in the Democratic party of New York state in 1845 who opposed the Barnburners or radical section.

INDIAN MEAL. A plantation contribution describing the meal made from maize or Indian corn.

JAYHAWKER. A political contribution denoting one who carried on irregular war in eastern Kansas in the early days of the Civil War.

JERKED BEEF. Beef cut into long, thin strips and dried in the sun. Derived from the Chilian *charqui.*

JEW. In America, to haggle or dispute in selling; in England, to cheat. An American might speak of trying to jew one down in price; an Englishman might declare that one tried to jew him out of a thing.

KEY. A low island near the coast. Used especially in regions where Spanish is or was formerly spoken. Derived from the Spanish *cayo.*

KILL. A Dutch contribution; signifies a small stream.

KOTOW. A word of Chinese origin indicating obsequious politeness.

KUKLUX KLAN. A political contribution; the name of a secret oath-bound society in the Southern States after the close of the Civil War whose members sympathized with secession and perpetrated outrages upon negroes and Northern sympathizers. The name is derived from the Greek *ku'klos*, a circle.

LAGNIAPPE. A word commonly used by the negroes of the Southern States to denote a gift from tradesmen when buying; good measure; a brottus.

LAM. To beat or to thrash. Of old English origin. No longer used in England, except, perhaps, provincially.

LASSO. A rope of hide from 60 to 100 feet in length, with a sliding noose, used in catching cattle and wild horses. Derived from the Spanish *lazo*, a snare.

LEVEE. A term in use in southern and western United States to denote an embankment along a river to confine it in its channel and also a landing place for vessels. Derived directly from the French.

LIKELY. An American use of the English word promising. An American may speak of a likely-looking colt, where an Englishman would call it a promising colt.

LOCOFOCO. A political contribution denoting one of the equal rights section of the Democratic party in 1835.

LOGGING CAMP. An American contribution to indicate the headquarters for men and horses while carrying on lumbering.

LOG ROLLING. A political contribution denoting the exchange of services to secure the passage of schemes or measures by politicians. Neighbors joined in helping one another to roll their logs; so politicians who assisted one another in their respective interests were engaged in log rolling.

LUMBER. An American speaks of lumber where an Englishman calls it timber. The English use of lumber is in the sense of something which encumbers or is heaped together in disorder, as, to lumber up a room.

LYNCH LAW. The administration of penalties by unauthorized persons to anticipate legal delays. The kind of law exercised by Charles Lynch (1736-1796), a Virginia planter who, with his neighbors, Robert Adams and Thomas Calloway, outraged and maltreated lawless or disaffected persons in his neighborhood, especially Tories and those opposed to the Revolutionary party.

MAIL. In America a letter is mailed; while in England it is posted. In America a package comes by mail; while in England it is received by post.

MESA. Commonly used throughout the southwestern United States to denote a table-land, a broad and flat river terrace, or a level or gently-sloping region. Taken directly from the Spanish.

METIF. An Indian half-breed or the offspring of a white person and a quadroon. From the French *métif.*

MOCCASIN. A word of American Indian origin denoting their peculiar foot gear.

MOONACK. A name of the woodchuck in southern United States. The negroes also use the word to denote a mythical animal. Supposed to be of American Indian origin.

MUGWUMP. A political contribution denoting one of the independent members of the Republican party who refused to vote with the party in 1884, but voted Democrat, Prohibitionist, or abstained from voting.

MUSTANG. A wild horse of the pampas and prairies of America. Derived from the Spanish *mesteño.*

NOODLES. A Dutch contribution from *noodlejes*, an imitation of macaroni; made from wheat flour and used in soups, etc.

NOTIFY. In America notify means to give notice; in England, to make known. The word is also used in America, where inform would be preferred in England.

OFFAL. Literally that part which *falls off.* An English term for those parts of a slaughtered animal not fit for food; also used in America. In the vicinity of Chesapeake Bay, "offal" is the small fish taken in nets and used for fertilizer because they are unfit for food.

OMNIBUS BILL. A political contribution applied to a bill embracing several distinct objects; it was the popular name for the Compromise of 1850 in which Clay combined several different objects. The bill was broken up into several individual bills and passed separately.

OPOSSUM. The name of this well-known animal is of American Indian origin (*opassom*).

OVERSLAUGH. A Dutch contribution from *overslaag*, to skip or pretermit. The word is peculiar to the United States and denotes to pass over in favor of another; to hinder or obstruct; to oppress or keep down.

PAN OUT. A mining term originally used to describe the yield of gold panned in a locality, but extended to mean yield or afford in any sense; to turn out more or less satisfactorily.

PICKANINNY. A child of a member of any negroid race. Derived from the Spanish *pequeño niño.*

PINDER. A name given to the peanut among the negroes in Florida and other Southern States. Supposed to be of African origin. Also pindar and pindal.

PIPE-LAYING. A political contribution denoting the preparation of plans for promoting a political scheme or measure.

PLANK. A political contribution denoting one of the articles or paragraphs in the platform of a party. The use is purely a figurative one, where the word platform is taken in a double sense.

POND. In America, a natural or artificial pool of water; in England, only artificial pools are called ponds.

PORTAGE. A common use in the United States; denotes portions of interrupting land along river courses which necessitate carrying the goods, boats, etc., from water to water. Derived directly from the French.

POSTED. A trade contribution derived from the ledger; supplied with fullest information; possessed of needed intelligence; well-informed.

POWWOW. A word of American Indian origin from *powwan*, a prophet or conjurer. The word has a colloquial use denoting a meeting or conference at which there is more noise than deliberation.

PRAIRIE. This word is taken directly from the French. It was frequently used by Father Hennepin and other French writers in describing the areas adjacent to the Mississippi. Inhabitants of the prairies never speak of them as plains. The latter term is restricted by them to the arid, treeless wastes; but never applied to the richly fertile undulating prairies.

PRAIRIE SCHOONER. A term originating in western America and used to designate the white-covered wagon used by emigrants to convey themselves and goods across the prairies before the completion of railroads across the continent.

PRETZEL. A German contribution denoting a small, brittle biscuit fashioned in the form of a knot and salted on the outside.

PRIMARY. A political contribution denoting a meeting of voters belonging to the same political party who meet to choose candidates or delegates, etc.

PROSPECT. A mining term meaning to look for indications of gold or other mineral; gradually extended to describe a search or investigation for other things.

RACCOON. The name of this familiar animal is of American Indian origin.

RAFT. A colloquial use in America to indicate a miscellaneous or unassorted collection of articles as, a raft of papers, or a whole raft of things to attend to. The word is derived from the use of raft to indicate the collection of trees transported in rafts.

RECONSTRUCTION. A political contribution denoting the process by which, after the Civil War, the seceding states were restored to rights and privileges as members of the Union (1865-1870).

RELIABLE. An American uses reliable when an Englishman would use trustworthy.

ROUND-UP. A ranching term from western America and describing the herding or driving together of animals on a ranch for inspecting, counting, sorting, or branding. The word has acquired a meaning of the completing or finishing of some large task.

SACHEM. A word of American Indian origin; a sagamore or chief.

SALOON. In America this is applied to a place where intoxicating liquors are sold. An Englishman speaks of such as a tap-room, or grog-shop, or public-house. English use restricts saloon to a spacious, elegant apartment, or a hall for public amusements or entertainments.

SALT RIVER. A political contribution denoting the defeat of a candidate for political preferment. Such an one is said to go, row, or be sent up Salt River. It is said that the navigation of Salt River in Kentucky is extremely arduous and a hard task for the unfortunate rower.

SAMBO. The offspring of a black person and a mulatto. Derived from Spanish *zambo*.

SETTLE. A trade contribution from the accounting room; to liquidate; to pay; to balance.

SHINPLASTER. A political contribution denoting the small paper fractional currency issued by private and irresponsible parties during the suspension of specie payment. These were especially abundant in the panic of 1837 and during the war (1861-1865). Few of them were ever redeemed. When the government assumed the issuance, the term was applied to them also.

SHIVAREE. A mock serenade with horns, kettles, bells, either in annoyance or insult. Derived from the French *charivari*, and often so spelled.

SICK. The old English sense is retained in American use. The modern English use implies affected by nausea and a desire to vomit. In many cases where an American might use sick, an Englishman would say ill.

SKUNK. The name of this animal is of American Indian origin.

SLEEPER. This American designation of the wooden supports of car rails is a tie in England.

SMART. Several colloquial uses of smart are to be noticed in America. (1) Considerable or large; as, a right smart distance. (2) Extremely bright and clever; as, smart as a steel trap. (3) Keen in business; sharp and often of questionable honesty. In England the word is restricted to talented.

SMUDGE. In America, a smoke made to drive away mosquitoes, etc.; in England, any overpowering smoke.

SPELLBINDER. A political contribution denoting a political orator or party speaker. The term was first used during the presidential campaign of 1888.

SQUATTER. A term of American origin used to indicate one who settles upon land, usually public, without title to the same.

SQUATTER SOVEREIGNTY. A political contribution denoting the theory advocated by Democrats 1847-1861) and under Douglas that the people of a territory and not Congress had the right to decide whether slavery should exist within a territory. Called also popular sovereignty.

SQUAW MAN. An American contribution from the West to denote a white man who has married an Indian woman and has taken up the Indian mode of life either in part or in whole. Its use is generally contemptuous.

SQUELCH. To crush down; to put down. An old English word used by Samuel Butler in *Hudibras* and by others. No longer used in England.

STAKE A CLAIM. A mining term used to describe the marking out of a claim in gold regions. Later it meant the dividing off by means of marks or stakes.

STAMPEDE. A ranch term derived from the Spanish *estampido* and describing the panic-stricken rush of cattle in herds or droves.

STOOP. A Dutch contribution from *stoep*, and signifies the step or steps leading up to a house.

STORE. In America, applied to a shop. The English restrict the meaning to a place where goods are stored, and their use of the word corresponds to our idea of a warehouse or storehouse.

SUCCOTASH. Of American Indian origin, denoting a dish of maize and beans mixed.

TARRY. To delay. This is the old English form, common in the Bible and Book of Prayer. The English have discarded the word to a great extent.

TAVERN. Americans call a tavern what Englishmen call an inn, for in England there is never any lodging at a tavern. When lodging is supplied the place is an inn.

TEMPER. In America temper is the show or display of passion; in England it is the control of it.

TIMBER, THE. An American term to indicate the woods or the growing timber. The slang expression "taking to the tall timbers" means seeking a refuge from an embarrassing situation, and is a modification of "taking to the woods."

TOBOGGAN. A word of American Indian origin denoting a kind of sled without runners.

TOMAHAWK. A word of American Indian origin; the war ax of the Indians of North America. To bury the tomahawk was a signal of peace among the Indians.

TRACK. In America this means the rails upon which a train runs; in England it is always spoken of as the line.

TRAPPER. An American contribution indicating one who makes his living by trapping animals.

TRUCK-PATCH. A farm contribution descriptive of ground upon which vegetables, fruits, etc., are raised for market. The use of truck to describe the produce of a market garden is peculiar to the United States.

UGLY. In America ugly is often used where in England ill-natured would be used.

VENISON. In America venison means only deer's meat; while in England it means wild meat of any kind.

VEST. In England this article of a man's dress is always called a waistcoat.

VOYAGEUR. A French word in common use in America to denote the travelers in rivers and inland waters by boats or canoes. It has come directly into the language and has been widely disseminated by the very voyageurs themselves who early penetrated the remote parts of the country.

WIGWAM. A word of American Indian origin denoting a hut or house used by the Indians.

WILT. A colloquial use in America is that of becoming languid; of losing energy or strength. In America it is often used of plants when in England wither would be used.

WIRE-PULLER. A political contribution denoting a person in authority who manages the carrying through of a political enterprise or guides a political organization.

YAZOO FRAUD. A political contribution denoting the bill for the sale of a tract embracing what is now the state of Mississippi and one half of Alabama in 1795 by Georgia. The law was repealed in 1796 because it was fraudulently enacted. The U. S. Supreme Court in 1810 declared the repealing act void.

COMPOSITION.

Style is the man himself.—*Buffon.*
Style is the physiognomy of the mind, and a safer index to character than the face.—*Schopenhauer.*
Style is the personal impress which a writer inevitably sets upon his production.—*Arlo Bates.*

Style.—The above quotations imply not only the author's method of expressing his thought, but also his method of thinking. As style reflects the character and personality as well as the intellect of the writer, there arise many varieties of style. Hence, there is no one good style. To acquire a good style one must live with the best authors, read their works, and study their modes of expression and thinking. Disraeli says that mastery of one's subject is the true secret of style. To know what you would say and to say it with freedom and individuality is the great point.

Composition is the art by which ideas and mental impressions are conveyed in written language. To gain skill in composition it is necessary to examine its elementary principles. Considering it as a whole, there are three principles of structure which govern its mechanism: *Unity*, *Mass* or *Emphasis*, and *Coherence;* and three of quality which govern the intellectual character, *Clearness*, *Force*, and *Elegance*.

Unity requires that every composition shall center around one fundamental idea, since without it the value and effectiveness of the entire work will be destroyed; that every paragraph and sentence shall have one essential thought or purpose.

Mass concerns the external arrangement of what is written; it governs the placing of words and clauses in the sentence, of sentences in paragraphs, of paragraphs in longer compositions. Professor Barrett Wendell says, "The test of a well-massed sentence is very simple: Are the words that arrest the eye, the words on which the writer would arrest your attention?" He further says, "In an ideally massed sentence the most significant words come close to the periods, the less significant close to the lesser marks of punctuation, the least significant in those unbroken stretches of discourse where there is nothing but words to arrest the eye."

Coherence is the law of internal arrangement. It determines the relation of each part to the others, which relation must be clear and unmistakable. Words that are closely related in thought should be kept together. This is a good rule to follow in sentence construction. In paragraph making the placing of sentences to give the right proportion of strength to each one is more difficult.

It is not only necessary for the writer to follow closely the principles of *Unity*, *Mass*, and *Coherence*, but good style requires also a selection and right use of words. (See page 36.) This is called *Diction*, and it is based upon *Good Usage*, that usage which is present, national, and reputable. It is the general agreement regarding forms and standards by means of which ideas are conveyed. *Purity*, *Propriety*, and *Precision* are the most important qualities of good diction.

Purity relates to three things: viz., the forms of words, their construction in sentences, and the meaning of words and phrases. A violation of purity in the forms of words is a *barbarism;* in the grammatical constructions it is a *solecism;* in the meaning of words, an *impropriety*. Words should be chosen with reference to the desired effect, whether long or short, of English or foreign origin, general or specific, literal or figurative, although there are a few cautions to bear in mind. Avoid as far as possible the use of foreign words or idioms which have not become domesticated, words out of date, old-fashioned, or obsolete, unusual or unauthorized words, and slang or vulgar words and expressions. (See pages 36 to 43 for examples.)

Propriety requires that only such forms be used as are appropriate to the subject. It consists in choosing words that properly express the intended meaning. Avoid coarse expressions, poetic inversions, the use of figurative language in treating prosaic subjects, and mixed metaphors, but do use words according to their idioms. A free use of the dictionary and careful observance of the usage of the best writers and speakers are the wisest methods of securing propriety.

Precision is the quality by which a writer's style expresses "no more, no less, and no other than the thought he intended to express." It is the synonym of exactness, and in itself demands an accurate knowledge of synonyms with the ability to discriminate in their use. (See Dictionary of Synonyms, page 45.) To secure precision avoid ambiguous words or expressions (those which are capable of being understood in either of two senses); do not make overstatement or understatement of fact. (See pages 38 to 45.)

Good composition demands a large vocabulary. The best means of obtaining this is by careful reading, real study of the meaning and force of the terms used; a constant use of the dictionary, conversation of the highest order, and continued practice in writing, seeking always for the right words to express one's ideas.

The question of long or short sentences depends entirely upon the effect the writer wishes to produce. Long sentences give greater dignity and are more impressive if the subject demands dignity, while the short ones produce the effect of lightness. The question of effect should also decide whether loose or periodic sentences are better. (See page 35.) It is said that the best English contains more loose sentences than periodic because the latter have a tendency to make the composition stiff and formal. It is well to bear in mind that all good style contains a judicious union of both kinds.

Having considered the mechanical form of composition, as *Unity*, *Mass*, and *Coherence*, the principles of quality next demand attention. *Clearness* is closely associated with the principles of structure, but it goes a step farther and requires a complete understanding of the meaning of the sentences used, a full comprehension of their purpose. To insure this, one must avoid all vagueness of thought and expression, each sentence must have but one apparent meaning, and the language must be that of the persons addressed.

Force has been defined as the quality which appeals to the emotions, the quality which secures the reader's interest. It is the power of one mind over another, and includes both matter and manner. Perhaps the most necessary characteristic of force lies in what it suggests to the reader, its effect upon the mind. A good beginning and a good ending are equally necessary to forceful writing.

"*Elegance*," says Professor Wendell, "is that distinguishing quality of style that pleases the taste; the æsthetic quality of style. Beauty, some call it; charm, others; others still, grace,

ease, finish, mastery." It is the quality in which the imagination shows itself. It is the function of culture in its broadest sense, to be acquired only through the masterpieces of literature, and a persistent effort in writing.

Outline or Plan.—There are two essential steps in all composition. First, the collection of material; second, the expression of the thoughts derived from that material. By preparing an outline or plan at first in a general way and filling in the subheads as material is classified in the writer's mind, the second step will be easier and the result more satisfactory. There are three main parts to every outline, the Introduction, the Body, and the Conclusion. If the points necessary to the development of these parts are arranged logically, the work of written expression is greatly aided. The introduction and conclusion need few, if any, subheads; the former should invite attention and arouse interest, while the latter brings out a definite meaning, what the writer wishes to enforce, to emphasize, and to make effective. The body should contain only as many subtopics as are necessary to aid the writer in putting his thoughts into a smoothly connected, harmonious composition.

The divisions of prose composition are: Narration, Description, Exposition, and Argument.

Narration.—A record of events, real or imaginary. In a narration there are four elements, the plot, the characters, the situation as to time and space, and the purpose or motive for which the whole is told. All its details should work towards a climax. Narration includes historical works, biography, autobiography, memoirs, journals, letters, books of travel, news items, anecdotes, folk tales, and fiction.

History.—A systematic and accurate record of past events; especially the record of the events in which man has taken an active part. It is distinct from tradition, which is an oral account of past events.

Biography.—A life history of one person written by another. When written by an individual about himself it is an *autobiography.*

Memoirs.—A narrative of the events happening within the memory of the writer is called memoirs. It may comprise the greater part of his life or may cover an interesting period of history with which he was connected.

Journal or Diary.—Systematic records, day by day, of the events during a man's life. "Pepys's Diary" and "Evelyn's Diary" have thrown much light upon great national events and the daily social life in England.

Travel.—Books of travel seem to combine the autobiography, the memoir, the journal, and the letter, in which the added charm of adventure, of strange lands and people, and of a constantly shifting scene both interests and instructs.

News Items.—Writers of news items require special training in order to acquire that clear, direct, and vivid style which impels attention.

Fiction.—The great difference between history and fiction is that events recorded as history are true, while fiction deals with purely imaginary circumstances. Perhaps the most remarkable feature of the literature of modern times is the increase in works of fiction. Still, it is among the enduring works of such great writers as Dickens, Thackeray, Scott, George Eliot, Hugo, Dumas, and Irving that the masterpieces of fiction are to be sought. In the great scope which the novelist's work affords, studies of society, psychology, art, science, literature, and history are often treated with consummate skill. Fictitious narrative includes long and short stories, novels, romances, and dramas. The short story is a condensed novel. Much more skill and literary ability are required to excel in this than in the longer novel. A short story is not a sketch in that it is compact and deals with more characters, details, and events than are found in a sketch. Edgar Allan Poe was probably the greatest, as he was the earliest, of American short story writers. Bret Harte, George W. Cable, Ruth McEnery Stuart, Edward Everett Hale, and Thomas Nelson Page are also among the most famous in America.

A *novel* deals realistically with actual life, while *romance* deals with life in a false or fantastic manner. Scott, Dickens, and Thackeray were novelists; Hawthorne was a writer of romance. A *drama* is a narrative portraying life or character told by actions and usually dialogue, to be put upon the stage.

Description.—The endeavor to present a picture by means of language. A writer must first see clearly what he wishes to describe, feel keenly what he wishes to communicate, and then confine himself to a portrayal of what he sees and feels. Description is closely associated with narration, to which it lends a strong support in the development of plot.

Exposition.—A statement, an explanation, or a setting forth. Clearness, unity, and progression are the most valuable qualities in this sort of writing. The plan or outline is here of greatest value. It is the product of the reasoning faculty. It is one of the most common forms of composition. *Definition* is a species of exposition. The two general divisions are scientific and literary exposition. The former deals with scientific subjects; the latter has a wider range and includes formal and informal essays, editorials, notices of plays, concerts, and art subjects, criticisms, book reviews, character sketches, and discourse. The essays of Bacon, Macaulay, Emerson, and Carlyle are formal, those of Addison, Swift, Lamb, Irving, and Lowell are informal.

Editorial.—A leading article in a journal or periodical written by the editor or his associates and published as an official argument or expression of opinion.

Criticism.—A written estimate based upon comparison of work with certain well defined standards. The great point for the critic to know is what the author tried to do, and judge of his success. Sainte-Beuve, Leslie Stephen, Taine, and Lowell were noted literary critics.

Book Reviews.—These are critical expositions which give in small space the general scope and literary or practical value of recent publications. Book reviews are helpful when they give the busy man an idea of what is going on in the literary world; and when they guide one to a selection of good books. A good book review includes a statement of the location of the principal scene in time and place, a sketch of each of the principal characters, a brief outline of the plot, a criticism of the plot, the characters, and the author's style in addition to a statement of the object of the book and its attainment.

Discourse.—Sermons, lectures, orations, and other speeches. *Sermons.*—Discourses based on texts chosen from the Scriptures, and appealing to the religious feeling. *Lectures.*—These vary in

theme but much more liberty is allowed than in the more formal oration, sermon, or essay. The scope is very broad; all possible sorts of subjects find their way into consideration; the style is as varied as the subject or its treatment; yet there ought to be a very definite and logical outline upon which the structure is built.

Oration.—A discourse intended to be delivered in public. Its purpose is to entertain, inform, interest, arouse the emotions, or to move the will. It is usually delivered upon some formal occasion and is more elaborate than ordinary speeches.

Argument.—The endeavor to establish the truth or falsity of an idea or a proposition; to make others think or believe as we do. It is very closely allied to exposition. The main difference between them is that argument goes further. "In exposition the writer declares; in argument he defends." This sort of composition is found in a lawyer's plea, in newspaper editorials, the scientific essay, and in literary opinions or criticism.

Debate.—Set discussion of a subject between opponents according to formal rules. Arguments on both sides of a question are furnished by the debate, which is a form of expository composition. One essential of a debate is that the subject be so narrow in scope or so well defined in its limits that the opposing sides must discuss the same aspects or points of the question. It is a waste of time for one side to discuss one part or aspect of a subject, while the opposing side does not answer the arguments adduced, but deals with a wholly different aspect. A good debater not only states all that is to be said in favor of his side of the question, but must also be ready to refute or to disprove what is said by the opposing side.

Spelling.—The first point by which a literary composition is judged is the ability of the writer to spell correctly. Correct spelling is an indication of the extent of a person's education. Good spelling is more essential even than good penmanship. Always consult a dictionary when in doubt about the spelling of a word.

Rules to Aid in Spelling.—There are many helpful rules to assist one in spelling; but these rules seldom cover all cases. The exceptions are sometimes more numerous than the cases which the rules themselves will cover. This is a result of the irregularities of the language due to the many sources from which the words are derived and to the changes which these words have undergone.

Believe, receive, and such words perplex one, because of the changed position of the *i* and the *e*. This is covered in part by the aid:—

I before E,
Except after C.

Words of one syllable ending in *l* with a single vowel before it double the *l:* as *tell, sell, call.* But if the *l* is preceded by a double vowel or diphthong there is only one *l* at the close: as *fail, rail, feel.*

Derivatives of monosyllables ending in *ll* formed by adding one or more syllables generally retain both *l's*: as *skillful, skillfulness, willful, willfulness.* So also in *installment, thralldom* and similar words. But one *l* is dropped when adding the termination *ly,* to prevent the recurrence of three *l's*: as *ill, illy, dull, dully.* Words similarly formed by adding the termination *less* are written either with the three *l's* with a hyphen before the termination or with two *l's* with the hyphen omitted: as *skill-less* or *skilless, smell-less* or *smelless.*

Words ending with silent *e* generally drop the *e* before taking an additional syllable beginning with a vowel: as *have, having; bride, bridal; lie, liar; move, movable; force, forcible.*

But the *e* is retained in some words to distinguish them from others: as *dyeing,* meaning coloring, distinguished from *dying,* expiring; *singeing* (burning) from *singing.* The *e* is also retained in *hoeing* and *shoeing.*

Words ending in *ce* or *ge* retain the *e* before a suffix beginning with *a* or *o* in order to preserve the soft sound of *c* or *g:* as *trace, traceable; change, changeable; courage, courageous.* But legal usage favors *mortgagor.*

When adverbs are formed by adding *ly* and nouns by adding *ment* to words ending in *e,* the *e* is usually retained: as *sure, surely; confine, confinement.* But *judge* and *acknowledge* drop the *e* and form *judgment* and *acknowledgment.*

Words of one syllable ending in a consonant preceded by a single vowel double the consonant on adding a suffix beginning with a vowel: as *run, running; big, bigger.* But if the final consonant is preceded by a double vowel or diphthong the consonant remains single: as *sleep, sleeping; plead, pleading.*

Words of more than one syllable ending in a single consonant and accented on the last syllable double the final consonant when suffixes are added: as *remit, remitting; commit, committee.* But if accented on the first or other syllable than the last (as trav'el) the single consonant is retained: as *travel, traveler.*

Words ending in *y* preceded by a consonant change the *y* to *i* and add *es* to form the plural: as *lady, ladies; comedy, comedies.* But if the *y* is preceded by a vowel the *y* is retained and *s* is added: as *valley, valleys; money, moneys.* An exception is made of names of persons, which are usually formed by the addition of *s*: as *Henry, Henrys.*

Words ending in *er* generally retain the *e* before the *r* when suffixes are added: as *refer, reference;* but some, as *hindrance, monstrous, wondrous,* and *disastrous,* elide the *e.*

Words which formerly ended in *our* are nearly all spelled with *or* now in the United States, though the *our* is largely retained in England: as *labor, honor, valor.*

Words ending in *o* generally form the plural regularly, as *solos, folios,* through usage differs in regard to some of them. A few nouns ending in *o* preceded by a single consonant form the plural by adding *es:* as *echoes, heroes, potatoes, tomatoes.*

Simplified Spelling.—Benjamin Franklin and Noah Webster were strongly in favor of a spelling reform.

Isaac Pitman, the inventor of phonography, labored for many years in England to simplify the spelling.

In 1874, at the annual meeting of the American Philological Association at Hartford, the president called attention to the "monstrous spelling of the English language."

In 1875, Prof. William D. Whitney of Yale University, and the first president of the American Philological Association, was one of

a committee appointed to consider the whole subject of spelling reform. In 1876 this committee reported in favor of it and laid down the principles which should guide the reform. The committee has been continued from year to year since then.

In 1876 an international convention for the advancement of English orthography was held at Philadelphia and Prof. Samuel D. Holdeman of the University of Pennsylvania presided. The convention resolved itself, on August 17, into the Spelling Reform Association.

In July, 1877, the "Standard Phonetic Alphabet" was adopted by the Spelling Reform Association.

In 1883 rules for simplified spelling were adopted by the American Philological Association and by the British Philological Association.

In 1886 a list of amended spellings was adopted by the American Philological Association and published in their *Transactions*.

In 1898 the American National Education Association adopted twelve simplified spellings: program, tho, altho, thoro, thorofare, thru, thruout, catalog, prolog, decalog, demagog, and pedagog.

In 1906 a list of 300 words was recommended by President Roosevelt to be used by the Public Printer at Washington in all government publications. This order was withdrawn on December 14, 1906, because the committee of Congress on printing did not approve of their use.

On November 13, 1907, the Board of Trustees of Columbia University officially adopted a list of 180 words to be used in all University printing. This list is as follows:—

Abridgment	Dolor	Humor
Acknowledgment	Draft	Hypotenuse
Adz	Dram	Idolize
Anapest	Dulness	Instil
Antipyrin	Ecumenical	Jail
Antitoxin	Edile	Judgment
Arbor	Enamor	Labor
Ardor	Encyclopedia	Legalize
Armor	Endeavor	License
Assize	Envelop	Licorice
Ax	Eon	Liter
Bark (not barque)	Epaulet	Lodgment
	Eponym	Luster
Behavior	Era	Mama
Brazen	Esophagus	Maneuver
Brazier	Esthetic	Materialize
Bun	Esthetics	Meager
Bur	Estivate	Medieval
Caliber	Ether	Meter
Caliper	Etiology	Miter
Candor	Fagot	Mold
Catechize	Fantasy	Molder
Center	Favor	Molding
Check	Favorite	Moldy
Checker	Fervor	Molt
Chimera	Fiber	Naturalize
Civilize	Flavor	Neighbor
Clamor	Fulfil	Niter
Clangor	Fulness	Ocher
Clue	Gage	Offense
Coeval	Gazel	Omelet
Color	Gelatin	Orthopedic
Colter	Gild (not guild)	Paleography
Controller		Paleolithic
Coquet	Gipsy	Paleontology
Criticize	Gloze	Paleozoic
Cue	Glycerin	Paraffin
Cutlas	Good-by	Partizan
Cyclopedia	Gram	Patronize
Dactyl	Harbor	Pedobaptist
Defense	Harken	Phenix
Demeanor	Hematin	Phenomenon
Deposit	Hiccup	Plow
Develop	Hock (not hough)	Polyp
Dieresis	Homeopathy	Practise v. and n.
Dike	Homonym	
Distil	Honor	Prenomen
Pretense	Saltpeter	Synonym
Preterit	Savior	Tabor
Pretermit	Savor	Teazel
Primeval	Scepter	Tenor
Program	Septet	Theater
Quartet	Sepulcher	Tumor
Questor	Sextet	Valor
Quintet	Simiter	Vapor
Rancor	Skilful	Vigor
Raze	Smolder	Vizor
Recognize	Somber	Wagon
Reconnoiter	Specter	Whisky
Rime	Succor	Wilful
Saber	Sumac	Woolen

Many changes in the spelling of words have been advocated and authorized by the Simplified Spelling Board, which, through the liberal endowment of Mr. Andrew Carnegie, is conducting an active campaign in this work. The changes advocated are radical, and the work is designed to reform the spelling gradually and not to make sweeping changes.

Handwriting.—The first essential is that the matter be easily read, as that is the purpose of the writing. Too lavish use of flourishes detracts from the legibility. Use only black ink, and never use a lead pencil in correspondence or in such formal or business writing as is intended to be preserved. The "fine hand" is generally hard to read and does not hide deficiencies in grammar, spelling, or education; generally it exaggerates them. Crooked writing is to be guarded against. Care in forming the letters properly, and especially in making all figures in amounts and dates, will conduce to legibility and intelligible communication. The "copperplate" hand is neither demanded nor appreciated in business or social circles. Handwriting is said to indicate character, temperament, and habits. It should be one's aim, then, to let it markedly display care, accuracy, neatness, and thought, rather than those qualities which made Horace Greeley's illegible writing a subject for ridicule.

USE OF CAPITALS.

To be able to use capital letters correctly is a sure mark of education. Generally speaking, too many are used rather than too few. The tendency in all writing and printing is to restrict the use of capitals to a far greater degree than was customary in olden times. An old book fairly teems with capitals where one would now never think of using them. The Germans use many more than we do, for nearly every noun in that language begins with a capital. The French use, perhaps, fewer than we, for they do not capitalize the names of the days of the week, or of the months, or adjectives derived from proper names, as we do.

(1) The first word of every complete or entire sentence must always begin with a capital letter.

The lower Himalayas are at first extremely disappointing. The scenery is enormous but not grand, and at first seems hardly large.—*F. Marion Crawford.*

Shall I stay with you always? Yes, just as long as I live, you shall be my child.—*Maria S. Cummins.*

"Tarry thou, till I come!"—The words shot through me.—*George Croly.*

(2) Every line of poetry should begin with a capital.

Like as the waves make towards the pebbled shore,
So do our minutes hasten to their end;
Each changing place with that which goes before,
In sequent toil all forwards do contend.
—*Shakespeare.*

His state
Is kingly; thousands at his bidding speed
And post o'er land and ocean without rest;—
They also serve who only stand and wait.
—*Milton.*

(3) The first word of every direct quotation should begin with a capital, unless introduced by that, if, or some other conjunction.

The judge replied, "Honesty is the best policy."
The judge said that honesty is the best policy.
Sir Henry Wotton expresses the joy of manly independence in his poem which begins: "How happy is he born and taught that serveth not another's will."
Lepers sit by the sunny walls, and your soul cries, "Unclean! Unclean!" while you loosen your purse-strings.—*George William Curtis.*

(4) The several names and appellations of Deity must begin with a capital letter.

These include: God, Jehovah, the Almighty, the Supreme Being, the Lord, Providence, the Messiah, the Holy Spirit, Jesus, Christ, Father, Son, Infinite One, the First Cause, the Saviour, etc.

(5) The words Bible, Scriptures, and names of books and parts of the Bible should begin with capitals.

(6) The names of the months and of the days of the week are written with capital letters.

January. Monday the 15th of July. He came on Tuesday.

(7) The names of holidays, festivals, fast days, and feast days, whether civil or religious, are usually written with an initial capital.

Christmas, Labor Day, Easter, Yuletide, Whitsunday, Ash Wednesday, Good Friday.

The names of the seasons, unless personified as in poetry, are not capitalized.

(8) All proper nouns are written with an initial capital. These include:—

(*a*) Names of persons, real or fictitious:—

Thomas Jefferson, Oliver Cromwell, Adam Bede, William II., Joseph H. Choate.

(*b*) Names of places:—

Chicago, New Orleans, Liverpool.

(*c*) Names of streets:—

Broadway, State Street, Pennsylvania Avenue, The Strand, Rue de Madeleine.

(*d*) Names of mountains:—

Andes, Sierra Nevada, Rocky Mountains, the Alps, Himalayas.

(*e*) Names of bodies of water:—

Lake Erie, Salt Lake, Dead Sea, Caspian Sea.

(*f*) Names of rivers:—

Mississippi, Amazon, Seine, Tiber.

(*g*) Names of ships:—

Lusitania, Kaiser Wilhelm der Grosse, Great Eastern.

(9) All adjectives derived from proper names:—

American, English, French, German, Jeffersonian, Alpine, Amazonian.

(*a*) We write china silk, india ink, india rubber, turkey red, castile soap, majolica ware, prussian blue, canton flannel, with small letters though derived from names of places. This is because they have become thoroughly incorporated into our language as common rather than proper adjectives.

(10) Christianize, Hellenize, Anglicize, and some other verbs derived from proper nouns are written with capital letters. But there are many such which have been more closely and intimately incorporated into the language and by frequency of use and consequent familiarity have come to be written with small letters. Among such are: boycott, outherod, macadamize, japan (leather), galvanize (iron).

(11) Orient, Occident, Levant, are written with capitals when used as proper nouns to denote well defined geographical zones or districts. Otherwise they are written with small letters.

(12) In denoting parts of the country by the points of the compass, such terms are written with capital letters.

Out West. In the South. The Northwest. In the East.

(13) When a geographical, political, or physiographical conformation is used as a title, it is usually written with a capital.

Rocky Mountains, Mississippi River, Barbary States, Death Valley, Sioux City, Cook County.

But when this descriptive word is written before the distinctive word a small letter is usually employed.

The county of Westchester; the state of Texas; the kingdom of Italy.

(14) Names of religious denominations begin with capitals.

Methodists, Unitarians, Presbyterians, Roman Catholics, Episcopalians, Christian Scientists.

(15) The names of societies, associations, and corporate bodies are written with an initial capital for all important words in their titles.

Young People's Society of Christian Endeavor. Roman Catholic Hierarchy of the United States. International Order of the King's Daughters and Sons.

(16) The names of political parties are written with capital letters.

(17) Official and honorary titles begin with capitals when they occur before the name of the bearer.

President Roosevelt, Senator Brown, Secretary Hay.

If written after the bearer's name, they are preferably in small letters.

The late Grover Cleveland, ex-president of the United States.

When titles of honor are abbreviated and written after the bearer's name, these are capitalized. Such include degrees from universities.

William P. Thomas, M.D., D.C.L.; Hon. William H. Taft, D.C.L.; James Edwards, M.C.

(18) When a title is used alone without the bearer's surname, we write the title with a capital letter.

(19) In writing the title of a book it is customary to capitalize the important words in the title, such as the nouns, verbs, and adjectives, but not prepositions and conjunctions.

Roget's Thesaurus of English Words and Phrases. Sturgis's A Dictionary of Architecture and Building. Brown and Butterworth's The Story of the Hymns and Tunes.

In cataloguing books on library cards it is customary now to use no capitals in the title except the first initial letter and the initials of proper names which may occur.

Alford, Greek testament with revised text. Dodge, Bird's-eye view of our civil war.

(20) The pronoun I and the interjection O are always capitals.

Stay, O stay! nor thus forlorn
Leave me unblessèd, unpitied, here to mourn.
—*Gray.*

Oh is not capitalized excepting when it stands at the beginning of a sentence.

The other evening we went to the ball at the Tuileries, and oh! it was splendid.—*George William Curtis.*

(21) When a word is of very especial importance, whether an event, or transition, it may at the choice of the writer be rendered emphatic

CONTRIBUTIONS TO EDUCATION THROUGH INVENTION

1 William Caxton examining first proof sheet from earliest printing press in A. D. 1471. 2 Early type of press used in U. S. A. 1600–1700. 3 William Caxton. 4 Richard Hoe, inventor of printing press for moveable types. 5 Christopher Latham Sholes, inventor of the typewriter. 6 Early model of linotype (Blower) machine invented by Ottmar Mergenthaler. 7 Modern Hoe Newspaper Press.

by writing with a capital. Thus we see such words as renaissance, revival of letters, reformation, middle ages, written both with and without capitals.

Often the principal subject of a composition is written with a capital letter whenever it occurs.

(22) A word, which when occurring only once or rarely upon a page would be written with a capital, is not so written if it is frequently repeated. A congressman addressing the chair as "Mr. Speaker" would be reported with a capital letter in Speaker, but addressing him as "sir," as is usually done, a small *s* would be written in "sir."

(23) Names of abstract ideas, if used like names of persons, are capitalized.

Can Honor's voice provoke the silent dust,
Or Flattery soothe the dull cold ear of Death?
—*Thomas Gray.*

(24) In all accounts or bills, the names of the separate items begin with capitals.

(25) In a formal resolution the first word after *Resolved* begins with a capital letter.

CORRECT PUNCTUATION.

Without punctuation marks all of our writing would be in simple sentences only, with a separate sentence for each statement. It would be impossible to show clearly the relative importance of each statement or to indicate that one sentence modified or restricted another. There could be no complex or compound sentences and both description and reasoning would be difficult. By the proper use of the several punctuation marks, we show clearly to the reader the full meaning of our statements.

Serious losses and much legal entanglement have resulted from the misplacing of even a comma. In legal documents great care is taken with punctuation, and many more marks are used in them than in ordinary writing and printing. All possibility of ambiguity or of misinterpretation is removed by what is known as close punctuation. Fifty years ago the pages of ordinary books were lavishly sprinkled with punctuation marks, in strange contrast to those of the present day.

Punctuation Marks:—

Comma	,	Quotation Marks	" "
Period	.	Apostrophe	'
Semicolon	;	Dash	—
Colon	:	Parentheses	( )
Interrogation	?	Brackets	[ ]
Exclamation	!	Hyphen	-
Ellipsis	* * * *		

Marks of Reference:

Asterisk	*	Paragraph	¶
Obelisk or Dagger	†	Index	☞
Double Dagger	‡	Brace	⌒
Section	§	Caret	∧
Parallels	‖		

The marks of reference are now seldom used in the best books, having given place to superior figures or small italic letters.

Comma.—(1) Two or more words connected in sense, but with the connecting word not expressed, are separated by commas.

Alfred was a brave, pious, patriotic prince.

(2) A relative clause which conveys an additional thought is separated from the rest of the sentence by commas.

The emperor, who had just arrived, immediately took command.

But when a relative clause restricts the meaning of the antecedent to a particular sense the commas should be omitted.

Happy are the people who have no history.

(3) The part of the sentence containing the noun absolute is separated from the rest of the sentence by commas.

Shame being lost, all hope of repentance is lost.

(4) The part of the sentence containing the nominative case independent is separated from the rest of the sentence by commas.

Brightest in dungeons, Liberty, thou art.

(5) Nay, so, however, hence, besides, perhaps, probably, finally, in short, at least, moreover, again, first, secondly, lastly, once more, on the contrary, and similar words and phrases are usually inclosed by commas.

(6) Nouns in apposition with or without explanatory words or phrases are usually separated by commas.

O Music! sphere-descended maid,
Friend of Pleasure, Wisdom's aid!
—*William Collins.*

But commas would not be used if the title is used as a part of the name.

Paul the Apostle of the Gentiles was eminent for his zeal and knowledge.

(7) Words of another writer introduced directly and not as a quotation are separated by a comma.

I pity the man who can travel from Dan to Beersheba and cry, 'T is all barren.

(8) Words and clauses expressing contrast are separated by commas.

Though deep, yet clear; though gentle, yet not dull;
Strong, without rage; without o'erflowing, full.
—*Sir John Denham.*

(9) When a word is omitted and its place is taken by a pause in reading or speaking, its place in writing is taken by a comma.

From law arises security; from security, inquiry; from inquiry, knowledge.

(10) Such expressions as, that is, as, namely, to wit, viz., take a comma after them.

He will be promoted; that is, if he prove worthy.

(11) When a subordinate clause in a complex sentence comes first, it is separated by a comma.

If thou art wise, thou knowest thine own ignorance. —*Luther.*

(12) Two short, complete, and independent statements in one sentence may be separated by a comma.

You may paint with a very big brush, and yet not be a great painter.—*Carlyle.*

(13) Two words differently modified in the same construction are separated by a comma to avoid confusion.

The sheriff wore a cocked hat, and a sword.

(14) When a whole clause is the subject of the principal verb, it is not usually separated by a comma unless the clause ends with a verb which might cause confusion.

That the voice of the common people is the voice of God is as full of falsehood as commonness.—*Warwick.* That that is, is.—*As You Like It.*

Semicolon.—(1) In a sentence composed of several members, each a distinct statement, and each dependent upon the other, the parts are separated by semicolons.

My way of life
Is fallen into the sere, the yellow leaf;
And that which should accompany old age,
As honor, love, obedience, troops of friends,
I must not look to have; but, in their stead,
Curses, not loud, but deep, mouth-honor, breath,
Which the poor heart would fain deny, and dare not.
—*Macbeth*, v. 3.

(2) A compound short sentence made up of two closely connected ideas has the parts separated by a comma; but when the ideas are not so closely connected use a semicolon.

My name is Norval; on the Grampian hills my father feeds his flock.—*Home.*

But

My mind to me a kingdom is,
Such perfect joy therein I find.—*Byrd.*

(3) When one or both of the members of a compound sentence contain commas, separate the members by a semicolon.

Mercy is above this sceptred sway,
It is enthroned in the hearts of kings,
It is an attribute to God himself;
And earthly power doth then show likest God's
When mercy seasons justice.
—*Merchant of Venice*, iv. 1.

(4) A sentence consisting of a direct statement followed by another introduced by for, but, and, or similar word is divided by a semicolon.

Many speak the truth when they say they despise riches and preferment; but they mean the riches and preferment possessed by other men.—*Colton.*

(5) When a series of ideas depends upon a statement made at either the beginning or end of a sentence, the members of the series are usually separated by semicolons.

Learn to be pleased with everything: with wealth so far as it makes us of benefit to others; with poverty, for not having much to care for; and with obscurity, for not being envied.—*Plutarch.*

This rule is often stated thus: A succession of clauses depending upon one principal expression should be separated by semicolons.

Colon.—(1) A colon is placed between the chief divisions of a sentence when they are but slightly connected and are themselves divided by other marks of punctuation.

Gather ye rosebuds while ye may,
Old Time is still a-flying:
And this same flower, that smiles to-day,
To-morrow will be dying.—*R. Herrick.*

(2) A colon is used after a sentence which announces a direct quotation.

(3) A colon is used after the word *following*, when a list of things is given.

(4) The colon is used after the "Dear Sir" or other address in letter writing. Sometimes the colon is followed by a dash, but this use is disappearing.

(5) A colon follows "Yes" or "No" when the rest of the sentence deals more fully with the affirmation or negation.

Yes: you will find people ready enough to do the good Samaritan, without the oil and twopence.—*S. Smith.*

No: creation, one would think, cannot be easy.—*Carlyle.*

Period.—(1) A period marks the close of every declarative and imperative sentence.

He buys very dear who begs.

(2) All abbreviations are followed by a period.

No. for number. Jas. for James. D.C.L. for Doctor of Civil Law. M.D. for medical doctor or Doctor of Medicine.

The Roman numerals are treated as abbreviations and are followed by a period.

Louis XIV., king of France. Henry I. was surnamed Beauclerc.

But when the possessive form is used the period is omitted.

William I's son Richard.

The period does not follow an abbreviation in which the ellipsis is marked by an apostrophe; nor in 1st, 2d, 3d, etc.

When a period follows an abbreviation it does not preclude the use of another punctuation mark immediately after the period if necessary.

The Norman kings of England were: William I., William II., Henry I., Stephen, Henry II., Richard I., and John.

Interrogation.—(1) Every direct question is followed by an interrogation point.

What is the use of health or life, if not to do some work therewith?—*Carlyle.*

(2) An interrogation point is often inserted in parentheses in any part of a sentence to express doubt.

One who said he was his friend (?) told me so.

When the entire question is a quotation the interrogation point should be placed before the last quote-marks.

"And who is he?" said Henry.

If only part of the question is quoted, the point should follow the last quote-marks.

Do you know who wrote "The Pioneers"?

Exclamation Point.—(1) The exclamation point is used to express any sudden emotion, as surprise, joy, grief, love, fear, hatred, anger, pity, or anxiety.

"Ah, that 's it! that 's it!" shouted the whole party delighted with the solution of the initial difficulty.—*Conscience.*

(2) The exclamation point follows the noun or pronoun after an interjection.

O blissful day! Ah me! how soon we pass!
O shame! where is thy blush?

The exclamation point usually follows Oh immediately if some other mark does not.

Oh, you have come at last!
Oh! I do not wish to deceive you.

The exclamation point is placed within the quote-marks, if the whole sentence is quoted; outside, if only a portion is quoted.

(3) One or several exclamation points may be inclosed in marks of parenthesis to denote surprise at, or ridicule of, a statement.

(4) An exclamation point follows a question to which no answer is expected.

What is more amiable than virtue!

Marks of Parenthesis.—These marks inclose parenthetical matter thrown into a sentence, which may be omitted without destroying the sense or the grammatical construction.

We have nothing to do with what is happening in space (or possibly may happen in time): we have only to attend to what is happening here and now.—*Ruskin.*

When the parenthesis is a question the interrogation point falls inside the last mark.

Brackets or Crotchets.—(1) Brackets are generally used to inclose corrections in a quoted statement, or to add words improperly omitted.

(2) When a parenthesis includes another parenthesis, brackets are employed on the outer parenthesis and marks of parenthesis on the inner.

Commas have taken the places of both parentheses and brackets in recent days. Speaking generally, the use of brackets or parentheses leads to an involved sentence which would read much better and more clearly if split up.

Hyphen.—(1) The hyphen is used to connect two words which are so used as properly to form a compound word, as sea-water, far-reaching.

(2) The hyphen is used to indicate the division of a word into syllables, as el-e-men-tal.

(3) The hyphen is used at the end of a line to connect the syllables of a divided word.

(4) In indicating the component parts of words, if a hyphen follows the part, a prefix is denoted as ad-, pro-, per-, and sub-. If the hyphen precedes it, a suffix or affix is denoted, as -tion, -ly, -ment, and -est.

Dash.—(1) The dash is used to indicate a sudden turn in a sentence or an abrupt termination, or interruption.

Where we made the mistake—but let us forget it.

(2) The dash is rapidly displacing the marks of parenthesis and brackets in parenthetical writing.

(3) The dash marks the omission of letters.

I saw General L——n there.

(4) A dash follows a question and precedes the answer when both are on the same line.

Q. Where do you live?—In San Francisco.

(5) A dash is often used before an expression which is repeated for especial emphasis.

(6) A dash precedes a partial quotation.

Ben Jonson speaks of
—"the vulgar sort
Of nut-crackers, who only come for sight."

(7) A dash also denotes hesitancy in speech.

I think it will be necessary to—to—to—

Quotation Marks.—(1) A word, phrase, or sentence transcribed from an author in his own words is placed between quotation marks.

And here I am reminded that it is Pope who says "The proper study of mankind is man."

If a passage is not quoted *verbatim*, but only in paraphrase, no quotation marks are used.

(2) When a quotation occurs within a quotation double quotation marks are used for the whole quotation, and single quotation marks for that within.

"He said very pleasantly, 'What is your name?' "

(3) When a passage quoted consists of more than one paragraph, quotation marks are used only at the beginning of each paragraph and at the close of the last.

(4) When especial attention is called to a long quotation, single quotation marks may be used at the first of each line quoted.

Apostrophe.—(1) The apostrophe is used to denote the possessive case, as "Milton's."

(2) The apostrophe denotes a contraction by the omission of one or several letters, as "'t is" for "it is," "is n't" for "is not," "lov'd" for "loved," "I 'll" for "I will."

(3) The plural of proper names is not written with an apostrophe, as "Smiths" not "Smith's," "Marys" not "Mary's."

(4) When the plural of numerals is written wholly in letters no apostrophe is used; but if the figures for the numerals are used, add an apostrophe with s, as *twos, threes,* and *fours;* or 2's, 3's, and 4's. The plural of letters is written thus: "Mind your P's and Q's."

Diaeresis.—(1) The diaeresis is placed over the latter of two vowels to show that they are to be pronounced in separate syllables, as coöperate, Laocoön, preëngagement.

Letter Writing.—The art of letter writing has been mourned by many as a lost art. It is said that the letters of the present day do not compare in interest, style, and attractiveness with those of fifty years ago. The ease of travel, frequency of mails, the general rush of life, and the common use of the telephone have, no doubt, all had their effect upon the intercourse between people.

The importance of using great care in the writing of letters has in no wise diminished. Errors in spelling, grammar, choice of words, as well as clumsily constructed sentences and bad taste in the choice of materials, give just as much offense, and decide as strongly against a man, as they ever did.

Materials.—Fine paper and thick envelopes are the first requisite. Cream-white paper that folds once to go into an oblong envelope is preferred for social use. Pure white paper of fine quality, folding once across and twice the other way to fit a No. 6 or commercial envelope, is the best for business use.

Jet-black ink is the only color sanctioned by the best usage. Nothing is so trying upon both patience and eyes as a pale or a brilliant colored ink, especially when a fine pen is used.

Under no circumstances write a letter with a lead pencil. Its use is properly regarded as a discourtesy.

Do not tear a sheet of paper in halves, no matter how short your letter. This does not show economy but meanness, and it may occur in cases where it would give a wrong impression.

Writing materials are so inexpensive that one should have a plentiful supply of good material always at hand. Blotting paper, pens, ink, and paper should always be at hand and easily accessible, especially in homes where letter writing is least frequent.

Language in Letters.—Written language is always more formal and more correct than spoken language. The many slang terms, contractions such as don't, won't, etc., and colloquial expressions are not to be used in letter writing. Grammatical accuracy and the correct use of words are, if possible, to be more positively insisted upon in a letter than they are usually regarded in speaking. The structure of sentences and of paragraphs, punctuation, and the use of capitals, are of extreme importance in letter writing, and conciseness and exactness of expression are absolutely necessary. Perhaps the first essential is to see that in all cases your meaning is absolutely plain. If this can be secured in few words, then the prime requisites of a good letter will be secured. Correctness in spelling, grammar, and all of the niceties of expression will go for nothing if you do not express yourself both clearly and fully.

Young persons should be encouraged to write letters to their friends. They should be supplied with every facility for so doing. Not only should materials always be at hand when needed, but parents should suggest topics or subjects, however trivial, upon which the young may write to others. It is by practice that skill in the use of words comes, and children should not rely upon formal school exercises, perfunctorily performed, for the development of this most essential and much neglected accomplishment.

Parts of a Letter.—The parts of a letter now generally recognized are:—

(1) The Heading.
(2) The Address.
(3) The Salutation.
(4) The Body of the Letter.
(5) The Complimentary Close.
(6) The Signature.

The Heading, including the date and location, is the first point to be considered. Always date a letter exactly. In a business letter the date comes at the top of the page. In a social letter it may be reserved until the last if the writer chooses. If a reply is expected, the heading includes the full address of the writer.

The Address in a business letter is full and includes practically all that will appear upon the envelope. This, like the date, may appear either at the beginning or at the close of the letter.

The Salutation depends upon the nature of the letter, the station of the person addressed, and the degree of intimacy existing between the persons concerned. In ordinary business "Dear Sir" and "Dear Madam" are the forms almost universally employed. "Sir" and "Madam" are very formal modes of address. A woman, whether married or single, may always be addressed as "Dear Madam." One may also write to a single woman with the address "Dear Miss Wilson" with equal propriety, but not as "Dear Miss." "My dear Sir" and "My dear Madam" are regarded as being more formal or more distant than "Dear Sir" or "Dear Madam." In England the reverse is the case. In addressing a firm, "Gentlemen" is preferred to "Dear Sirs" by most writers. This form is also used in addressing firms made up of men and women. The use of capital letters in the Salutation is largely a matter of taste and we may write either "My Dear Sir" or "My dear sir" with equal propriety. The Salutation may be followed by a colon as:—

My dear sir:

or by a comma, as:—

My dear sir,

whichever one prefers.

The Body of the Letter may begin upon the same line as the salutation or, as is more frequently done, on the next line below. There are some who invariably begin a letter with excuses for not having written before. If that is needed in a letter, defer it until later on. Do not begin with the pronoun "I" if it can be avoided; and do not let that letter occur too frequently; a little care in the structure of sentences will avoid this. Give each topic a separate paragraph. Finish each topic fully before leaving it.

The Complimentary Close, like the Salutation, depends upon the persons concerned, and the nature of the letter. The most generally used are "Yours truly" and "Respectfully yours." They are what might be termed safe expressions to use. Affection, regard, and esteem will suggest other forms, such as "Sincerely yours," "Faithfully yours," "Affectionately yours," "Very cordially yours," "With kindest wishes, I remain," and many others.

These are written on the line below the last one of the body of the letter. The first word of the Complimentary Close should always be capitalized. A comma follows the last word.

The Signature, except in informal letters between intimates, should always be the full name. Many business letters are not signed by the senders, and endless trouble results from this carelessness. There is need of the fullest information as to name and address when a reply is expected. If a woman wishes to indicate that she is married she may inclose "Mrs." before her name as: (Mrs.) Ellen T. Ferguson.

Similarly a single woman may sign (Miss) Jane F. Anston.

The Superscription or Address upon the envelope is always to be clear as to the identity of the person and the locality in which he lives. Care in this regard insures more speedy delivery and often prevents disappointment. It is not now considered necessary to punctuate each line of the superscription with a comma, though it is quite permissible to do so. If commas are used there, a period must appear at the end of the lowest line. It is customary to add titles to the names of persons for whom the letter is intended. In England and in Canada the use of "Esq." is very general, when a man has no title. Sometimes "Mr." is prefixed to the name. But only one such may be used at a time. It is wrong to address a person as "Mr. Clarence F. Thomas, Esq." Write either "Mr. Clarence F. Thomas," or "Clarence F. Thomas, Esq." Where a man has gained several degrees the highest is chosen. If a man has secured both D.D. and LL.D. use both and put LL.D. last, as: James L. Adams, D.D., LL.D.

Prefix "Rev." before a clergyman's name and add abbreviations for his degree. Write before a bishop's name "Rt. Rev." for "Right Reverend" and append titles. Prefix "Hon." before the names of the Vice-President, members of the Cabinet, members of Congress, mayors of cities, judges, consuls, and other officials, and follow with any title, but never with "Esq." Never address or speak of a doctor's wife as "Mrs. Dr. Edwards," but as "Mrs. A. H. Edwards."

Examples of Formal and Familiar Correspondence.—Formal invitations and communications passing between persons not acquainted are often written in the third person throughout. Upon occasions of great formality and for large gatherings the invitation is generally engraved and printed.

AN INVITATION TO A WEDDING AT CHURCH.

Mr. and Mrs. Thomas Carter
request the honor of your presence
at the marriage of their daughter
Muriel
to
Mr. Charles Payton Tyrrell
on Thursday evening, May tenth
One thousand nine hundred thirty-eight
at half-past seven o'clock

Eighteenth State Street
May sixteenth.

REPLY ACCEPTING THE INVITATION

Mr. and Mrs. James Clark accept with pleasure the kind invitation of Mr. and Mrs. Thomas Jones Wilson for Friday evening.
One hundred forty-six Clifford Street
May seventeenth.

REPLY DECLINING THE INVITATION.

Mr. and Mrs. James Clark deeply regret that they cannot accept the kind invitation of Mr. and Mrs. Thomas Jones Wilson for Friday evening.
One hundred forty-six Clifford Street
May seventeenth.

INFORMAL INVITATION TO DINNER.

My dear Mr. Simpson:
Governor Anderson will dine with us on Thursday next at seven o'clock. It will give us very great pleasure if you will favor us with your company on that occasion.
Very cordially yours,
James P. Clark.

To James R. Simpson.
May 17, 1938.

ANSWER TO PRECEDING.

My dear Mr. Clark:
It will give me great pleasure to dine with you Thursday evening and meet Governor Anderson.
Very truly yours,
James R. Simpson.

To James P. Clark.
May 18, 1938.

NOTE ACCOMPANYING A WEDDING GIFT.

Miss Eva Clinton sends her kindest love and best wishes to Miss Amelia Rowan and asks that she will accept the accompanying trifle as a token of her affection and desire for her future happiness.
January Fifth, 1938.

REPLY TO THE PRECEDING.

Miss Amelia Rowan presents her compliments and sincere thanks to Miss Eva Clinton for the exquisite token of her affection and good wishes
January Fifth, 1938.

LETTER OF CONDOLENCE.

to a friend on the death of her husband.

Rochester, New York,
November 7, 1938.

My dear Mrs. Van Arsdale:
Any word of mine will prove but poor comfort to one in such deep affliction as yours, yet I cannot refrain from offering to you my most sincere and heartfelt sympathy. My own grief at the loss of a beloved and highly valued friend teaches me how great must be your sorrow; but knowing your Christian fortitude under other circumstances, I trust that heavenly balm and consolation will be poured upon your heart. May God bless and sustain you, my dear friend.
If I can in any way be useful to you, or relieve you of any care, please call upon me.
With deepest friendship,
Yours sincerely,
Julian Suydam.

Mrs. Henry Van Arsdale.

LETTER ASKING A FAVOR.

Albany, New York,
October 19, 1938.

Dear Alma:
If you have finished reading Milton's "Paradise Lost," illustrated by Doré, will you kindly lend it to me for a few days? I wish to compare it with my new edition of the "Ancient Mariner," illustrated by the same artist.
Lovingly yours,
Sarah.

Miss Alma Bainbridge.

LETTER GRANTING A FAVOR.

Dear Sarah:
With pleasure I send the book, and hope that you will find it of value in your study of Doré.
Yours affectionately,
Alma.

October 20, 1938.
Miss Sarah Stanhope.

LETTER OF INTRODUCTION.

Boston, Massachusetts,
Dec. 11, 1938.

My dear Mr. Eliot:
Permit me to introduce the bearer, Mr. F. J. Howland, of Boston. Any attention shown him will be greatly appreciated.
Yours truly,
M. L. James.

To Mr. T. W. Elliot,
Chicago, Illinois.

REPLY TO AN ADVERTISEMENT.

864 Market Street
Galveston, Texas
January 23, 1938

Wright, Elliott and Company
1299 Monroe Street
Chicago, Illinois

Gentlemen:

Your advertisement in the Kansas City *Star* for yesterday has attracted my attention. If you are in need of a salesman to handle your brands of food products in the southern states, I think my qualifications may interest you.

Last summer, acting on the advice of my physician, I came south for a complete rest, made necessary by a railway accident. Since June I have traveled at leisure through Texas, Mississippi, Georgia, Alabama, and parts of other states, where I spent some time five years ago while on vacation. This seems a wonderful country to me, and I should like to consider locating here permanently. For this reason I seek employment such as your house seems to offer. You will find enclosed a statement of my age, health, and ideas of business, from which you may gain some information as to my fitness.

My old employers, Summers and Company, 469 Simrell Street, Kansas City, Missouri, will be glad to write you as to my success with them. Since a personal interview is much more satisfactory than mere correspondence, I suggest that you have one of your salesmen in this territory or the manager of your branch house in Austin arrange for a personal interview.

If you are interested in my qualifications, I should be glad to hear further from you, and to answer any questions you may wish to ask.

Very truly yours,
Edward Simpson, Jr.

LETTER ORDERING GOODS.

80 Grant Street
Elizabeth, New Jersey
February 10, 1938

Brokaw and Stanley
Broad Street
Philadelphia, Pennsylvania

Gentlemen:

For almost ten years, ending in June last, I was employed as a salesman by Davis and Company, large retail grocers of your city. Recently I invested my savings, and a small inheritance, in a good store in Elizabeth. Business has been so prosperous that I am now adding floor space, and wish to take advantage of buying in larger quantities from wholesale houses like yours.

Please let me know what terms you can make for both cash and credit for the bill of goods enclosed. I desire the shipment to be made by American Railway Express as soon as you are willing. As to my reliability, you may refer to my former employers and to the Second National Bank of Elizabeth, where I have an account.

Truly yours,
Stuart Newton

ACCEPTANCE OF ORDER.

159 Broad Street
Philadelphia, Pennsylvania
February 17, 1938

Stuart Newton
80 Grant Street
Elizabeth, New Jersey

Dear Mr. Newton:

We have corresponded with your references, mentioned in your letter of February 10, and find that your credit is excellent and your reputation high.

Our shipping department is, therefore, sending the goods to you requested, and we are billing them to you on our most liberal terms of 5% for cash, or three months without discount, at your option.

If you discover faults in any items of this shipment, let us have a chance to make an adjustment at once, since we value your order and we are pleased to open a new account.

Very truly yours,
Brokaw and Stanley.
By R. S. Stanley, Pres.

COMPLAINT TO AN EXPRESS COMPANY ABOUT LOSS OF GOODS.

New Haven, Conn.
December 2, 1938.

Adams Express Co.,
Hartford, Conn.

Dear Sirs: Word has been received that goods shipped by me to Hartford on the 10th ult. have not yet reached their destination. Kindly inquire into the matter, and let me know the result at your very earliest convenience.

Yours truly,
Brenton E. Hapgood.

LETTER WITH REMITTANCE.

Westfield, New Jersey
March 13, 1938

First National Bank
Somerville, New Jersey
Attention of Mr. H. J. Hixson

Gentlemen:

I am now enclosing my check for $25.65 to cover the semi-annual interest due on the note given by me to your bank last September. According to my understanding this note is to run for six months more. If I am wrong in this, or in figuring the amount of the interest now due, please inform me.

Gratefully yours,
Everett T. Huntley.

LETTER ACKNOWLEDGING REMITTANCE.

Syracuse, N. Y.,
November 28, 1938.

Mr. Everett T. Fuller.

Dear Sir: Your check for twenty-five dollars and sixty-five cents, ($25.65) in payment of interest on my note, received and credited.

Yours truly,
Oscar Blake.

LETTER REQUESTING PAYMENT.

Hope, Illinois
January 11, 1938

Mr. Samuel Poor
R. D. 3, Box 19
Hoopestown, Indiana

Dear Mr. Poor:

Last spring you appealed to us for credit on some farm implements which you said were absolutely needed that you might plant and harvest your crops this season. Though you did not comply with all the requirements usually met in cases of opening new accounts, we trusted to your sense of fairness.

Now we are obliged to make payments ourselves, and we find that your account is three months past due. Does it seem fair that you have written no explanation of your delay?

May we not hear from you at once?

Expectantly yours,
Lincoln Hardware Company.

LETTER REFUSING CREDIT.

Decatur, Illinois
January 11, 1938

Mr. Samuel Smith
Munhall, Indiana

Dear Mr. Smith:

You ask for credit on some farm machinery needed for the coming season.

We regret to say that our firm does business on a strictly cash basis, and our prices are made accordingly. In fairness to all our old customers, we feel that we must impartially hold to this plan of doing business.

Very truly yours,
Hall Hardware Company

LETTER REQUESTING RENEWAL OF NOTE.

Camden, N. J.,
November 4, 1938.

Gentlemen:

My note for two thousand dollars ($2,000) falls due on the 19th inst., and I find that it will be impossible for me to meet it. I would, therefore, ask you to renew it for ninety days, with interest, at the end of which time I shall undoubtedly be in receipt of more than sufficient funds to pay it.

Your compliance with this request I shall deeply appreciate.

Very respectfully yours,
Walter Provost.

Messrs. Adrian & Schuyler,
Philadelphia.

LETTER OF RECOMMENDATION.

Chapel Hill, North Carolina
June 29, 1938

Marsh, Treat, and Company
Raleigh, North Carolina

Gentlemen:

You request our opinion of Mr. Henry W. Fulton, who has been selling bonds for our house since April, 1926.

The best we can report of Mr. Fulton is that we should extremely regret to lose him. Yet, in justice to Mr. Fulton himself, we feel that he deserves more rapid advancement than we can offer at the present. He has always proved an alert, courteous, and effective employe.

Very truly yours,
Dow, Jones, and Coulter,
By R. S. Coulter, Secretary.

RSC-MJ

A TELEGRAM

The essential thing in writing a telegram is to make the message convey a clear, exact, and complete idea of what the sender means, in as few words as possible.

EXCUSE FOR ABSENCE FROM SCHOOL.

Dear Mr. Griffiths:

Please excuse Charles's absence from school, May sixth to ninth, on account of illness.

Very truly yours,
(Mrs.) Charles F. Brand.

GENERAL RECOMMENDATION.

Clarksburg, West Virginia,
March 16, 1938.

To Whom It May Concern:

This is to certify that the bearer of this note, Miss Gladys O'Neill, was graduated from Teachers' College, California, Pennsylvania, and has taught in the schools of this city for the past three years.

She has taught in Madison School and I have had the opportunity to observe her work closely. I can recommend her as capable of filling any position in a graded school.

Charles F. Rice,
Principal of Madison School.

TEACHER'S APPLICATION FOR POSITION.

Newtown, Pennsylvania,
January 21, 1938.

Mr. James C. Brown,
Superintendent of Schools,
Warren, Ohio.

Dear Sir:

I have been informed that there is a vacancy to be filled in the Garfield Junior High School of your city, and I should be glad to have you consider me as an applicant for the position.

In 1918 I was graduated from high school, and in 1922 completed the teachers' training course in the State Teachers' College of Indiana, Pennsylvania. The first three years after graduation I taught in the public schools of Newtown, which is my home town. The last four years I have been teaching in the East End Junior High School of Niles, Ohio.

I enclose copies of letters from the following:

Doctor T. J. Livermore of Indiana Normal School.

Doctor F. L. Mowrer, Superintendent of Schools, Newton, Pennsylvania.

Mr. O. K. Wilson, President of the Board of Education, Niles, Ohio.

I shall be pleased to come to Warren for a personal interview.

Respectfully yours,
(Miss) Irene Gordon.

Enc.

APPLICATION FOR COMMERCIAL POSITION.

622 Bancroft Street,
Zanesville, Ohio,
February 16, 1938

Messrs. F. Y. Young and Brother,
62 Liberty Street,
Pittsburgh, Pennsylvania.

Gentlemen:

I hereby apply for a position in your Sales Department which you mention in your advertisement in this morning's issue of the "Post Gazette".

I am twenty two years of age, a graduate of the Central High School of Zanesville in the class of 1926. I have also completed the regular stenographic course in the Warden Business School of your city. At present I am doing stenographic work for the H. J. Goodwin Company in this city.

My parents have moved to Pittsburgh. I am therefore anxious to secure a position in your city. I should be pleased to be granted a personal interview at your convenience.

Very truly yours,
(Miss) Irma C. Watson.

SALES LETTER

20 South LaSalle Street
Chicago, Illinois
August 13, 1938

John Purchas
Warren, Iowa

At last the ordinary business man is satisfied. No miracle has been performed. We have made no absolutely new type of breakfast food, or special brand of soap that will break your whiskers off without the use of some sort of razor, or even a typewriter that will always spell correctly.

Yet we have done something we feel you will appreciate. You may have thought it not quite possible. We have perfected and patented a new chair cushion for office and typewriter chairs that will stay put where you place it on the chair, will not become as hard as cement in an hour, and will outlast the desk chair itself.

If the enclosed circular describing the Easy Chair Pad interests you, let us have a chance to prove what we have been saying of it. Our slogan has always been,—"We refund without asking the customer to fill out a two-page blank explaining just what is wrong." You are the one to be pleased.

Yours expectantly,
Zero Manufacturing Company

MMJ:HT.

CONVERSATIONAL SALES LETTER.

Periodical Sales Company
Palo Alto, California
August 17, 1938

Mr. Lumber Merchant
Everywhere, U. S. A.

"What are you going to send your customers as a Christmas greeting this year? It won't be long now before Santa Claus will be coming around on his annual visit." In this manner our salesman opened a conversation in a large office recently.

"Blamed if I know," said the manager of the lumber company, "for we have tried calendars, ruling sticks, blotters, and everything else. They do no good."

"Are you certain of that?" asked our traveling man. "Why not try something different this time,—something that the office needs and will keep in sight every day of the year?"

"You are the boy to convince me that it can be done."

"Well, here is my chance right now. Have you seen the last copy of the *Retail Lumber Dealer?* Our house has arranged with the publishers to supply this monthly magazine to wholesale dealers who want to give their customers something handsome for Christmas."

"You don't mean to expect me to subscribe for this thing for a whole year for every customer? It would cost too much."

"Suppose you have been paying fifty or seventy-five cents for things which went out of sight or into the waste basket year after year. Why not pay a quarter more, get something that will please, and moreover something that will really advertise you every month of the year?"

As a result of this conversation, the salesman brought us 85 orders from one firm alone.

Let us send you further details. It will cost you nothing and may lead to greatly increased sales next year.

Very truly yours,
Periodical Sales Company
Herbert H. Halliday, Pres.

REQUEST FOR ADJUSTMENT OF LOSS

489 Chapel Street,
New Haven, Connecticut
March 1, 1938

Rapid Auto Express Company
Hartville, New York

Gentlemen:

Day before yesterday you brought several crates of furniture from New York to our warehouse in New Haven. As our workmen opened them yesterday afternoon, they found several pieces damaged or broken, and evidence of rough handling in transit. There seems to be some evidence of a collision or of some sudden jar which caused the injury.

As soon as we can estimate the exact damage, we shall send you a statement. In the meantime, if a representative of your firm wishes to examine the shipment, we shall be glad to have him come to our office.

Truly yours,
Tuttle Furniture Co.
By J. C. Eliot, Manager.

jce-ty

LETTERS OF FAMOUS PEOPLE

Abraham Lincoln's reply to a letter requesting information about the financial condition of one of his neighbors.

Springfield, Illinois,
My dear Sirs: September 17, 1858.

Yours of the 10th inst. received. I am well acquainted with Mr. X., and know his circumstances. First of all, he has a wife and baby; together they ought to be worth $50,000. Secondly, he has an office in which there are a table worth $1.50 and three chairs worth, say, $1. Last of all, there is in one corner a large rat-hole which will bear looking into.

Respectfully,
A. Lincoln.

March 3, 1863.

To Mr. James T. Fields:

I was ashamed this morning to send the expressman to your door in quest of an old umbrella, not unlike that which accompanied and consoled the exiled King of France in his flight to England. Nevertheless I did send, for it is a lineal descendant of King Cotton, and is of that particularly audacious kind that never says "Lost." In the hands of a modern sensuous poet the handle would become pearl (daughter, not mother of), and the rest would be of a "tissue from the looms of Samarcand." Finally, it is the one I keep to loan to lecturers at the Lowell Institute and the like; and, tho' very dissipated, is worth reclaiming.

Accept my apology and believe me or not,
Yours truly,
Henry W. Longfellow.

Thomas Bailey Aldrich to Professor Edward S. Morse.

My dear Morse:

It was very pleasant to receive a letter from you the other day. Perhaps I should have found it pleasanter if I had been able to decipher it. I don't think I mastered anything beyond the date, which I knew, and the signature, at which I guessed.

There is a singular and perpetual charm in a letter of yours—it never grows old, and it never loses its novelty. One can say every morning, as one looks at it, "Here's a letter of Morse's I haven't read yet. I think I shall take another shy at it to-day, and maybe I shall be able in the course of a few years to make out what he means by those t's that look like w's and those i's that haven't any eyebrows."

Other letters are read and thrown away and forgotten, but yours are kept forever—unread. One of them will last a reasonable man a lifetime.

Phillips Brooks to his niece.

233 Clarendon Street, Boston,
My dear Gertie: March 21, 1881.

This is a picture of you and Toody and the little boy that gave you the measles. Toody is the one with the umbrella, and you are the one with your finger in your mouth. I am glad you have got done the measles. What are you going to have next? I should think you might take half of poor Tood's measles and help her through. I thank you for writing me such a beautiful letter, and I hope you will come and see me the first time you go out.

Samuel Johnson's letter on friendship written to Mrs. Thrale.

Since you have written to me with the attention and tenderness of ancient times, your letters give me a great part of the pleasure which a life of solitude admits. You will never bestow any share of your good-will on one who deserves better. *Those who have loved longest love best.* A sudden blaze of affection may by a single blast of coldness be extinguished; but that fondness which length of time has connected with many circumstances and occasions, though it may for a while be depressed by disgust or resentment, with or without a cause, is hourly revived by accidental recollection. To those who have been much together, everything heard and everything seen recalls some pleasure communicated or some benefit conferred, some petty quarrel or some slight endearment. Esteem of great powers, or amiable qualities newly discovered, may embroider a day or a week, but a friendship of twenty years is interwoven with the texture of life. A friend may be often found and lost but an *old friend* never can be found, and nature has provided that he cannot *easily* be lost.

29 De Vere Gardens, W.,
My dear Tennyson: August 5, 1889.

To-morrow is your birthday—indeed a memorable one. Let me say I associate myself with the universal pride of our country in your glory, and in its hope that for many and many a year we may have your very self among us, secure that your poetry will be a wonder and delight to all those appointed to come after. And for my own part, let me further say, I have loved you dearly. May God bless you and yours!

At no moment from first to last of my acquaintance with your works, or friendship with yourself, have I had any other feeling, expressed or kept silent, than this which an opportunity allows me to utter—that I am and ever shall be, my dear Tennyson,

Admiringly and affectionately yours,
Robert Browning.

The Earl of Chesterfield to his son.

Dear Boy: London, August 10, 1749.

Let us resume our reflections upon men, their characters, their manners; in a word, our reflections upon the World.

They may help you to form yourself and to know others. A knowledge very useful at all ages, very rare at yours; it seems as if it were nobody's business to communicate it to young men. . . . . .

There is a certain dignity of manners absolutely necessary, to make even the most valuable character either respected or respectable. Whoever is admitted or sought for, in company, upon any other account than that of his merit and manners, is never respected there, but only made use of.

. . . . . .

Abject flattery and indiscriminate assentation degrade as much as indiscriminate contradiction and noisy debate disgust. But a modest assertion of one's own opinion and a complaisant acquiescence in other people's, preserve dignity. . . . . Adieu.

Figures of Speech.—When, instead of literal terms, we employ imagery we are said to use figurative language. The forms of expression so used are called figures of speech, tropes, or images. The use of figurative language clothes the sentences in beauty and dignity; pleases us by exciting our imagination; enables us to make a larger use of our vocabulary; and aids us by a clearer and more forcible manner of expressing our thoughts. Figures should be used sparingly. A too frequent use of them palls upon the reader and causes a lack of appreciation of them.

The figures of speech most frequently used are arranged in three groups:—

Figures based on resemblance.	Simile. Metaphor. Personification. Apostrophe. Allegory.
Figures based on contrast.	Antithesis. Epigram. Irony.
Figures based on other relations.	Metonymy. Hyperbole. Climax. Interrogation. Exclamation. Vision.

Simile.—This is the comparison of two things when *like*, *as*, or a similar word is employed. Not all comparisons, however, are similes. To say "The lion is as strong as the tiger" is not to use a simile, though there is comparison and *as* is used. It is important to note that a simile expresses a likeness of one point between things that are unlike in every other point. The following are good examples of simile:—

"A fatal habit settles upon one like a vampire and sucks his blood."

How far that little candle throws its beams!
So shines a good deed in a naughty world.
—*Shakespeare, Merchant of Venice.*

Her hair drooped round her pallid cheek,
Like seaweed on a clam. —*Holmes.*

Metaphor.—When we say that one thing is another by way of comparison we call the figure a metaphor. As in the case of the simile the contrasted things must not be too nearly alike.

"All the world 's a stage."
"Spare moments are the gold-dust of time."
"Thy liquid notes that close the eye of day."

When one object is compared to two or more in the same sentence there results a mixed metaphor, which is generally ludicrous or ridiculous in its effect. Care must also be taken that a metaphor be not combined with a literal statement in the same sentence. When we say "Her cheeks bloomed with roses and health" we combine the metaphor "roses" with the literal "health." But we might correctly say "roses of health."

Personification.—When inanimate objects are treated as though they were animate, and when the lower animals are endowed with human powers and attributes, they are personified.

"The morning stars sang together."
"The angry sea."
"The wind howled."
"All day the sea-waves sobbed with sorrow."

Apostrophe.—When we address an inanimate object, or an absent or dead person, the figure is called apostrophe.

"My country, 't is of thee."
"Thou, too, sail on, O ship of state."
"O Death, where is thy sting?"

Allegory.—In some respects an allegory is a continuous metaphor. It is essential, however, that the subject be kept in the background in an allegory and not given the prominence which is required in a metaphor. Among the most famous allegories are: Bunyan's "Pilgrim's Progress"; Spenser's "Faerie Queene"; Swift's "Tale of a Tub"; and Addison's "Vision of Mirza."

Allegorical representation is very common in painting and in sculpture. Many famous large mural decorations are of allegorical subjects; among the most celebrated are the many fine examples found on the walls of the Library of Congress and in the Boston Public Library.

Parable.—A short account of a happening, either real or imaginary, intended to enforce or to teach a moral principle, is a parable. This was Christ's favorite method of teaching.

Fable.—Useful lessons taught by stories in which animals and inanimate objects are introduced as persons are called fables. This was a favorite method with classical writers, such as Æsop; and with modern writers, such as Fenelon and Gay.

Antithesis.—A forcible statement of unlikeness in which the contrast is conveyed by balanced sentences is called antithesis. It is important that the same structure of sentence be maintained and that the same parts of speech be used in the contrasting parts of the sentence.

"Deeds show what we are; words, what we would be."
"Silence is as deep as Eternity; speech is as shallow as Time."
"Fools rush in where angels fear to tread."

Epigram.—This is a condensed, pointed saying which apparently contradicts in one part of the sentence or by one word what has been said in another.

"The child is father of the man."
"When you have nothing to say, say it."

Irony.—A statement made in such a way that its very absurdity will show that the opposite meaning is intended is the figure known as irony.

Metonymy.—When the name of an object is put for another in cases where the two objects are so closely related that the one name suggests the other it is called metonymy. This is a common figure in daily speech. We say "The kettle boils" when we mean that the water in the kettle boils. The use of "hands" for men; "head" for cattle; "gray hairs" for age; "rum" for intemperance, are all familiar cases of metonymy.

Hyperbole.—This is the figure of exaggeration, not for the purpose of deceiving, but, usually, to attain force or emphasis.

"The waves are mountains high."

The modern popular use of superlatives in daily intercourse illustrates the common use of hyperbole.

Climax.—The climax is a series of statements

of which each succeeding one surpasses or eclipses the preceding one. It is necessary that the rising order be strictly observed or an anti-climax will result. Never let a weaker or less important statement follow a stronger one.

Here I stand for impeachment or trial! I dare accusation! I defy the honorable gentleman! I defy the government! I defy their whole phalanx!

—*Grattan.*

The following is an example of anticlimax:—

"The arm of the Lord is as fixed as fate, as sure as eternity, as strong as the rock of Gibraltar."

Interrogation and Exclamation.—In these figures strength or force is derived by putting a statement in the form of a question to which no answer is expected or in the exclamatory form.

Am I my brother's keeper?
Is life so dear, or peace so sweet, as to be purchased at the price of chains and slavery?

—*Patrick Henry.*

Oh what a tangled web we weave
When first we practise to deceive!

—*Scott.*

But oh, for the touch of a vanished hand,
And the sound of a voice that is still!

—*Tennyson.*

Vision.—This figure represents a past scene or event as one now passing before the eyes of the audience or the reader.

I see before me the gladiator lie;
He leans upon his hand—his manly brow
Consents to death, but conquers agony,
And his drooped head sinks gradually low.

—*Byron.*

Synecdoche.—A figure in which a part is used to represent the whole, as when "fifty sail" is used for fifty ships; or the whole is used for the part, as "The whole world knows his worth"; or the species for the genus, as the use of "cut-throat" for assassin; or the genus for the species, as "being" for man; or using the word for the material from which a thing is made instead of the name of the thing itself, as "board" for table; or that which contains for the thing contained, as "bottle" for wine, etc.

Litotes.—A moderation, modification, or softening of a statement in order to avoid censure or to increase the effect.

"I am a citizen of no mean city."

In such cases a statement is made by denying the opposite.

Parallel.—A lengthy or continued comparison of two objects, whereby the likenesses and differences are noted. Sometimes it takes the form of an expanded or extended antithesis.

Allusion.—The use of a well-known fact or event in history for explanation, description, or illustration.

Onomatopoeia.—The use of words which cause the sound to correspond to the sense. Poe's poem, *The Bells,* and Southey's description of how the waters come down at Lodore are marked examples. Many words like *rattle, crackle, boom, rumble, roll, roar, swish,* and *hiss,* are onomatopoetic words.

Structure of Sentences.—Sentences from a grammatical standpoint are classified as simple, complex, or compound.

A simple sentence contains one predicate, either simple or compound.

A compound sentence is composed of two or more principal clauses.

A complex sentence contains one principal clause and one or more subordinate clauses.

A declarative sentence is a statement.

An interrogative sentence is a question.

An imperative sentence is a command or request.

An exclamatory sentence expresses strong feeling.

A periodic sentence or a period holds the attention until the close; or it is a sentence in which the full meaning of the speaker is not made clear until the last word is spoken.

A loose sentence may be brought to a close in one or several places, and in each case make complete sense.

A balanced sentence is composed of two members of similar form. It is much used in contrast, comparison, or antithesis.

A *phrase* is a group of closely connected words not containing a subject and predicate, but which may be used as a single part of speech. According to form, phrases are prepositional, participial, and infinitive; according to use, they are adjective, adverbial, and noun.

A *clause* is a part of a sentence containing a subject and predicate. From their rank in the sentence, clauses are named principal or independent, and subordinate or dependent. Co-ordinate clauses are those of equal rank in sentences, and are joined by "and," "but," "so," etc. From their use in sentences, subordinate clauses are called noun, adverbial, and adjective. A restrictive clause limits the word which it modifies so closely that it cannot be omitted without changing the meaning intended. *That* often introduces a restrictive clause. An unrestrictive clause may be omitted or changed to a principal clause.

Analysis is the separation of a sentence into its elements. *Synthesis* is the formation of a sentence from the parts.

Idiom.—A form of expression peculiar to a particular language. "At his fingers' ends."

Ambiguity.—A word or expression capable of being understood in either of two meanings.

Euphony.—The harmony of a sentence is often destroyed by the repetition of the same word or of the same sounds. This fault is known as a lack of euphony.

"The principal *ordered* the teachers to *order* the pupils to preserve good *order.*"

The same effect is produced by the repetition of the same syllabic sounds.

"The elephant was dra*wn in an e*normous car."

Tautology.—The needless repetition of the idea in other words is known as tautology. "To return back," "To still continue," "To rearrange again," are familiar instances.

Redundancy.—The addition of statements, descriptions, or words not essential to clear expression which overload the sentence.

"Collect *together* all of the books." The idea is repeated by the unnecessary use of *together.*

Pleonasm.—The use of more words than are necessary to express the idea. It is sometimes permissible. "I saw it *with my own eyes.*"

Verbosity.—The expression of the idea by many words, however grammatical or euphonious the choice may be, is the fault called verbosity.

"He regrets that the multiplicity of his engagements precludes the possibility of taking advantage of your polite invitation."

This fault is sometimes known as that of *prolixity, circumlocution,* or *periphrasis.*

Poetry.—Poetry has been defined by Edmund Clarence Stedman as follows:—

"Poetry is rhythmical, imaginative language expressing the invention, taste, thought, passion, and insight of the human soul."

The important classes of poetry are the epic, the lyric, and the dramatic.

Epic Poetry.—An epic poem deals with the past, is consequently dependent upon memory and imagination; is narrative in character; treats usually of the life and heroic adventures of some great person; is simple in construction and generally excites deep interest. The longer and more celebrated epics are Homer's "Iliad," Homer's "Odyssey"; Vergil's "Æneid"; the Anglo-Saxon "Beowulf"; and Milton's "Paradise Lost."

Lyric Poetry.—Lyric poetry has more to do with the emotions and feelings than with events. In lyric poetry the power and personality of the poet is of far greater importance than are the subjects of which he treats. In this class are included hymns, odes, patriotic songs, love songs, nature poems, and the sonnet. Burns is probably the greatest lyric master in the English language.

The sonnet is limited in length to 14 lines and in subject to only one thought. This form originated in Italy. It was first used in England by Wyatt and Surrey. A sonnet is divided into two parts—the first eight lines called the *octave*, in which the subject is introduced and elaborated; and the last six lines, called the *sestet*, in which the subject is summed up or the conclusion drawn. The rhyming of the lines in a sonnet is very variable and much freedom is allowed. The sonnets of Shakespeare, of Milton, and of Wordsworth are most celebrated and many of them are familiar.

Dramatic Poetry.—The forms through which the English drama passed in its development are: Passion plays and Saint plays; Miracle plays; Moralities; Interludes; Comedies, and Tragedies.

Passion plays originated in Europe in the second century and were paraphrases of Biblical events. These were presented in churches with the priests as actors. In the fifth century they were strengthened by the addition of tableaux, dialogue, and very simple scenery. Plays with such characters as Daniel, Lazarus, and St. Nicholas as heroes were common in England in the twelfth century.

Miracle plays were presented in the public squares and places of cities, in the fourteenth century. They consisted of cycles which often covered from 25 to 42 important events of Biblical history. Coventry, Chester, York, and others were noted for the miracle play cycles in those days. Oberammergau in Germany is still noted for its passion plays, which vividly portray the chief events in Christ's life, and these are given by a simple village people with inadequate equipment, yet in such manner as to attract the attention of the whole world.

Moralities were plays in which the several vices and virtues were personified and allegorical representations were used in an attempt to correct abuses which had gradually crept into the miracle plays to the great scandal of the church.

Interludes were short plays given between the acts of more important plays in order to engage the attention and interest of the audience during, otherwise, long waits for dressing and stage carpentry.

Comedy was first known in England in "Ralph Roister Doister" by Nicholas Udall in 1551.

Tragedy was first presented in "Gorboduc, or Ferrex and Porrex," by Norton and Sackville.

Mixed Forms.—It is possible for one poem to combine epic, lyric, and dramatic characteristics.

A legend is a more or less mythical elaboration of some story founded upon tradition or fact. Layamon's "Brut"; Chaucer's "Canterbury Tales"; Longfellow's "Golden Legend," "Hiawatha," "Evangeline," and "King Robert of Sicily" are noted examples of this form.

An allegory, such as Spenser's "Faerie Queene," and shorter forms, as Leigh Hunt's "Abou Ben Adhem," is not only metaphorical in treatment but didactic in purpose.

The Ballad or folk-song is in some respects a combination of both epic and lyric characteristics. Old English history is a prolific field and has given to us such vigorous, dashing, and charming examples as "Chevy Chase," "Robin Hood," and "Bonny Barbara Allan."

Versification.—A verse is not to be confounded with a stanza. A verse is a line of poetry, or a combination of feet, and we speak of blank verse and of rhymed verse. A stanza is a group of verses and consists usually of either four or eight lines.

Meter is the division of a verse or line into feet. The kinds of feet most commonly used in poetry are:—

Trochee, consisting of one accented and one unaccented syllable, as bright'est, and is marked thus: — ⏑

Iambus, consisting of one unaccented and one accented syllable, as distress', and is marked thus: ⏑ —

Anapest, consisting of two unaccented and one accented syllable, and is marked thus: ⏑ ⏑ —

Dactyl, consisting of one accented and two unaccented syllables, and is marked thus: — ⏑ ⏑

Spondee, consisting of two accented syllables, and is marked thus: — —

Scansion.—This is the measuring of lines, dividing them into feet, and marking any pauses in the lines. In it we tell the kind of feet and the number of feet to a line.

One foot to the line is monometer verse.
Two feet to the line is dimeter verse.
Three feet to the line is trimeter verse.
Four feet to the line is tetrameter verse.
Five feet to the line is pentameter verse.
Six feet to the line is hexameter verse.
Seven feet to the line is heptameter verse.

In scanning a line we proceed thus:—

⏑ — | ⏑ — | ⏑ — | ⏑ — | ⏑ —
The cur | few tolls | the knell | of part | ing day.

The unaccented and the accented syllables are marked and it is seen that the verse consists of five iambi. Therefore the verse is said to be iambic pentameter.

— ⏑ | — ⏑ | — ⏑ | — ⏑
Tell me | not in | mournful | numbers

is a trochaic tetrameter for it consists of four trochaic feet.

˘ ˘ ¯ ˘ ¯ ˘ ¯
The Assyr | ian came down | like a wolf | on
˘ ¯
the fold. |

This is anapestic tetrameter verse for it consists of four anapestic feet.

Lines which lack a syllable at the end, or which terminate in an incomplete or imperfect foot, form what is known as catalectic verse.

¯ ˘ ¯ ˘ ¯ ˘ ¯ ˘
It was | eve, at | anchor | riding,
¯ ˘ ¯ ˘ ¯ ˘ ¯
Stately | ships were | lulled to | rest.

The first line is trochaic tetrameter for it contains four trochees; the next line is trochaic tetrameter catalectic for it contains four trochees, the last of which is catalectic.

Caesura is a break or pause which occurs usually in the middle of a foot.

"This is the forest primeval. || The murmuring pines and the hemlocks."

There is a caesural pause after primeval. There are sometimes two such pauses in a long line.

Rhyme.—This correspondence between the sounds of words, in order to be perfect, must conform to the following rules:—

(1) The vowel sounds in the words must be the same.

Sing rhymes with ring, but not with pleasing.

(2) The consonants following the vowel must have the same sound.

(3) The consonants before the vowel should have different sounds.

(4) The accents should fall on corresponding syllables in the rhymed words.

Poetic license is a term given to a certain freedom and liberty accorded to poets in the use of meter and rhyme. In some cases a much better expression may be secured by slight variations in rhyme and meter, so perfection in these qualities is not always demanded.

Alliteration or head rhyme, as the Anglo-Saxons called the frequent recurrence of the same letter in line, was the mark of Old English rhyme. We now use the end rhyme. A moderate use of alliteration is permitted in verse. "Lightly down leaping he loosened his helmet" is a line from an Old English poem where the rhyme is secured by the oft-repeated letter "l." Among modern poets Swinburne is, perhaps, most noted for alliterative rhyming. Shelley speaks of "the beaded bubbles winking at the brim"; and Roberts of "the grackles bickering in the alder boughs."

Blank Verse.—Poetry in which the lines do not end in rhymes. It is most common in long and serious poems. The writer is not hampered in the expression of thought by a search for rhymes.

Distich or Couplet.—A verse of two lines making complete sense. Distich is also applied to an epigram of two verses.

Triplet.—Three verses or poetic lines rhyming together.

Quatrain.—A stanza of four lines rhyming alternately. The Omarian quatrain in which Fitzgerald wrote his Omar rhymes in the first, second, and fourth lines.

Rhyme-royal.—A stanza of seven ten-syllabled lines of which the first and third, the second, fourth, and fifth, and the sixth and seventh rhyme. The stanza was introduced by Chaucer.

Spenserian Stanza.—A stanza of eight iambic pentameter lines followed by an iambic hexameter. It was introduced by Edmund Spenser and has been much used by Byron and other modern poets.

Heroic Verse.—The verse in which epic or heroic poems are usually written; in English, Italian, and German it is the iambic pentameter; in French, the iambic hexameter. In Vergil's Æneid, and in Homer's works, it is the hexameter line.

Alexandrine.—A verse composed of twelve syllables; sometimes applied to the last line of a Spenserian stanza.

Vers de Société.—Sometimes called society verse. It is the lightest kind of lyrical poetry, designed for the entertainment of polite society.

Villanelle.—A form of French verse written in nineteen lines and two rhymes, arranged in five triplets and a concluding quatrain. The first and third lines of the first stanza are repeated alternately as the last line of the following triplets and also form a couplet at the close of the quatrain.

Ode.—A lyric poem suitable to be set to music; it possesses marked nobility of sentiment and dignity of style.

Strophe.—That part of a Greek chorus or dance when the chorus turns from the right to the left of the orchestra. In modern verse it is also sometimes applied to a stanza.

Antistrophe.—The return of the chorus after the strophe. When the chorus moved around the altar, the strophe was sung while moving from east to west; the antistrophe, from west to east; and the epode, or last part of the song, while all stood before the altar.

Epode.—An after song; that part of a lyric poem which follows the strophe and antistrophe. Archilocus invented a lyric poem in which a longer verse is followed by a shorter; such are the Epodes of Horace.

Meter.—The meter of hymns and psalms is sometimes designated by such terms as long meter (L. M.), short meter (S. M.).

The Long Meter, or **L. M.**, is formed of four-line stanzas of tetrameter verse.

Though long the weary way we tread,
And sorrow crown each lingering year,
No paths we shun, no darkness dread,
Our hearts still whispering, Thou art near.

The Common Meter, or **C. M.**, is formed of four-line stanzas, the first and third lines of tetrameter (four-syllabled) verse, and the second and fourth of trimeter (three-syllabled) verse.

No mortal can with him compare
Among the sons of men.

The Short Meter, or **S. M.**, is formed of four-line stanzas, the first, second, and fourth lines of trimeter (three-syllabled) verse, and the third line of tetrameter (four-syllabled) verse.

Stand up and bless the Lord,
Ye people of his choice.

The Hallelujah Meter, or **H. M.**, is formed of eight-line stanzas, of which the first four are of tetrameter (four-syllabled) verse, and the last four are of trimeter (three-syllabled) verse, though sometimes these last four are written as two lines of hexameter (six-syllabled) verse.

WORDS OFTEN INCORRECTLY USED.

A.—Do not fail to repeat the article before a word if the sense requires it: He bought a black and white horse (one horse). He bought a black and a white horse (two horses).

Use *a* before a word beginning with a consonant or an aspirated "h"; *an* before a word beginning with a vowel or a silent "h."

Above.—Good writers do not say "the *above* statement"; *foregoing* or *preceding* is preferred. *Above mentioned* and *above referred to* do not sound as well as the simpler *already* does.

Accept of.—The *of* is unnecessary; we do not accept *of* gifts; we simply accept them.

Accompany.—In speaking of things, remember that one thing is accompanied *with* another; of persons, one person is accompanied *by* another. "The rain is accompanied *with* wind." "The governor was accompanied *by* his secretary."

Accord.—Not to be used for grant or give. *Accord* is a formal word and it involves great condescension on the part of the one who bestows.

Ad.—Not a correct abbreviation for advertisement and not sanctioned by good authorities. In writing, *advt.* is the proper form. The reason why *ad.* is so commonly used is because it is so difficult to pronounce *advt.*

Adjective.—It surprises some to learn that the best usage sometimes permits the use of an adjective where an adverb might be expected: Drink *deep;* he looked *bad;* stand *erect;* that seems *strange; wide* open; *red* hot; *pale* blue.

Adopt.—Often wrongly used for decided upon. Congress *adopts* a set of rules or a resolution which some one has prepared beforehand. But when several courses of action are presented and fully discussed, it is better to say that such a measure or course was *decided upon.*

Administer.—Medicine, oaths, affairs, and governments are *administered;* blows are *dealt.*

Advent.—Not to be used instead of arrive or arrival. Reserve the use of *advent* for sacred, stately, or ceremonial occurrences.

Affect.—Means to influence in some way; *effect* means to bring about, to accomplish: "This will not *affect* me in any degree." "He failed to *effect* the reforms for which he labored so hard."

Agriculturist.—This form is to be preferred to *agriculturalist.*

Ain't.—Never use this incorrect form of I'm not. It is less an abbreviated form of have not, for which it is sometimes used. Say *am not, are not, is not,* and *have not.*

Alike.—This word does not need *both* and *just* which so often accompany it. "Both alike" or "both just alike" are not to be used; say "They were dressed alike."

All of.—The *of* is not necessary. "I have them *all*" is better than "I have *all of* them" and "Take it *all*" than "Take *all of* it."

All of them.—Instead of "All of them left at nine" say "They all left at nine."

All over.—Transpose these words to "over all" and the effect is better. "Fires are raging *over all* the country" is a much better form.

Allege.—*Say* is much to be preferred to *allege* in the sense in which it is so commonly misused. If there is no sense of criminality or freeing from blame in the statement, do not use *allege.*

Allow.—Commonly misused for admit, think, or to be of the opinion. "He *allowed* that the price was a reasonable one" should be "He *admitted* that," etc.

All the same.—This is not so good as *nevertheless,* or *still,* for which it is sometimes used.

Almost, nearly.—Use *almost* when a thing has been going on for some time and is nearing completion; use *nearly* in speaking of something that has not been begun or did not happen. A man who has been severely injured might be *almost* killed; while one who fled unharmed from the danger might have been *nearly* killed.

Alone.—Not to be used instead of only. To do something *alone* is to do it unaided; to be the *only* one to do signifies that there were none others who did it. "I did it *alone*" means that I had no help or was unaccompanied. "I was the only one who did it" means that others did not do it.

Alternative.—Do not use *alternative* when *course* is meant. It is absurd to speak of "the only possible *alternative,*" because alternative means that a choice between two courses is open to one.

Always.—Watch this word to see if its use is really necessary. "Whenever I go to New York, I *always* go to see him" is no stronger with, than without, the word.

Among one another.—Say "*with* one another" or "*among* themselves."

And.—Not to be used instead of *to.* "Try *and* come," should be "Try *to* come." "Go *and* see him" should be "Go *to* see him."

Not to be used for *or.* "A language like the Greek *and* Latin;" there is no Greek and Latin language.

And which.—*Which* in this case is unnecessary, the *and* alone will do all that is needed.

Anniversary.—This word is applied only to yearly celebrations, as birthdays or wedding anniversaries. We do not speak of centennial *anniversaries;* we call them centennial *celebrations.*

Antecedents.—Not to be used for past history or reputation. Avoid such an expression as "His *antecedents* are bad."

Anticipate.—Not to be used in the sense of hope, or expect.

Any.—Not to be used as in the sentence "I did not sleep *any* last night."

Anyhow, anyway.—Not to be used in place of "At any rate," "In any event," "Be that as it may."

Any place.—Avoid the use of such forms as: "He wants to go *some place,*" "He will not go *any place.*" Use *somewhere* and *anywhere* instead.

Anyway and anywhere.—Never spell these with the unnecessarily added "s."

Apparent.—Not to be used for evident, obvious, or plain. "The truth of that is *apparent*" should be "The truth of that is *obvious.*"

Apt, likely.—*Apt* means endowed with some special fitness or ability; *likely* means probably. "He is *apt* to come at any time" is wrong, for it requires no mental fitness to come. Say "He is *likely*" or, better, "It is *likely* that he may come at any time."

Around, round.—Use *around* when rest is signified; *round* when motion is expressed. "The grocer is just *around* the corner." "The

boy ran *round* the corner." "He sailed *round* the world." "The bandage was tied *around* his finger."

As—as, so—as.—Use *as—as* for positive or affirmative comparison; *so—as* for negative comparison: "John is *as* tall *as* James;" "George is not *so* tall *as* Mary."

As I take it.—Better say "As I understand it," "As I see it," or "As it seems to me."

Ascend.—Do not use *up* with this word. "He ascended *up* to the top" should be "He ascended to the top."

At.—Instead of "Where have you been *at*?" say simply "Where have you been?"

At all.—This expression is usually unnecessary as it does not add to the strength of a sentence. "It does not rain *at all*" is no better than "It does not rain."

At best.—Say "at *the* best."

At that.—Avoid the use of this expression.

Audience.—Do not use when you mean spectator. An *audience* listens; *spectators* see what occurs.

Awful, awfully.—That only is awful which inspires awe. Do not use these words in any other sense. They are among the words most frequently used in an incorrect way.

Back.—Often wrongly used for *ago*. Do not say "three weeks *back*" or "a week *back*." Say *ago*.

Bad.—Do not say *bad* accident for *serious* accident; or a *bad* pain for a *severe* pain.

Bad grammar.—Some claim that this expression is false syntax; that if it is grammar it cannot be bad. But the Standard Dictionary quotes it as an allowable expression.

Badly.—Not to be used for greatly, exceedingly, or very much. "That rug needs to be beaten *badly*" is an amusing blunder. "I wanted that *badly*" is an expression to be avoided.

Balance.—Do not say "the *balance* of the day was spent at golf"; say "the *remainder* of the day." Leave balance to the bookkeeper or to the accountant, who regards a sum necessary to balance an account as the *balance*.

Beastly.—This term, so commonly used as expressive of disappointment, disgust, or contempt, should not find a place in your vocabulary.

Beautiful.—Not to be used where *nice* is meant. "*Beautiful* bread" should be "*nice* bread."

Because why.—Do not join these words. Either alone may be made to do the work you require of it.

Been to.—Do not say "I have been *to* New York" for "I have been *at* (or *in*) New York." You cannot *be to* a place.

Beginners.—Never say "a new beginner," nor "a new beginning." The *new* is unnecessary.

Behind.—Often unnecessarily used with left. "I left him *behind* in St. Louis" should be "I left him in St. Louis."

Between.—This is a preposition and requires the objective case after it. Never say: "Between you and *I*," because *I* is the nominative. Say "Between you and *me*."

Blame on.—Say "blame *for*" or "lay the blame *upon*"; but do not "blame anything *on* any one."

Both alike.—Leave out *both*.

Both of them.—Instead of "Both of them are here" say "They are both here."

Bound.—A very common, incorrect form of speech, as "I am *bound* to go." One is bound only when some obligation or constraining or compelling force binds one. Say "*determined* to go" or "*resolved* to go."

Bran-new.—The word is *brand-new*.

Bred and born.—Transpose these and say "born and bred."

But.—Often incorrectly used for *than* after *other*. Instead of "It is none other *but*" say "It is none other *than*."

But what.—Do not use when you mean *but that*. "I do not know *but what* I shall" is better written "I think I may." "I know nothing *but what* you told me" is correct.

Calculate.—Be sure that some mathematical process is concerned when you use this word. Do not "*calculate* that it will rain" unless you have arrived at the conclusion by a meteorological calculation.

Call.—Not to be used for occasion. "He had no *call* to be angry with me" should be "He had no *occasion* to be angry with me."

Cherubim.—Remember that *cherubim* is the Hebrew plural form of cherub. Then you will never speak of "*a* cherubim."

Choose.—Do not say "Because I don't *choose* to." Say, rather, "Because I would rather not" or "Because I don't care to do so" (or whatever verb is required).

Clothes.—Do not say that your clothes have grown too small for you, when it is you who have grown too large for your clothes.

Combine.—Do not use together with this word. "Combine *together*" is unnecessary repetition.

Complected.—Better use *complexioned*.

Couple.—When you use this word be sure that the two objects are really united by some bond or tie. Do not use it when you mean two.

Credible.—This word, which means worthy of belief, is not to be confounded with *creditable*, which means redounding to one's credit.

Crush out.—The *out* is usually unnecessary in this expression, for crush means to force out of shape. We "*crush* a rebellion."

Dangerous.—Do not use *dangerous* for in danger or dangerously, as "He is ill, but not *dangerous*." His life may be in danger, but he is far from being *dangerous*.

Deceive.—One does not deceive another unless he actually produces a false impression. It is absurd to say "He is deceiving me," because if he is deceiving you, you do not know it; if you do know it, he is not deceiving you. "He is trying to deceive me," or "He thinks he is deceiving me," is what is meant.

Demean.—Often wrongly used for bemean. Demean is to behave one's self; bemean is to disgrace one's self.

Depreciate.—Instead of "The property has *depreciated in value*" say "The property has *depreciated*." Depreciate means to fall in value.

Die.—Put such expressions as "I thought I should *die*" and "I nearly *died* laughing at him" out of your vocabulary.

Different.—Followed by *from*, never by *than*.

Differ from and with.—One thing differs *from* another in appearance, size, etc.; one person differs *with* another in opinion.

Direct.—Do not use this word for address. You do not *direct* a letter; you *address* it when

you write an address upon the envelope. You do, however, *direct* a person how to reach a place.

Disappointed.—Never be "*agreeably disappointed,*" rather be "*agreeably surprised.*"

Discommode.—Often used for incommode. "I fear I shall *discommode* you" should be "I fear I shall *incommode* you."

Disremember.—Say *forget.*

Done.—See that there is some other verb such as have, had, is, or was, with *done* when you use it. "You *done* it" should be "You *did* it."

Don't.—This is a contraction for do not but not for does not. Use *does n't* in the latter case. Such forms are permissible in conversation, but in writing the full form should be used.

Don't think, don't believe.—Instead of "I don't think it will rain" say "I think it will not rain."

Doubt but that.—Leave *but* out and say "I do not doubt that such is the case."

Drunk.—Drunk is the past participle; drank is the past tense. "They *drank* his health," "His health was *drunk.*"

Dutch.—Do not say *Dutch* when you mean German. *Dutch* pertains to Holland.

Each.—Always takes a verb in the singular. "Each *comes* in *his* turn and *receives* the amount due for *his* work."

Each other.—See that only two are concerned when this expression is used. If more than two are concerned use *one another.*

Eat.—Do not use this form for eaten. Instead of "The candy is all *eat* up" say "The candy is all *eaten.*"

Either.—Not to be used when you mean each. "On *either* side of the street" should be "On *each* side of the street," when both sides are meant. "On *either* side" is right when only one side is meant and when it does not matter which side.

Elder, Older.—Use *elder* and *eldest* in speaking of persons and usually of members of the same family, as the "*elder* brother"; *older* and *oldest* are applied to both persons and things.

Elegant.—Not to be used in such expressions as "*elegant* time," "an *elegant* view."

Else.—Be sure to follow *else* with *than,* not with *but.* Say "It was no one *else than* John."

Else.—Not necessary in the sentence "Nobody *else* but me." Say "Nobody but me."

Else.—By custom when *else* joined to anybody, somebody, any one, or some one, forms a possessive the *'s* is added to else, as *somebody else's.* But there are many who prefer to write *somebody's else, some one's else.*

Endorse, indorse.—Do not say "*endorse* upon the back of" for *endorse* means to write upon the back of. *Indorse* is the spelling generally preferred in business.

Enjoy.—No one really *enjoys* poor health.

Enough.—Instead of "A large enough room" say "A room large enough."

Equally.—Not necessary in the expression, "It is *equally* of the same value." Say "It is of the same value" or "They are of equal value."

Equally as well.—The *as* is not necessary, so write "*equally well.*"

Equanimity.—Do not say "*equanimity* of mind." It is useless repetition.

Ever.—Not to be used with the phrase "As soon as"; this of itself is sufficient.

Every.—Be careful to see that a verb of the singular number follows. "*Every* passenger *was* injured."

Every confidence.—Better say "*implicit* confidence." *Every* refers to a number of things, which confidence is not.

Every now and then.—Better use "occasionally."

Except.—Not to be used for unless, as "*Except* I am delayed." Say "*Unless* I am delayed."

Excessively.—Use very or exceedingly rather than *excessively.* "It is *exceedingly* cold" is better than "It is *excessively* cold."

Executed.—Do not use *executed* for put to death. Sentences are *executed;* criminals are *put to death.*

Expect.—Do not say "I *expect* it is" or "I *expect* it was." Use suppose, or think, or believe, or suspect. *Expect* refers only to the future.

Experience.—It is better to say "I *feel* great pleasure," not "I *experience* great pleasure."

Farther, further. Farther is the comparative of far and measures distance, as "How much *farther* have we to go?" Further measures quantity or degree, as "You should say nothing *further* upon that subject."

Feel bad, feel badly.—One feels *bad* when one's health is not good; one feels *badly* when there is something wrong with one's sense of touch.

Few.—There is a difference between *few* and *a few.* "*Few* persons like him" means that he is generally disliked. "*A few* persons like him" means that there are some who do like him.

Few, little.—Few measures number; little measures quantity or size. "I have *fewer* (not *less*) books than you;" "We all have *less* money than we think we need."

Find.—Not to be used for provide or furnish. "I *find* him in clothes" should be "I *furnish* (or *provide*) him with clothes."

First.—Say "first two," "first five," instead of "two first," "five first." Only one can be first; the next is second.

First-rate.—Use this as an adjective; not as an adverb. "You did that *first-rate*" is not correct.

Fix.—Be sure that you intend to convey the idea of fastening firmly when you use *fix.* It is not the same as repair, remedy, arrange, or set up.

For.—This word is often added to a sentence when not needed. "He knows more than you think *for*" would read better without *for.*

For to.—Not to be used where *to* alone is sufficient. "I went *for to* see him" should be "I went *to* see him."

From.—Often used where of is required. "He died *from* consumption" should be "He died *of* consumption." It is, however, quite right to use "from the effects of."

-ful.—This termination often causes trouble in forming plurals. The plural of *teaspoonful* is *teaspoonfuls;* of *cupful, cupfuls.*

Froze.—Do not use *froze* for frozen. Instead of "The brook is all *froze* over" say "*frozen* over."

Funny.—Often used where strange, or queer, or unusual is meant. One should not say "That 's *funny*" when the element of fun is entirely lacking.

Gent.—This word should never be used. It is not tolerated in refined writing or speaking.

Going to, just going to.—Use *about to* instead. "I am *about to* go."

Got.—Strictly this word means having possession of a thing after an effort to secure it. It does not signify mere possession. Instead of "I have n't *got* a pencil" say "I have no pencil."

Gotten.—While many good writers employ this form, *got* is to be preferred. Instead of "When he had gotten over his illness" say "When he had recovered from his illness."

Graduate.—We can say either "He was graduated from the university" or "He graduated from the university." Formerly it was held that "was graduated" only was correct; now both forms are used.

Gratis.—Not necessary in such expressions as "Given away *gratis*." Gratis means without charge or cost; given away means that also.

Grow small.—One cannot grow and become small at the same time. Use decrease or diminish.

Guess.—Be careful that this word is not used for think. Do not say "I *guess* so" when you mean "I think so."

Had better, had rather.—These forms are used by some of our best writers, though *might* or *would better* and *would rather* are preferable.

Had have.—The form "had have" is incorrect, for there is no such form of the verb. In "If I *had have* known it, I should have gone," the *have* is unnecessary; leave it out. Sometimes in pronunciation the *have* sounds like of—"If I had of heard it," etc.

Had ought.—*Had*, or any other form of the verb to have, cannot correctly be used as an auxiliary with ought. Use should or ought not. "He should not have done it" or "He *ought* not to have done it."

Hain't.—There is no such contraction for "have not" or "has not." Its use is a vulgarism.

Handful.—The plural is *handfuls*, not *handsful*. We may, however, speak of one having "both hands full."

Hang.—This verb has two forms of the past participle, *hanged* and *hung*. *Hanged* is used in speaking of a person who has been put to death in that way. "He was *hanged* for it," not "He was *hung* for it."

Hard, Hardly.—*Hardly* means scarcely and is not to be used for the adverb *hard*. "He struck the drum *hard*" (not *hardly*).

Have.—This word often intrudes in an incorrect way. "I meant to *have* written to you" should be "I meant to write to you." "I intended to *have* gone" should be "I intended to go." "I should like to *have* gone" should be "I should have liked to go."

Hence, Thence, Whence.—As these words mean from here, from there, and from where, it is wrong to say *from hence, from thence*, or *from whence*.

How?—Not to be used for What? or for "What did you say?"

However.—The use of this form for *how* and *ever* combined is a common error, as "*However* did you manage it?" for "How did you possibly manage it?" Nor should the word be used in the sense of "at any rate," "under all circumstances." The word is properly an adverb.

I am thinking.—"I think" is preferable.

If I was him.—This should be "If I were he." The verb *to be* takes the same case after as before it, and the subjunctive form *were* is required because there is no possibility of your being he.

Immigrant and Emigrant.—These are often confounded in use. An immigrant is one who comes *into* a country; an emigrant goes *out* of a country. A German leaving Hamburg for New York is an emigrant from Germany and an immigrant to the United States when he reaches New York.

Imminent.—Do not say eminent when *imminent* is meant. "He is in *imminent* (not eminent) danger."

In.—Often used for into. Instead of "Put your knife *in* your pocket" say "Put your knife *into* your pocket."

In case.—It is better to say "If I go" rather than "In *case* I go."

In so far as.—The *in* is not necessary. "So far as I know" is the correct form.

In spite of.—It is better to use *despite* or *notwithstanding*.

In the street.—This form is preferred to *on the street*. "He lives *in* State Street" is better than "*on* State Street."

Index.—This word has two plural forms: *indexes* when parts of books are meant; *indices* with reference to exponents of numbers.

Is that so?—This and similar expressions of surprise imply some doubt or incredulity and are not complimentary to the person to whom they are addressed.

Kind of.—Do not use this phrase for "somewhat" or "rather." It is correctly used in "What kind of man is he?" but do not say "What kind of *a* man is he?" The term "kinder" for "kind of" is inelegant.

Lady.—This term is much abused. When distinguishing the sexes say "woman" and "man." The term "woman" is never uncomplimentary, as many persons think. The combination of "saleslady" is wrong for, clearly, the opposite of "salesman" is "saleswoman."

Last and Latter.—When comparing or referring to two use *latter* instead of *last*. Generally avoid the use of former and latter in writing if you can, for the eye or memory must go back to the terms previously referred to in order to see which one is meant. Say, also, "the last three," "the last four," and not "the three last."

Lay and Lie.—These verbs are frequently confounded. The confusion arises from the fact that lay is the present tense of the verb to lay, and is also the past tense of the verb to lie. Present, *lay*, to put down or to cause to lie down; imperfect, *laid;* past participle, *laid*. Present, *lie*, to rest; imperfect, *lay;* past participle, *lain*. *Lay* in the present tense requires an object after it. *Lay* in the past tense does not require an object after it. In the expression "Now I lay me down to sleep" we have a poetic form of "Now I lie down to sleep." Here the form of the verb is reflexive.

Least.—"Of two evils choose the *least*" is incorrect. Say instead, "Of two evils choose the *less*."

Leave.—This verb is often used where let is meant. "*Leave* me go," "*Leave* me alone," should be "*Let* me go" and "*Let* me alone."

Lengthways, Sideways, Endways.—Preferable forms are *lengthwise, sidewise,* and *endwise.*

Let you and I.—This should be "Let you and *me.*" Let requires the objective case after it.

Liable, Likely.—Liable means "having a tendency"; likely suggests "very probable." Do not, then, say "It is liable to storm" or "He is liable to come." Use "likely" in these sentences.

Lit.—Not to be used for lighted. Instead of "He *lit* the gas" say "He *lighted* the gas." Nor for alighted. Instead of "He *lit* on his feet" say "He *alighted* on his feet."

Little or nothing.—Instead of "They know *little or nothing* about it" say "They know *little, if anything,* about it."

Miss.—The plural is *Misses.* Instead of "the Miss Smiths" say "the Misses Smith."

Mistake.—Do not say "I took you for another person." Say "I mistook you for another person."

Mistaken.—The common form "If I am not mistaken" should be "If I mistake not." A person may be mistaken for another.

Mutually.—Not to be used with "each other." Instead of "They mutually hated each other" say "They hated each other."

Myself.—Only to be used when emphasis is required, as "I did it *myself,*" meaning that I was unaided or had no associates. Avoid its use in such sentences as "My son and *myself* were there."

Near.—Not to be used for nearly. "It was not *near* so hard as I expected" should be "It was not *nearly* so hard as I feared."

Never.—Do not use *never* for not. "I *never* did it" should be "I did not do it."

Nicely.—Not to be used for well or very well. "I am getting along *nicely* now" would be stronger if well or very well were used.

No.—Used wrongly for not in such sentences as "Whether I go or *no,*" "Whether he is there or *no.*" Use *not* in such cases.

Nothing like.—Instead of "It is *nothing like as* good as mine" say "It is *not nearly so* good as mine."

Noways.—Incorrectly used for nowise. Say "He was nowise to blame."

Numerous.—Avoid the expression "numerous friends" and say "many friends."

Of all.—Not necessary in such expressions as "the first of all," "the last of all." "The first" and "the last" are quite as expressive.

Off.—Often incorrectly used for from. Instead of "He jumped *off* the roof" say "He jumped *from* the roof." It is even worse when followed by of, as "He jumped *off of* the roof."

On.—Often incorrectly used for to. Instead of "The box fell *on* the floor" say "The box fell *to* the floor."

One.—When the pronoun "one" is used in a sentence, see that it is not changed to "he" or "they." Keep it all the way through. Do not say "One can do as he likes with his own," but "One can do as one likes with one's own."

One.—Not to be joined to "other" or "another." "The other one" and "another one" should be simply "the other" and "another."

One another.—Often used for "each other." "They loved *one another*" should be "They loved *each other.*" Though we hear "Little children, love one another."

Only.—Be careful to place this word as close as possible to the word which you intend it to modify. If you say "I only wrote to him a week ago," you mean that you wrote and did nothing else; but "I wrote to him only a week ago" means that it is only a week since you wrote to him. "I wrote only to him a week ago" means that you did not write to any one else.

Opposite.—Should be followed by to in such sentences as "I live opposite to the hotel."

Other.—This word is frequently omitted when the sense demands its use. It finds a place in the sentence "James is more studious than any *other* boy in his class," because James is one of the boys in the class and he is not more studious than himself.

Ought.—Not to be used for aught. Instead of "For *ought* I know," write "For *aught* I know."

Over.—Should not be used for across. "I am going *over* the bridge" should be "I am going *across* the bridge," unless one means that one is going over the side of the bridge into the water.

Own up.—Not so good as confess or acknowledge.

Pair.—"A pair of new shoes," not "A new pair of shoes," for the shoes are new.

Pants.—This word should find no place in the vocabulary of any person of refinement. Say trousers.

Partake.—You cannot *partake* of food by yourself; it must be a share of that which is enjoyed by several. Eat is a much better word to use.

Party.—Not to be used for person. Do not say "I met a party on the train" unless you mean that you met a party of several persons. "A certain party" is also wrong when you mean some person whose name you do not care to mention.

Pellmell.—Never to be applied to one person, but only to a confused crowd. "He ran pellmell down the street" should be "He ran excitedly down the street."

Per.—Be careful to use this only with Latin words. It is quite right to say "per cent.," "per diem," "per capita," or "per annum"; but never "per day," "per week," or "per year." Say "so much *a* day." In signing for another write "by" not "per."

Perfect.—Avoid such expressions as "A perfect lady," or "A perfect gentleman." Nor does perfect admit of degrees of comparison. Do not say "most perfect."

Pled.—Not to be used for pleaded. Say "He *pleaded* for mercy," "He *pleaded* for his life," "He *pleaded* in his behalf."

Post.—Not to be used for inform. Do not say "I am not very well *posted.*"

Prejudice.—Never to be used in a good or favorable sense. You are not *prejudiced* in a person's favor; you are *prepossessed* in his favor. You are invariably prejudiced against him.

Presume.—Not to be used for think or believe. "I *presume* that is correct" should be "I *think* (or *believe*) that is correct."

Pretend.—Not to be used for profess or claim. Instead of "I *pretend* to know something about law" say "I *profess* to know something about law."

Preventative.—Wrongly used for preventive. Do not speak of a "*preventative* treatment of disease."

Promise.—Do not say "to promise faithfully." One may promise to do something faithfully; but one cannot promise faithfully to do it.

Propose.—Often incorrectly used for purpose. Instead of "I *propose* to go home to-morrow" say "I *purpose* to go home to-morrow."

Providing.—Not to be used for provided. Instead of "We shall go, *providing* the day is fine" say "——*provided* the day is fine."

Pure and Unadulterated.—An unnecessary repetition. That which is pure is, of course, unadulterated.

Quantity.—Wrongly used for number. Do not say "a great *quantity* of people" for "a great *number* of people" or "a great *many* people."

Quite.—Not to be used before a noun. Do not say "He is *quite* an orator."

Raise.—Not to be used for rear or bring up. Cattle are reared, or raised; children are brought up, or reared; potatoes are grown, or raised; one's rent is increased, not raised.

Real.—Not to be used for very. Avoid such expressions as "real sorry," "real well," "real glad."

Restore.—Do not say "Restore it *back* to me." Restore means to give back, and the sentence is as though one said "Give it back back to me."

Reverend.—In speaking of a clergyman always say "*The* Reverend Thomas Brown," not "Reverend Thomas Brown."

Saw.—Do not say "I *never saw* anything like this before." The proper form is "I *have never seen* anything like this." It is correct, however, to say "I never saw anything like that when I was there."

Says I.—Say "I said."

Seldom or ever.—Omit "or ever." It is not necessary. "I seldom see him" is correct.

Set, Sit.—The farmer *sets* a hen; but the hen *sits*. So we should speak of a *sitting* hen. We *sit* up late at night. We *sit* down on chairs. We *set* figures down in our books. We are able to *sit* up after an illness.

Shall have.—Do not say "I shall have pleasure in accepting your kind proposal." Say "I have much pleasure."

Shall, Will.—These forms of the future tense are very frequently interchanged and wrongly used. There are two futures: (1) The simple future, which denotes only the futurity of an event. In it we use *shall* in the first person and *will* in the second and third. *Simple Future.*—Singular: First person, I shall go; second person, Thou wilt go or You will go; third person, He will go. Plural: First person, We shall go; second person, Ye or you will go; third person, They will go. (2) The determinate future, which denotes an expression of the will or a determination that an event must occur in the future. In it we use *will* in the first person and *shall* in the second and third. *Determinate Future.*—Singular: First person, I will go; second person, Thou shalt go or You shall go; third person, He shall go. Plural: First person, We will go; second person, Ye or you shall go; third person, They shall go. If one remembers that the form *will* means a willingness or the performance of one's own free will, it will be seen that since one can will only for one's self and not for another, *will* must be used only in the first person of the determinate future. "I will go" denotes although there are many obstacles to prevent me, yet I have determined to go. "You shall go" denotes that although you object to going, I am going to see to it that you do go. The same is true of "He (or they) shall go." In the simple future "I shall go" denotes that my going is a matter of no determination or of overcoming any objections or obstacles, but is a natural happening in the future. "You will go," "He will go," "They will go" denote a perfect willingness upon the part of the respective agents and the absence of any force or compulsion to be exercised by the speaker. *Shall* is the proper form to be used in the first person when questions are asked. "Shall I come to-morrow?" is the correct form. "Will I come to-morrow?" means "Am I willing to come to-morrow?" and no one knows that so well as the speaker. In the second and third persons use *will* in the interrogative form. "Will you come to-morrow?" "Will they come to-morrow?" In the form "Shall he come to-morrow?" the speaker asks "Is it your determination that he must come to-morrow?" and, of course, there are occasions when that form might be used correctly.

Should, Would.—The form often seen in letter writing "I should be very glad if you would send me the papers" would be better "I shall be very glad if you will send me the papers."

Sick, Ill.—In England *sick* is restricted to a form of illness attended by nausea or vomiting. This distinction is not rigidly observed in the United States.

Slow.—Often used for slowly. Instead of "The boat is traveling *slow*," say *slowly*.

Smell of.—The *of* is unnecessary in such sentences as "I saw the dog smell of his master's coat."

Some.—Not to be used before numerals. Instead of "I met him *some* six years ago" say "I met him *about* six years ago."

Some.—Not to be used for somewhat. Do not say "He is some better to-day" for "He is rather (or slightly or somewhat) better to-day."

Somewhere.—Use this word in place of *somewheres* or *some place*.

Splendid.—Not to be used to express mere excellence. Avoid such expressions as "perfectly splendid," "a splendid time," and "a splendid story."

Standpoint.—Frequently used where point of view would be much better.

Stationary, Stationery.—*Stationary* means remaining in one place or in one position. *Stationery* is writing material of all kinds.

Statu Quo.—Not to be used for *status quo*. *In statu quo* is correct.

Stop.—Wrongly used for stay. Instead of "I am *stopping* with a friend" say "I am *staying* with a friend."

Stricken, Struck.—While *stricken* is used in cases where misfortune is expressed, as "He was *stricken* with apoplexy," we also find more freedom in its use in the United States than in England. It is not unusual in this country to hear a motion in Congress "that all after the first paragraph be *stricken* out."

Such.—Not to be used for so, as "I had never felt *such* a severe pain," which should be "I had never felt *so* severe a pain."

Surplus.—Do not say "A surplus over and above," for a surplus is over and above.

Suspicioned.—Not to be used for suspected.

Than me.—Frequently used for *than I*. Instead of "He is stronger *than me*" say "He is stronger *than I*."

That.—Not to be used for so. Instead of "He was *that* independent that he refused my offer" say "He was *so* independent."

That, Who.—(1) "I saw the expressman, *who* brought my trunk," means "I saw the expressman, *and he* brought my trunk." (2) "I saw the expressman *that* brought my trunk" points out a particular expressman, viz., the one that brought my trunk.

That 's him.—Should be "That 's *he*."

Them.—Do not use *them* for *those*. Instead of "Give me some of *them* pears," say "Give me some of *those* pears."

Then.—Not to be used in such expressions as "The then secretary," "The then cabinet." Say "The secretary at that time," "The cabinet of that time."

Thence.—Remember not to use from with this word. *Thence* means from that place. "He departed *thence* at noon."

There.—Do not use this word with that. "That there house" should be "that house." "That there" and "this here" are common errors to be avoided.

There 's.—Do not use this form for there are. "*There 's* twenty" should be "There are twenty."

These kind, Those sort.—Remember that "kind" and "sort" are singular nouns and require "this" and "that," not "these" and "those."

Think.—Say "I think not" instead of "I don't think so." Say what you do think, rather than what you do not think.

Think for.—*For* is unnecessary. "He hears more than you *think for*" should be "He hears more than you think he does."

Thinks I.—Say "I thought."

Through.—Inelegant in such expressions as "getting through" with a speech or with a meal.

To.—Avoid the use of this word for *at* after the verb to be in such expressions as "He was *to* home when I called," "He is not *to* home," "He was *to* school." Also in "I saw him *to* meeting Sunday." Use *at* in all such cases.

To let.—The proper form is "To be let." A landlord wishes *to let* his house; but the house is *to be let*.

To-morrow.—There has been much argument over the expressions "To-morrow *is* Tuesday" and "To-morrow *will be* Tuesday." Both forms are regarded as correct.

Try.—Not to be used in speaking of an experiment. We do not *try* an experiment; we *make* it.

Try and.—Instead of "Try *and* come," say "Try *to* come."

Unbeknown.—Not to be used for *unknown*.

Unique.—While we may say a thing is quite unique, we cannot say that it is very unique. Unique means "the only one of its kind."

Universally.—Not to be used in the sense of "generally." Instead of the expression "universally regretted" or "universally beloved" say "generally regretted" or "generally beloved."

Unmistakable.—Be careful not to lose sight of the fact that *un* means not. You will not, then, say "He spoke in *no* unmistakable terms," for "no unmistakable" means "mistakable."

Up.—Not necessary after the verb *to rise*. Instead of "He rose up from his chair," say "He rose from his chair."

Use.—There are many incorrect and inelegant forms of this verb. Avoid such as "I use to" for "I used to"; "Did n't you use to?" "You use n't to," and other uncouth expressions.

Various.—Often used for several. Instead of "Illinois is the greatest of the various states mentioned," say "of the several states mentioned."

Very.—Need not be used with such superlatives as best and worst. "The very best" is no better than "the best."

Vest.—Waistcoat is the better term.

Veterans.—Do not say "old veterans." A veteran is one who has been long in service. It is correct to say "aged veterans."

Vicinity.—Not to be used when "neighborhood" is intended.

Wa'n't.—Not to be used as a contraction for was not or were not.

Want, Need.—*Want* expresses both the desire for a thing and also the idea that the thing is lacking; *need* expresses the necessity of having a thing. A rich man may want a position which he does not really need.

Want of.—Instead of saying "What does he *want of* a boat?" say "For what purpose does he *want* a boat?" or, still better, "Why does he *need* a boat?"

Ways.—Often incorrectly used for way. Instead of "His house is a long *ways* from here," say "His house is a long *way* from here."

Well.—Not needed in such forms as "Well, I don't know." It also marks indecision and gives a bad impression.

What for.—Do not say "What did you do it for?" better, "Why did you do it?"

Whatsomever.—Never use this form for *whatsoever*. *Whatever* is better than either.

Where.—Often incorrectly followed by to. "Where did he go to?" should be "Where did he go?"

Who.—Many persons never use *whom* but always *who*. Instead of "Who are you speaking to?" say "To whom are you speaking?" Instead of "Who did you give it to?" say "To whom did you give it?"

Whole.—"The whole of" is not so good as "all." Do not say "The whole of the guests were present," say "All the guests were present."

Worse.—Not to be used when *more* is intended. You do not dislike one thing *worse* than another; you dislike it *more* than another.

A DICTIONARY OF ENGLISH SYNONYMS.

Comprising words related in meaning, arranged in groups, with examples of their proper use and notes of their difference. A complete alphabetical index of these words is to be found at the end of the table.

A knowledge of synonyms brings out the finer and nicer shades of the meanings of words, makes our meaning clearer, and secures a good literary style. There are in English a great many pairs of words which have come into the language, one through the gateway of the Anglo-Saxon, the other through the French, and these are almost perfect synonyms. These are curiously repeated in the liturgy of the English church, and include "acknowledge" and "confess," "dissemble" and "cloke," and "will" and "testament." Yet in the growth of the language these words have had other distinguishing shades of meaning attached to them, until it may almost be positively stated that there are no two words in the English language that are perfectly synonymous. The word *synonyms* has come to mean pairs of words or groups of words which are similar in meaning. A table of synonyms is of great service to young writers, who are often at a loss to find the word which will exactly express the shade of meaning which is desired. Very often the required word may be found by turning to a word which expresses the idea, and looking through the list of synonyms under that head.

1. **ABANDON,** abdicate, abjure, cast off, cease, cede, depart from, desert, discontinue, forego, forsake, forswear, give up, leave, quit, recant, relinquish, renounce, repudiate, resign, retire from, retract, surrender, vacate, and withdraw from. A throne is abdicated; religion, opinion, or allegiance is abjured; territory is ceded; a wife deserts her husband; a cowardly crew deserts a ship, while the passengers abandon it; a pleasure is foregone; an office is resigned; a statement is retracted; religion is renounced; a claim is repudiated; premises are vacated.

2. **ABANDONED** (adjective), bad, corrupt, depraved, detestable, dissolute, forlorn, forsaken, incorrigible, irreclaimable, odious, profligate, reprobate, shameless, unprincipled, vicious, wicked. An abandoned person has given himself up wholly to unrestrained evil and does not care; the reprobate is beyond hope; the corrupt and vicious may regard public opinion; the dissolute and profligate may reform.

3. **ABASE,** bring low, cast down, debase, degrade, depress, disgrace, humble, humiliate, lower, reduce, sink. Abase is to lower in station or in reputation; debase is to lessen the character or quality; an insult humiliates; a sense of inferiority or of unworthiness humbles; punishment disgraces; an officer is degraded in rank or reduced; a vice is degrading; misfortune may abase, but cannot disgrace.

4. **ABASH,** bewilder, confound, confuse, daunt, discompose, disconcert, dishearten, embarrass, humble, humiliate, mortify, overawe, shame. A perplexity may confuse; a defeat may confound; an accident may discompose; a failure of memory may disconcert an actor; losing one's way may bewilder one; a rude child may mortify a parent; soldiers overawe a mob; an officer's weapon daunts a criminal, exposure shames him; a Christian humbles himself before God; a sense of shame humiliates.

5. **ABATE,** decline, decrease, diminish, ebb, lessen, lower, mitigate, moderate, reduce, subside. Pain, fever, or a storm abates; offenses or misfortunes are mitigated; stocks or prices decline; a flood subsides; a tide ebbs; interest is lowered; weather moderates; population decreases.

6. **ABBREVIATE,** abridge, compress, condense, contract, curtail, cut down, epitomize, prune, reduce, shorten. A word or a phrase is abbreviated or contracted; a book is abridged; air is compressed; water vapor or gas is condensed; expenses are curtailed; wages are cut down; a larger work is epitomized; bushes are pruned; hours are shortened.

7. **ABET,** advocate, aid, assist, countenance, embolden, encourage, incite, instigate, promote, sanction, support, uphold. A crime is abetted; a reform is advocated; the poor are aided; the weak are assisted; men are incited to a riot; a crime is instigated; civil authorities are upheld; a course may be sanctioned.

8. **ABHOR,** abominate, despise, detest, dislike, hate, loathe, nauseate, scorn, shun. Abhor implies a starting back in horror and is the strongest of the series; detest implies both indignation and contempt; loathe suggests disgust; a traitor is abhorred; a coward is despised; a liar is detested; tyranny is hated; a flatterer is loathed.

9. **ABILITY,** aptitude, capability, capacity, cleverness, competency, dexterity, efficiency, expertness, faculty, power, qualification, readiness, skill, talent. Ability includes power of every kind; capacity suggests the power to receive; efficiency the power to execute; faculty is the power of mind or body; talent is a special endowment; dexterity is power acquired by practice; competency meets the demand of the occasion; readiness is promptness in meeting the demand.

10. **ABOLISH,** abate, abrogate, annihilate, annul, destroy, end, eradicate, exterminate, extirpate, nullify, obliterate, overthrow, prohibit, remove, repeal, reverse, revoke, set aside, stamp out, subvert, supplant, suppress, terminate. Slavery is abolished, as are other widespread or long-existing conditions, customs, or institutions; nuisances are abated; laws and treaties are abrogated by other laws or treaties which supersede them; laws are annulled, nullified, or repealed; that which is annihilated is utterly destroyed (reduced to nothing); troubles are ended; faults are eradicated (taken out by the root); pests are exterminated (put an end to); an eye is extirpated in surgery (taken out root and branch); a postage stamp is obliterated; laws prohibit; appellate courts reverse decisions of inferior courts; treaties are revoked; liberties are subverted; rebellions are suppressed; court favorites are supplanted; controversies are terminated.

11. **ABRIDGMENT,** abstract, analysis, compend, compendium, digest, outline, summary, synopsis. An abridgment gives the most important parts of a work just as they stand in the larger work; a synopsis or outline gives a plan of the larger work; an analysis gives the chief thoughts or arguments in a condensed form; a summary condenses to the utmost the thought; an epitome, compend, or compendium is a compact presentation of a subject without regard to other publications. A dictionary is abridged, but an analysis, summary, digest, or epitome of it is impossible. We may have a compendium of English literature or an epitome of religion, but an abridgment of either is an absurdity.

12. **ABSOLUTE,** arbitrary, authoritative, autocratic, despotic, irresponsible, supreme, tyrannical, unconditional, unequivocal. Absolute power is neither limited nor controlled; authoritative is based upon the right to claim authority; autocratic power is limited only by the person who so rules; despotic is rather weaker than tyrannical; arbitrary power rests upon the will or judgment of the wielder; irresponsible persons have no limiting restraint; unequivocal has the sense of decided, most certain, undoubted.

13. **ABSOLVE,** acquit, clear, discharge, exculpate, exempt, exonerate, forgive, free, liberate, pardon, release, set free. To absolve from sins; to acquit of a charge; to clear of blame; to discharge a prisoner; to exculpate from fault; to exempt from taxes or military service; to exonerate from guilt; to forgive an offender; to free a prisoner; to liberate a captive; to pardon a criminal; to release from an obligation; to set free from a bond.

14. **ABSORB,** consume, drink in, drink up, engross, exhaust, imbibe, suck up, swallow, swallow up, take in, take up. Wood absorbs moisture; wood is consumed in the fire; we drink in knowledge; one engrosses the conversation; learning is imbibed; a credulous person swallows preposterous stories; lime takes up water.

15. **ABSTINENCE,** abstemiousness, continence, fasting, frugality, moderation, self-control, self-restraint, sobriety, temperance. Abstinence implies going without; abstemiousness, partaking sparingly; self-control, self-restraint, and self-denial imply refraining from what one desires; fasting has a religious or hygienic connection; one is temperate in eating and drinking; but one abstains from vice.

16. **ABSTRACT,** appropriate, detach, discriminate, distinguish, distract, divert, eliminate, purloin, remove, separate, steal, take away, withdraw. We abstract an element from all that attends it and we view it separately; the mind is abstracted from all other subjects and concentrated upon one; the mind is diverted from that to which it should attend; ideas may be separated; we discriminate between things by distinguishing their differences; we eliminate certain things from a consideration by ignoring them; purloin and steal imply appropriating unlawfully to one's own use.

17. **ABSTRACTED,** absent-minded, absorbed, heedless, inattentive, indifferent, listless, negligent, oblivious, preoccupied, thoughtless. Abstracted, absorbed, and preoccupied are used when considering the cause; absent-minded relates to the effect of the abstraction, absorption, or preoccupation; heedless is willfully thoughtless; inattentive to the subject in hand is absorption in another subject; listless may be a physical condition of inattention; negligent, when the abstraction causes indifference; one is oblivious when the thoughts are elsewhere.

18. **ABSURD,** anomalous, chimerical, erroneous, false, foolish, ill-advised, ill-considered, ill-judged, inconclusive, incorrect, infatuated, irrational, mistaken, monstrous, nonsensical, paradoxical, preposterous, ridiculous, senseless, stupid, unreasonable, wild. That which is contrary to the first principles of reasoning is absurd; that which deviates from a fixed rule, or law, is anomalous; enterprises which are fancifully impracticable are chimerical; views are erroneous through mistaken conceptions; reasoning may be false; that which is contrary to the dictates of good sense is foolish; irrational views are contrary to sound reasoning; a statement may be paradoxical (or apparently contradictory in its terms) and yet be true; that which is silly is petty and contemptible; monstrous and preposterous imply an overwhelming absurdity; verses may be nonsensical and yet entertaining.

19. **ABUSE,** damage, defame, defile, disparage, harm, ill-treat, ill-use, impose on, injure, malign, maltreat, misuse, molest, oppress, persecute, pervert, rail at, reproach, revile, ruin, slander, victimize, vilify, vituperate, wrong. Property is abused by willful defacement; a tenant may damage property and injure its sale; false reports may defame a man; contact with vice will defile him; we disparage by speaking lightly or by making little of; a man may be abused without being harmed; talents are often perverted; innocent persons are often victimized by swindlers; a wrongfully accused man is vilified; shockingly abusive language is vituperation; one is oppressed for pecuniary advantage, and persecuted for opinions.

20. **ABYSS,** chasm, deep, gorge, gulf, pit, profound. Abyss, chasm, and gorge generally apply to openings in the earth caused by upheavals; gulf, deep, and profound refer to the ocean; a pit is an excavation.

21. **ACCEDE,** acquiesce, agree, assent, coincide, comply, concur, consent, yield. Opinions which concur agree in general terms; those which coincide agree in every detail; decisions always concur, never coincide; causes concur, but views coincide; terms are accepted; wishes are acceded to or complied with; proposals are acceded to or consented to; consent expresses a more hearty acquiescence than does accede; one yields to another upon conviction.

22. **ACCELERATE,** advance, dispatch, drive, expedite, facilitate, further, hasten, hurry, promote, speed, urge. Motion is accelerated; enterprises are advanced; a thing is dispatched when finished; work is expedited when all hindering influences are removed; processes are facilitated when means of accomplishment are rightly adjusted; hurry implies attendant confusion; a cause is promoted by advancing influences.

23. **ACCESSORY,** abettor, accomplice, ally, assistant, associate, coadjutor, colleague, companion, confederate, follower, helper, henchman, participator, partner, retainer. Accessory, abettor, confederate, and accomplice are generally used in a bad sense. An ally is a national or military associate; an abettor of a crime is present at the time of its commission, an accessory never; one who watches outside while a crime is committed is an abettor, not an accessory, while an accomplice is usually one of the chiefs or principals; a retainer, or a henchman, or a follower, is one bound to a chief by reward, fee, or need; a partner is one whose association is now wholly limited to business interests; a colleague is always used in a good sense.

24. **ACCIDENT,** adventure, calamity, casualty, chance, contingency, disaster, fortuity, hap, happening, hazard, incident, misadventure, mishap, possibility. An accident is a happening without intention; an adventure is a happening either good or ill; a calamity involves serious sufferings; a casualty is usually a fatal accident; chance is a happening without known cause; a contingency is the possibility of happening; a disaster is an accident attended by suffering or loss; a fortuity is a chance occurrence; a mishap is a slight disturbing accident.

25. **ACCOMPLISH,** achieve, bring about, bring to pass, carry out, carry through, complete, consummate, discharge, do, effect, execute, finish, fulfill, perform, realize. We accomplish what we set out to do; we achieve some great or especially worthy undertaking; we bring about or bring to pass things in which we were sharing with others a leading part; carry out and carry through apply to long-sustained efforts; we complete that which has been begun before; we consummate that upon which thoughts and hopes have long been centered; we discharge what was assigned us to do; we effect a purpose by certain means; we execute the commands of another; finish applies frequently to the superficial and detailed careful execution of a work; we fulfill our obligations or agreement; we perform a feat in which there has been always a possibility of failure; we realize an ideal.

26. **ACQUAINTANCE,** association, companionship, experience, familiarity, fellowship, friendship, intimacy, knowledge. Acquaintance between persons implies that each knows the other. We can have no acquaintance with any one who does not know us. Association does not imply friendship or intimacy, for men may be associated for a long time in business with each other without knowing each other intimately; there may be friendship between two who have never met, but who know each other by correspondence and reputation; intimacy implies a thorough knowledge of each other's thoughts and feelings; fellowship is greater than friendship by the great quality of sympathy; acquaintance with a man's writings or with a subject is less deep than is familiarity.

27. **ACRIMONY,** acerbity, asperity, bitterness, causticity, harshness, malignity, moroseness, severity, sharpness, sourness, unkindness, virulence. Acerbity is sharpness with some bitterness caused by slight or momentary vexation; asperity denotes decided irritability; acrimony is caused by deep-rooted dislike; malignity denotes the greatest degree of intention to do harm; virulence of speech suggests the exudation of poison and accompanies unbridled hostility; severity of language is always calm and intentionally just, though always painful.

28. **ACTIVE,** agile, alert, brisk, bustling, busy, diligent, energetic, expeditious, industrious, lively, mobile, nimble, officious, prompt, quick, ready, restless, sprightly, spry, supple, vigorous, wide-awake. Active implies not only a quickness but a continuous or habitual action; busy means actually employed; a bustling person is noisily busy; an officious person is unpleasantly active in the affairs of others; a restless person is busy because he cannot keep quiet.

29. **ACTUAL,** authentic, certain, demonstrable, developed, genuine, positive, real, true, unquestionable, veritable. Actual applies to something which has been done or is accomplished; real to something which exists; an authentic story is one which has been fully proved or corroborated; demonstrable is capable of proof; developed has been evolved or brought about; genuine is opposed to false, dissembling, or fictitious; positive is fixed or established.

30. **ADD,** adjoin, affix, amplify, annex, append, attach, augment, cast up, enlarge, extend, increase, join on, make up, subjoin, sum up. In adding we increase by uniting; in multiplying we increase by repeating; we augment immaterial things by any means; we enlarge a house; extend the bounds of an empire; annex a building to another; affix a seal to a document or a signature to a letter; amplify a discourse; append a statement; make up an account.

31. **ADDICTED,** accustomed, attached, devoted, disposed, given, habituated, inclined, prone, wedded. One is addicted to habits which have gained a strong hold upon him; accustomed to hard work; attached to his family; devoted to his art; given to gluttony; wedded to science; prone to evil.

32. **ADDRESS,** accost, apostrophize, appeal, approach, court, greet, hail, salute, speak to, woo. We accost a stranger when we speak first; greet is a passing salutation and may be silent; hail is to greet in a loud-voiced and hearty manner; to apostrophize is to solemnly address; we appeal for aid; we may address a person either by speech or by writing.

33. **ADEQUATE,** able, adapted, capable, commensurate, competent, equal, fit, fitted, fitting, qualified, satisfactory, sufficient, suitable. An adequate remedy; an able man will do everything well; a capable man will do fairly well; means are commensurate when they are equal to the performance of the task in hand; competent, which takes account of both natural and acquired abilities, is higher than qualified, which considers only the acquired abilities.

34. **ADMIRE,** adore, applaud, approve, enjoy, esteem, extol, honor, love, respect, revere, venerate, wonder. We admire the beauty of nature; we enjoy a book; we approve excellence; applaud a good performance; esteem the good; honor and respect nobility of character; revere and venerate the aged; extol the goodness of God; adore his majesty and power.

35. **ALLUDE,** advert, hint, imply, indicate, insinuate, intimate, mention, point, refer, signify, suggest. Allude is to refer only slightly to a matter; we advert to it when we turn out of our way to consider it; we refer to it when we bring it prominently before the mind of our hearers; we mention it when we state it clearly or name it distinctly; a hint is a harmless suggestion; but an insinuation is always unfavorable; we imply without directly stating a fact.

36. **ALTERNATIVE,** choice, election, option, pick, preference. Alternative is strictly the choice of one of two things. It has, however, come to mean the one thing chosen from two; choice is a selection from among many things, or the act of choosing, or the right to choose; option is the privilege or right of choosing; pick and election are examples of a word of Anglo-Saxon origin and one derived from the French, which were at one time synonymous, and these are used when the objects are represented as displayed before one and a choice is made; alternative signifies that it is the only other thing one can do under the circumstances, while all the other words in the group imply freedom of action.

37. **AMBITION,** aspiration, competition, emulation, opposition, rivalry. Ambition was originally "a going around" among the Roman people asking for their votes for political office; it is the seeking for fame, honor, riches, and political preferment; aspiration is the simple desire to excel; competition is a striving with another; emulation is a friendly desire to equal or to surpass another; opposition suggests a struggle involving both competition and hindrance; rivalry is a competition for the nobler sorts of prizes.

38. **ANALOGY,** affinity, coincidence, comparison, likeness, parity, proportion, relation, resemblance, semblance, similarity, simile, similitude. Analogy is a resemblance and from the likeness noted other deductions are made; affinity is attraction without apparent likeness; coincidence is an exact agreement on one or more points, the commonest being that of time of occurrence; similitude is a setting forth of a comparison between things which resemble one another in one or more points; resemblance is only superficial and does not extend to the essence or entity of things; parity of reasoning is applied to an argument on things not really analogous.

39. **ANGER,** animosity, displeasure, exasperation, fretfulness, fury, impatience, indignation, irritation, offense, passion, peevishness, petulance, rage, resentment, temper, vexation, wrath. Anger is violent and is brief in proportion to its violence; animosity is active and lasting, though less so than enmity; displeasure is the mildest of these terms; exasperation, literally "a roughening," is a flash of anger that quickly subsides; fretfulness, peevishness, and petulance are slight displays of anger excited by petty causes; fury is intense and uncontrollable; indignation is a form of impersonal and unselfish displeasure; irritation is a slight expression excited by repeated occurrences of slight cause; rage excites to imprudent and indiscreet acts; temper is properly the general state of mind, though it is often colloquially used for anger.

40. **ANIMAL,** beast, brute, creature. Animal is the term used to denote a being capable of feeling, and is employed to distinguish from inanimate objects and from vegetable life; a beast is one in which the appetites are the strongest characteristics; a brute is the term applied to an animal incapable of experiencing the finer sensibilities; creature is a general term applied to all created things.

41. **ANNOUNCE,** advertise, circulate, communicate, declare, enunciate, herald, make known, notify, proclaim, promulgate, propound, publish, report, reveal, state, tell. We announce a fact in some formal way or public manner; business is advertised; plans are communicated; we enunciate views; notify an individual, but give notice to the public; declare our intentions or declare war; proclaim peace; propound a question; promulgate a platform of a party; herald an event; reveal a secret; report an interview; publish a book; announce our arrival.

42. **ANSWER,** rejoinder, repartee, reply, response, retort. An answer may be in words, or by a look or an action or sign; a reply unfolds thought and intelligence; a rejoinder is an answer to a reply; repartee is a witty, good-natured, and prompt answer; a retort may be bitter, sarcastic, or savage in its nature.

43. **ANTICIPATE,** apprehend, expect, forecast, foretaste, hope, look forward to. Anticipate goes before in fact or in thought; apprehend is applied to an event or condition which is both expected and feared; we expect that which we have good reason to think will happen; we forecast what we think or judge will occur; we foretaste what we look forward to with certainty and pleasure; we hope for that which we wish to happen; we look forward to a condition which possibly may come about.

44. **ANTIPATHY,** antagonism, aversion, detestation, disgust, dislike, distaste, hatred, hostility, repugnance, repulsion. Antipathy and repugnance are intuitive or instinctive and may have no actual or apparent cause; antipathy is a mental or physical recoil from association or connection with either persons or things; repugnance suggests a desire or impulse to fight against; aversion, or turning away from, is both deep and lasting in its effects; disgust and distaste are usually acquired; those of strong religious and moral senses abhor and detest.

45. **ANTIQUE,** ancient, antiquated, old-fashioned, quaint. Antique is old in style and is still prized; ancient is merely very old; antiquated is old and discarded; old-fashioned may or may not be prized and we may approve or contemn the thing so spoken of; quaint is old, odd, and pleasing.

46. **ANXIETY,** anguish, apprehension, care, concern, dread, fear, foreboding, fretting, misgiving, perplexity, solicitude, trouble, worry. Anxiety is suffering caused by what may happen, while anguish is the result of what has happened; in anxiety there is always the element of hope, while in apprehension, dread, fear, and foreboding there is only despair; care and anxiety over matters impel to the necessity of taking action to prevent or repair injury; concern is less grave than anxiety; worry is a less serious form of anxiety; fretting and worry imply an open communication or display to others of anxiety; one may be perplexed but not at all anxious; trouble is a general term for mental disturbance.

47. **APATHY,** calmness, composure, immobility, impassibility, indifference, insensibility, lethargy, phlegm, sluggishness, stoicism, unconcern, unfeelingness. Apathy is an entire absence of feeling or emotion; calmness is a state of mind resulting from courage, confidence, or strength; composure is calmness produced by the exercise of the will; immobility is usually applied to the countenance which does not betray its emotions or feelings; impassibility is the inability to suffer and is a divine attribute; indifference implies a lack of interest in a thing, insensibility, a lack of feeling; lethargy suggests a stupor or general inactivity; phlegm is a constitutional sluggishness; stoicism is intentional or willful indifference to trouble or suffering, sometimes spoken of as philosophical; unconcern disregards consequences.

48. **APOLOGY,** confession, defense, exculpation, excuse, justification, plea, vindication. By offering an apology one admits wrong and offers concessions; in old times apology meant a valiant defense; an excuse is a reason for the fault or offense; a confession is a full acknowledgment of a fault or offense and may or may not contain an apology or excuse; an exculpation is a defense clearing one's self of blame; a justification is a plea of right and justice in one's action; a plea may be a prayer for pardon or leniency, or it may be an attempt to clear one of all blame; a vindication is a reëstablishment of reputation.

49. **ASK,** beg, beseech, crave, demand, entreat, implore, petition, pray, request, require, solicit, supplicate. We ask what we have good reason to expect; we beg what we have no right to expect; we beseech with a humbled intensity; crave is a formal word; we demand what is rightfully ours; entreat is an earnest asking; implore is attended by weeping; petition is written request to those in authority; request is a formal asking; solicit is an effort to excite sympathy; supplicate implies an asking on bended knees.

50. **ASPECT,** view. Aspect is the way a thing appears to us; view is the application of our faculty of sight to a large or complex object. We may take a false view of things; things may present a false aspect to us; a view from one's window may be permanent, but may present varying aspects to us.

51. **ASSEMBLY,** assemblage, group, collection, gathering, company, meeting, convention. Assembly and assemblage are applied to persons, though a late use of the word assemble is applied in manufacturing to the putting together of the parts of machinery, such as bicycles or automobiles; an assembly of persons is a voluntary gathering of people usually under the authority of one person; a group is applicable to both animate and inanimate objects, and usually conveys an idea of artistic effect; a collection suggests a gathering together under some guiding force which may be with a definite purpose in view or mechanical and by chance; a meeting is less formal and more general than an assembly; a convention is a gathering together under authority, in which the members are assembled but the gathering is convened.

52. **ASSERT,** affirm, asseverate, aver, avouch, protest. Assert is used in opposition to suppose or imply, while affirm is the opposite of deny; we assert a truth; we affirm a proposition; to asseverate is to assert with earnestness and force; we aver what we are in a position to prove; protest originally meant a serious or public indication of truth and sincerity, but in doing so it often entailed disproving the opposite and it now often has the force of antagonism or opposition; and while we protest our innocence we also protest against another person or thing; protestations are often apparently the opposite of actions and indicate one motive while they seem to express another.

53. **AVENGE,** revenge. Avenge is to inflict pain or loss in retaliation for injury to one's self or another and may be an act of justice; revenge is the infliction of pain or loss to satisfy a vindictive desire; we avenge another's loss; we revenge ourselves.

54. **AVERAGE,** mean, medium. Average is a medial sum or quantity made out of several unequal sums or quantities; mean is a point intermediate between two extremes; medium, in addition to a sense of mean, has the idea of an agent or instrument.

55. **BAD,** evil, naughty, wicked. Bad denotes the absence of good qualities and is the general term; evil is employed only in a moral sense; a wicked man is immoral and sinful, offending both divine and human laws; naughty expresses the faults of children, though at one time it was applied to anything which was not what it ought to be.

56. **BAFFLE,** defeat, frustrate. Baffling involves repeated counteractions from several standpoints, as a baffling wind heads a sailor off in every direction; when used of persons it implies skill and scheming; a disease may baffle the best efforts of the most skilled physician; defeat is final, while one may overcome baffling forces; a man may be baffled but not defeated; plans and purposes are frustrated when they are made or caused to miss their ends

57. **BANISH,** exile, expel. Banish signifies to put under a ban, and implies the removal from a place or the prohibition from privileges; exile signifies removal from home; expulsion is simply coercive, and may be the act of an individual or a society beyond whose jurisdiction the act does not extend. The Tarquins were banished from Rome never to return; a man may be exiled for a time; a person is expelled from a society.

58. **BARE,** naked, uncovered. Bare implies the absence of some particular covering; naked the absence of all covering; that is uncovered from which the covering has been removed.

59. **BASE,** vile, mean. The intensity of meaning of these words rank as written, base stronger than vile, and vile than mean. We abhor the base; are disgusted with the vile; and have contempt for the mean. The higher in social rank the greater his baseness; the lower in rank the greater his vileness; the richer the person the greater his meanness.

60. **BEAR,** carry, convey, transport. Bear is to take the weight of a burden upon one's self and to sustain it; carry is to remove the object to another place; convey expresses the manner in which goods or messages are carried; transport tells not only the manner in which they are carried but implies something of the distance.

61. **BEAR,** yield. Bear marks the power of bringing forth; yield is applied to the result. Trees bear fruit under nearly all conditions; they yield according to the degree of cultivation which they receive. A certain quantity of seed will yield so much, while each individual plant bears its share.

62. **BIAS,** prepossession, prejudice. Bias marks a leaning toward feelings or opinions; prepossession indicates an occupation of the mind by some idea which shuts out all others; prejudice is a condition of mind caused by judging or deciding without full information or data. Prejudice is always used in a bad sense; a man's mind may be honestly biased or prepossessed, but prejudice favors the cause of faleshood.

63. **BLAME,** censure, condemn, reprove, reproach, upbraid. Blame simply ascribes a fault to one; censure expresses disapproval of acts; condemn is more concerned with things than with persons; reprove is decidedly personal in its application; reproach denotes the expression of personal feelings in a matter; upbraid conveys an idea of contempt or wounded feelings.

64. **BLEMISH,** stain, spot, speck, flaw, defect. A blemish affects the nice appearance of a thing and may include all of the other terms; a stain is larger than a spot, while both are caused by something foreign to the object; a speck is smaller than a spot; a flaw is usually applied to hard substances and denotes a faulty surface; a defect denotes that some essential part is lacking.

65. **BLOT OUT,** expunge, rase, erase efface, cancel, obliterate. Blot out may cover with a blot; expunge shows that the parts are no longer to be considered; figures are erased that the space may be occupied by others; they are canceled by striking through them with a pen or by similar marks; they are obliterated by any or all of these means without indicating which; they are effaced by scraping off the surface as of a wall.

66. **BODY,** corpse, carcass. We speak of the dead body of man or of brutes; corpse is the term to use to convey that a human body is lifeless; carcass is often used contemptuously or restricted properly to a brute's dead body.

67. **BOLD,** fearless, intrepid, undaunted. Bold applies to the spirit; fearless to the mind. One may be fearless when there is no danger; but one is bold only in time of danger. Intrepid is a condition of fearlessness; undaunted is the highest condition of boldness, and is the state in which one faces almost awe-inspiring odds.

68. **BOOTY,** spoil, prey. Booty indicates a division among soldiers or sailors of things taken in battle and divided in shares; spoils are the property of the slain in battle which rightfully belong to the victor; prey is properly that which is taken to be consumed, though the term is often used figuratively in an extended sense.

69. **BORDER,** edge, rim, brim, brink, margin, verge. Border is a stripe; edge is a line; rim is the edge of any vessel; brim is the edge of a cup; brink is the edge of a precipice; margin is the border around a printed or written page; verge is the very outer border.

70. **BOUND,** limit, confine, circumscribe, restrict. A bound is a natural or political division between countries, such as a river or mountain; limit is an artificial boundary; to confine is to bring the limits close together; to circumscribe is to mark out the surrounding limits; to restrict is to keep within well defined limits.

71. **BOUNDARY,** frontier, confines, precinct. A boundary divides or limits the extent of a thing; the frontier lies on the front or at the entrance into a country; confines are the parts which touch other states or countries; a precinct, while properly the girdle or space surrounding something, is often applied to the entire space within certain bounds.

72. **BOUNDLESS,** unlimited, infinite. A thing is boundless while no limits or bounds exist or may be seen. We speak of the boundless ocean only while we cannot see the bounds. Unlimited indicates that no limits exist but that there might better be a restriction. Infinite indicates that no limits can exist.

73. **BRAVE,** defy, dare, challenge. To brave is to withstand or to resist an opposing force with bravery; to defy is to consider lightly an opposing force as one which can easily or safely be overcome; to dare is to provoke opposition; to challenge is a formal provocation to a contest.

74. **BRAVERY,** courage, valor. Bravery depends upon the physical temperament, is a sort of instinct, and is of service only in time of contest; courage is based upon reason or reflection, may be displayed by persons of weak physical powers, and is of service at all times; valor is the highest type and combines both bravery and courage.

75. BREAK, burst, crack, split. Break indicates separation into parts with more or less force and from any cause; burst is applied to hollow bodies which break under pressure from the inside; crack is an irregular breaking of hard or brittle objects; split is to break lengthwise and is generally applied to wood.

76. BREEZE, gale, blast, gust, storm, tempest, hurricane. A breeze is gentle; a gale is strong and steady; a blast is sudden, impetuous, and of short duration; a gust is sudden and vehement. These terms are applied to the wind. A storm includes other elements besides the wind; a tempest is a storm with thunder and lightning; a hurricane exceeds all storms in violence and intensity.

77. BRING, fetch, carry. Bring is to carry a thing with one from place to place; fetch is to go first to the place where the thing is and to bring it back with one; carry has the sense of taking something directly from one place to another.

78. BUILD, erect, construct. Build expresses the purpose; erect, the manner; and construct, the contrivance. Erect conveys an idea of height; construct, of ingenuity. We build houses, erect monuments, and construct machines.

79. BUSINESS, occupation, employment, engagement, avocation. Business takes all one's time, thoughts, power, and interest; occupation and employment, only one's time and strength; engagement is partial employment; avocation a special or particular employment. One who is busy has more to take his attention than one merely occupied.

80. BUSINESS, trade, profession, art. The employment of one's time, experience, and ability for profit is business; buying and selling are inseparable from trade; learning and particular skill are required in a profession; artistic ability is needed in an art.

81. BUSINESS, office, duty. Business is an engagement which a man proposes for himself; office, what he is required to do for another; duty is an obligation. Office being work performed for others is usually restricted to public affairs.

82. BUSTLE, tumult, uproar. Bustle is marked by hurry; tumult by confusion and disorder; uproar by the noise of many voices.

83. BUY, purchase, bargain, cheapen. Buy and purchase are synonymous terms, and may be interchanged, though purchase is considered a term of greater refinement by some. We buy necessities but purchase luxuries. Bargain and cheapen have to do with the price more than with the exchange. Poor people are obliged to cheapen, but a mean person may bargain.

84. CALAMITY, disaster, misfortune, mischance, mishap. Calamity is a great disaster or misfortune; misfortune is a great mischance or mishap. A calamity is attended by destruction; disaster by injury or defeat of one's plans; misfortune by the loss of property or of health; a mischance or mishap is comparatively trivial.

85. CALCULATE, reckon, compute, count. Reckon, compute, and count are all modes of calculating. We reckon when we count and set down in detail; we compute by estimates based upon a variety of information; we count one by one. Calculation is applied to the larger mathematical processes.

86. CALENDAR, almanac. A calendar registers events under every month, as a gardener's calendar which tells the horticultural events for each month; an almanac registers times or the divisions of the year.

87. CALL, cry, exclaim. Call summons or attracts another on ordinary occasions; cry is to call loudly upon some particular occasion; exclaim is to give voice to one's feelings by a loud cry or call on some particular occasion.

88. CALL, invite, bid, summon. We call by the use of any sounds; invite by a direct or formal act or word or by a look, manner, or motion; we bid in words and with some authority; we summon by a more or less imperative request.

89. CALM, composed, collected. Calm expresses the state of the feelings; composed, of feelings and thoughts; collected, more particularly of the thoughts.

90. CALM, placid, serene. Calm refers only to the winds; serene, to the air and sky; placid, only to the mind.

91. CAN, may. Can denotes possibility or power, or ability; may, liberty, permission, or probability.

92. CANDID, open, sincere. Candid implies conscious purity of intention; openness implies unguardedness and a freedom in speaking one's thoughts; sincerity permits one to speak only what one thinks and causes one to frequently refrain from speaking.

93. CARE, charge, management. Care comprehends personal labor in attending to something; charge conveys an idea of responsibility; management involves the direction of others or of regulating or ordering affairs.

94. CAREFUL, cautious, provident. Carefulness may be shown by either doing or in not doing; caution is care in guarding against danger; provident conveys an idea of seeing beforehand and of taking steps to guard against possible danger in the future.

95. CARESS, fondle. One caresses by words and actions; fondles, by actions alone.

96. CARNAGE, slaughter, massacre, butchery. Carnage takes into account the number of the dead resulting; slaughter, both the act and the manner of the killing; massacre denotes a secrecy and treachery of action; butchery is the killing of the helpless.

97. CARRIAGE, gait, walk. Carriage indicates the way one carries the whole body; gait, the limbs and body in walking; walk is rather indefinite and indicates the manner of walking.

98. CAUSE, reason, motive. Cause is concerned with the order in which connected events happen; reason denotes the movements and operations of the mind; motive the impulses or ideas which move one to act.

99. CAUSE, occasion, create. To cause is to bring about naturally; to occasion is to bring about incidentally, though often necessarily; create is to bring into existence arbitrarily.

100. CAUTIOUS, wary, circumspect. One is cautious on all occasions when danger is present; but wary when the danger is great. These terms vary only in degree and are used of practical acts; circumspect denotes a watchful care in matters of theory and contemplation.

101. CEASE, leave off, discontinue. Cease indicates the passive act of stopping particular actions or habits, and is the simple cessation; leave off and discontinue are active. We cease writing or crying; a laborer leaves off his work at any hour, generally with a view of taking it up again; we discontinue visits when we observe that they are not agreeable to others.

102. CELEBRATE, commemorate. We may celebrate either a present or past event; we commemorate only past events; celebration is usually festive and social; commemoration is marked by solemnity or seriousness.

103. CELESTIAL, heavenly. Celestial is opposed to terrestrial and is a general term applied to the heaven of the heathens; heavenly is used as relating to the abode of the God of the Hebrews and the Christians.

104. CERTAIN, sure, secure. We are certain and sure as to our convictions; secure regarding our interests or condition; certainty is based upon positive knowledge or experience; sure may be a condition resulting from reliance upon the word of others; security is a sense of freedom from danger and literally means without care.

105. CESSATION, stop, rest, intermission. Cessation indicates that something is no longer going on; stop, that something has intervened to prevent motion or a continuance of the act; whatever does not move or exert itself is at rest; intermission is an alternation of motion and rest at regular or irregular intervals.

106. CHAIN, fetter, band, shackle. Chain is the general and indefinite term; fetters are larger than chains and may consist of several chains; bands are any restraints upon the limbs or body; shackles are fetters which confine or hamper the limbs.

107. CHANCE, fortune, fate. Chance is the name given to the uncertain and variable events which happen without order, form, or design; fortune applies to persons, and is represented as being blind in the bestowal of its awards; fate forms fixed plans with decisive results.

108. CHANCE, probability. A chance is a possibility however slight; many chances make a probability.

109. CHANCE, hazard. Hazard is a species of chance and is always unfavorable; there is a chance of gaining, but a hazard of losing.

110. CHANGE, alter, vary. One changes a thing by putting another in its place; one alters a thing by making it different from what it formerly was; one varies it by altering it in several ways and at different times.

111. **CHANGE,** exchange, barter, substitute. We change by putting one thing in the place of another; we exchange by giving one thing for another, being guided generally by a preference only; we barter when we give in exchange for a thing another commodity of equal value; we substitute when we put one thing in the place of another for better effect.

112. **CHANGE,** variation, vicissitude. Change is a ceasing to be the same; variation consists in being different at different times; vicissitude in being alternately different and the same at different times. We change our mode of life; experience variations, and suffer the vicissitudes of daily life.

113. **CHARACTER,** letter. Character is a letter of a foreign alphabet which differs in form from those of our own; the constituents of our own alphabet are letters; the units in shorthand are characters and not letters.

114. **CHARACTER,** reputation. Character is the moral equipment as it really is; reputation is what others think a man to be. A man of doubtful character may have a good reputation.

115. **CHARM,** enchant, fascinate, enrapture, captivate. Charm is to affect as by a charm or magical verse; to enchant is stronger than to charm and was originally to affect as by an incantation; to fascinate is still stronger and affects through the eye and operates by words and motions; to enrapture is a mental effect which is brought about directly without the implied secrecy of the previous terms; to captivate has a moral application only and is often used with fascinate in a bad sense.

116. **CHEAT,** defraud, trick. To cheat is to deceive by direct or gross falsehood or tricking; to defraud by a fixed plan or contrivance; to trick by an impromptu invention.

117. **CHECK,** curb, control. Check is derived from the game of chess where the term denotes that the king is prevented from moving, hence it implies that the body to be checked is in motion; curb is derived from the curb of a horse's bridle and like control may be applied to bodies at rest or in motion; control or counter-roll is the keeping of one roll against another and has a moral application.

118. **CHECK,** chide, reprimand, reprove, rebuke. One is checked that he may be stopped in what he is then doing; one is chidden that he may be prevented from repeating an act; one is reprimanded for omissions or mistakes; reproved for irregularities of conduct; rebuked for improprieties of behavior.

119. **CHECK,** stop. Check is to cause to move more slowly; stop is to prevent all motion. The course of a river is checked by rocks or sand banks, but is stopped by a dam; a man who is checked in his career continues upon it but more slowly; one stopped in his career adopts another course.

120. **CHEER,** encourage, comfort. One cheers the spirits of the sad, encourages the resolution of the timid, and comforts the afflicted in their distress. Cheering and encouraging act upon the mind; comforting may affect the body as well.

121. **CHEERFUL,** merry, sprightly, gay. One is cheerful when the flow of happiness is even and moderate; merry when there is more noise and tumult; sprightly when the happiness is buoyant and demonstrative; gay when the pleasure is fitful and may be followed by sullenness and discontent.

122. **CHIEF,** principal, main. Chief has to do with order or rank, as a chief clerk; principal, with importance and respectability, as the principal people or street in a city; main with the degree or quantity, as a main water pipe, or a main line, or the main object.

123. **CHIEF,** chieftain, head, leader. Chief is the first in civil matters; leader is the first in bold or difficult enterprises; a chieftain is a sort of leader who usually combines executive ability and undisputed power over his followers; heads are endowed with talents for directing large enterprises.

124. **CHOOSE,** prefer. To choose is to take one thing from among others; to prefer is to take one thing before or rather than another. Necessity often directs a choice and may prevent from taking what one prefers; the dictates of reason often direct one to choose one course as the wisest, when it is not at all what one prefers.

125. **CHOOSE,** pick, select. One picks with greater care than one chooses, and selects with still greater discrimination than one picks. One may choose or pick one or several from among many, but one generally selects a number.

126. **CHOOSE,** elect. One man or many may choose a person for an office or position; election is always the act of many; a person chosen is generally bound to accept the office; one who is elected has the right of refusal.

127. **CITE,** quote. One may cite either persons or things; one quotes things only. An author is cited; his works are quoted; authorities are cited by lawyers and historians to strengthen the evidence and to inspire confidence; passages from authors are quoted for purposes of illustration, confutation, or support of an argument.

128. **CITE,** summon. These words convey the idea of authoritatively calling upon a person to appear. Cite is used in a legal sense; summon is both legal and ordinary in its use. One is cited to appear before a court; one is summoned for the same purpose, but may be summoned as a doctor or friend to a sick bed.

129. **CIVIL,** polite. Polite expresses more than civil; it is really polished or refined. One may be civil without being polite; an inferior is civil to his superior; one is polite to an equal or to an inferior; civility is the absence of rudeness; politeness goes out of its way to please.

130. **CLANDESTINE,** secret. Clandestine implies that the thing done in secret is illegal or forbidden; that done in secret may be perfectly right but is done only without the knowledge of others. A secret marriage is conducted without the knowledge of some others; a clandestine marriage, without the knowledge, and, often, contrary to the wishes of others.

131. **CLASS,** order, rank, degree. Class distinguishes from without; order, rank, and degree, from within. We speak of the laboring class, the merchant class, etc. Order is a more particular division; the word means literally a row. One conceives persons or things arranged in rows according to some standard of equality. Rank distinguishes one individual from another; and there are degrees among those of the same rank.

132. **CLEARLY,** distinctly. That is seen clearly when the view is unobstructed; distinctly, when one may distinguish it from all other objects. One may see a thing clearly, but by reason of its distance or through a defect of sight it may not be seen distinctly.

133. **CLEARNESS,** perspicuity. Clearness applied to our ideas denotes the manner in which we understand or perceive; perspicuity denotes how distinctly and plainly we express our ideas. One may understand a question very clearly; but may fail utterly in expressing it perspicuously. A study of subjects which develop the reasoning powers will enable one to see clearly; grammar, and the cultivation of a good style, enable one to express himself with perspicuity.

134. **CLEMENCY,** lenity, mercy. Clemency is a mildness which prevents one from exercising power for fear of causing pain or suffering; it often defeats the ends of justice. Lenity deals lightly in dispensing punishment and implies an exercise of discretion where withholding a severe punishment may often have a greater effect. Mercy is shown by those in authority to one who is in trouble, distress, or suffering either by his own fault or through other circumstances.

135. **CLERGYMAN,** parson, priest, minister. In countries which have a national or state church it is customary to restrict the use of the term clergyman to those only who hold the holy office in that church. In polite society the word is often preferred when speaking of any of the clergy of any denomination; parson is really the highest of the three orders of the inferior clergy: parson, vicar, and curate; but the term has passed almost into a nickname; priest is one who is ordained to actually officiate at the altar in distinction to the deacon, who only assists; a minister actually or habitually officiates.

136. **CLOAK,** mask, blind, veil. These figurative words, derived mainly from articles of clothing, all express the idea of means employed to keep one's acts or motives concealed from others; blind and veil only partly conceal; mask and cloak conceal the whole object; a veil deceives one's self; the cloak, mask, and blind deceive others; we speak of a hypocrite making a cloak of religion; of false friends wearing a mask; of cheating tradesmen using a blind; of prejudice acting as a veil upon one's judgment.

137. **CLOG,** load, encumber. A clog impedes motion as of a wheel or machine which may be clogged with dirt; loaded is used in the sense of overloaded, as a picture loaded with color, or a tree with fruit; encumbered objects move or act but with difficulty.

138. CLOISTER, convent, monastery. A cloister conveys an idea of seclusion or retirement; a convent of a community or gathering; a monastery of solitude. One shuts himself up in a cloister, gives himself up to God, and surrenders his personal liberty; renounces his worldly habits in a convent; shuns all human intercourse in a monastery.

139. CLOSE, compact. Compactness is produced by a perfect adhesion of parts, while closeness consists in mere proximity or nearness.

140. CLOSE, near, nigh. There is little or no difference between near and nigh; the former is most frequently heard. Houses are close when they nearly touch; near when within sight. Persons are close when they touch; near when within speaking distance.

141. CLOSE, shut. Close is to put close together and is a partial shutting; shut is to close so as to prevent admittance or entrance; we close a door or window when we partly shut it; we shut our eyes by closing the lids; we shut our mouths by closing the lips.

142. CLOSE, conclude, finish. Close brings near to the end; conclude brings actually to an end; finish is to follow to a conclusion according to a certain well-defined plan; we may close by stopping abruptly at any point even though we have not concluded or finished; we may conclude before we have wholly finished.

143. COADJUTOR, assistant. A coadjutor is a fellow laborer who takes higher rank than an assistant or subordinate helper.

144. COARSE, rough, rude. Coarse refers frequently to the materials of which a thing is composed; rough to the surface; and rude to the fashion, make, or finish of things. We speak of coarse food, clothing, feelings, or manners; rough wood, skin, or language; and rude implements, utensils, language, or manners.

145. COAX, cajole, fawn, wheedle. Coax is to plead as with a child or simpleton, using entreaty or supplication in place of reason or argument; cajole is to employ trickery and stratagem coupled with soft words and insinuating manners; fawn is to hang upon in a servile or flattering way; wheedle is to employ knavish artifices as by greedy or covetous persons upon those of easy temper and generous impulses.

146. COERCE, restrain. Coercion implies the use of force or pressure to compel in a certain course; restrain, the keeping within certain bounds. We coerce when we prevent one from doing certain things and compel him to do others; we restrain when we only prevent him from doing some things. So we restrain while we coerce; but do not coerce when we restrain.

147. COEVAL, contemporary. Coeval means of the same age; contemporary, of the same time. As an age is a very long period, these words differ in degree. Things are coeval which extend over long periods; contemporary when existing at the same and, comparatively, short time.

148. COLLEAGUE, partner. Colleague implies the sharing of a common office; partner, of a common interest. Members of Congress and judges have colleagues; business men have partners.

149. COLOR, dye, tinge, stain. A thing is colored when color is put on it, or a description is colored by strong figures, facts, or vivid description; that is dyed when substances are used to change the color, usually said of textiles and fabrics; tinged when lightly touched with color, usually poetical; and stained when an unnatural color is added. In a moral sense that is stained which has lost its purity.

150. COLOR, hue, tint. A hue is a faint or blended color; a tint a shade of color.

151. COMBAT, oppose. Combat, to fight together, is used in speculative and moral matters; opposed is used in private and personal concerns; one's position is combated; one's interests or plans are opposed.

152. COMFORT, pleasure. Comfort is the most lasting form of enjoyment; pleasure is followed or accompanied by suffering; comfort is less than pleasure in detail, but it is more than pleasure in the aggregate.

153. COMMAND, order, injunction, precept. A command is given by one in authority, is imperative and must be obeyed; an order instructs, directs, and must be carried out; an injunction is an explicit impressing upon the mind; a precept points out a clear duty or a wise course.

154. COMMISSION, authorize, empower. We commission another to perform an act for us by expressing our wishes in the matter; we authorize when our personal authority is necessary to empower another to act; we empower another by formally transferring to him the legal right to act.

155. COMMODIOUS, convenient. Commodious contributes to the bodily ease and comfort; convenient well suits the business, the interests, or the plans; a porch, a house, a room, or a chair is commodious; an arrival, a time, a season, or an opportunity is convenient.

156. COMMODITY, goods, merchandise, wares. A commodity is some article which is of the first necessity; goods are those things of value sold by retail traders; merchandise is the belongings of merchants; wares are manufactured articles and are either goods or merchandise.

157. COMMON, vulgar, ordinary, mean. Things may become common, vulgar, or ordinary by frequent use; that which is mean is so of itself and by its nature. What everybody may obtain, use, and enjoy is common and hence of little value; vulgar is opposed to polite and cultivated; ordinary is the opposite of distinguished; mean is that which is inferior or does not rise above the moderate.

158. COMMONLY, generally, frequently, usually. What all do is commonly done; what the greater part do is generally done; what many do or what a few do very often is frequently done; what one or many are used to do regularly is usually done.

159. COMMOTION, disturbance. A public commotion is attended by unusual bustle and excitement; a disturbance interrupts the peace and quiet of a community. A commotion in nature is violent motion of several objects or of the individual parts of an object; a disturbance puts the object out of its natural condition or state.

160. COMMUNICATE, impart. That is communicated which is made of common knowledge or of common enjoyment; what is imparted is given to or shared with another and is usually of interest or importance to both parties.

161. COMPARISON, contrast. Generally we compare things to show their likeness and to learn their true relations; we contrast things to show their differences; we compare two shades of the same color; we contrast two different colors. Comparison brings out like qualities; contrast displays opposite qualities.

162. COMPATIBLE, consistent. Whatever does not interfere with carrying out a plan is compatible with it; whatever conforms to one's ideals or with one's station in life is consistent.

163. COMPENSATION, amends, satisfaction, recompense, remuneration, requital, reward. Compensation is a return, equal in value, for a loss or damage sustained; amends is a return for something faulty; satisfaction is a satisfying return made to another for injuries or damage; a recompense is a voluntary return for some service voluntarily performed; remuneration is a reward based more upon the dignity, fame, or standing of the person than upon the value of the services performed; requital is a grateful return for a kindness done; a reward is that which comes to a man in return for his conduct.

164. COMPETENT, fitted, qualified. One is competent who is qualified by mental endowments and experience; the disposition and character have much to do with one's fitness; one is qualified by acquaintance with the business to be done and by expertness in doing it.

165. COMPETITION, emulation, rivalry. Competition is more the act of striving for the same object as another; emulation is the spirit in which the contest is conducted; rivalry has usually a selfish object in view and marks an unworthy spirit as well as unscrupulousness in the choice of means of attaining the end.

166. COMPLAIN, lament, regret. Complaint is caused by dissatisfaction; lamentation by grief; and regret by pain.

167. COMPLAIN, murmur, repine. Complaint is not so loud as murmuring, but louder than repining. Complaint and murmuring are demonstrated by audible means; repining is generally in secret.

168. COMPLAINT, accusation. A complaint is generally made for the purpose of obtaining redress; an accusation, to bring the guilty to punishment.

169. COMPLETE, perfect, finished. When there is no deficiency, nothing wanting, a thing is complete; when it possesses marked excellence, it is perfect; when there is no omission in it, it is finished. Nothing that man does is, in the proper sense, perfect, but the term is used relatively to indicate a high degree of excellence.

170. COMPLETE, finish, terminate. When we complete a work, we make it what it ought to be; we

finish it when we do all to it that was originally intended; we terminate it by bringing it to an end.

171. **COMPOUND,** complex. A compound is made up of several wholes; a complex, of many parts. A compound may consist of two constituents; a complex consists of many parts.

172. **COMPREHENSIVE,** extensive. Comprehensive is concerned with quantity; extensive, with space. What comprehends much is comprehensive, what extends far is extensive. A comprehensive view of a subject takes in all of the branches of it; an extensive view takes up all of the minute details.

173. **CONCEAL,** dissemble, disguise. We conceal by simply abstaining from making known what we wish kept secret; we dissemble by both art and falsehood in an effort to prevent others from learning what we desire to keep secret; we disguise by cunning, artifice, and labor what we desire to pass unnoticed.

174. **CONCEAL,** hide, secrete. We conceal by keeping something out of sight; we hide it by putting it under cover; we secrete it by putting it in cunningly devised, unfrequented, or least thought of places.

175. **CONCEIVE,** understand, comprehend. To conceive is the simplest of these mental operations as we may conceive only one idea. We may conceive that something is possible without understanding or comprehending how or why; understanding applies to the more familiar subjects of business and daily life; comprehending relates to principles, lessons, and speculative knowledge.

176. **CONCEPTION,** notion. Conceptions are the result of one's own understanding and imagination; they are the product of one's own unaided mental operations upon one's own ideas; notions are the result of information and experience.

177. **CONCILIATE,** reconcile. We conciliate a person when we gain his affection and esteem for ourselves; we reconcile two persons when we unite their esteem and good will to each other.

178. **CONCLUSION,** inference, deduction. A conclusion gathers up all of the arguments and reasoning into full and complete proof; an inference is only partial, indecisive, and special; a deduction is drawn from a number of facts, inferences, and assertions and is final.

179. **CONCLUSIVE,** decisive, convincing. That which is conclusive puts an end to all argument and determines what the judgment shall be; decisive puts an end to all doubt or wavering and determines the will; convincing applies only to argumentative matters and is more particular and special than conclusive. A chain of reasoning is conclusive; a command is decisive; an argument is convincing.

180. **CONCORD,** harmony. Concord is the union of the wills and affections and may exist between persons living apart from one another; harmony is an accord of the minds of persons and is used of those whose daily lives are closely united. In music concord is used in speaking of two or more single sounds; harmony of any number or aggregate of sounds.

181. **CONDITION,** station. Condition in life relates to one's circumstances, education, or birth; station to one's rank, occupation, or mode of life.

182. **CONDUCE,** contribute. Conduce is used of all that brings about a condition or serves the full purpose; contribute serves a secondary purpose and only helps in a lesser degree to bring about a condition.

183. **CONDUCT,** manage, direct. Wisdom and knowledge are required to conduct; action to manage; and authority to direct.

184. **CONFER,** bestow. Conferring is an act of authority and is properly the act of those in power; bestowing is more an act of generosity or charity and is the act of private individuals.

185. **CONFIDENT,** dogmatical, positive. A confident man has faith in himself, is always ready to act, and is sure of success; a dogmatical man is used to making unqualified assertions, is always ready to speak, and feels sure of being heard; a positive man is fixed to one point, is confident that he has made no mistake, trusts more to his own memory and powers than he ought, and is consequently most often deceived.

186. **CONFIRM,** corroborate. What confirms removes all doubt; what corroborates adds more strength to. A story is confirmed when it is proved beyond all doubt; evidence is corroborated when something is added which strengthens it in some particular.

187. **CONFIRM,** establish. These words differ essentially only in degree,—confirm is not so strong as establish. While stories, reports, rumors, and opinions are confirmed, reputations, principles, faiths, and hopes are established.

188. **CONFOUND,** confuse. A person confounds one thing with another; he is confused or confuses himself. One name is confounded with another; a child often has confused ideas on a subject. When one takes two different accounts to be the same, one confounds them; when one mingles items from one account with another one confuses them.

189. **CONFRONT,** face. Two or more persons confront each other, as witnesses are confronted; one person faces danger, conditions, or the enemy.

190. **CONFUSION,** disorder. Confusion marks the absence of all order; disorder marks the disarrangement of things where order previously existed.

191. **CONFUTE,** refute, disprove. Confute is applied to argumentative matters, an argument is confuted by proving its fallacy; a charge is refuted by proving the innocence of the party; an assertion is disproved by showing that it is not correct.

192. **CONJECTURE,** supposition, surmise. A conjecture is an idea in the mind based upon some trivial suggestion; a supposition is based upon some reasons; a surmise has less foundation than either. We make conjectures regarding events, their causes, consequences, and circumstances; suppositions on speculative points; and surmises regarding the motives or intentions of people.

193. **CONNECT,** combine, unite. Only things of the same kind can be united and in the union all individuality is lost; unlike things are combined or connected and in the combination or connection each remains distinct. Combine indicates a closer union than connect. Houses are connected by a common passage; the armies of two nations are combined; two armies of the same nation are united.

194. **CONNECTION,** relation. Connection indicates the tie that binds two or expresses the condition of being so bound; relation does not define what the association is. There is a relation between one who gives a present and one who receives it; they stand in the relation of giver and receiver. There is a dependence upon one another for one could not be giver unless the other received the gift. But there need be no connection between them.

195. **CONSCIENTIOUS,** scrupulous. A conscientious person is guided by his conscience in all of his acts; a scrupulous person is so in minor or trifling points. Scruple is derived from a Latin word meaning a little hard stone which hurts one when stepped on. A man may be conscientious in the discharge of all of his duty; and an otherwise inefficient servant may be scrupulously clean.

196. **CONSEQUENCE,** effect, result, issue, event. Consequences may follow naturally from the actions of men or from things in which there was no design, plan, or intention; results follow directly from a plan, design, or purpose; an effect is produced by connection with some cause or thing which has effected or brought it about; issue and event mark the final outcome and are used of larger or more vital operations as of negotiations and battles.

197. **CONSIDER,** reflect. One considers common objects; reflects upon speculative and moral matters. We consider before we take action; we reflect when we look back upon what has been done with a view to future guidance.

198. **CONSIDER,** regard. We consider things when we look upon them as they really are, and study them with thoughtful caution; we regard them when we look into them with personal interest. We are accustomed to consider the details of means and matter and to regard the end or object at large.

199. **CONSIGN,** commit, intrust. To consign is to transfer to another for a specific purpose as in consigning goods to another to sell for one's advantage; commit is to put into the hands of another to manage for one, as a merchant commits the management of his business to his clerk; intrust is to place in trust and marks the confidence and trust of the one party, and the responsibility of the other.

200. **CONSTRAINT,** restraint. Constraint applies to the movements of the body; restraint to the mind as well. One is constrained by tight clothing or one's manner is constrained as though bound; one is restrained by motives or fear of consequences.

201. **CONSULT,** deliberate. Consult requires the discussion or consideration by, at least, two persons; one may deliberate alone. We speak and listen when we consult; we hesitate and take time to deliberate. Those who coöperate frequently consult; those who have large measures to decide deliberate.

202. **CONSUMMATION,** completion. A thing is complete when it answers its purpose; consummate when it has attained the highest possible degree. Wishes are consummated; plans are completed. The completion of one's plans may not be the consummation of one's hopes.

203. **CONTAIN,** hold. Hold is employed only for the matter for which hollow bodies have a capacity. In general use contain is regarded as being preferable to hold, and is applied to spiritual or moral content.

204. **CONTAMINATE,** defile, pollute, taint, corrupt. Corrupt destroys the purity; the other terms denote injury to the purity. Taint is the weakest of the words; corrupt and defile are the strongest. The impure contaminates; the gross and vile defile or pollute; the contagious or infectious corrupts; what is corrupted may taint.

205. **CONTEMN,** despise, scorn, disdain. We contemn that which is contemptible in superiors, such as mean acts; we despise or look down upon degraded or inferior persons; one who is scorned is shorn or stripped of honors and derided; in disdaining we consider a person or thing as altogether unworthy. A little, vain mind scorns others, though the noblest minds scorn to do mean or dishonest acts. A haughty or perverted mind treats others with disdain.

206. **CONTEMPLATE,** meditate, muse. We contemplate what is before us, or the present; we meditate upon the absent, or the past; though we may both contemplate and meditate for the future. We muse on circumstances or events which are just happening. There is more of serious thought in meditating or contemplating than in musing.

207. **CONTEMPTIBLE,** contemptuous. A thing, an act, or a person may be contemptible; the manner in which one shows his contempt is contemptuous.

208. **CONTEMPTIBLE,** despicable, pitiful. One is contemptible for vanity or weakness, despicable for baseness and vileness, pitiful for lack of spirit or manliness.

209. **CONTENTMENT,** satisfaction. A contented person wishes for no more; one is satisfied when one has obtained all that was wished for. A contented feeling is permanent; one is satisfied only for the time. Contentment is the absence of pain; satisfaction is a feeling of pleasure.

210. **CONTINUAL,** perpetual, constant. That which is continual is never interrupted; that which is perpetual has no end; that which is constant suffers no change.

211. **CONTINUE,** remain, stay. Continue suggests a state of action; remain, of rest. One continues working; one remains quiet. To remain is involuntary; to stay is voluntary. One remains in prison; one stays with a friend.

212. **CONTINUE,** persevere, persist, pursue, prosecute. Continue contains the general idea of not setting the work or act aside; persevere is to continue with no wish to desist; persist, with a determination not to cease; a plan, a measure or a line of conduct is pursued according to some definite design; an undertaking is prosecuted to carry it out in conformity to some desire or to follow it up to a definite result. One may persist in trifles, but one perseveres in important works.

213. **CONTRADICT,** deny, oppose. One may contradict unintentionally by setting up one statement against another as a lying witness contradicts himself; one denies by purposely asserting the falsehood of another's statement; one opposes by any mode of action or statement.

214. **CONTRIVE,** invent, devise. Devising is more difficult than contriving. A contrivance is simple and easily understood; a device has greater difficulties to overcome and is more complex. Invention is of greater importance and suggests something hitherto unthought of. Thought and combination will contrive and devise, but ingenuity is required to invent.

215. **CONTROVERT,** dispute. We controvert speculative matters; we dispute statements of fact.

216. **CONVERSANT,** familiar. To be familiar with things or subjects expresses a more thorough and intimate knowledge of them than to be conversant with them does. One is conversant with things that have come to his notice frequently; one is familiar with those things which come up in the daily routine of his business. A layman may be conversant with ordinary phases of law, but by no means familiar with all cases or aspects bearing upon them.

217. **CORRECT,** accurate. What is done according to a fixed rule is correct; what is done by an effort of the mind and attention is accurate. An engineer makes an accurate survey, a scientist accurate observations, a pupil solves a mathematical problem accurately. Another pupil may solve a problem and be correct in the use of the rule yet his work may not be accurate.

218. **COST,** expense, price, charge. Cost is the amount laid out on a thing; expense is what the person actually lays out; price is what the thing will fetch or be worth; charge is whatever is to be demanded of the person or thing. In manufacturing the cost of production, a share of expense, and all other legitimate charges, with profit added determine the price.

219. **COVER,** hide. We hide by covering, though we cover without any idea of hiding. Hide always conveys the idea of concealing.

220. **CURE,** heal, remedy. We cure what is out of order, heal what is broken, and remedy by applying remedies.

221. **CURIOUS,** inquisitive, prying. One is curious who carefully examines things for himself; inquisitive when he closely questions others; and prying when curious or inquisitive regarding other people's affairs.

222. **CURSORY,** hasty, slight, desultory, perfunctory. Cursory implies a running over a subject in both a hasty and slight way. A cursory view of a subject may be taken because it is unimportant; a hasty view may lead to error; a slight view to shallowness. A desultory action is a leaping action, not continuous but with intervals; a perfunctory act is one done from duty but without much, if any, interest in the subject.

223. **CUSTOM,** habit. Custom is the frequent performance or repetition of an act; habit results from this frequent performance. A custom is the result of the action of the will; habits are performed involuntarily. We follow a custom and acquire a habit.

224. **CUSTOM,** fashion, manners, practice. The customs of a country are the regulations for the conduct of men in the important concerns of life and are authoritative; fashions are arbitrary, fickle, and subject to frequent change; manners are the expressions of moral feelings and are an index of the culture and refinement of the people; a practice differs from a custom in that it may be frequent or infrequent, regular or irregular.

225. **DEADLY,** mortal, fatal. Deadly is productive of death; mortal terminates in or is liable to death; fatal relates to death and to things which work great mischief. Mortal is past all cure; fatal cannot be retrieved; deadly may be counteracted.

226. **DEATH,** decease, demise. Death is the general term; it denotes extinction of life and may be applied to both men and all animals; decease is a technical term in law and in a popular use denotes a falling off in the number of living; demise is appropriately used of those who, in dying, put off or resign earthly honors or high station.

227. **DEBILITY,** infirmity, imbecility. Debility is a physical weakness and may be constitutional or otherwise; infirmity is accidental weakness and is either physical or mental; imbecility is mental weakness. Debility may be general or local; infirmity is local; imbecility is general.

228. **DEBT,** due. Debt is usually applied to that which is owing from a person; due to that which is owing to a person. One pays one's debts and receives one's dues.

229. **DECEIVER,** impostor. A deceiver practises any form of deception; an impostor deceives by putting on a false appearance. The deceiver plays upon individuals or the public; the impostor usually upon the public at large.

230. **DECISION,** judgment, sentence. A decision is given; it puts an end to all doubt and enables a person to act. A judgment is formed; it respects innocence or guilt, moral excellence or defects of persons or things, and preferable courses of action; it enables a person to think. A sentence follows upon a judgment, is pronounced or passed, and determines the sentiments of those in judgment.

231. **DECLARE,** publish, proclaim. Declare is simply to make known to others, to make clear to them; one may declare privately or publicly, by word of mouth or by writing. We publish in the manner which will make the thing most widely known and cause it to become public property. Proclaiming is always an official act, as when the President issues a proclamation on public affairs. In olden times proclamations were uttered to the public by heralds who shouted out the royal wishes or commands.

232. **DECREE,** edict, proclamation. A decree is a solemn and deliberative act, the decision of one or many, and regulates both private and public matters. An edict is more authoritative than a decree, speaks the will of an individual, usually despotic, and includes such commands as the ukase of Russia. A proclamation contains the command to the people from a constitutional ruler.

233. **DEDICATE,** devote, consecrate. One who dedicates himself to God, promises solemnly to give himself entirely up by shutting out all other considerations; one who devotes himself to the ministry, pursues it as the first object of his thoughts but not to the exclusion of all else. We also devote our time to some work or thing. Consecrate is to set apart for a special object or purpose with religious form or ceremony.

234. **DEDUCT,** subtract. Deduct is a taking away from in a general sense as when one deducts an amount paid from the whole bill of charges; subtract is a technical term of arithmetical calculations, as when a bookkeeper subtracts small amounts from the gross sum.

235. **DEFACE,** disfigure, deform. Deface denotes the actual destruction of what has previously existed; disfigure is to destroy or to so execute as to take away the figure; deform is to change the form of what has existed. A painting or writing is defaced by tearing, smearing, or similar cause; a statue is defaced when the outward surface is damaged, disfigured by the loss of a limb; deformed when made so as to appear monstrous or even unlike the original. The human form is disfigured by loss of a limb or serious burn; deformed, when misshapen.

236. **DEFECTIVE,** deficient. Defective denotes that something is wanting to complete; deficient relates more to the part or thing that is wanting. A book is defective because some leaves are missing; the leaves are deficient.

237. **DEFEND,** protect, vindicate. Defend has the sense of keeping or warding off in a general way. Defense may be made regardless of the station or rank of the defender. A weak man may defend a stronger. Protect has the sense of a defense or shelter by a superior and involves an additional idea of covering, supplying with necessities, and furnishing comforts. Vindicate has a moral sense where a man not only defends himself against charges, but proves his innocence, and restores his good name.

238. **DEFENSIBLE,** defensive. A place or a line of conduct is defensible when it is possible to defend it; the means taken to defend it are the defensive measures.

239. **DEFINITE,** positive. Definite is bounded by a line or limit; positive is placed or firmly fixed. A man's views upon a question are definite when clear and sharply marked so as not to be confounded with others; they are positive when they admit of no doubt.

240. **DEFINITION,** explanation. A definition is correct or precise and marks off the boundaries and limitations; an explanation is ample or general and spreads out a full view of the matter. We both define and illustrate when we explain. We define a word when we show its exact meaning; we explain its use by illustration and contrast with other words.

241. **DEJECTION,** depression, melancholy. Dejection, a casting or hurling down, is stronger than depression, a pressing down. Both of these feelings or states of mind are temporary and passing. Melancholy is constitutional and is a disease. Its effects are permanent.

242. **DELAY,** defer, postpone, procrastinate, prolong, protract, retard. Delay denotes not to commence action; defer to put off action until another time; postpone is a discretionary act of putting off until a more favorable time; procrastinate is a delay arising from the fault of the person and is a culpable or negligent delaying; prolong is to lengthen to a wearisome extent; protract is to draw or drag along with no activity; retard is to cause a thing to go slowly or to prevent its advance.

243. **DELEGATE,** depute. An office or duty is delegated; the person to whom the task is delegated is deputed to perform it.

244. **DELIGHTFUL,** charming. Delightful is applied to both material and spiritual objects; charming is restricted generally to objects of sense. Music is rather charming than delightful.

245. **DELIVER,** rescue, save. Deliver is to set free; rescue to recover from danger; save to make safe. Deliver and rescue take out of the way of danger or suffering; save is to keep out of the way of evil. We deliver from slight danger; we rescue from great or immediate harm.

246. **DEMAND,** require. We demand by a formal asking for that which is justly our due and about which there can be no question; we require what we wish or expect to be done, but our requisition may be met by questioning or refusal.

247. **DEMUR,** hesitate, pause. We demur or keep back from doubt or difficulty; we hesitate from indecision; we pause from caution or the force of circumstances. We demur and hesitate by an action of the mind; we pause in speaking or in action.

248. **DENOTE,** signify. Denote is to cause to know; signify is to make some sign as a guide to the understanding. Letters or characters may be used to denote grades of excellence or the quality of things; nods, signs, glances, or looks signify wishes or feelings.

249. **DESIGN,** purpose, intend, mean. Design and purpose denote works of greater importance than intend and mean, which are familiar. A design includes many objects or topics; a purpose but one; there is something more methodical and studied about a design; a purpose is proposed or set before the mind seriously; we intend only vaguely; mean is applied to matters requiring but little thought and implies simply to have in mind.

250. **DESIGN,** plan, scheme, project. A design is arranged, studied out, and systematically prepared; a plan is the means by which a thing is to be brought about; a scheme and a project are intricate solutions of rare or extraordinary conditions; a project is intended to cover matters of great moment involving large interests. Design and plan are more practical and less speculative than scheme or project.

251. **DESIRE,** wish, long for, hanker after, covet. A desire demands gratification; wish is a strong inclination for; longing is impatient and continued; hankering is a desire for something placed out of reach; coveting is the desire for something which belongs to another. Hankering suggests a wish for something which has been previously enjoyed but of which we are now deprived.

252. **DESPERATE,** hopeless. Desperate, applied to things, is stronger than hopeless; it expresses the absence of hope to remove evil; hopeless expresses the absence of hope to attain good. One makes a desperate effort; one undertakes a hopeless task.

253. **DESTINY,** fate, lot, doom. Destiny is considered as marking one's station and walk in life; fate regards what one suffers; lot denotes what one gets or possesses; doom is the final and unhappy destiny of life.

254. **DESTROY,** consume, waste. Destroy is putting an end to that which one desires should be preserved; consume is to use up; waste is to consume by using wrongly.

255. **DESTRUCTION,** ruin. Destruction is immediate; ruin is gradual. What is destroyed may be rebuilt; what is ruined is past recovery or restoration. Destruction may be partial; ruin is total.

256. **DESTRUCTIVE,** ruinous, pernicious. An instrument or means is destructive or pernicious; its effects are ruinous. Pernicious agents or influences work in a more limited way than do the destructive.

257. **DETECT,** discover. One detects what another wishes to conceal; one discovers that which is concealed without wicked intent.

258. **DETER,** discourage, dishearten. Deter is to frighten away from a thing and one is deterred from beginning a thing; one is discouraged or disheartened from continuing a work. An impatient man is easily discouraged; one who lacks courage or perseverance is disheartened.

259. **DETERMINE,** resolve. Determine is an act of the judgment and follows examination and choice; resolve is an act of the will and follows determination. We determine what is best to be done and resolve to do it.

260. **DEVIATE,** wander, swerve, stray. Deviate is to turn out of the way or direct path; wander is to travel aimlessly without regard to paths or directions; swerve is to turn abruptly and suddenly from a course; stray is used in a bad sense either measured by morality or by consequences.

261. **DEVISE,** bequeath. Devise is to give lands or real estate by a properly attested and witnessed will; bequeath is to give personal property after one's death in a less formal but no less legal way.

262. **DICTATE,** prescribe. Dictate denotes greater authority than prescribe. Dictate is more than command; there is no sense of command in prescribe

though a rule of action or conduct is laid down for the prescribed to follow. One may dictate a line of action without giving any reasons therefor; prescription has the sanction of reason.

263. **DICTION,** style, phrase, phraseology. Diction is concerned with a proper observation of grammatical rules, proper use of words, and a clearness of writing such as may be attained by any student; style deals with niceties and elegances of expression, such as characterize the writings of the masters of the language; phrase has to do with the use of single words; phraseology with a succession of phrases.

264. **DIE,** expire. Die denotes the extinction of life; expire the last act of life. Trees and plants die, but do not expire; animals which breathe air, and some objects which depend upon air, such as lamps, expire.

265. **DIFFER,** vary, disagree, dissent. Differ is the most general and indefinite term. We differ from any cause or in any degree; we vary in only small matters. It takes two or more to differ; one may vary; we disagree in matters of personal interest and in practical affairs; there is always more or less ill-humor and feeling in a disagreement; there is also hard feeling among those who dissent in matters of speculation or opinion.

266. **DIFFERENCE,** variety, diversity. A difference may exist between two objects; variety requires several; diversity exists in the taste or opinion.

267. **DIFFERENCE,** distinction. The difference lies in the things themselves; the distinction is the act of the person who notes the difference. The distinction between two objects lies in the difference between them.

268. **DIFFERENCE,** dispute, altercation, quarrel. A difference is a less serious and personal matter; a dispute suggests many angry words and much ill-feeling; an altercation is a wordy dispute, with wide difference of opinion, and much abusive language; a quarrel is the most serious and involves all forms of violence.

269. **DIFFERENT,** distinct, separate. Difference is opposed to likeness; no objects which are alike can be different. Distinct is opposed to identity; two objects exactly alike may appear to be distinct when seen clearly. Separate is opposed to unity; two bodies which are united are not separate.

270. **DIFFERENT,** several, various, divers, sundry. Different describes the quality of things rather than the number and may be used of two; several denotes split up into many; various expresses a great number and a great diversity; divers denotes many different objects; sundry denotes many things widely separated.

271. **DIFFERENT,** unlike. Things which are different have some points of resemblance and may be compared; things which are unlike are wholly so and do not admit of comparison.

272. **DISPEL,** disperse. To dispel is to drive away a thing, so that it does not return; to banish permanently, to eliminate completely. Knowledge dispels ignorance; and light, gloom. More force is implied by dispelling than in dispersing. Both are used figuratively. The thing itself may be destroyed if dispelled; while to disperse may mean merely to destroy the cohesion of its parts. To disperse does away with the completeness as a whole; to distribute elsewhere, or scatter, but not to remove; yet to disperse is a voluntary action; while the act of scattering may be involuntary and without method or plan.

273. **DISPENSE,** distribute. To dispense is to confer upon, in the sense of giving out in different directions. But it has no special reference to the one who does the bestowing. One may say Nature dispenses her bounty to all. To distribute is a definite action toward individual points, as something which comes directly from giver to recipient. To dispense is also to do without a thing,—as "we can readily dispense with that."

274. **DISPLEASE,** offend, vex. Displease is the opposite of please, and more nearly respects the inward state of mind; while the act of offending is outwardly to give occasion to provoke the feeling. Simply not to please is a negative quality; while to offend is to cause a sense of displeasure in a distinct and definite way. Vex has the same signification as offend with the additional sense of repeated actions tending to aggravate not only one's displeasure but the actual offense.

275. **DISPLEASURE,** anger, disapprobation. Displeasure is a state of irritation of mind or feeling caused by the conduct of others. It is always produced by an adequate cause, real or supposed. Anger may result from continued displeasure, and is a state of mind aggravated by a continuance, perhaps, of offensiveness. Displeasure is mild, while anger is harsh. Disapprobation is an opposite opinion from approval. Displeasure is always felt at what has passed; disapprobation may be felt also with regard to things about to take place.

276. **DISPOSE,** arrange, digest. To dispose is to assign a place to each of several things; to arrange implies a more thoughtful action. Disposal is a personal act. Troops may be disposed but ideas may be arranged. Things not wanted are disposed of; books are arranged with regard to subjects or size. To digest is the act of assimilation, the gathering together of things with a fixed design in so doing. To digest information implies an intellectual process; while disposal may be simply to set aside or put apart.

277. **DISPOSITION,** temper. Both terms refer to the mind and its bias. Disposition is the natural or prevailing tendency of the mind as a whole, and is a permanent state. Temper relates only to the bias or tone of the feelings, and is transitory. A disposition inclining to right living makes a man a useful member of society; a good temper may make one acceptable and agreeable but not necessarily useful. A good disposition will go far toward correcting the errors of temper; a bad one will leave no chance for amending the temper.

278. **DISPOSITION,** inclination. Disposition is used here in application to the particular frame of mind, rather than the general, as in the previous instance. A disposition may be indulged in; while an inclination may be yielded to. A disposition to do something applies to the state of the whole mind at that time; an inclination may be a particular part of one's general disposition. One may be disposed to be unfriendly; but have an inclination to be studious.

279. **DISREGARD,** neglect, slight. To disregard is the act of not heeding, while neglect is the act of not choosing. To disregard means a settled mental purpose to diverge from a stated plan. To neglect is to omit to do an act, as from forgetfulness or postponement. What is disregarded is purposely passed over after being seen; what is neglected is often not seen or thought of at the time. To slight is to pass over lightly, easily, casually.

280. **DISSENSION,** contention, discord. Dissension is a state produced by a collision of opinions, peculiar to bodies of men; while contention is a collision of interests, but related to individual action. Selfishness is the main cause of contention; a disposition to be opinionated causes dissension. Discord is mainly caused by ungovernable temper. Inharmonious collision between two unrelated or unsuited chords in music makes discord. Contention implies greater action than the state of being discordant or in dissension.

281. **DISTANT,** remote, far. Distant implies standing apart from, used in reference to great space; far is used relatively, and only of space which is ordinary. Distant applies to bodies at rest, while far may be attributed to bodies which are or are not stationary. Remote is an implication of superlative distance, something so far that it is out of sight and inaccessible. A place may be quite definitely distant; a bird flies indefinitely far.

282. **DISTINGUISH,** discriminate. Distinguish is to regard things as to their entirety or their divisibility. One distinguishes as to quality by the senses; while one discriminates with the understanding only. The latter is a definite action; while ability to distinguish is indefinite.

283. **DISTINGUISHED,** conspicuous, noted, eminent, illustrious. A thing is distinguished for a certain quality when that thing acquires distinction or bears the mark of it, though only by comparison. Anything is conspicuous with regard to its being seen; it is distinguished only as it is separate and distinct from others. A person is noted for some certain quality, without being necessarily either distinguished or conspicuous. One may be either one or all these three for attributes which are good, bad, or indifferent; but the terms eminent and illustrious apply only to good qualities and praiseworthy actions. A person may be eminent for virtue or attainments; and these things make his name illustrious.

284. **DISTRESS,** anxiety, anguish, agony. Distress is the state one may find himself in when there seems no chance for escape. Distress is produced by a present evil, from an outward cause, with either old or young; anxiety or anguish can only belong to riper years. Anxiety is often imaginative; anguish and agony are forms of the more severe degrees of distress. Anguish usually follows reflection upon an evil which is past; while agony is felt by a person witnessing what comes directly under his observation.

285. **DISTRESS,** perplex, harass. Distress is that which brings to straits, or binds so as to hamper action. To distress is to cause to be thrown into discomfort by a condition; while to perplex is to puzzle

or bewilder or entangle. To harass is to cause a distressed condition repeatedly or continuously. One may be perplexed in understanding, but he is harassed intellectually by baffling and recurrent causes, which may throw him into a state of distress.

286. **DISTRIBUTE**, allot, assign, apportion. To distribute is a term applied to the portioning out of a thing in more than one direction, while to allot is to dispose for a specific reason, as for the sake of usefulness or order or beauty. To assign is definitely to readjust as to merit; to apportion is to divide by some fixed rule that is meant to be uniform and fair.

287. **DISTRICT**, region, tract, quarter. District is a definite tract or space specifically set apart. A region is a more indefinite place, of larger dimensions. The former may apply to a small part of a region, while the term tract is applied to a smaller portion still. A quarter is used merely to designate a direction, and is the most vague term of all. A region is usually spoken of in connection with weather or climatic conditions. All are terms relating to area.

288. **DISTRUST**, suspicion, diffidence. Distrust is the opposite of a state of trustfulness, and may be a negative feeling, while suspicion is an active and positive conviction of the evil in a matter. When a person feels a lack of trust in his own powers or qualities, the term used is diffidence, while distrust may be felt either of ourselves or of others. The condition of distrustfulness is a particular state; that of suspicion is a matter of habit.

289. **DISTURB**, interrupt. Disturb is to cause to be disordered and thrown into a state of commotion, either internally or externally. When such confusion comes positively and outwardly, it is an interruption. Disturbance depends upon the character or temperament of the individual; interruption, or breaking in upon a thing so as to stop progress, would affect any one of an indefinite number. To disturb is to cause the state of rest to exist no longer; to interrupt is to destroy the evenness or regularity of a course.

290. **DIVIDE**, part, separate. Divide is to put into parts or asunder, though the separation of the parts of a thing may still leave them connected; as a stream may divide a state, by running through it, while a mountain merely separates the parts of a country. To divide applies to things only; to part or to separate applies to persons as well. People may part without coming to a separation; and the moment of parting is often more painful than the separation to follow.

291. **DIVIDE**, share, distribute. To divide has the sense of a division into parts, not extending beyond the thing divided; distribution or sharing extends as well to the purpose of the action. To share is simply to give or receive an apportionment; to distribute applies to giving only, as to a definite number of persons.

292. **DOCILE**, tractable, ductile. To submit one's judgment or inclinations to the influence or power of another is a docile condition, and is applied to the will, mainly. To be tractable is one form of docility,—that of making the conduct conform to judgment. To be ductile is another form of being docile,—that pertaining to matters of character. Docility and tractability are applicable either to mankind or brutes; ductility as applied to the mind or its powers may be used only of persons.

293. **DOCTRINE**, precept, principle. Doctrine relates to a thing taught, while precept is a thing laid down. Doctrine presupposes a teacher; precept a superior with authority. A principle is the starting point of a theory or school of mental effort; while the doctrine is composed of several principles. The principle lies in the thing itself; the doctrine is framed by some one, and the precept also implies individual and preliminary action.

294. **DOCTRINE**, dogma, tenet. A thing which originates with a teacher is a doctrine; a dogma is the thing thought, or admitted to be the truth, and may lie with a number of individuals. A tenet is a thought, or series of them, held or maintained by one or more. Doctrines rest on authority of the originator; dogma upon authority of the church or body holding such principles; while a tenet rests upon its own merit for support.

295. **DOUBT**, question. Doubt respects what is believed about that of which one has two opinions; question relates to a deviation from such a belief. Doubt is mental, and denotes a withheld decision; to question implies an inquiry into a matter, with a demand for proof which will assist in a decision.

296. **DOUBT**, suspense. To be in doubt is to lack the necessary evidence for belief in a matter; to be in suspense is to fail to possess certainty regarding something maintained. Doubt interrupts progress towards a desired truth; suspense puts an impediment in the way of progress.

297. **DOUBTFUL**, dubious, uncertain, precarious. The state of being doubtful admits of doubting only; while being dubious relates to events and things speaking for themselves, and causes suspense. The meaning is very similar, both having distinct relation to the person holding an opinion on a matter. Uncertain and precarious are applied to qualities of the things themselves, as a rule. Precariousness usually depends upon the will or humor of another, and is actually the highest form of uncertainty. It is applied to that which is dependent to an extent upon future casualties. Uncertainty is a more negative quality of variance in a state of doubt.

298. **DRAW**, drag, haul, pull, pluck, tug. To lay hold of a body and put it in motion toward one's self is to draw it; to drag it is to draw it with violent effort. To haul is, commonly, to drag it with still greater violence. To pull is a maintained effort to draw without effect or motion; to pluck is, literally, to pick out of, or twitch apart from. To tug is to pull with violent effort; as, after a long pull for the shore, the oarsmen may still tug at the oars.

299. **DREAM**, reverie. To dream is to pass through subconscious experience, commonly in sleep, a mental process occurring when the imagination is in a sound state. A reverie may come while a person is awake, with the imagination in more or less of a disturbed condition.

300. **DREGS**, sediment, dross, scum. Dregs are the worthless part which may separate from a liquid. Sediment is the matter, not necessarily worthless or dirty, which may settle at the bottom. Dross is a variation of the term dregs, more often applied to metal-working. Scum is the same as froth, or that which rises to the surface. Dregs and sediment settle of themselves; but scum and dross signify some preliminary process of evolution.

301. **DULL**, gloomy, dismal, sad. The removal of brightness or spiritedness of a thing constitutes its dullness; and implies literally a lack of light. The state of being gloomy denotes not only the lack of perfection in dullness, but actual tarnishing. A place as gloomy as possible may be said to be actually dismal, simply extending and emphasizing dullness which has passed the gloomy stage. Sad is more an attribute of moral states than of physical; and may indicate a heart-wound or pained feeling.

302. **DURABLE**, lasting, permanent. Durable is said of things intended to remain a shorter time than lasting, and always of things material. Lasting is used of things spiritual. That which perishes quickly is not durable; that which ceases quickly is not lasting. Permanent is, literally, remaining to the end.

303. **DURABLE**, constant. Durable is the attribute of things, while constancy pertains to either persons or things. What is durable is inherently so; what is constant is so from temperament. The durable lasts long, it may be; but the constant is possessed of uninterrupted durability.

304. **DURATION**, time. Duration is commonly the portion of time during which a thing exists; continuance in time, but has reference to the beginning and ending of the existence of a thing. Time is infinite duration or its measure.

305. **DUTIFUL**, obedient, respectful. Dutiful means a fullness of duty, and is independent of all circumstances. Obedience and respect are relative terms, and merely modes of being dutiful. Respectful is a term of greater latitude than either of the others.

306. **DUTY**, obligation. Duty is that which is due from one being to another. Obligation denotes the bond or necessity entailed in the discharge of the duty. A duty is not necessarily lasting. An obligation is compulsory. Love may be the impelling power in the carrying out of a duty; necessity, or a sense of honor, is more likely to be the force behind an obligation.

307. **EAGER**, earnest, serious. Eager implies to be ardent in the pursuit or accomplishment of a thing. Eagerness is largely based upon impulsive or thoughtless action. Earnestness applies more to a settled purpose, a state of mind, to do a thing, as a characteristic of the temper of mind. Seriousness does not go to the extreme of solemnity, but is literally without laughter. Earnestness indicates a state of being ardent in the pursuit of an object; seriousness expresses a fixed intention in the same direction, but with less warmth.

308. **EARNEST**, pledge. An earnest is a token or assurance of what may be expected. A pledge, as of one's good faith in a matter, is the bond or guaranty that the duty or labor will be performed; but earnest

applies more to the confidence inspired than to the tie by which it is either affirmed or brought to pass.

309. **EASE,** quiet, rest, repose. Ease respects a motionless state of exemption from pain, noise, or other disturbance, and implies negative and apathetic pleasure and agreeable calmness;—the stationary state of being easy following a period of unrest. Quietness is an attribute of this state, with particular reference to the absence of noise or outside violence. Quiet denotes a lying-down state or condition; while rest simply applies to cessation from motion. Repose is the degree of rest enjoyed after its interruption.

310. **EASE,** easiness, facility, lightness. Ease and easiness relate to the abstract state or condition of ease in thing or person. Facility relates to that which is done; as one may say, a person's facility is determined by comparison of his ability with that of others who are less skillful. We judge of the easiness of a thing by comparison of it with others more difficult. Lightness and ease are both said of what is to be borne. That which presses in any form is not easy; that which presses in a sense of weight does not possess lightness. To ease is to relieve a person of pain or labor. To facilitate is to make a course or progress more certain; and to lighten is to remove a burden in the sense of weight.

311. **EASY,** ready. Easy implies a sense of freedom and absence of obstruction looking towards action in ourselves; to be ready indicates a preparedness, a willingness and a disposition to go forward immediately and to do. The first relates only to the thing or manner; the latter to the person who does the thing.

312. **EBULLITION,** effervescence, fermentation, ferment. Ebullition denotes literally a boiling forth, and is drawn from a physical application of the process resultant from the effect of heat upon a liquid. Fermentation is a process more gradual than effervescence, which is ebullition in moderation. A ferment implies that a process has resulted tending to make a new state or a thing distinct from a former one.

313. **ECCLESIASTIC,** divine, theologian. An ecclesiastic is a person connected with or occupying a definite station in a religious order, though not in person performing any particular office in that station. A divine actually performs the office of teacher or preacher. A theologian is simply a student in theology.

314. **ECLIPSE,** obscure. Eclipse is a state of the shutting off of light from a thing, and implies a body completely out of view from that cause. Obscure is only a relative term and may apply to a partial eclipsing of light or power, as regarded in a general sense. To obscure a thing is to render less distinct by intervention of shadow; to eclipse is to hide wholly.

315. **ECONOMICAL,** saving, sparing, thrifty, penurious, niggardly. Economical is the attribute of not expending unwisely or unnecessarily; saving is keeping resources in an undisturbed state for future use, a laying by or setting apart with care of a reserve fund or quantity. Sparing is holding back that which ought naturally to be expended. Thrift is the prominence of that quality which arises from the habit of saving; to possess it makes a person thrifty or thriving. To be niggardly is to be close, to narrowly fall short of withholding altogether. To be penurious is to incline to niggardliness as regards one's self,—to actually suffer from the penury caused by not spending enough of one's own money or resources.

316. **ECONOMY,** frugality, parsimony. Economy implies management in expending, and a regulated manner of putting forth resources. Frugality denotes a prudent or temperate management of resources. Parsimony is a more negative term, relating to a simple forbearance in spending. One who is parsimonious has only the object of saving in his attitude. One who is frugal may spare expense upon himself and be liberal with others to the point of extravagance.

317. **ECSTASY,** rapture, transport. Ecstasy indicates a passive state of being beside one's self or out of one's mind, temporarily; a mental tension, and unusual elevation of spirits. Rapture is a state which does not, like the former, paralyze the faculties, but may call the faculties into action or expression. Ecstasy and rapture are always pleasurable and arise from pleasurable causes. Transport is a state of extreme mental activity which may relate either to joy or anger, pleasure or pain.

318. **EDIFICE,** structure, fabric. Edifice is a term relating to a house already made and finished, and is always architecturally applied. The word structure is used when the act of raising the edifice is considered. Fabric is a term applying to the simple framing, designing, or contriving of a thing to be erected or created.

319. **EDUCATION,** instruction, breeding. Education comprehends not only instruction (the communication of ideas) and breeding (the outward conduct or manners), but the formation of the mind and the establishment of principles. Instruction makes one more completely educated; breeding makes one more agreeable; while education makes one better in every direction. Travel and other things may add to education as neither simple instruction nor breeding can. The lack of breeding merely unfits a person for the society of the cultivated. Instruction withheld is more or less inconvenient though not fatal to worldly advancement; but a total lack of education, considered broadly, may be detrimental in every way.

320. **EFFECT,** produce, perform. What is effected is both performed and produced. To produce is to bring something into being, and performing is to carry a thing through to the end; while to effect is to produce by performing something. That which is effected is done according to a definite design. That which is produced may follow only incidentally.

321. **EFFECTIVE,** efficient, effectual, efficacious. Effective denotes being capable of effecting something. Whatever is efficient is that which is capable of effecting something. That which is efficacious or effectual signifies having the power to effect, or to bring about the effect. When an end or outcome is effectual, the means to that end must be termed efficacious; and it is unnecessary to adopt further measures when methods are proved to be effectual.

322. **ELDERLY,** aged, old. Elderly signifies approaching a state of age. Aged denotes a still greater degree of elderliness; and old implies still more age than either.

323. **ELOCUTION,** eloquence, oration, rhetoric. Elocution relates to the manner of delivering speech. Eloquence denotes the matter delivered, and lies in the person who does the speaking. Oratory deals with the mode or style of expression. Rhetoric is an amplification of oratory, dealing with the theory of the art of which oratory is but the practice. Elocution is therefore requisite for an actor, and eloquence more for a speaker, though of course oratory is most desirable for both.

324. **EMBARRASS,** perplex, entangle. Embarrass is to hamper or place impediments upon manners or circumstances affecting one's self, want of prudence or presence of mind being most common causes. One is perplexed when diverse interests or conditions cause confusion. Perplexities may arise from one's personal actions or from outside causes. Entanglements arise solely from outside sources. Pecuniary troubles embarrass; for example, perplexities may come from counter advices or counsels; while lawsuits entangle.

325. **EMISSARY,** spy. Emissary is literally one who is sent forth, or sent out. A spy is one who takes a station from which he sees things and takes cognizance of events or objects for future use. An emissary is sent out to mix with people or to associate with whoever may serve his purpose best to sow seeds of dissension or policy. A spy keeps at a distance and maintains secrecy as to his movements.

326. **EMPIRE,** reign, dominion. Empire is a term comprehending the idea of an exercise of sovereignty, allied to the idea of a definite reign by a ruling power. Empire is applied to people or nations, but a reign applies to the individuals who are in power. Dominion applies to the personal act, whether of a ruler or private individual. Force of law gives a potentate the reign over a people.

327. **EMPLOY,** use. To employ is to apply to some particular use or purpose; to use is to derive a benefit from such employment. One always employs when he uses; but does not always use what is employed. Persons as well as things may be employed; use is applied to things only.

328. **EMPTY,** vacant, void, devoid. Empty implies lacking or wanting, and is quite similar in meaning to the term vacant. Either a house or a seat is said to be empty or vacant when it lacks an inhabitant or an occupant. Void is slightly at variance with these terms, always used as a qualifying word but never prefixed as an adjective. A mind which is vacant of ideas may be termed void of reason; and a stare absolutely devoid of expression is said to be a vacant one.

329. **ENCOMIUM,** eulogy, panegyric. Encomium is a form of praise, in the usual sense, applied to an object at the time unconscious of such sentiments. A eulogy may be praise bestowed upon a hero of another age or country, or the characters or actions of men in general. Great achievements may be accorded encomiums; great men are given eulogies. A panegyric is,

literally, a solemn, formal oration, spoken before a stated assembly about the person or character of an individual.

330. **ENCOURAGE,** animate, incite, impel, urge, stimulate, instigate. To encourage is to inspire with courage or animate with stout-heartedness. To animate is to put spirit into a matter. To incite is to put into action or motion toward an object. To impel is to cause a thing to be advanced toward an end. To urge is to cause to be set into work or action. To stimulate is closely allied to the term "to inspire," relating rather to the putting forth of a goad, or incentive which encourages action. To instigate is to cause to be put forward and literally to spur onward. All are applied to the process of calling into action and bringing things to a specific end.

331. **ENCOURAGE,** advance, promote, prefer, forward. To encourage in another sense is the same as to promote,—to put forth as an impelling force. To advance is to bring near to a point or end. All three words are applicable either to persons or things. To prefer is to differentiate in favor of a certain person above others, and applies usually to the advancement of a person through outside efforts. To promote is to move forward or upward in degree, and is applied either to projects or persons. To forward a thing is to put it ahead one or more steps farther than its previous position. All these terms may be employed in certain phases in the consideration of either persons or things, and few other groups of allied words are more interchangeable in modern writings.

332. **ENCROACH,** intrench, intrude, invade, infringe. To encroach is to creep upon or into a situation unobserved, denoting an unauthorized procedure and, often, an imperceptible or insensible action. To intrench is to dig beyond one's own environment into that belonging to another. Intrude and invade are words denoting an unauthorized or unwarrantable entry into another's territory,—the former in a manner suggesting "thrust in upon" and the latter a "marching against" a position. To infringe is to break in upon, as, for example, an infringement of law or of rights. Intrusion implies an unexpected advance upon good manners, and invasion means an equally violent assumption of position beyond that just occupied.

333. **END,** terminate, close. To end is to bring a thing to its termination. To close is to end gradually. To terminate is to end finally. All are expressive of the conveyance of a thing to its last point.

334. **ENDEAVOR,** aim, strive, struggle. To make attempts to any end, or to set about doing a thing, is to endeavor to do it. To aim to do something is to have an objective beyond the immediate action. To strive is to qualify the act of endeavor, in the sense of earnestly doing it. To struggle is to find difficulties in the way of doing, to strive earnestly in contending with such difficulties. As, we endeavor to correct faults, aiming at perfection, by striving to conquer bad habits and struggling to overcome temptation.

335. **ENDEAVOR,** effort, exertion. An endeavor is, literally, a trying to do a thing, from a sense of duty. Effort is applied to the actual bringing out of the power to do, while exertion applies to the putting forth of that power. The latter is used as applied to nations as well as individuals; but endeavor is commonly an effort applied to individuals only.

336. **ENERGY,** force, vigor. Energy signifies the power of producing positive effects from inward force. Force is similar to the verb compel, as one may say he is forced to the conclusion through circumstances. Activity is connected with the idea of energy, and capability with that of force. Vigor is a term given to power exercised in a flourishing manner, usually applied to youthful energies.

337. **ENLARGE,** increase, extend. To enlarge is to make wider and increase in extent or dimension. To increase is to grow to a thing, signifying a greater size by reason of the junction of something else. To extend is to increase the length or the space of a thing. The bounds of a property are said to be enlarged; or the strength of an army increased; while views or prospects are seen to be extended.

338. **ENORMOUS,** huge, immense, vast. Enormous means extensive beyond the rules of law, order, or what is usual. Huge is, properly speaking, that quality indicating uncommon height; and these two are applicable to magnitude. Immense relates to excessive quantity and number, expressing more than vast. Immensity expresses extent exceeding all calculation; whereas vastness denotes simply a large or an unusual excess.

339. **ENORMOUS,** prodigious, monstrous. Enormous, signifying an excess of bounds, is to be contradictory of all rules and standards of judgment: while that which is monstrous contradicts nature and does violence to our senses and understanding. What is prodigious raises the mind beyond the ordinary course of thought, and excites astonishment and wonder.

340. **ENOUGH,** sufficient. Enough is literally a satisfying quantity of a thing. What is sufficient is that which is made or suited to the purpose. Enough may be applied to desires which have been well satisfied; sufficient to the ample supplying of one's wants. Enough is said only of the physical objects of desire; sufficient is said of that which serves its object.

341. **ENROLL,** enlist, register, record. To enroll is to place in a condition of enrollment, as in a manuscript or book form. To register is the act of placing in a written or listed form. To record is, literally, to bring back to mental consciousness, or to the memory, a fact or series of them by means of memoranda. To list, or enlist, is to set down more than one item in the form of a list. Both enroll and enlist imply a setting down of several things in an orderly manner in written or printed form.

342. **ENTERPRISING,** adventurous. Enterprising signifies to engage in that which is extraordinary or out of the common, and relates to the understanding. Adventurous means that enterprise which is hazardous or involves risk, venture, or trial. The enterprising conceive great attainments and enter upon the pursuit of difficult projects. The adventurous seek to do that which is new and dangerous.

343. **ENTHUSIAST,** fanatic, visionary. An enthusiast is one who is affected inwardly with extraordinary fervor, while a fanatic or a visionary expresses the same fervor in outward marks or singularities of conduct. Fanatic is a term often applied to those who, under stress of religious frenzy, are possessed of an intemperate zeal to insist upon others following their leadership. Visionaries are those who from any cause see or pretend to see visions as an inspiration. The influence of an enthusiast may proceed from earnestness of heart-purpose; but fanatical or visionary folk are governed by the fancy.

344. **EPITHET,** adjective. The rhetorician speaks of an epithet; the grammarian calls it an adjective. Epithet considers the meaning and force of the word; adjective is a class-name under which to place the word grammatically. So we would speak of a gentle, harsh, or ennobling epithet; but not of a gentle, harsh, or ennobling adjective. In the expression "Father Abraham," father is an epithet, but not an adjective.

345. **EQUAL,** even, equable, like, alike, uniform. Equal signifies like in degree, quantity, number, dimensions, or other qualities, and opposed to difference of any kind. Evenness is applied to the surface or the position of bodies, or may be used in a figurative sense, as to say one has marked evenness of temper. Equable means simply being susceptible of equality. Like or alike are terms used in connection with accidental qualities; and the term uniform signifies one form, and is applied to conduct, habits, or character.

346. **ERADICATE,** extirpate, exterminate. Eradicate is to get out by the root, to remove materially. Extirpate is to destroy thoroughly by removing the stalk. Exterminate is to cancel wholly and put a thing completely out of existence, and is used with regard to whatever has life, and denotes a violent and sudden action. Pestilence may extirpate, while the sword exterminates.

347. **ERROR,** mistake, blunder. Error is a term signifying the act of wandering from a fixed course, or going astray. A mistake is taking amiss or wrong, or going blindly into a path that is not the right one. Error is strictly opposed to truth, and is applied mainly to moral wrongs. Blunder is an error of action, while a mistake is an error of choice. A mistake is a thing that should be rectified. An error is something that may be forgiven. A blunder may or may not have to be set right.

348. **ERROR,** fault. While the error lies in the domain of judgment or conduct, a fault lies with the will or intent. Faults are things to be corrected, and errors are things to be treated. Error is a departure, however slight or infrequent, from a right line. Fault applies to that which is habitual.

349. **ERUPTION,** explosion. Eruption signifies a breaking forth or coming into view by a sudden bursting out. Explosion is the bursting of a thing with a noise; hence of flames there may be an eruption of a flaming substance, but an explosion of the gases or of gunpowder, and volcanoes have eruptions which are often attended by explosions as well.

350. **ESCAPE,** elude, evade. To escape is to get out of, or away from, without implying what means were

used. To elude is to avoid personally, in the sense of avoiding something which is impending. To evade is to slip away cleverly for the purpose of avoiding something. These are commonly terms applied to avoidance of disagreeable things. One is said to elude a punishment, but to evade a law.

351. **ESPECIALLY**, particularly, principally, chiefly. Especially refers to something which, out of many things, is superior to all. This meaning, in an exclusive or superlative sense, is peculiar, also, to the term particularly. Principally and chiefly refer in general to the superiority of some things over others, the former being less general than the latter. Especially is of stronger import than particularly.

352. **ESSAY**, treatise, tract, dissertation. Essay denotes an attempt or trial to set forth the outline or arguments supporting a subject, more commonly applied to small and detached pieces affording room for later amplifications. A treatise is a more systematic treatment of a subject, conveying the idea of something labored or exhaustive, and follows a more methodical form. Tracts are "occasion pieces," usually brief, and seldom surviving the occasion which gave rise to them. Dissertations are arguments advanced to support disputed points, or subjects about which there is considerable speculation.

353. **ESTEEM**, respect, regard. Esteem is to set a specific value upon an object, and is produced by intrinsic worth. Respect is the feeling engendered by some particular mark of distinction, as superiority of talent or attainments. Regard is affection blended with esteem, and flows directly from the heart. Like respect it is limited to a favored few. All these embrace a favorable attitude of mind towards the object.

354. **ESTIMATE**, compute, rate. To estimate is to get at the sum of a thing either by figurative or literal calculation,—a variation of esteem. To compute is personally to put together and think out by the specific process of assembling items in related form. To rate is to make a mental estimate of a thing by comparison, deduction, or natural sequence. All are applied to the mental operation by which sum, amount, or relative values are determined.

355. **ETERNAL**, endless, everlasting. Eternal is that which pertains to a state of which it can be said it has never begun and will never end, as set above time. Endless lies within appreciable time because it applies to something which began but which has no ending. Everlasting presupposes something which could have neither cessation nor interruption, and is more powerful than the term endless.

356. **EVADE**, equivocate, prevaricate. To evade is to avoid by a going around,—to escape by shrewdness or an artful mode, as by turning the subject or shifting, perhaps argumentatively. To equivocate is to employ a baser means of avoidance, and to make use of expressions tending towards a misleading. To prevaricate is to make use of actually and purposely contrived untruths, or vague statements conveying a wrong impression; or to employ loose and indefinite expressions, as in the case of criminals who want to shift responsibility for wrongdoing.

357. **EVASION**, shift, subterfuge. Evasion is used only in a sense other than good, with shifting and subterfuge as gradations of it. To shift is to put off a burden or responsibility upon some one else. Subterfuge is literally to fly away from in an underneath or concealed manner, suggesting recourse to screen or shelter. No truly courageous person will try to shift or to make use of subterfuge, and no candid one will consider making an evasion; all these being resorted to for low or paltry purposes.

358. **EVEN**, smooth, level, plain. Even is used of a surface or substance which is free from great or marked roughnesses or irregularities. Smooth signifies something which is wholly free from anything rough or irregular. Level, applied to a piece of land, means flat, or a surface free from protuberances or depressions. Plain is a term possessing the last mentioned qualities, and, in addition, is uninterrupted or untraversed, within the reach of vision, by water, woodland, or other deviation from an absolutely level-appearing state.

359. **EVENT**, incident, accident, adventure, occurrence. Event is that which falls out, "turns up," or transpires. Incident is something occurring in the course of events, as a collateral part of a natural or expected system. Adventure is that which happens to a person, or befalls in an unexpected or surprising manner. Occurrence is something running or coming naturally in the way, yet is a little out of the placid course of things. Accident is the thing which happens or transpires, always spoken of that which has been, an event occurring without rule or intention, and something which could not have been prevented.

360. **EVIL**, ill, misfortune, harm, mischief. Evil is comprehensive of those qualities which are not good, and ill is a contraction of or modified form of evil. Misfortune is a minor evil and depends upon circumstances. Harm and mischief are species of lesser evils; the latter an evil from some definite disturbance and the former from circumstances which may not be known, or from an indeterminate locality. Harm properly lies in the thing itself; mischief lies in that which is a consequence of a form of evil.

361. **EXACT**, extort. To exact is to drive out, as by simple force. To extort is to wring or to rend out, and implies the action of special or severe force. Exact is commonly an act of injustice; while extortion is an act of violence as in an act of tyranny; one may exact what is considered justly due or willingly accorded, as deference or obedience; one extorts what is not easily secured, or yielded only after much persuasion, as one may extort a confession or discovery.

362. **EXACT**, nice, particular, punctual. Exact is the quality of accuracy, the absence of defect of any sort. Nice is a term applied to a discriminating taste and quick perceptiveness, as in the judgment. Particular is a gradation of nicety, bringing discrimination to a specified point. Punctual is the quality of keeping to a definite point, like a person's punctuality as to time or season in doing a thing.

363. **EXAMINATION**, search, inquiry, research, investigation, scrutiny. Examination is the balance in which mentality holds itself when an inquiry into the condition of a subject is in order. A search is a combination of seeking and seeing, in the sense that one might physically place himself in the attitude of looking intently after a thing. Inquiry is an intellectual effort of searching or seeking after; and research is searching with energy or special intentness. Investigation is the act of seeking out information or general facts by means of waymarks, signs, or tracks. Scrutiny is to examine strictly or turn over obstacles to find something sought for. A research is inquiry into that which is remote; an investigation is minute and detailed inquiry. Scrutiny implies the most careful examination or inquiry along a given line.

364. **EXAMINE**, search, explore. In the sense of looking upon places or objects with a view of securing a closer acquaintance, to examine expresses less than either to seek or to search. To search is to seek for things which are more or less remote and hard to find. We explore regions that are either highly inaccessible, hitherto unknown, or far removed. Examination implies that the object looked at is near; as a botanist examines a plant, but a discoverer explores a distant region. Exploration signifies more than either of the others an issuing forth or a quest, the result of which is wholly problematical.

365. **EXAMPLE**, pattern, sample. Example is a thing framed or shaped in accordance with a likeness or similarity; while a pattern is a literal copy. A sample denotes something done according to an example. A sample is usually an attainable goal; but an example or copy is ever something one strives to reach, being indefinitely held forth or in advance as a pattern.

366. **EXAMPLE**, precedent. Example has a particular use which implies that something which has preceded or taken place is by special distinction entitled to notice. A precedent much more distinctly implies this. Both signify something worthy of being followed or used as a rule or guide of action. The example may derive its authority from an individual, but the precedent from time and from common consent. One is more commonly led on a course by a copy or example; one is, more strictly speaking, guided or governed by a precedent.

367. **EXAMPLE**, instance. Example, as here used, denotes the thing to be followed or copied; instance, that which stands or serves for a starting or resting point. Examples are useful for instruction or illustration; instances are usually adduced by way of proof.

368. **EXCEED**, excel, surpass, transcend, outdo. To exceed is to go beyond or farther, or to pass out of. To excel is to lift or move over a thing. To surpass is, literally, to over-pass; as one nation surpasses another in a particular show of power. To transcend is to climb beyond a premise or boundary; and to outdo signifies doing what is beyond the ordinary course. To excel is confined to that which denotes good actions only, and can only be secured by effort. No particular effort is necessarily implied in surpassing a thing,

which may really be a passive and altogether involuntary condition.

369. **EXCELLENCE,** superiority. Excellence is the quality of excelling, which makes it an absolute term. Superiority is only a relative term, implying a degree or status of advance from an inferior position, literal or figurative. Superiority is often applied to a particular virtue or quality; but excellence, in the main, signifies general and sustained worthiness.

370. **EXCESS,** superfluity, redundancy. Excess is that which exceeds or goes beyond any measure. Superfluity signifies more than a sufficiency of a thing, a fullness to overflowing in reference to a definite supply. Redundancy denotes not only enough of a superfluity to overflow but enough to stream back, and even cause an inconvenient inundation of excess.

371. **EXCESSIVE,** immoderate, intemperate. Excessive denotes superlative excess, or what is beyond measure. Immoderate is merely beyond moderation or without measure; while intemperate signifies something which is without bounds in general. Excessiveness applies to what is over and above in general; both immoderate and intemperate imply the things which are excessive in a moral sense only. Excessive admits of degrees; while immoderate and intemperate indicate a great or surprising amount of going beyond,—immoderate being, in fact, the highest conceivable degree of excess.

372. **EXCHANGE,** barter, truck. To exchange is to put one thing in the place of another, or to take one for another. One of the several modifications of exchanging is the term barter, implying an exchange of one article of trade from one person to another. To truck is, literally, to wheel or carry about the thing to be traded for, sold, or exchanged. In all these there is the suggestion of private property changing ownership by an agreement involving conditions of sale or exchange.

373. **EXCITE,** incite, provoke. To excite is to make alive, to cause to be in an awakened condition, applied to purely physical influence. To incite is to rouse up and at the same time inspire with a feeling of hope or courage. To provoke is to call forth the feelings in such a way as to aggravate, and may be applied either to an inward or outward action. Excitement is usually applied to the inward feelings, as one may excite a smile but provoke laughter. To incite is always applied to moral action.

374. **EXCURSION,** ramble, tour, trip, jaunt. Excursion is a departure from one's course or path. A ramble is applied to a course taken without any particular objective. A tour is a circuitous course. A trip is an excursion on foot, or one which is so short that it might easily be taken on foot. A jaunt is very similar to trip, but implies a distance that might be more easily compassed by wheeling or other means of locomotion. A tour is most often applied to a sober scheme of enjoyment by travel; but those who have little time for such pleasure take trips or jaunts.

375. **EXCUSE,** pardon. To excuse is to exempt a person or thing from blame. To pardon is to give up or not insist upon the punishment of another for a fault. One excuses that which personally affects one's self, like a small offense, or pardons a much greater wrong, or one which offends against morals in general. Generosity and mercy are exercised in pardoning; while simple good nature may excuse.

376. **EXECUTE,** fulfill, perform. To execute is to bring about or cause to come to pass a certain ending, and involves active measures. To fulfill is to carry out an obligation, moral or otherwise. To perform is to do or carry forward a simple action or labor. One executes according to a fixed intention, personal or otherwise, but previously determined; one fulfills according to the wishes or expectations of others; one performs that which is a fixed program of action.

377. **EXERCISE,** practise. To exercise is to drive or force out action or power, as to carry forward repeated exertion of some sort. To practise is an amplification of the idea of continuous or habitual action. One may exercise a virtue, implying a peculiar mental effort; while the practice of a profession, for example, is to put forward efforts tending towards desired ends, daily and ordinarily, in the natural course of duty.

378. **EXERT,** exercise. Exert signifies an action which is either internal or external. The exercise of functions implies, as in the previous instance, something particular and definite which is being carried forward.

379. **EXHORT,** persuade. To exhort is to speak in a manner to excite or impel one in the direction of an advisable line or course. To persuade is to speak so as to produce more of the drawing or compelling and involuntary action on the part of the listener, as may be done by a friend or an equal. A superior exhorts, and presumably on matters of duty or necessity; but one who persuades may exert an influence over another resultant in any sort of action.

380. **EXIGENCY,** emergency. Exigency is what a case demands, while emergency signifies the coming out or rising above a case. The latter is imperative when it comes, the former more casual. A traveler carries enough with him to cover exigencies, but not always sufficient to cover emergencies.

381. **EXIST,** live. To exist is to place or to stand a thing by itself or of itself, and existence is the property of all things in the universe. To live is more, for it signifies action by the heart, as well as the quality of merely carrying life forward. A patient may exist but faintly; but when he is said to live, the implication is of vitality and energy, which the other term does not convey.

382. **EXONERATE,** exculpate. To exonerate is to take off or remove a burden, and to exculpate is to throw off the blame. The first is the act of another; the second is one's personal act.

383. **EXPEDIENT,** resource. An expedient is an artificial means to an end. A resource is a natural means. It requires cunning to set up and successfully resort to expedients; and we say a naturally clever man is one who has abundant resources,—not here used in the sense of wealth.

384. **EXPEDIENT,** fit. Expedient is a condition of readiness for a stated occasion, and fit, or fitness, signifies an agreement with or suitability to circumstances. Fitness is determined by moral rule, while the adoption of an expedient is an action dependent upon any outward circumstance. It is imprudent not to do that which seems to be expedient; but it is more or less of a disgrace to do a thing which is unfit.

385. **EXPERIENCE,** experiment, trial, proof, test. Experience is an action which denotes the act of bringing out or of lighting up a thing. The trial of a thing denotes the actual trying of it by examination or search. The proof of a thing is the act of making good along a certain line. The test is that which serves to prove the reality or do away with the uncertainty surrounding a thing. All these together, with the word experiment especially, imply endeavors to arrive at a certainty respecting some unknown particular or the truth of something which is largely speculative.

386. **EXPLAIN,** expound, interpret. To explain is to make plainer by either implied or actual speech. To expound is to set forth more especially in detail. To interpret is literally to get the sense out of something which needs explanation or elucidation. To expound and to interpret are both methods or species of explaining.

387. **EXPLAIN,** illustrate, elucidate. To explain is to render more intelligible by words. To illustrate means, literally, to make bright, that is, to cause a thing to be more easily examined. To elucidate signifies, literally, to bring forth into the light. Both illustrate and elucidate are to give additional clearness, implying that a partial explanation has preceded. We illustrate by means of examples, similes, and allegories; we elucidate by means of commentaries or explanatory notes.

388. **EXPLANATORY,** explicit, express. Explanatory signifies belonging or pertaining to an explanation. The explicit is that which is laid out for inspection, or unfolded to view. To express is to deliver an opinion or judgment in specific terms. The explicit demands a free use of words. The express requires words in which there is no ambiguity.

389. **EXPOSTULATE,** remonstrate. To expostulate is to demand a reason for a thing. To remonstrate is to show reason against something, and usually rests upon the force of peaceable representation. He who expostulates passes censure, and makes claim to be heard, often with a premeditation of violence. He who remonstrates presents his case and merely requests to be heard.

390. **EXPRESS,** declare, signify, testify, utter. To express is, literally, to press out what passes in the mind. A man may express all the affections; he declares his opinion for or against a matter, more or less publicly, and in more positive terms than he would use in an expression of his views. Words, looks, movements, gestures, may also express the feelings of a man. Signify and testify are words employed to describe any general act of communication other than by word; but express is stronger than either of them. By the latter the deepest feelings of the soul are made known,

while simple intentions are signified or testified to. To utter is to bring out by utterance an idea; while to express respects the thing which is to be communicated. Expressions come from the heart; but utterance is from the lips alone, and may easily consist of words without meaning.

391. **EXTENUATE,** palliate. To extenuate is to thin out or to make small in the sense of lessening the degree of an impropriety. To palliate is to throw a cloak, as of charitable consideration, over a wrong so that it may not be apparent. To extenuate is the effect of circumstances; to palliate is the effort of an individual.

392. **EXTRANEOUS, foreign,** extrinsic. Extraneous signifies, literally, out of the land or domain, and not belonging to it, as well as forming no necessary or natural part of a thing. The extrinsic is that which may be said to form a part of a thing but has only an indirect connection with it. Both these terms have only an abstract sense; but foreign is a much stronger term, and signifies not only apart from family or tribe, but from the nation also, and, in the widest sense, at large. Intrinsic merit lies in the contents of a thing, and is the opposite of extrinsic.

393. **EXTRAORDINARY,** remarkable. Extraordinary is, like remarkable, an epithet opposed to what is ordinary. The extraordinary is a thing which is out of the ordinary course, but may not be sufficiently so to cause general remark; hence it is not necessarily remarkable. There are few of the former, compared with the number of the latter. Extraordinary is a much stronger expression than remarkable, the latter being sometimes what is looked for, and the former what is often unexpected.

394. **EXTRAVAGANT,** prodigal, lavish, profuse. Extravagant means a general wandering and divergence from the line. Prodigal means a launching or sending forth, and that in unexpectedly great quantity. We speak of lavishness when we imply a dealing out of something so largely that it is of little use or of no avail. Profuseness is a term applied to a free and lavish pouring out of supplies in quantities. An individual is said to be extravagant with his own means, and profuse in what he bestows on another. One can only be prodigal with large sums, but extravagance may be associated with small sums in excess of one's own means.

395. **EXUBERANT,** luxuriant. Exuberant denotes that which is very fruitful and superabundant. Luxuriant signifies expanding with unrestrained freedom. Both are applied to vegetation in a thriving state; exuberance expressing the excess, and luxuriance the perfection of a state of growth.

396. **FABLE,** tale, novel, romance. Fable is something spoken or told. Tale is also a telling, or a species of narration. Novel is a tale which is extended. Romance is a tale that has for a basis the wonderful, or, to be literal again, the romantic. Fables are allegorical, and are supposed to be written for instruction; the action being perhaps natural enough but the agents imaginary. Tales are fictitious, as a rule, but unimaginative. The novel is a tale in complex form, introducing any number and variety of characters and incidents. But it remains for the romance to hold the attention and engross the interest to the exclusion, temporarily, of all other intellectual processes.

397. **FACTIOUS,** seditious. Factious signifies busy or intermeddling. Seditious means prone to sedition or insurrection. Factious applies to the tempers of men individually; seditious applies to bodies of men, in characterization of their conduct. The factious man wishes himself to take an aggressive part in affairs; the seditious man would compel others to do his bidding.

398. **FAIL,** fall short, deficient. To fail is not to succeed, and implies an action that was abortive. To fall short is to miss, by an appreciable difference, a reaching over to a desired aim or expectation. To be deficient is to fall short only in certain directions or in a specific manner. Falling short either designates the results of actions or the state of things in general. A person is deficient in politeness, education, or in some other definite and particular thing.

399. **FAIR,** honest, equitable, reasonable. Fair is synonymous with beautiful, and may be said of either persons or things. It also applies to fair-mindedness, and always springs from appreciation of the right. Honest is applied to a man's honor or principle, and characterizes conduct as being in line with truth and sincerity. Equitable is according to absolute equity, and reasonable is in conformity with reason. What is fair or equitable is so with reference to all its circumstances; what is reasonable is so of itself.

400. **FAITH,** creed. Faith denotes either the principle of trusting or of the thing trusted. Creed signifies the thing believed. The latter only represents the thing which is the object of faith, which is far the more comprehensive term. Faith is a more general and often more indefinite term; creed applies to a particular and definite code. Every established form of religion has its peculiar creed, while many may be grouped in accord with the same faith.

401. **FAITHFUL,** trusty. Faithful is filled full of faith or fidelity, respecting altogether the principle. Trusty signifies not only the principle but qualifications in general, and applies to those in whom trust is to be placed. Faithful is applied to persons, while trusty may be applied either to persons or things.

402. **FAITHLESS,** perfidious, treacherous. Faithless is a general term which denotes merely a breach of faith. Perfidious implies not only a breach of faith but added treachery and injury. A perfidious person generally works under the mask or semblance of sincerity and deceives those who trust him. A treacherous person betrays another, and we speak of the act as being treacherous also. A perfidious person has the will to do injury; he is treacherous as soon as he does the injury.

403. **FALL,** downfall, ruin. A thing falls from an upright or erect position. Its downfall is from an elevated position and the term is not applied to trifling objects or to slight falls. Ruin is the strongest word of the series and marks the fall, the downfall, and the resulting destruction.

404. **FALL,** drop, droop, sink, tumble. Fall is the general term; the others are particular words expressive of some form or act of falling. Drop conveys the idea of a sudden fall usually in the form of drops. Droop is a partial falling or dropping, as in the case of a flower or an awning or tent drooping. Sink is a gradual falling with a gentle motion. Tumble is to fall ungracefully, disorderly, or awkwardly.

405. **FALLACIOUS,** deceitful, fraudulent. Fallacious is deceitful or false without design or intention of so being. One may hold fallacious opinions or make fallacious statements from errors of judgment. Things are deceitful in appearance when they are not what they seem to be. Distances measured on the water are deceitful because they are greater than they appear to be. Fraudulent denotes willful, and often impudent, attempts to deceive.

406. **FALLACY,** delusion, illusion. A fallacy is that which tends to deceive. We try to detect fallacies in propositions or in reasonings. Delusion is something which deceives or misleads. Illusion is something which plays upon the mind, or it is the state of being so played upon or deceived.

407. **FAME,** reputation, renown. Fame is loud, noisy, uncertain, and more or less changing. Reputation is the lasting, solid, enduring opinion of a man and is generally based upon close observation or long intimacy. Renown is rather a combination of fame and reputation, being as loud as the one and as enduring as the other.

408. **FAME,** report, rumor, hearsay. Fame is that which spreads abroad without regard to the agent, is good or bad, and establishes the popular opinion or judgment of a person or thing. Report is a communication regarding events and occurrences; it depends upon the character and veracity of the one who communicates it. Hearsay regards the one who hears the thing and communicates his information not from any positive knowledge but from what he has been told.

409. **FAMILY,** house, lineage, race. Family regards the number, relationship, and intercourse of its members. A house regards the inmates and the occurrences within the walls. In an extended sense house is applied to the political, civil, official, and distinctive powers of a family and group, as the House of Brunswick, or the House of Lords. Lineage regards only blood relationship and includes present members, their ancestors and posterity. Race is broad, comprehensive, and includes all mankind or separate national or ethnical groups.

410. **FAMOUS,** celebrated, renowned, illustrious. Famous denotes that which is entitled to fame or which is the cause of it. Celebrated is that which is regarded with either solemnity or seriousness such as might mark a celebration or memorial ceremony. One who is celebrated commands great respect. A person is renowned because of the possession of very rare or extraordinary qualities or talents, or these in a high degree. Illustrious pertains to that which confers dignity or upon whom dignity is conferred.

411. **FANCY,** imagination. Fancy brings a thing into the mind and pictures it there either vaguely or

well-definedly. Imagination dwells upon the fancied subject, and invests it with much greater value and important accessories than fancy does. We fancy (not imagine) that we see or hear things.

412. **FASTIDIOUS**, squeamish. One is fastidious who is not easily pleased and whose niceness is caused by pride. One is squeamish who is easily disgusted from humor and caprice rather than from any well-founded sense of discrimination or good taste.

413. **FAVORABLE**, propitious. That which is well disposed towards us and acts kindly towards us is favorable. Whatever promotes our interests, furthers our plans, and confers benefits upon us by seconding our efforts and fulfilling our hopes is propitious. Winds, persons, friends, are favorable; the gods and circumstances are propitious.

414. **FEARFUL**, dreadful, frightful, horrible, horrid, tremendous, terrible, terrific. Fearful causes fear; dreadful causes dread. As fear and dread affect the mind only these in no way affect the senses. The derivation of the words makes plain the uses. Frightful causes fright; tremendous, literally, causes trembling or shaking; terrible and terrific cause terror; horrible and horrid, horror.

415. **FEAST**, banquet, carousal, entertainment, treat. Feast conveys the idea of enjoyment of a social meal. Banquet implies pomp, state, ceremony, and splendor. Carousal is a drunken feast. Entertainment and treat convey the idea of hospitality and generosity.

416. **FEAST**, festival, holiday. A feast is always sacred; a festival is either sacred or, at the least, serious; a holiday is a day upon which business is suspended.

417. **FEEL**, be sensible, conscious. Feel is capable of very wide uses, we feel with the whole body and with all our faculties; to be sensible is said only of the senses. We feel pleasure and pain; we are sensible of sounds. We are conscious of what passes inwardly. We feel the force of a remark; are sensible of the evil effects of wrongdoing; and are conscious of our own shortcomings.

418. **FEELING**, sense, sensation. Feeling is one of the five modes of sense; sense is the abstract power of feeling through the senses; sensation is feeling expressed in the serious, scientific, or medical sense of the word.

419. **FEELING**, sensibility, susceptibility. Feeling expresses a strong property of the mind, either particular or habitual; sensibility is taken in the sense of habit; susceptibility expresses a readiness to be affected by external objects. Keen sensibilities are undesirable since while they give much pleasure they also are the source of much pain.

420. **FEIGN**, pretend. These words both convey the idea of either doing or saying what is not true. Feign may be used in either a bad or an indifferent sense; pretend is always bad. Feign has in view a future purpose; pretend has a present purpose. Feign often follows a line of conduct; pretend depends upon words.

421. **FELICITATE**, congratulate. Felicitate has to do only with ourselves; congratulate, with others. We felicitate ourselves on an escape from evil; we congratulate others on their good fortune.

422. **FEROCIOUS**, fierce, savage. Ferocious conveys an idea of cruelty and wildness; fierce, of pride and anger; savageness, a less violent but more permanent state of cruelty or anger. Ferocious and fierce are usually applied to animals; savage, to man.

423. **FERTILE**, fruitful, prolific. Fertile expresses the power to send forth that which is unlike or not of its own nature. We speak of the soil being fertile when it sends forth an abundance of vegetation. Fruitful is the power of sending forth much which is of the same nature, as when trees, plants, and vegetables send forth fruit. Prolific is applied to animals.

424. **FERVOR**, ardor. We are fervent in feeling; ardent in acting. The affections are fervent; the passions are ardent.

425. **FESTIVITY**, mirth. Festivity rather produces mirth, and it includes eating, drinking, dancing, and other pleasures; mirth is that lightness of heart which usually attends such occasions.

426. **FICTION**, fabrication, falsehood. Fiction is the opposite of what is real; fabrication and falsehood, of what is true. The object of fiction is to instruct and to entertain; of fabrication and falsehood, to deceive and mislead. Fiction and fabrication require some invention; falsehood merely contradicts.

427. **FIGURE**, metaphor, allegory, emblem, symbol, type. Figure is that which is painted by the imagination and may be expressed in wood, marble, paint, and with a variety of tangible media; metaphor and allegory are figures of the imagination recorded only in words; an emblem is a representation of moral precepts and qualities by material objects; symbol is an emblem which all men recognize as standing for a definite thing; a type is an emblem by which one object is meant to represent another in a mystical way.

428. **FINAL**, conclusive. Final implies simply being the last; conclusive involves the processes by which one reaches the last. Final is arbitrary and the will can decide what shall be final; conclusive depends upon all the circumstances. An answer may be final, yet be far from being conclusive.

429. **FIND**, find out, discover, espy, descry. Find expresses a general idea of coming in sight of a thing. We may find a thing by accident, but we find out as a result of effort. We discover what is always remote and unknown. We espy what is very secluded and retired. We descry what is distant or rather hidden by a number of objects.

430. **FIND**, find out, discover, invent. In this sense we find modes or ways or means of performing or effecting purposes; we invent by applying in new ways materials which exist separately. We find out mechanical and operative processes; we discover by removing the obstacles and difficulties which ordinarily prevent a thing from being known or understood.

431. **FIND FAULT WITH**, blame, object to. All of these words denote expressing our dissatisfaction in words. We find fault with by pointing out the fault and we use the term in regard to both objects and persons. We blame persons only for the result of their faults. We object to things which have been done or are to be done.

432. **FINE**, delicate, nice. Fine is opposed to coarse, and we speak of a fine thread. In the moral sense fine conveys the idea of refined, as when we speak of a fine sense of honor or fine feeling. Delicate conveys an idea not only of fineness but also of something agreeable to the taste, as when we speak of delicate coloring, delicate shading, or of a delicate flower. In matters of appetite, delicate appeals to the refined and cultivated, while nice applies to the pleasures of the young, the ignorant, or the sensual. Nice has also a sense of discriminating, as when we speak of a nice taste in music. Niceness in such matters conforms to some established rule or standard.

433. **FINITE**, limited. Finite relates to the natural boundaries, while limited regards artificial bounds. We cannot extend the finite; but human power may change the limited.

434. **FIRM**, fixed, solid, stable. Firm is not easily shaken; fixed is attached or fastened to something and is not easily torn away; solid is capable of supporting or bearing up a load; stable will endure or last.

435. **FIT**, apt, meet. Fit is a property or quality which may be either natural or acquired; aptness is always a natural endowment; meet implies a sense of having been measured so as fully to come up to the requirements.

436. **FIT**, suit, adapt, accommodate, adjust. Fit makes a thing becoming or fit for one's use; suit is to make a thing suitable or agreeable; adapt is to change or to make something conform to present conditions, and involves the use of the judgment; accommodate is an act of the will and suggests that some sacrifice is involved; adjust conveys an idea of putting things in right order but not, necessarily, of keeping them in order.

437. **FIX**, determine, limit, settle. Fix has a general idea of making something keep its place and has a broad use; determine is a result of thought. In fixing one point is involved; in determining, one or more than one. We fix upon a point of beginning; we determine upon the beginning, the ending, the length, the breadth, and direction. We determine by removing doubt; a thing is limited by something tangible, or by law. We determine the details that we may settle the whole question.

438. **FLAG**, droop, languish, pine. Flag is to hang down as a flag and is only applied to those objects which may be blown out as a flag, though figuratively we say that the spirits flag. That droops whose head droops or flags. Languish is applied to persons and is used in describing conditions under sickness, prison, or other distress. Pine describes a mental condition of wearing pain.

439. **FLAT**, level. Flat is the opposite of round, and suggests the absence of elevation. Level has to do with other things by which its evenness is made clear.

440. FLATTERER, sycophant, parasite. A flatterer uses flattering words; the sycophant in addition to flattering words uses every artifice by which he can gain favor; and the parasite submits to every indignity and degradation to which he may be subjected.

441. FLEXIBLE, pliable, pliant, supple. Flexible is that quality which permits ease in bending; pliable, of folding. Pliant refers not to the quality but the act or the condition of folding backward and forward with marked readiness; supple suggests ease of movement.

442. FLOURISH, thrive, prosper. Flourish, a word drawn from the flower kingdom, denotes being in a state or condition which is agreeable; thrive denotes the process of reaching that state; while prosper is to pass through the several stages of seeing one's hopes consummated.

443. FLOW, stream, gush. Flow is the general term; the others are different modes of flowing. Water streams through small channels or from little spouts; fluids gush with violence. When we speak of blood flowing from a wound we merely express the idea that blood issues from the wound—we do not say how; it streams from it when it flows out as through a channel; but it gushes out when it issues forcibly and in as large quantities as the opening will permit.

444. FLUCTUATE, waver. He is said to fluctuate who forms many opinions in rapid succession; he wavers who cannot form an opinion or come to a conclusion. The spirits and opinions fluctuate; the will wavers.

445. FLUID, liquid. Fluid is anything that flows; a liquid is properly anything that has been melted. Water and air are fluids because both will flow; water is also a liquid because it is what ice becomes when it melts. Boiling lead is a liquid because it is melted.

446. FOLLOW, succeed, ensue. Follow, said of both persons and things, means to go or to be in the same place after another; succeed adds the idea of immediately after another. Ensue is used of things only and implies a necessary connection between the things spoken of.

447. FOLLOW, pursue. One follows another with a friendly or, at the least, an indifferent intent; one pursues with a hostile intent. When used of plans or purposes, one follows another's plans, but pursues his own.

448. FOLLOW, imitate. We imitate only that which is external, by copying or mimicking it; we follow, not only what is external, but what is internal, as the dictates of conscience.

449. FOLLOWER, adherent, partisan. A follower follows another person, his interests, or his principles; an adherent adheres to the cause or interests of another; a partisan adheres to a party. A follower has many motives; an adherent, a personal motive; and a partisan, a partial motive.

450. FOOL, idiot, buffoon. Fool is a class name and describes either a natural or artificial fool; an idiot is a natural fool; and a buffoon, an artificial fool. A fool goes contrary to common sense; an idiot cannot help doing so; while a buffoon does so intentionally.

451. FOOLHARDY, adventurous, rash. A foolhardy man has the hardihood of a fool and has no regard for consequences; an adventurous person is always ready to venture from the very love of it; a rash man acts swiftly without taking thought.

452. FORBID, prohibit, interdict. Forbidding is a direct, personal act; prohibit is a judicial act such as is exercised by the legal authorities; interdict is a moral term applied to the more serious concerns of life.

453. FORCE, violence. The use of force is justified by reason and fairness; the use of violence is illegal and, generally, unjustifiable.

454. FORESIGHT, forethought, forecast, premeditation. Foresight is seeing before; forethought is thinking before; forecast is reasonable prophecy of what will happen; premeditation is the act of taking thought beforehand with regard to what shall be said or done.

455. FORETELL, predict, prophesy, prognosticate. Foretell is a general and familiar word signifying to tell beforehand; predict is a foretelling by reason of some supernatural power, real or imagined; prophesy is to foretell by inspiration; prognosticate is to understand thoroughly so as to foretell results.

456. FORGIVE, pardon, absolve, remit. Forgive, of Anglo-Saxon origin, is the common term; pardon, from the French, is used of more serious offenses; absolve relates to the connection between man and God; remit relates more to the freeing from punishment than from blame or sin.

457. FORM, figure, conformation. Form is the result of either nature or art; figure, the result of design; and conformation is the arrangement or adaptation of parts to accomplish certain purposes or functions.

458. FORM, fashion, mold, shape. Form is to arrange in a form; fashion is to arrange in a definite or exact form; mold is to arrange in a set or precise form; shape is to arrange with regard to the external aspect.

459. FORM, ceremony, rite, observance. Form regards the prescribed standards of speech and conduct as determined by conventionality; ceremony regards those forms which express respect and deference; rites regard the tenets of religion; and observances refer to both religious and national ceremonies.

460. FORMAL, ceremonious, ceremonial. Formal describes conduct or speech in accordance with prescribed forms; ceremonious denotes an observance of ceremony, respect, or deference; ceremonial denotes an observance of proper ceremonies.

461. FORMERLY, in times past, in old times, in days of yore, in ancient times. Formerly denotes a more recent time than do the other terms; in fact, the difference in meaning or use of all of these terms is simply one of greater or less remoteness.

462. FORMIDABLE, dreadful, terrible, shocking. Formidable is applied to something which looms up so as to excite a weighty and serious fear; dreadful to what excites dread; terrible to what excites terror, acting both upon the senses and the imagination; shocking to what agitates violently. The terrible and the shocking both act in a sudden and unexpected manner, whereas that which is dreadful may grow gradually to be so, its forebodings being vague and intangible.

463. FORSAKEN, forlorn, destitute. To be forsaken is to be deprived of the companionship and assistance of others; to be forlorn is to be left alone in the midst of distress or difficulties, in a certain sense lost, to be without any guide in an unknown road; to be destitute is to be without any of the primary necessities and first essentials of life. To be forsaken is a partial condition only. To be destitute or forlorn is a more permanent condition.

464. FORTUNATE, lucky, fortuitous, prosperous, successful. Fortunate signifies being possessed of fortune in the circumstantial phases of a thing; and, with being lucky, is applied to that which occurs outside the plane of man's control. Lucky signifies having the luck or ability to make a success of something, and is always more sudden, unaccountable, or singular than to be fortunate. Fortuitous signifies to have by chance the quality of fortune. To be prosperous is to reach a condition in which hope has played a part, an extension of a state of advance along the line of one's fixed desires. To be successful is to meet with success, and is that degree of prosperity which immediately attends our own endeavor.

465. FOSTER, cherish, harbor, indulge. To foster is to give to a thing paternal care. To cherish is to feed with affection, to hold dear or set a value upon. To harbor is to provide shelter as well as protection. To indulge is to extend a certain liberty which is agreeable, often to give the whole mind to it, and make it the chief source of pleasure.

466. FOUND, ground, rest, build. To found is to exercise art or contrivance in making a support. To ground denotes the laying of the foundation of a thing so deep and so securely that it may never tremble or approach instability. To rest is more related to a state of settlement dependent upon the will of the individual. To build has especial reference not only to the basis taken but to the superstructure reared upon that foundation.

467. FRANK, candid, ingenuous, free, open, plain. Frankness is a condition of being wholly at ease, and may be associated with unpolished manners and impoliteness. Candor implies nothing to conceal and accompanies uprightness and refinement. Both may be either habitual or occasional and may be assumed. Ingenuousness is a permanent and inherent characteristic, implies a state of being absolutely without disguise, and denotes a habit of acknowledging the faults of one's self. Free is frank to the point of impertinence. Open signifies frank to the point of indiscretion, and to every one, while frankness is a habit of expression confined to particular individuals. Plain may be tactless, but is free from odiousness.

468. FREAK, whim. Freak applies more to the vagaries of childishness; whim refers rather to the eccentricities of responsible minds. Freak may be used in a figurative and material sense, *i. e.*, "Freak of

Fortune," "A freakish action." Whim is entirely a bias of the mind.

469. **FREE**, liberal. Free respects action or sentiment exerted under direction of the will. To be liberal is to act more largely according to the dictates of an enlightened mind or generous-hearted impulse. But liberality denotes impulsive, generous-hearted action, in which the will was the necessary first cause, or where without a definite will, despite the highest degree of liberality, action would never have resulted.

470. **FREE**, set free, deliver, liberate. Free is to free one's self. Set free means to make others free. Deliver is to rescue from evils due to circumstance, or those of oppression. Liberate is to rescue or set free from durance or captivity.

471. **FREE**, exempt. To be free is a state of freedom either by accident or design from any thing or condition undesirable. To be exempt is to be free by intention from any burden which ordinarily all others share.

472. **FREEDOM**, liberty. Freedom is a condition of untrammeled self-expression and action, used always in a good sense. Liberty is used often in a bad sense, and implies positive release from restraint.

473. **FREQUENT**, resort to, haunt. Frequent usually means the action of an individual; resort and haunt refer to numbers of individuals. Frequent and resort are used in an indifferent sense, haunt invariably in a bad sense.

474. **FRIGHTEN**, intimidate. Immediate danger which is seen frightens; threatened danger intimidates. Animals may be frightened but never intimidated.

475. **FROLIC**, gambol, prank. Frolic is any gay, joyous amusement. Gambol implies physical action, hence dancing or leaping for pleasure. Prank is a freakish trick or mischievous diversion. Gambol and prank may be applied to animals.

476. **FULFILL**, accomplish, realize. Wishes carried out are fulfilled. Any work perfectly done is accomplished. One's hopes, plans, or prospects are realized.

477. **FUNERAL**, obsequies. Funeral is an ordinary service however simple accompanying the interment of the dead. Obsequies may occur at any subsequent time. Also obsequies implies formal pomp and ceremony.

478. **GAIN**, profit, emolument, lucre. Gain is a general term meaning all increase of income. Profit means the gain from an estate or business. Emolument is reward or salary for labor or services. Lucre is used in a bad sense, signifying immoderate gain or usurious profit, or gain acquired in any dishonest way.

479. **GAPE**, stare, gaze. Ignorance and bewildered astonishment expresses itself by gaping; impertinence or stupefaction by staring. Gaze is used in a good sense and means to look steadily from any laudable motive. To gaze may express pleasure, interest, surprise, or curiosity.

480. **GATHER**, collect. Gather means to bring together. Collect implies the additional meaning of completing a whole by bringing together.

481. **GENDER**, sex. Gender, properly speaking, a kind, applies to distinctions in words. Sex implies nature or habit and applies to animals. There are three genders, masculine, feminine, and neuter; two sexes, male and female.

482. **GENERAL**, universal. The general rule may have exceptions; the universal has none. General is used in opposition to particular; universal is opposed to individual. General means the greater part; universal signifies every part.

483. **GENTEEL**, polite. Genteel refers to rank in life, to high birth, not necessarily to good breeding. Polite applies to manners, speech, and appearance.

484. **GENTILE**, heathen, pagan. Gentile signifies one who, while not positively believing in divine revelation, stands ready to be convinced. The heathen adopts a false form of worship. The pagan insists upon a mode of worship made out of his own imaginings. All pagans are heathens. All heathens are gentiles, but all gentiles are not either pagans or heathens.

485. **GENTLE**, tame. Gentle indicates sweetness and mildness in natural disposition; tame implies familiarity with human society due to training and association. All tame animals are not gentle, nor are all gentle animals tame. Tame is opposed to wild, gentle to rough or fierce.

486. **GET**, gain, obtain, procure. Get is a general term and includes the other three. What one gets may not be desirable or in accord with his efforts. To get something which is in any way advantageous or desired is to gain. Obtain implies rather the getting by one's own efforts and exertions. Procure is to obtain by either labor or strategy.

487. **GIFT**, present, donation. To make a gift is a generous act and confers benefit. Making a present is more an act of courtesy and confers pleasure. Gifts and presents are private and personal. Donations are public, viz., gifts to hospitals, churches, and other general institutions.

488. **GIFT**, endowment, talent. A gift is never obtained by one's own labors or exertions, and the word always suggests a giver. Endowments refer more to the receiver, and may be cultivated and acquired. Talents suggest only their own intrinsic merit independent of source, and may be either inherent or acquired.

489. **GIVE**, grant, bestow. The inclusive and general word is give. To grant is to give anything tangible or intangible in response to a request. Superiors grant or bestow. Any one may give to another. Bestow implies a condition of necessity on the part of the recipient.

490. **GIVE**, afford. Give is the general term. Afford implies giving in proportion to one's income or circumstances. Give denotes an entirely unconditional action.

491. **GIVE**, present, offer, exhibit. In order to give there must be acceptance. To present signifies giving with more or less formality. One offers when he makes the attempt to give. An offer may be refused. To exhibit is to place conspicuously in view.

492. **GIVE UP**, deliver, surrender, yield, cede, concede. We give up what is ours. We deliver that which is another's. We surrender with reluctance that which we wish to retain. To yield implies resistance, or giving up under compulsion and through helplessness or weakness. To cede is to surrender peaceably or by treaty, and implies willingness. Concede denotes yielding through courtesy or discretion.

493. **GIVE UP**, abandon, resign, forego. One can give up anything small or great. One abandons projects of importance, and that by his own decision. One resigns what he desires and what he already has. He foregoes that which he might have. We can forego a pleasure by deciding not to take it. We resign an office which we already hold.

494. **GLAD**, pleased, joyful, cheerful. These meanings increase in intensity in this order—pleased, cheerful, glad, joyful. Pleased may indicate only a fleeting emotion. Cheerful suggests a more permanent condition of mind independent of external conditions. Gladness may have its source in physical causes, but joy springs from mental impressions. Both gladness and joy are induced by outward circumstances.

495. **GLANCE AT**, allude to. Glance at in writing or speech signifies a cursory allusion to a fact or subject. To allude to implies an indirect but not concealed action, hence a reference to a subject without stating the fact.

496. **GLARING**, barefaced. Glaring denotes the quality of the thing; literally, in a powerful light. Barefaced describes the person; literally, entirely undisguised. Barefaced lie suggests the boldness of the liar. A glaring lie is an unmistakably obvious falsehood.

497. **GLIMPSE**, glance. A glimpse is what one sees in a fleeting moment. A glance is the act of looking quickly or surreptitiously. A glance at an object gives us a glimpse of it.

498. **GLOBE**, ball. Strictly speaking, a globe is a body not perfectly circular in every circumference line; that is, it may be irregularly round. A ball is symmetrically round. Globe applies rather to astronomical and chemical bodies.

499. **GLOOMY**, sullen, morose, spleeny. Gloomy is a matter of inherent disposition, a misfortune. Sullen is a matter of uncontrolled temper, a fault. Sullen also implies rebellion against authority. Morose is a pessimistic frame of mind in those of mature age and in authority, hence does not include rebelliousness. Spleen is perpetual bitterness and is a defect of the nature. Moroseness is a defect of the temper. Spleen is often consciously malicious. Moroseness signifies rather a warped judgment.

500. **GLORY**, honor. Glory induces extraordinary achievement. Honor leads to discharge of one's duty. Glory is more splendid and may be attained by only a few. Honor is more substantial and is within reach of

all. Glory may be regarded with indifference, but honor must be most highly prized and striven for by all.

501. **GLORY,** boast, vaunt. To glory is rather an act of the mind. To boast and to vaunt refer to an expression of that sentiment. One glories in matters of importance; he boasts of more trivial things. Vaunt is a word less commonly used in ordinary speech, and is confined more to classical literature.

502. **GODLIKE,** divine, heavenly. Godlike defines itself. Divine is opposed to human. Heavenly is opposed to earthly. Anything that appertains to a superior being is divine. That which belongs to heaven is heavenly.

503. **GOLD,** golden. Gold means made of gold. Golden is the quality of being or appearing like gold.

504. **GOOD,** benefit, advantage. Good comprehends everything that is suitable for a purpose, and desirable for happiness. Anything that may be used to promote our welfare is an advantage even though it be turned against us, thus becoming an evil rather than a good. A benefit is some specific good as applied to a particular individual, and is always in relation to circumstances.

505. **GOOD NATURE,** good humor. Both terms refer to an inherent disposition leaning towards pleasing others. Good nature is a permanent quality and habit. Good humor is a mood of the hour, and may be largely on the surface, while good nature applies to the state of the mind.

506. **GOODS,** furniture, chattels, movables, effects. One's goods include all personal possessions which are of value to him. Furniture belongs to the things of the household. Chattels has a wider significance, things separated from one's person and house, cattle, slaves, lands, etc., in fact all salable property. Movables are only those articles which can be taken from place to place. Effects contains almost as wide a meaning as goods, but relates especially to goods which can be converted into money. Goods not under the owner's control for disposal become effects.

507. **GOODS,** possessions, property. Goods must be considered as to whether they are real or imaginary, possessions as to whether lasting or temporary, property as to whether it is legal or illegal. "Some abound in the goods of this world." "Be not anxious for earthly possessions." "The most secure title to property is held by inheritance."

508. **GOVERN,** rule, regulate. To govern is to exercise authority tempered by judgment and knowledge. To rule is to arbitrarily control the actions of others. To regulate is to manage affairs purely by the exercise of judgment.

509. **GOVERNMENT,** administration. Government is a more comprehensive term than administration. Administration implies putting into execution the laws or will of another. A government may be administered. Administration may change while the government does not.

510. **GOVERNMENT,** constitution. Government signifies the general act of exercising authority in any form. A constitution is some fixed form of government.

511. **GRACE,** favor. Properly, grace is used only in regard to persons who have erred, and includes, in a sense, forgiveness. Favor is simply a kindness voluntarily shown, deserved or undeserved.

512. **GRACE,** charm. Grace is physical and qualifies the action of the body. Charm is an attractiveness of the mind and soul as well as of the body.

513. **GRATIFY,** indulge, humor. Gratify is to produce an intense pleasure, to please greatly, and suggests also an element of satisfaction. Indulge signifies to allow much gratification, perhaps to excess, but not necessarily so. To humor implies indulgence exercised toward fancies or caprices.

514. **GRAVE,** serious, solemn. Grave, weighty, applies to deportment and movements of the body as well as the state of mind; heaviness of action. Seriousness is caused only by an operation of the mind and bespeaks a steadiness of purpose and demeanor. Seriousness allows one to be quick and alert, which gravity does not, but is never jocular. Solemn is used to denote an extraordinary seriousness, and applies rather to things of a religious nature, or of great moment.

515. **GREAT,** large, big. Great defines intangible things and suggests an element of intangibility even in material things. Big applies to material things and expresses less in degree. Large describes things which can be measured. Great may be used to designate things infinite in quality. "God is great." We may say, "a great mind," "a big brain." Large suggests not only limitation, but is relative in its meaning. Thus, "The tiniest insect is comparatively large," never "comparatively big."

516. **GREAT,** grand, sublime. Great denotes extent. Grand embraces also the idea of superior excellence. Sublime applies only to the works of nature, and includes height, hence, figuratively, an elevating quality. Great may apply also to works of art, and suggests immensity.

517. **GRIEVE,** mourn, lament. Grieve is a general term, and denotes an inward act. To mourn is an outward act. Thus, to mourn is a manifestation of grief. Grieve and mourn are permanent sentiments. Lament is a passing feeling. To mourn may be a silent expression. Lament signifies mourning in cries or words.

518. **GROAN,** moan. Groan is involuntary, a noise made by hard breathing. Moan is a voluntary expression of pain, made simply by the voice. Both express pain of either body or mind.

519. **GROSS,** coarse. The moral significance of both words is synonymous. Gross suggests rather material bulk, hence is applicable more exclusively to habits of the body. Coarse suggests texture, so can be used to describe manners, and trend of the mind.

520. **GUARANTEE,** be security for, be responsible for, warrant. We guarantee by our word. To be security for includes also some binding act or contract, and is used more often in a legal sense. Guarantee is used more in a commercial sense, and implies the power to make good. Being responsible for applies to morals and conduct and is used always in reference to the behavior of people more or less under our charge and protection. To warrant binds one to make restitution; used morally, it indicates a justification of a certain line of action.

521. **GUARD,** defend, watch. Guard comprehends the meaning of both defend and watch. Defend is used only in case of actual attack. Guard signifies also to prevent the attack by watchfulness. One defends only in active fighting. One guards in times of peace and security. Watch denotes simply continuous observation for any purpose.

522. **GUARD,** guardian. A guard may guard either persons or things; a guardian applies to persons only. A guard may be only temporary, and protects from external evils. A guardian takes entire charge of the person and welfare of another.

523. **GUARD AGAINST,** take heed of. Guard against implies the exercise of special care against active external evils or influences. Take heed of applies to internal evils or undesirable mental tendencies, and passive dangers. "Take heed lest ye stumble." "Guard against slander."

524. **GUESS,** conjecture, divine. We guess at what is occurring or has occurred; we conjecture that which may be in the future. Properly, divine implies supernatural knowledge; commonly, however, it signifies to guess or conjecture correctly.

525. **GUILTLESS,** innocent, harmless. Innocent applies to acts; guiltless also to intentions. Guiltless properly characterizes only the condition of man; innocent may be used to indicate the quality of things. Innocent and harmless both represent a negative quality; innocent, a quality of the mind; harmless, an inability to cause physical injury.

526. **HAPPEN,** chance. Whatever occurs happens. That which happens by accident, or outside the ordinary course of expectation, is said to chance.

527. **HAPPINESS,** felicity, bliss, blessedness, beatitude. Happiness is induced by desirable conditions both of the body and soul. Felicity denotes an inward state due rather to ideal conditions of the soul, and independent of outward circumstances. Bliss indicates a higher degree of joy, and joy of a superior nature, than either happiness or felicity. Bliss relates to the spiritual nature. Blessedness implies special Divine favor. Beatitude denotes the most exalted degree of heavenly bliss.

528. **HAPPY,** fortunate. Happy relates to the state of mind; fortunate to external circumstances. Happiness depends upon one's nature; fortune upon one's efforts and abilities and chance. A fortunate man may be unhappy and *vice versa.*

529. **HARBOR,** haven, port. Harbor suggests a shelter, and is temporary; haven suggests a secure shelter, and a permanent resting place. A haven is a natural harbor; a port is an artificial or improved harbor, and is used rather in a commercial sense.

530. **HARBOR,** shelter, lodge. To harbor is used more often in a bad sense. It means to afford a

habitual stopping place. "One harbors resentment," or "one harbors thieves." One shelters those creatures which are helpless or weaker than one's self. One harbors permanently, though perhaps intermittently. One lodges that which wants a resting place. To lodge is temporary.

531. **HARD**, firm, solid. Hard denotes close adherence of the parts of any body. Firm is used to designate the close adherence of two separate bodies. Pieces of ice floating in a river may be hard but they are not firm. Solid is opposed to fluid and is not necessarily hard. Jelly is solid and stone is hard. Firm also implies a certain immovability.

532. **HARD**, callous, hardened, obdurate. As above, hard signifies the ability to resist external pressure. Hard is an intrinsic quality. Callous is a state of hardness brought about by circumstances and external conditions, or long-continued custom; a tender nature may become calloused. Hardened applies to both the heart and the mind. Obdurate refers especially to the will. One may become hardened by time and circumstance. Hardened is a permanent condition; calloused may be temporary.

533. **HARD**, difficult, arduous. Difficult is negative, and means simply not easy. Hard is a stronger term. Literally, arduous signifies high out of reach; hence, while hard tasks are possible of accomplishment by persons of only average ability, arduous work requires almost superhuman effort, and is beyond the reach of ordinary intellects.

534. **HARD-HEARTED**, cruel, unmerciful, merciless. Hard-hearted characterizes a settled habit of thought and action. Cruel may be only a passing disposition or an action of the moment. Cruelty is measured by the action rather than the person; a tender-hearted person may be cruel through ignorance. Both unmerciful and merciless denote lack of mercy, but merciless is the stronger term. A man may be unmerciful through an unwillingness to extend mercy in a particular case; a man is merciless when he is incapable of feeling mercy.

535. **HARDLY**, scarcely. In many senses these words are synonymous,, but when the idea of difficulty only is implied, hardly is the proper word. "I can hardly walk." When the idea of infrequency only is conveyed, scarcely is preferable. "He scarcely ever walks."

536. **HARSH**, rough, severe, rigorous. Harsh and rough have a physical significance, but harsh is much the stronger term. In their figurative use, rough applies to manner and mode of speech. Harsh refers to the mental attitude and includes that even when used to describe deportment. Severe and rigorous describe the action rather than the person. One may be severe in dealing with innocent persons under his control, but rigorous in punishing criminals. Rigorous is an extreme severity.

537. **HASTEN**, accelerate, speed, expedite, dispatch. Hasten denotes little besides active, rapid motion. Accelerate signifies to increase one's speed, or quicken an operation. Speed conveys the idea of forward movement. Whereas hasten may be aimless hurry, speed is effectual movement. Expedite expresses the idea of making easy of accomplishment; meaning, literally, to remove obstacles, hence to bring about a quick accomplishment. Dispatch designates the act of completing a task with expedition, of speedily finishing a piece of business.

538. **HASTEN**, hurry. We may hasten in good order and according to design. We always hurry in confusion, and without forethought.

539. **HATE**, detest. We hate from a personal feeling; we detest from a moral sense. We hate those who mistreat us; we detest those who mistreat others, or who are undeserving of respect. Therefore, to detest is commendable; to hate is blameworthy. We may hate those who are good, we cannot detest them.

540. **HATEFUL**, odious. Originally synonymous, these two words have now a slight deviation of meaning. Hateful is what we hate. Odious describes any quality or action that would make us hateful to others, or others hateful to us.

541. **HATRED**, enmity, ill will. Hatred expresses more than enmity, while ill will expresses less. Hatred wishes ill to others, and is happy only in their misery, but does not necessarily take an active part in causing that misery. Enmity, although consisting of action as well as feeling, is a more honorable sentiment in that it has always a real or fancied reason for its existence. Ill will lies only in the mind and may exist in only a slight degree.

542. **HAUGHTINESS**, disdain, arrogance. Haughtiness is based upon a high opinion of ourselves; disdain upon a low opinion of others. Hence disdain is sometimes justifiable. Haughtiness and disdain are sentiments of the mind. Arrogance is an expression of those sentiments, either by words or manner.

543. **HEALTHY**, wholesome, salubrious, salutary. In modern use healthy applies more exclusively to a condition of the body not to things that induce that condition. A man is healthy. Food, exercise, pure water, and good air are wholesome. Wholesome qualifies things and circumstances. Salubrity is the quality of an environment which improves the health. Salutary conveys the idea of positively curing disease.

544. **HEAP**, pile, accumulate, amass. Heap may be large or small, orderly or disorderly. A pile is always considerable in amount and is made according to some design, however simple. Hence a building may be called a pile. Accumulate suggests heaping and implies a collection of separate units which may be dissimilar in character. We amass that which coalesces into a whole. In neither amass nor accumulate is the action of a conscious agent necessary. A glacier accumulates stones. Ice amasses in rivers.

545. **HEAR**, hearken, overhear. To hear is solely the physical act of the ear. To hearken is also an act of the understanding. To overhear is to hear that which is not intended for us to hear.

546. **HEARTY**, warm, sincere, cordial. Sincere is a habit of one's nature Hearty, warm, and cordial express feelings induced only by certain circumstances, at certain times. Warm implies an affectionate regard; hearty a deep interest that comes from the heart, but not necessarily exercised toward an object of affection. Cordial indicates an extreme and sincere interest, and applies with special aptitude to the act of welcoming.

547. **HEAVY**, burdensome, weighty, ponderous. Heavy is an intrinsic quality of weight. A heavy thing becomes burdensome only when it is lifted or carried. Weighty is always positively heavy. Heavy has a relative meaning. A grain of corn is not weighty, but it is too heavy to be carried by an ant. Ponderous includes both size and weight, usually an excess of weight.

548. **HEED**, care, attention. Heed includes the idea of thinking upon the possible consequences of a mode of action. We heed the warning or counsels of others. We give attention to whatever is necessary for us to perform. We have a care for things of smaller consequence which require no forethought.

549. **HEIGHTEN**, raise, aggravate. To heighten is to make higher in the sense of taller. To raise represents the idea of lifting to a higher plane or situation. To aggravate is to make heavy, hence to increase. Applies to things disagreeable. A fever, a man's guilt or fear, may be aggravated or heightened.

550. **HEINOUS**, flagrant, flagitious, atrocious. Heinous signifies seriously violating laws either human or divine. A flagrant offense is one that defies custom and established opinion. A flagitious act is one that grossly violates the laws of good morals and decent conduct, especially if attended by profligacy. Atrocious is a crime committed under extremely aggravated conditions. "Than such atrocity can one no further go."

551. **HELP**, assist, aid, succor, relieve. Help is the general term and in almost every case could be used instead of any one of the others. Assist is used only of individuals. Aid is used in speaking of nations or bodies. Unlike the first three words, succor and relieve indicate exclusively the removal of an existing evil, while help, assist, and aid may mean also production of positive good. Succor must be personal aid, and refers to a definite and immediate action. Relieve is applied more commonly to pain and sickness.

552. **HIGH**, tall, lofty. High is the term in most common use. Tall and lofty mean extraordinary height. Tall always implies slenderness, that is, extension in a perpendicular direction only. Lofty also allows bulk or space in a lateral direction, as a tall steeple, a lofty room, or a lofty mountain. High is the general term of substitution for either of the others.

553. **HINDER**, prevent, impede, obstruct. Hinder expresses little else than delaying one's achievement of a purpose. Prevent means to hinder to the extent of rendering accomplishment impracticable. Impede implies hindering by means of confusing the action of a person or greatly increasing his labor. Obstruct suggests the presence of obstacles.

554. **HINT**, suggest, intimate, insinuate. We suggest and intimate openly. We intimate a fact because we prefer not to speak broadly. We suggest a line of conduct from a feeling of modesty or delicacy. We hint

surreptitiously at that of which we fear to speak directly. Insinuate is invariably used in a bad sense. To imply anything against the character or attainments of another is to insinuate.

555. **HOLD**, keep, detain, retain. To hold implies physical action, and may be only for a moment; is always temporary. To keep is rather the simple act of possessing, of permanently having within reach. To detain is holding back what is another's, hence is used to express delay of action caused by anything foreign to that action. To retain is the keeping indefinitely, but not necessarily permanently. Retain also indicates keeping through some change or changes of circumstances.

556. **HOLD**, occupy, possess. We hold temporarily or permanently for any purpose whatever. We occupy that which we hold for use whether it is ours or another's. We possess only that which is our own. Occupy contains also the idea of dwelling upon or within. Possess applies to anything we own.

557. **HOLD**, support, maintain. We hold by active exertion, in any direction. We support more passively. Even inanimate objects may support. Support is to hold up, or to help any one else to hold up; implies the idea of a prop. We hold our own opinions. We support another's opinions. We maintain opinions when we express them. We maintain by assertion. We support by argument. Maintain includes also the idea of money support.

558. **HOLY**, pious, devout, religious. Holy, a characteristic of the genuine Christian, heavenly minded. Pious is a less comprehensive term, consequently is applicable to a larger number. It applies to all believers in a Supreme Being whether Christian or of another belief. Pious signifies the homage of the mind and heart to a Supreme Being. Devout denotes an outward act of prayer or worship. Religious applies to those who conform to the dictates of conscience in all matters that relate to good morals and good citizenship.

559. **HUMBLE**, humiliate, degrade. To humble implies a previous eminence; literally to bring down. Degrade is used always in a bad sense morally; all vices degrade. It affects the character. Humble and humiliate apply rather to position, circumstance, and the mind or outward person, not to moral character. Humiliate is a stronger term than humble.

560. **HUMOR**, temper, mood. Temper is a permanent characteristic. Humor, a temper of the moment. Mood applies only to the temper of the mind and is a passing condition. Humor conveys an additional sense of physical cause.

561. **HURTFUL**, pernicious, noxious, noisome. Hurtful means simply full of hurt, injurious. Pernicious is positively destructive. Noxious and noisome are used only in a physical sense. Noxious is a direct bodily injury. Noisome an indirect and more subtle harm. Mosquitoes are noxious insects. Malarial fog is noisome.

562. **IDEA**, thought, imagination. An idea is a picture in the mind. We have ideas of all material things. We have thoughts upon abstract subjects. Imaginations are thoughts founded upon unrealities. Lower animals may have ideas. Insane people may have imaginations, but only rational beings can have thoughts.

563. **IDLE**, lazy, indolent. Idle is a state of being unoccupied with work. Lazy represents an aversion to labor, particularly labor requiring bodily exertion. A lazy man may work, and an idle man may want to work. Indolent indicates an inactivity of the mind due to lack of purpose or incentive. Lazy is opposed to industrious. Indolent is opposed to active.

564. **IGNORANT**, illiterate, unlearned, unlettered. Ignorant signifies not knowing. Illiterate is a form of ignorance due to an entire lack of education. A well-educated man may be ignorant of certain subjects or circumstances. Unlearned implies the lack of a higher education. Unlettered suggests an unfamiliarity with the classics of literature. Unlearned, unlettered, and ignorant may be used interchangeably in many cases.

565. **IMITATE**, copy, counterfeit. Imitate is to make a general likeness. Copy is to make an exact duplicate. Counterfeit is to copy with intent to defraud.

566. **IMITATE**, mimic, ape, mock. To imitate is a general term. To mimic is an exact imitation of manner or speech for the amusement of others. To ape is an absurdly exaggerated imitation of manner or dress, assumed for the purpose of making it appear to be one's natural expression. Mock signifies in its broader sense any form of taunting ridicule; is also used in the sense of mimic.

567. **IMMINENT**, impending, threatening. All three terms indicate approaching danger. Imminent may be sudden and only for a moment. Impending implies duration and gradual approach. Threatening is said of something impending, only when the danger is one which gives warning of its nearness.

568. **IMPERFECTION**, defect, fault, vice. An imperfection is a lack of perfection, and is rather a negative term. A defect is a positive imperfection or inability. Defective is a stronger term than imperfect. A fault is a defect for which a person may be held blameworthy. A vice is an actual stain upon the character.

569. **IMPERTINENT**, rude, saucy, impudent, insolent. Saucy, impudent, and insolent relate to the conduct of inferiors toward those above them in station or authority. Rude signifies rough, unpolished, and is often the result of ignorance or forgetfulness. Impertinent is a general term and must be always intentional. Impudent is a brazen impertinence. Insolent is the extreme of outrageous impertinence.

570. **IMPLACABLE**, unrelenting, relentless, inexorable. Implacable denotes absolutely unchangeable hatred or animosity. Relentlessness indicates the same fixity of purpose, but may be caused by adherence to principle rather than personal reasons. Inexorable may apply also to inanimate things, as death or justice. It signifies a quality of not yielding to prayers and entreaties. Unrelenting and relentless are almost identical unless, perhaps, the latter term is the stronger.

571. **IMPLANT**, ingraft, inculcate, instill, infuse. The first two words are their own definition. To implant, to set roots into the ground. To ingraft, to graft on to a plant already growing. A parent implants principles, a teacher ingrafts them. To inculcate, to teach by words, or to impress by continued repetitions of the teachings. Instill, literally drop by drop, is the gradual process of education. Permanent sentiments are instilled into the mind. Temporary excitements or feelings are infused.

572. **IMPLICATE**, involve. One is implicated who is only slightly or indirectly concerned in an affair. Involve conveys the idea of being completely entangled. Implicate, to be folded into. Involve, to be rolled up in.

573. **IMPORTANCE**, consequence, weight, moment. Things are important from the value, real or imaginary, which is placed upon them. Anything of importance because of the consequence which follows is said to be of consequence. "It is of no consequence" signifies that the result would be the same in any case. Intrinsic importance gives an action weight. Weight also implies an affair which requires deliberation. Moment bespeaks a great degree of importance.

574. **IMPUGN**, attack. Impugn relates only to doctrines and opinions. Attack includes the idea of violence, and applies also to material things. We impugn with arguments; we attack with ridicule.

575. **INACTIVE**, inert, lazy, slothful, sluggish. Inactive is the unqualified and general term. Inert signifies absolutely without motion. Lazy is the dislike of physical action. Slothful is always to move slowly. Sluggish means moving as in a stupor, heavily, drowsily.

576. **INCAPABLE**, insufficient, incompetent, inadequate. Incapable, without capacity, is a permanent and inherent characteristic of the mind. Insufficient, not enough, implies limitations that may be due to youth or inexperience. Incompetent is applicable to certain things and conditions; a thoroughly capable person in certain directions may be incompetent for other kinds of work. Inadequate, not equal to, has a relative significance, and is very nearly synonymous with insufficient.

577. **INCLINATION**, tendency, propensity, proneness. Inclination refers to our first leaning towards a thing. Tendency is an habitual inclination. Propensity is a strong tendency. Proneness indicates a still stronger tendency.

578. **INCREASE**, grow. That which becomes larger by any means whatever is said to increase. To grow is to increase by means of the life principle. Figuratively, grow is a gradual increase.

579. **INCREASE**, addition, accession, augmentation. Increase is again the unqualified term. Addition is to increase by means of putting two or more things together. Accession is an accidental mode of addition. A man makes additions to his wealth, but receives an accession to his property by inheritance. Augmentation is a more formal expression, synonymous with increase.

580. **INDEBTED**, obliged. Indebted is unlimited in its application. It designates the state of owing any-

thing. Obliged is restricted in its use to the owing of favors and courtesies.

581. **INDIFFERENCE,** insensibility, apathy. Indifference is a negative term denoting entire lack of preference for one thing more than another. Insensibility is a lack of feeling. Apathy is an incapacity for feeling. Apathy is an inherent, permanent characteristic of one's constitution. Indifference and insensibility may be acquired or temporary. One may be indifferent and not insensible, or insensible and not apathetic.

582. **INDISTINCT,** confused. Indistinct is simply not positively well marked, faint in outlines. Confused implies a mixing or blending of outlines of two or more objects or ideas. Anything that is confused is also indistinct, but not *vice versa.*

583. **INFAMY,** ignominy, opprobrium. Infamy is opposed to good fame. It implies public disgrace, and refers to the act rather than the person. Ignominy and opprobrium apply rather to the person. Opprobrium is an extreme degree of ignominy. Either ignominy or opprobrium may not be far reaching, but may extend throughout a comparatively narrow circle of acquaintances.

584. **INFORM,** instruct, teach. Inform is a widely extensive term. It applies to all facts of any character, and any one however ignorant may inform others of anything that he knows. Instruct refers to the serious, valuable knowledge of life. Instruct and teach are the acts of those superior in attainments or position. Teach relates more especially to the imparting of facts and various useful knowledge, rather than the act of training the mind and implanting principles, which is preferably the office of the instructor.

585. **INFORMATION,** intelligence, notice, advice. Information refers to the knowledge one has acquired. Intelligence is the ability to understand. Information is knowledge imparted of facts that have occurred; intelligence, knowledge imparted of recent facts and suggests the idea that they are not generally known. Notice is knowledge imparted of what is about to occur. Advice in this sense is detailed information.

586. **INJURY,** damage, hurt, harm, mischief. Injury is the making of anything otherwise than perfect. Damage is an injury which subtracts from the value of a thing, and applies only to physical things. Injury and hurt both apply to persons, but hurt may be only a pain and momentary, while injury is more serious. Hurt qualifies only bodily injury. Harm and mischief may apply to either persons or intangible things, and are almost identical in meaning. Mischief, however, seems to include the idea of a malicious agent, while harm may be caused by things inanimate.

587. **INJUSTICE,** injury, wrong. Injury, again, is the general term. Injustice is an undeserved injury; also it is not necessarily an injury. An unfair opinion of any one does him an injustice, but not an injury. A wrong includes both injustice and injury.

588. **INSIDE,** interior. Inside applies to bodies both small and large. Interior is used in speaking only of large bodies. Inside means rather the side that is inward. Interior refers to the space inclosed.

589. **INSIST,** persist. Insist signifies to maintain a position. Persist conveys the impression of pressing forward. To continue to do anything is to persist. To refuse to yield a point is to insist.

590. **INSTANT,** moment. An instant is the present moment. A moment may be of the past or future. Both terms are a point of time, hence have no duration.

591. **INTERCEDE,** interpose, mediate, interfere, intermeddle. One intercedes to a superior for an inferior. One interposes between equals. One intercedes to plead a request. One interposes to stop a quarrel. One mediates to settle a quarrel, to make peace. To interfere does not necessarily imply a good motive, though it may benefit. One intermeddles only from a bad motive.

592. **INTERCOURSE,** communication, connection, commerce. Intercourse is the more general term and relates to every form of interchange between persons, not between persons and things. Communication refers especially to exchange of thoughts or messages, verbal or written. Connection, literally, linked together, implies relationship, or some form of permanent intercourse. Commerce relates especially to trade and mercantile intercourse. Connection applies also to things.

593. **INTEREST,** concern. Interest is the more comprehensive term, literally, to have a share. It applies to all that touches or comes near to us. Concern applies more particularly to things of an undesirable nature and suggests anxiety. Interest is prompted by desire and pleasure or the affections. Concern is prompted by fear.

594. **JOURNEY,** travel, voyage. Journey, any trip or passage, long or short, from one place to another. Travel implies a journey involving exertion and fatigue; travel is also used in a less specific sense. Voyage relates to travel by sea.

595. **JUDGE,** umpire, arbiter, arbitrator. The judge makes decision according to prescribed law. He holds a more formal and permanent office. The other three decide according to their own judgment and are chosen for one particular case. The umpire decides contests, the arbiter and arbitrator matters of litigation. Arbitrator implies the meaning peacemaker. Arbiter is used also in the sense of controller or arranger, as, "He is the arbiter of my fate."

596. **JUDGMENT,** discretion, prudence. Judgment is the quality of being able to decide between right and wrong in general. Discretion requires an intuitive and fine discernment and includes the exercise of tact. It relates especially to our capacity for management in dealing with others. Prudence includes caution and applies exclusively to the control of our own conduct.

597. **JUSTICE,** equity. Equity contains a higher moral significance than justice. Equity is the application of the golden rule. Justice relates to the adjustment of legal rights, and denotes fairness and equality.

598. **KEEP,** preserve, save. Keep is used generally to characterize the retention of possession, to have about one indefinitely. To preserve is to keep intact or in a state of perfection. To save suggests also an act of rescue. We save from destruction. We preserve through all sorts of adverse circumstances.

599. **KILL,** murder, assassinate, slay, slaughter. Kill is the general term, meaning simply to take life. Murder is to kill unjustly or with violence, and applies only to human beings. Slay is to kill in battle or in a duel. Slaughter properly applies only to animals, but is used in reference to human beings when they are killed after the manner of brutes.

600. **KIND,** species, sort. Kind, originally of the same family, has a less definite meaning than species. Species is, in its most accurate sense, a scientific term of classification, according to well defined attributes. Kind is a more general term of discrimination. Sort does not imply necessarily any similarity, but merely the assemblage. It denotes arrangement rather than classification, and may be used either as kind or species.

601. **KNOWLEDGE,** science, learning, erudition. Knowledge implies the things known, however learned; learning, knowledge one has acquired through schools or study. Erudition is the highest term and denotes great reading and research. Science is learning which is classified, and is the exact knowledge of an orderly mind, concerning facts in nature. Erudition implies rather a knowledge of literature, philosophy, and history, though it may include all learning.

602. **LARGE,** wide, broad. Large is the general expression for dimension in every or any direction; that is, large includes length, breadth, height, and depth. Wide and broad are almost synonymous, wide being opposed to close, and broad to narrow, hence wide is used more properly in speaking of apertures, as a wide mouth, a wide door.

603. **LAST,** latest, final, ultimate. That which is last or ultimate is succeeded by nothing else. Latest implies that which is succeeded by only a short interval of time. Final suggests the completion of a task or plan. Last is opposed to first, latest to earliest, final to the beginning. Ultimate suggests completion. A man's last words are not necessarily his ultimate verdict.

604. **LAUGH AT,** ridicule. Laugh at is a natural expression of mirth excited by the actions or traits of another. Ridicule conveys a greater degree of contempt and shows itself in words or writings or actions. Laugh at may be involuntary. Ridicule is a positive action directed by the will.

605. **LAUGHABLE,** ludicrous, ridiculous, comical, droll. Anything that excites laughter is laughable. Ludicrous and ridiculous suggest a laughable situation of a person, ridiculous, however, being much the stronger term and relating to actions or mental attitude, while ludicrous refers more to one's outward appearance or position. Comical and droll properly designate things or the antics of animals rather than persons.

606. **LAWFUL,** legal, legitimate. Lawful pertains to law in general. Legal is a more definite term and relates to civil law. Legitimate is of broader significance and applies to unwritten law or generally accepted

rules. Thus one says legitimate art, legal documents, lawful acts.

607. **LEAD,** conduct, guide. One leads by the hand, conducts by the mind, guides by the eye. Hence conduct includes the idea of planning and managing. Lead implies helping one weaker than one's self. Guide is simply to point out the way. One could lead a child who knew the road, or guide a strong man who did not know the road.

608. **LEAN,** incline, bend. That which leans rests on one side. Lean suggests the need of a support. Incline implies simply to deviate from the perpendicular or horizontal, be it ever so slightly. Bend suggests curvature. Trees bend with the wind. A hill inclines. An old man leans on his cane.

609. **LEAVE,** quit, relinquish. One leaves that to which he may return. To quit is final. To relinquish is to quit unwillingly.

610. **LEAVE,** take leave, bid adieu, bid farewell. Leave designates simply the act of separating one's self from anything. Take leave is an expressed ceremony of parting between persons. Bid adieu and bid farewell are a solemn leave-taking, and indicate a permanent or at least a long and uncertain separation.

611. **LEAVE,** liberty, permission, license. The word leave is used in small matters. Liberty, as here used, suggests infringement on the rights of another. License is legal permission. Permission is a more general term, and may be either public or private. Leave is always private.

612. **LET,** leave, suffer. Let implies simply the passive part of not placing hindrance on the actions of another. Leave signifies rather an active removal of constraint, or a positive decision not to interfere. Suffer is the strongest term, and refers to one's attitude towards those over whose actions he has the right to exercise control.

613. **LIE,** lay. Lie is an intransitive verb, and lay a transitive verb. A creature lies down, but he lays himself down. I lie on the couch. I lay the book on the table.

614. **LIFT,** raise, erect, elevate, exalt. We lift that which we take off the ground. We raise and erect by placing in a higher position while it remains on the ground. Erect signifies raising to an upright position and contains also the idea of construction. Elevate implies raising from a lower point to a higher, and is used more often in a figurative sense. Exalt applies always in a moral sense. One's soul may be exalted.

615. **LIKENESS,** resemblance, similarity, similitude. Likeness is a general term and refers to either external or internal circumstances. Resemblance applies only to outward appearance; and similarity only to the invisible qualities. There may be a resemblance of face, but a similarity of disposition. Either is a likeness. Similitude is a more poetic term than similarity; has also a higher significance.

616. **LINGER,** tarry, loiter, lag, saunter. We linger from reluctance to go on and usually against our ideas of what we should do. We tarry deliberately. Hence linger suggests the thought of continually intending or starting to move, while tarry implies complete suspension of motion. To loiter is to move slowly and with reluctance. To lag is to go slower than others. Thus we can loiter when we are alone, but we lag only when we are in company with others. To saunter is to loiter aimlessly or without any destination in view.

617. **LIST,** roll, catalogue, register. List is the most simple, and implies merely names or words written one under the other. Roll is used only for names of persons. Thus we may have a list of names, a list of the trees in a certain locality, a list of verbs, but a roll of honor. A catalogue contains more details and specifications than a list, while a register is a complete record of the names on the list.

618. **LITTLE,** small, diminutive. Little is the most general term, and refers to both size and quantity. Small has reference only to size. One may say a little water or a little dog, but one may not substitute small in the first example. Diminutive is small contrary to the natural course. All babies are small, but not all are diminutive.

619. **LOOK,** see, behold, view, eye. See is the mechanical action of the eye. Look is a voluntary effort to see. We may see without looking and *vice versa*. A blind person may look towards an object. Behold includes the idea of an impressive mental sensation. To view is to look at in all directions, comprehensively. To eye is to look at shrewdly or earnestly.

620. **LOOK,** appear. To appear is simply to come into sight. One's look implies the impression one's appearance makes. Also one's appearance refers to one's manner and deportment and the characteristics thus indicated, while looks refers to the external face or figure. She looked beautiful. She appeared charming. And, in the first sense, he appeared suddenly and looked hideous.

621. **LOOSE,** vague, lax, dissolute, licentious. Loose is the general term, and applies to anything that lacks proper connection or adherence of its parts. Whatever is remotely scattered is vague. Vague applies only to the intellect. Dissolute and licentious refer only to the morals. Lax may designate either. Lax suggests the quality of being unbound. Dissolute is the extreme of loose; licentious is the extreme of lax. In modern use licentious applies exclusively to sexual immorality, while the other words include looseness of all moral principles.

622. **LOSS,** damage, detriment. Whatever has gone from us that we want to keep is a loss. Any object that is injured to the extent of decreasing its value is damaged. A detriment is a lack, whether by loss or damage or through never having possessed.

623. **LOW,** mean, abject. Low is below the ordinary level. Mean is at the ordinary level. Abject holds also the idea of submission, and is not an inherent quality. Low and abject may be involuntary. A man is voluntarily mean. A servant is low in station, but he is not necessarily abject. A slave is abject in his condition but not necessarily so in his nature; while a king may be abject through cowardice or fear. Abject is, literally, cast down.

624. **MAKE,** form, produce, create. Make is an unqualified term, and signifies the bringing into being of anything. To form is to give a shape to, to make according to a pattern. To produce is to bring into existence, usually by changing the qualities of its parts. Fire is produced by friction; corn is produced from the earth: a vase is formed from clay. Also a thing may be formed without the means of a conscious agent,—rocks are formed. In the literal sense only the Supreme Being can create. All the words are used figuratively.

625. **MALEDICTION,** curse, imprecation, execration, anathema. A malediction is a spoken evil wish. An imprecation is a prayer for evil. A curse is a solemn or ratified malediction, and also represents varying degrees of evil, and may be an act either of God or man. An execration is an informal expression of the most violent personal anger. An anathema is an execration pronounced by an authoritative body or person according to canon law. Only man pronounces a malediction, an imprecation, an execration, or an anathema.

626. **MALEVOLENT,** malicious, malignant. Malevolent characterizes an inherent quality of one's nature and is therefore constantly active. Malicious represents a quality that may be temporarily roused. A malicious person takes pleasure in causing pain to others, while a malevolent person works evil as a matter of course. One might say that to a malevolent person his malevolence is a necessity; but malice to a malicious person is a luxury. Malignant is properly applied to the evil itself rather than to the person.

627. **MALICE,** rancor, spite, grudge, pique. Malice takes delight and pleasure in working evil. Rancor is unremitting anger and may have been justly or unjustly provoked. Petty malice, malice in trivial things, is spite. A grudge includes the idea of revenge for some particular injury and may be of long standing. A grudge may be satisfied by a single revengeful act, and then cease to exist. A pique is short lived, and not deep seated. It is caused by any trifling affront.

628. **MARITIME,** marine, naval, nautical. Maritime signifies belonging to the sea. It can be applied to countries which have great intercourse by sea, or to commerce by sea, and is a broader term than marine, which signifies directly pertaining to the sea, and is used entirely in a technical sense. Naval refers to the government navy maintained on the sea, or it may designate commercial arrangements, but is more frequently used in the former sense. Nautical pertains to the science of sailing, or navigation, or the mechanical ship.

629. **MARK,** print, impression, stamp. Mark has a universal application, and signifies anything which in any way alters the external face of anything. Stamp is made by direct pressure, and by an artificial instrument. Print is either an artificial or natural impression, made either by design or accident. A print has always a definite form and represents an object or a sign. An impression is properly a sinking in of the mark. Impression and stamp are both used figuratively. Otherwise print and impression are almost always exactly synonymous.

630. **MARK,** trace, vestige, footstep, track. As above, mark is the term of general significance. A faint

mark or one broken in outline is a trace. Vestige applies only to those definite traces left by mankind, as the marks remaining of an earlier race of people. Footstep is the impression made by the foot of a creature. A track is any kind of mark by which we can trace the path taken by anything, but applies more strictly to the impression left by feet, or wheels, or whatever comes in contact with the ground.

631. **MARRIAGE,** wedding, nuptials. Marriage is simply the act of marrying. Wedding is the ceremony and attendant festivities of marriage. Hence one may have an elaborate wedding or a simple wedding, but the marriage is the same. Nuptials includes the idea of both marriage and wedding.

632. **MARRIAGE,** matrimony, wedlock. Marriage refers rather to the act of marrying. Matrimony is the state of being married. Thus one can say marriage is the necessary step toward matrimony. Wedlock is used instead of matrimony in modern speech when it has a legal significance.

633. **MAXIM,** precept, rule, law. A maxim is a self-evident moral truth. A rule is an inflexible guiding principle, and may have reference only to the conduct of affairs, without involving any moral phase. A precept is both a maxim and a rule. Precept applies to those principles which form character. A law is from a higher authority than rule. The government rules are laws. We may speak of the laws of God, the rules of good breeding, the precepts of Jesus. Precepts are taught. Rules are to be obeyed.

634. **MELODY,** harmony, accordance. Melody is a succession of single musical tones. Harmony is a succession of chords. Accordance is the necessary quality of harmony, but it is the technical word meaning merely agreement of sound. Harmony has a wider significance. Harmony becomes the science of musical composition in its technical sense. All three terms are used figuratively.

635. **MEMORY,** remembrance, recollection, reminiscence. Memory is simply the act of the mind in recalling images, whether voluntary or involuntary. Remembrance is the conscious exercise of memory. Recollection is remembrance in a greater degree. Animals may have remembrance, but only man has recollections. Recollection suggests the recalling to one's memory incidents and visions of the distant past. Remembrance is the more ordinary exercise. We remember our lessons. We remember to put on overshoes. We recollect our childhood's home. Reminiscence is the remembrance of things purely intellectual.

636. **MULTITUDE,** crowd, throng, swarm. Multitude applies to great numbers of anything; crowd, throng, and swarm to animate objects; crowd and throng to human beings. A multitude is always large. Crowd signifies rather pressing close together. So a few people in too small a space form a crowd. One can say, a small crowd. A crowd in motion is a throng. Swarm suggests more rapid motion, and applies literally only to insects, as a swarm of locusts. It is used figuratively in reference to other creatures.

637. **MUTILATE,** maim, mangle. To mutilate is to remove any part. Maim originally applied only to wounds in the hand, but is generally understood in the present day to mean a wound in any of the limbs, or any infirmity which deprives a man of the use of a limb or an extremity. Mangle refers to irregular wounds or gashes in any part of the body.

638. **NAME,** call. To name is to say the name. To call is the use of any sound. Also to name describes a person's name. To call describes a nickname or a characteristic. The emperor was named Nero; he was called a monster. He was named William; he was called William the Conqueror.

639. **NECESSARY,** expedient, essential, requisite. Necessary is the indefinite term. Expedient suggests the exercise of discretion. A course of action which is expedient may or may not be followed; while it is necessary to the best results, it is not inevitable that it occur. Requisite is a stronger degree of necessity. Essential implies a vital necessity. Essential, the essence, is the strongest possible degree of necessity.

640. **NECESSITIES,** necessaries. The necessary is that which is absolutely necessary, regardless of circumstance. Water is a necessary of life. Necessities are the things which are necessary through circumstances; they may be artificially created. To those who live for fashion alone luxuries become necessities.

641. **NECESSITY,** need. Necessity refers to the thing wanted; need, to the person wanting. Need may apply to a temporary lack; necessity more properly to habitual lacks. We may need greatly that which is not a necessity.

642. **NEGLECT,** omit. To neglect is a culpable act. To omit may be permissible. We omit or not at our discretion. We have no right to neglect.

643. **NEGLIGENT,** remiss, careless, thoughtless, heedless, inattentive. The first two words refer to the act, the others to the state of the mind. Negligent is a stronger term than remiss. Remissness may be due to forgetfulness. Negligence applies to those things constantly in view. One is careless in trivial matters; one is thoughtless in matters of greater moment, matters that have to do with conduct. Heedless denotes a lack of caution; thoughtless, a lack of reflection; inattentive, a lack of attention. Careless includes the idea of lack of desire: one is careless when he does not care. There are times when heedlessness and inattention are not culpable. It shows a nobility of soul to be heedless of unavoidable discomforts, or inattentive to small slights.

644. **NEIGHBORHOOD,** vicinity. Vicinity has the wider meaning; it refers to the country round about. Neighborhood applies to one's immediate vicinity; it also includes the people living near. Vicinity is used to designate only the place in general.

645. **NEW,** novel, modern, fresh, recent. New is the general term, meaning anything that is not old. Novel contains the idea of something out of the ordinary. A new baby is certainly not a novelty. Modern is used in contrast to that which is old fashioned or out of date. Fresh includes the idea of condition. New vegetables are not necessarily fresh. An old man may have a fresh color. Recent is used to designate that which has just occurred; it relates to happenings and applies properly to news.

646. **NOTED,** notorious. Noted signifies well known. Notorious is used only in a bad sense, and applies only to those who are noted for evil deeds and vices.

647. **NOTICE,** remark, observe. We may notice casually. To remark implies a return of the mind to the subject. To observe one must examine closely. We notice and remark involuntarily. When we observe, we make a special effort.

648. **OBJECT,** oppose. We object to that of which we disapprove. We express objections by words. We oppose by actively placing obstacles in the way. We express opposition by acts and positive effort to thwart.

649. **OBSERVATION,** observance. Observation is the act of examining an object with the eyes. Observance is the act of keeping with care or holding it sacred. By a close observation of affairs, one cultivates a shrewd judgment. The observance of July fourth serves to keep the patriotism of our forefathers fresh in the minds of our children.

650. **OBSERVE,** watch. To observe is to look at consciously. To watch is to observe keenly with suspicion, or at least from some particular reason for strictness. We may observe listlessly or idly. We watch alertly.

651. **OBSTINATE,** contumacious, stubborn, headstrong. Obstinacy is not necessarily a fault. It is the rather negative quality of adherence to one's own line of action, or set of opinions. Stubborn is a stronger term and implies force. Headstrong implies lack of judgment. Stubborn is perversion of will, headstrong a perversion of judgment. Contumacious signifies violent opposition to those in authority and is always a crime against lawful restraint.

652. **OCCASION,** opportunity. Occasion leaves us no choice of action. We must do as occasion requires. Opportunity tempts us to action, but we may or may not respond. The opportunity offers, or we seek it. The occasion demands of us, and comes of itself.

653. **ODD,** uneven. Odd is to be without a mate. Uneven is to be unequal. Thus odd comes to mean a person who has peculiarities like no one else. Both words are opposed to even.

654. **OFFENDER,** delinquent. Offender is one who positively offends, or goes against the law. A delinquent is one who fails by omission to do what is required, hence delinquent is sometimes used in a legal sense to denote a lawbreaker.

655. **OFFER,** bid, tender, propose. Offer is the general term, and is employed for that which is literally transferable. To offer is a voluntary and discretionary act and may be accepted or rejected. Bid implies a commercial transaction, as to offer a price for the purchase of a house. To tender is to offer in words or to present for acceptance, as a sum of money by way of payment, or to fulfill an obligation; one may also tender his services. Terms of settlement and arrangements or plans with specifications are proposed, also a certain line of action may be proposed.

656. **OFTEN,** frequently. Often signifies a repetition of action. Frequently has relation to a plurality

of objects. A man often errs. People frequently make mistakes. We frequently meet the same persons in the route which we often take.

657. **OLD,** ancient, antique, antiquated, old fashioned, obsolete. Old includes all the other terms. Anything very old is ancient. Anything long ancient is antique. Anything no longer in the fashion is old fashioned. Whatever is extremely old fashioned is antiquated. Obsolete implies gone out of use. It more often refers to customs and words.

658. **OPENING,** aperture, cavity. Opening is the general term, meaning any place that is open. There may be an opening in the woods. Aperture is a small opening into some specific inclosure. The cavity is the inclosure. The aperture is the opening leading to the cavity.

659. **OPTION,** choice. Option is the power of choosing. Choice is the act of choosing. Option implies an uncontrolled act of the mind. Choice is simply an act of the will.

660. **ORIGIN,** beginning, rise, source. Origin refers to the cause of existence; beginning to the period of existence. The origin must be before the beginning. The rise includes also the gradual progress of the early stages of existence. The origin exists but once. The source is permanent. Thus, if the source of a river is destroyed, the river ceases to exist.

661. **OUTLIVE,** survive. To outlive means simply living longer than another. Strictly speaking survive—live after—is used more to designate life continued after hardships. Few men can survive the bitter cold of the arctic regions. Only seventeen persons survived the devastating plague. But the two words are used interchangeably in many instances.

662. **OVERFLOW,** inundate, deluge. To overflow, flow over; inundate, flow into; deluge, wash away. The wash tub or the river may overflow. A cellar may be inundated by an extra heavy rain. A deluge carries all before it.

663. **OVERTURN,** overthrow, subvert, invert, reverse. To overturn is to turn over gradually or otherwise. To overthrow is to overturn with violence. Either of these two actions may place a thing on its side. To subvert is to turn that under which should be upward. To invert is to place on its head that which should be on its feet. All these terms have to do with the perpendicular. Reverse is to place that before which should be behind. Subvert is used only of things of great importance. One inverts a plate, he reverses the action of a locomotive engine.

664. **OVERWHELM,** crush. To overwhelm is to cover with a heavy body so that one sinks under it. To crush is to destroy the shape or consistency by violent pressure. An avalanche overwhelms an entire settlement and many houses and people are crushed beneath it. A wagon may crush a man by rolling over him but he is not overwhelmed.

665. **PACE,** step. Pace is the manner of moving the body in passing. Step relates to the manner of moving the feet. The pace is a walk or a run. It is fast or slow. The step is long or short, light or heavy. In measurement, the pace is a long step, the step is the length of the ordinary step made without effort.

666. **PAINT,** depict. Paint, to represent scenes or figures on paper or canvas. Paint is also used figuratively, as to paint scenes to others by means of words. Depict is used only in the figurative sense.

667. **PALE,** pallid, wan. A lack of color where color might be expected is pale. Pallid is an excess of paleness. Wan is pallid to the point of sickliness. It also suggests the state of having a wasted look.

668. **PARABLE,** allegory. Both terms denote a story told in illustration of a truth. A parable is a story presented in a simplified form to illustrate a moral truth. But everything is represented in its proper nature. In an allegory, mental and moral attributes and personal characteristics are personified; or the characters are represented by something else. "I am the vine, ye are the branches," is a spoken allegory.

669. **PART,** division, portion, share. Part is the general and indefinite term. Portion is always the result of dividing. Division is used as portion, also to designate the act of dividing. Share signifies the portion to which one is entitled. A part is not necessarily a division. A part may be complete in itself, as the parts of an engine. The parts of a book are the leaves and the binding; the divisions would be certain sections of the reading matter.

670. **PARTAKE,** participate, share. To partake is to take a part to one's self. To participate is to enter into. We partake of a meal with a friend. We participate in his happiness. To share is to take that to which we are entitled. It is also used in the opposite sense,—to share with another, *i. e.*, to give part to another.

671. **PARTICULAR,** singular, odd, eccentric, strange. That which is particular belongs to some special part or place. What is singular is single, or the only one of its kind. Anything odd has no mate. Eccentric signifies out of the center, and is used to designate singularity to the point of lack of mental balance. Strange indicates that which does not belong to this part or place, alien.

672. **PATIENCE,** endurance, resignation. Endurance relates to the act. Patience relates to the state of mind.

> There was never yet philosopher
> That could endure the toothache patiently.
> —*Shakespeare.*

If we endure without complaint and with a serene mind, we have patience. Endurance is simply strength to bear. Resignation comprehends also the idea of conformity of will. We can be patient under injustice, but, in order to be resigned, we must be in a state of mind that sees no injustice.

673. **PATIENT,** passive, submissive. To be patient is a virtue. Passive is the state of enduring weakly or indifferently. Patient implies an act of the will. Submissive is the state of yielding to superior authority or force. Submissive is opposed to contumacious.

674. **PEACE,** quiet, calm, tranquillity. Peace is a necessary quality of all the other terms. Peace denotes a state of no hostility. Quiet implies freedom from noise. Calm refers rather to the state of the mind. Tranquillity is a condition of extreme calm. Both calm and tranquillity express absence of motion as well as absence of noise.

675. **PEEL,** pare. To peel is to remove the skin. To pare is to trim or make smooth. A potato is peeled after it is boiled. It is pared before it is boiled. We pare our nails, we peel an orange.

676. **PENETRATE,** pierce, perforate, bore. To penetrate is to go into a substance. Rust penetrates iron. Fog penetrates the air. Pierce commonly suggests penetrating by means of a sharp point. Ordinarily, perforate indicates numbers of piercings. A perforated surface is full of comparatively small openings. Bore is to make a hole by means of a rotary instrument. A dagger pierces, a gimlet bores.

677. **PEOPLE,** populace, mob. People is the general term denoting simply human beings in the aggregate. Populace is a vast assemblage of people. Mob is used to designate what is low, hence a turbulent crowd of people.

678. **PEOPLE,** persons, folks. As above, people comprehends persons in the mass. Persons has an individual sense. One may say one person, five or six persons; but such people. Folks is almost synonymous with people, but is generally used in a more familiar sense; derivatively, the common people.

679. **PERCEIVE,** discern, distinguish. We perceive that which is obvious. We discern that which is more or less hidden. We distinguish in order to know one thing from another. We perceive colors, shapes, or the truth. We discern motives, characters, consequences. We distinguish shades of the same color. The owl cannot distinguish objects by daylight.

680. **PERCEPTION,** idea, conception, notion. We have a perception of that which is before us. When the object is removed we have an idea of it. We have a conception of what we have never seen. A notion is what we think the thing is, judging by its appearance.

681. **PERISH,** die, decay. To die is simply to cease to live. To perish is to have its substance dissolved or disintegrated. Thus wood may perish but it does not die. Decay expresses the process of gradual destruction or disintegration of substance. A thing may perish suddenly. Decay takes time.

682. **PERPETRATE,** commit. Perpetrate is much the stronger term. One perpetrates a crime; he commits an error or an offense.

683. **PERSUADE,** entice, prevail upon. Persuade implies causing the will to yield. That is not necessary in the use of prevail upon. One may be prevailed upon by force or authority. Persuade is to coax until one voluntarily consents. One persuades by words. One entices by words or actions. Entice is commonly used in a bad sense.

684. **PILLAR,** column. Modern use recognizes little difference of meaning in these two terms. Derivatively, a column is a pillar which is also a prop or support, but the best modern authorities recognize no such distinction.

685. **PITEOUS,** doleful, woeful, rueful. Piteous describes the expression of suffering; the child wept piteously. Doleful relates to those expressions or sounds which suggest pain or melancholy; the doleful cry of the sea birds. Woeful has a wider application, referring rather to one's circumstances; hungry, cold, and friendless, he was certainly in a woeful plight. Rueful expresses regret rather than actual pain, and applies to the expression of one's face; one looks rueful when he loses his train, or spoils his best hat.

686. **PITIABLE,** piteous, pitiful. Pitiable is deserving of pity, and is consequently always used in a good sense. Piteous implies helplessness. Pitiful implies worthlessness. One whose situation is pitiable is unfortunate. One whose circumstances are piteous is incapable. One who makes pitiful shifts to get along is small and mean.

687. **PITY,** compassion. Pity indicates an inferior object. We pity a man of weak intellect. We feel compassion for those who are unfortunate. We pity our inferiors. We compassionate our equals. Pity is allied to contempt.

688. **PITY,** mercy. We pity those who are innocent and those who are guilty. Pity may be unexpressed by action. Mercy is action prompted by a sentiment. We have mercy only for the culpable.

689. **PLACE,** station, situation, position, post. Place is the general and indefinite term, denoting any space that may be occupied. A station is a definite place, a stated place. Situation and position include the place and the thing that occupies it. Situation comprehends the site, and is used to denote the way an object stands in relation to its surroundings; the house is in a fine situation. Position indicates the way an object stands in relation to itself; as, "That man has an awkward position." A post is a place in which one has a specific duty to perform.

690. **PLACE,** dispose, order. To place is to put in a place, any place. To dispose is to place according to a rule, or some special plan. To order is to place after some carefully arranged plan. Things carefully ordered may not be disposed to the best advantage.

691. **PLACE,** spot, site. A place is indefinite. A spot is a particular place. A site is a place considered as a situation and is generally used in connection with buildings; as, a fine site for a church. A spot is comparatively small.

692. **PLAY,** game, sport. Anything done for recreation and amusement is play. Game is systematic play according to rules. Sport is any recreative employment that demands bodily exercise. Chess, croquet, and cards are games. Riding, rowing, shooting, and skating are sports. Golf is both a sport and a game.

693. **PLEASURE,** joy, delight, charm. Pleasure is the general term comprehending all the others. Anything that pleases gives pleasure. Pleasure varies in degree. Joy and delight are always extreme degrees of pleasure. Joy is produced by the exercise of the affections; delight, through either the affections or the intellect. Delight is more intense than joy and depends upon the temper of the person. We feel the charm of things which attract us toward them. Thus we take delight in her society, but we are charmed by her personality.

694. **PLENTEOUS,** plentiful, abundant, copious, ample. Plenteous and plentiful are exactly synonymous in meaning full or filled. Plenteous is used in the grave or poetic sense. Plentiful is the familiar word. Abundant, to overflow, means more than plentiful. Copious is used to designate what is collected in one point, hence is used more often to describe that which may flow, or be poured, as a fluid. Ample signifies that which is capable of expansion, what may be increased or diminished at will. We say, a plentiful harvest, plenteous mercy, copious flood.

Kindly pours its copious treasures forth.
—*Thomson.*

695. **PLUNGE,** dive. To plunge is to suddenly submerge one's self in the water. To dive is to go to or toward the bottom of the water. One may plunge without diving, or *vice versa.* Used figuratively, plunge is an act of recklessness; dive is a preconsidered action.

696. **POISE,** balance. Poise is an equilibrium maintained in relation to itself. Balance is an equilibrium maintained in relation to other things. One poises one's self. One balances one's self opposite another, or one balances other things. One loses his balance when other things change or shift their corresponding weight and he falls. He loses his poise when he falls without any external, active cause.

697. **POISON,** venom. Poison is anything which destroys the system. Venom is a virulent poison. Poison must be administered internally. Venom may be applied externally. The air we breathe may be poisonous, but it cannot be venomous.

698. **POLITE,** polished, refined. Polite indicates a behavior which is always agreeable to others. Politeness which is acquired by art is polish. A man is polite according to the rules of good society. He is polished by force of circumstances. Polite and polish apply only to the exterior. Refined extends to the mind and nature of a person.

699. **POSSESSOR,** proprietor, owner, master. Proprietor is synonymous with owner except that owner is used for trivial things. Proprietor and owner denote the legal right of control. Possessor indicates the actual having about one. Thus one may say, "I am the owner of that book, but Mr. Blank possesses it at present." Master signifies absolute control and ownership. An insane person may be the proprietor of an estate, but he is not allowed to be master of it.

700. **POSSIBLE,** practicable, practical. Anything that can be done, however difficult, is possible. That which can be practised is practicable; that is, what may be brought into habitual use. Practical is that which is practised. Practical is opposed to theoretical.

701. **POVERTY,** want, penury, indigence, need. Poverty is the general term, and means opposed to wealth. Indigence is a nearer approach to extreme destitution than poverty. Penury is the last extremity of poverty. Need and want apply to a temporary condition which may be relieved by a single act. Want is a stronger term than need. One is in want who lacks the necessaries of life. He who is in need may lack only the comforts. Need and want are used also to indicate a lack of anything by a person not necessarily in poverty.

702. **PRESSING,** urgent, importunate. One's affairs may be pressing or urgent. Pressing is the stronger term, implying compulsion. Urgent appeals to our feelings and implies persuasion. Importunate is used only of persons. Beggars may be importunate. Importunate is urgent to the point of irresistibleness.

703. **PRESUMPTIVE,** presumptuous, presuming. Presumptive is used in a good sense. The presumptive heir; that is, one who is expected to be heir. Presuming and presumptuous both indicate an unauthorized taking upon one's self of authority or position. Presumptuous is the stronger term. Also, presuming applies to one's nature. Presumptuous has reference to special acts. He is a most presuming person. His conduct was presumptuous.

704. **PRETENSE,** pretension, pretext, excuse. Pretense is a concealment of what is bad. Pretension is display of what is good. Pretext is a pretense used as an excuse to accomplish or conceal actions really culpable or criminal. A pretense may conceal only a mild fault. Pretext holds always the idea of a means to an end. Excuse may be a perfectly legitimate reason or explanation of any act which is a breach of etiquette, or a violation of generally accepted rules.

705. **PREVENT,** obviate, preclude. That which one prevents does not happen. That which one obviates is rendered unnecessary or removed. In ordinary modern use, preclude is to make impossible in the nature of things. A boy is prevented from running a foot race by any obstacle, by the prohibition of his father, by lack of racing shoes, etc. He is precluded by a broken leg.

706. **PREVIOUS,** preliminary, preparatory, introductory. Anything that happens before is previous. Preliminary is used in speaking of contracts; preliminary articles, preliminary condition. Preparatory implies making ready for what is to follow. Introductory relates to making plainer that which is to follow, hence is used in matters of discussion and literature; introductory remarks.

707. **PRIDE,** vanity, conceit. Pride applies to anything; vain, to one's appearance; conceit, to one's talents or mental attributes. Pride may be an entirely proper sentiment. One has pride in work well done, a superiority of position, family, literary or scientific attainments, or wealth. It is only an excess of pride that is culpable. One is vain of his clothes. One is proud of that which he has. He is vain or conceited of that which he only thinks he has.

708. **PRIVACY,** retirement, seclusion. Privacy is opposed to public, and indicates the state of attracting no notice. Retirement indicates a privacy positively sought, a withdrawal from the society of others. Seclusion is the extreme of retirement. Nobody has access to one who lives in seclusion.

709. **PROGRESS,** progression, advance, advancement. Progress applies to a continual going forward. Advance signifies going forward toward a definite goal

that may be reached. We make progress in learning, to which there is no end. A man intending to be president of the United States may be said to have made advance when he becomes governor of his own state. Progression and advancement imply also the act of moving forward. He made great progress last year. The progression or advancement from one point to another was necessarily slow.

710. **PROMINENT,** conspicuous. Whatever projects beyond the level or line of other things is prominent. That which is easy to be seen by many is conspicuous. The nose is the most prominent feature, but it is never conspicuous unless it is misshapen, highly colored, or in some way abnormal.

711. **PROMISCUOUS,** indiscriminate. Promiscuous signifies mixing of different things. Indiscriminate applies to the action in which one does not discriminate between different things. One is promiscuous in his company when he associates equally with everybody. He is indiscriminate when he exercises no choice between desirable and undesirable persons.

712. **PROOF,** evidence, testimony. Proof is incontrovertible. Evidence furnishes or tends to furnish proof. Proof is exact, hence is used scientifically. Testimony is evidence by means of spoken or written words. Evidence is offered by anything. Only a person can give testimony.

713. **PROROGUE, adjourn.** Prorogue is to defer indefinitely. Adjourn is to adjourn for a day or a short period of time. Prorogue relates to national assemblies. Adjourn applies to any meeting. Congress or other governing body is adjourned every day. It is prorogued when a ruler or executive terminates its session for the season.

714. **PROVE,** demonstrate, evince, manifest. Prove is the general term. We demonstrate when we prove by intellectual effort. Only persons can demonstrate. We evince to produce conviction. We manifest to make a thing known. We evince by our daily habit of action. We may manifest by a momentary act. We demonstrate and prove facts in science or nature. We evince or manifest a disposition. Things may prove, evince, and manifest.

715. **PROVIDE,** procure, furnish, supply. Provide and procure are the acts of persons only. Furnish and supply may be the acts of unconscious agents. We provide for the future. We procure when by the exercise of labor or management we get anything, whether needed or not. Furnish implies a care in selection. Supply is to furnish that which is lacking.

716. **PUBLISH,** promulgate, divulge, disclose, reveal. To publish is to make public. Promulgate is to make known to the world, or to as many as possible. Modern use gives to promulgate also the suggestion of teaching and imparting. He who promulgates doctrines does more than publish them; he also tries to gain converts. We divulge that which should be kept secret. We disclose an affair from beginning to end. To disclose is to lay bare a whole transaction. We reveal that which has been concealed. It is not culpable to reveal. We divulge secrets. We reveal mysteries.

717. **PURPOSE,** propose. We purpose trivial things. We propose important things. Purpose is to intend. Propose is to express our intention by setting it forth definitely either to others or in our own minds.

718. **QUESTION,** query. Questions may be asked out of curiosity. Queries are put to gain information. A question may be frivolous; a query is rational and serious.

719. **RARE,** scarce, singular. Derivatively, rare means thin. Scarce means cut short. Hence rare is used in speaking of atmosphere when it is lighter in weight than normal. Scarce used in that connection would mean limited in quantity. Rare is applied to luxuries. Scarce to articles of ordinary use or necessity. Jewels are rare but not scarce. Scarce always suggests a deficient supply. In times of famine bread is scarce. Scarce applies only to material things. Singular is merely peculiar or different from others of its kind. Rare always suggests high value. What is singular may be highly undesirable.

720. **READY,** apt, prompt. Ready is applied to that which is prepared for any set purpose. Apt is a kind of readiness which implies one's equipment; literally, fit. Prompt denotes that readiness which consists of quickness. Thus, one who has a ready wit is apt in conversation. One who is prompt is not late, is habitually on time, hence always ready for his appointments. We make ourselves ready for a journey. Apt and prompt refer only to persons. Ready is a general term, and applies to anything.

721. **RECKON,** count, account, number. Reckon is to reach an accurate result by summing up the factors, hence is used figuratively, "Reckoning themselves absolved by," etc. Count is the simple act of determining how many. Number implies the additional act of tabulating or labeling. Account signifies the necessary arithmetical calculations attendant upon keeping one's books. All the terms have a figurative application.

722. **REDEEM,** ransom. Redeem is the general term. Ransom applies only to persons. We ransom with money. We redeem with any equivalent of money. Ransom is used most frequently in connection with prisoners of war.

723. **REDRESS,** relief. Redress signifies literally to bring back to the former point. Relief is to help. Hence redress applies to matters of law and justice; relief, to matters of kindness and compassion. People are entitled to redress for their wrongs. They are dependent upon their own exertions or the generosity of others for relief from their sufferings.

724. **REDUCE,** lower. Reduce, to change the condition of anything by making it less in size, quality, quantity, or rank. Reduce to powder. The fever was much reduced. He was reduced from colonel to captain. To lower is to change the position of anything by making it less high. We lower a bucket into a well; we lower a wall. In their figurative sense the same idea is conveyed. Reduce is the stronger term. One is reduced to his last extremity. He is lowered in the estimation of his friends.

725. **REFUSE,** decline, reject, repel, rebuff. Refuse is the common and general term. Decline is to refuse gently and with courtesy. Reject is a more positive and decided refusal. We decline an invitation to drive. We reject a dishonorable proposal. Repel is to refuse violently. Repel indicates an active antagonism. To rebuff is to refuse with rudeness and scorn or contempt.

726. **RELATE,** recount, describe. We may relate anything. We recount that in which we have borne a part or in which we have a deep interest. We recount that which is remotely in the past. We may relate in writing; we recount only by speech. We relate and recount that which passes. We describe that which exists. We relate the story of our journey. We describe the country we passed through or the car which carried us. We recount our adventures. We describe the places where they occurred.

727. **REMAINS,** relics. That which remains unused or unconsumed is the remains. That which is left after a long lapse of time is relics. Relics always have a value derived from their original state or owner. Remains may or may not be of value. There are remains of buildings after a fire. The uneaten food still on the table is the remains of the feast. Old monasteries contain precious relics of the saints.

728. **REPEAT,** recite, rehearse, recapitulate. Repeat, to go over again, is the more common term. Recite is to repeat from memory. Rehearse is to repeat or recite in order to prepare or learn a part. Recapitulate is to repeat in an exhaustive manner, to go into the minute particulars. Recapitulate is not to repeat word for word, as recite; but rather to repeat statements or specifications.

729. **REPENTANCE,** penitence, contrition, compunction, remorse. Repentance is the general term. We repent a sin, a mistake, or an error of judgment. We feel penitence only for sins. Contrition is a continuous penitence and denotes an habitual state of mind. Compunction is momentary and occasional. Remorse is an excessive contrition and causes anguish. Compunction causes a sharp, temporary sorrow. Contrition causes sadness.

730. **REPRIEVE,** respite. Reprieve, to take off that which has been laid upon, is permanent. Respite is a temporary cessation. A condemned man who is granted a new trial gains a respite. If his sentence is commuted he has a reprieve.

731. **REST,** remainder, remnant, residue. Rest comprehends the meaning of all the other terms. Remainder applies only to things. The remainder is that which is left after part has been taken away. The remainder may be more than half. A scanty remainder is a remnant. Remnant applies specially to the small ends of cloth or tapestry goods which are left unsold. Residue is the settlings. Residue is used in chemistry. All three terms have figurative use.

732. **RESTORATION,** restitution, reparation, amends. To give back that which is taken away is common to all these terms. Restoration and restitution apply only to property. Any one can restore. Only the one who wrongfully took away can make restitution. Restitution is always a restoration of that which has

been unjustly taken. He who has stolen money can make restitution. Reparation applies to intangible things also. He who has robbed another of his good name makes reparation. Amends is used in trivial matters. One makes amends for the loss of a day's pleasure. He makes amends for some small slight or negligence.

733. **RESTORE,** return, repay. To restore is to make good. Hence restore signifies the act of bringing back to its former condition that which has been injured, or replacing by something else that which has been lost or destroyed. To return is to give back what has been taken away. We return the same thing that was taken. To repay is to return equal value in service, favors, or money.

734. **RETARD,** hinder. To retard is to make slow. To hinder applies to the person. Retard has reference to the actions. We retard the accomplishment of anything by hindering the person who is trying to accomplish. But if the person is able to overcome hindrances, we hinder without retarding.

735. **RETORT,** repartee. Retort is always a reply to a censure. It may be, and frequently is, ill natured. Repartee is commonly a witty reply to good-natured badinage or wit.

736. **RETROSPECT,** review, survey. Review is to see again that which we have seen before. We may review the past or review the present. Retrospect is to review the past. Survey is to take a comprehensive view of a thing in order to examine all sides of it. A survey is not necessarily a review. We may take a survey of what we see for the first time.

737. **REVIVE,** refresh, renovate, renew. Revive is to make alive again. Refresh is to make fresh again. Renovate and renew signify to make new again. Revive applies to things and conditions of much importance. Refresh is used in connection with trivial things and conditions. A dying or unconscious man is revived by a powerful remedy. A dusty traveler is refreshed by a bath. An old, shabby costume can be renovated. Renew signifies imparting fresh vigor, or beginning again. They renewed their clamor. A lease may be renewed.

738. **RICHES,** wealth, opulence, affluence. Riches is the general term, and is comparative,—"And his best riches, ignorance of wealth." Wealth is great riches. Wealth applies also to intangible things, as a wealth of good nature. Opulence suggests a flourishing prosperity, an exuberant wealth. Affluence denotes an increasing wealth, and always holds the idea of riches flowing in to a person.

739. **RIDICULE,** satire, irony, sarcasm. Ridicule is simply to excite laughter at the expense of any one, for any cause. Satire is more formal. One writes a satire, or makes an address which is a satire. Irony is to condemn with seeming praise, to say the opposite of what one really means. Sarcasm is personal satire. Sarcasm expresses personal resentment, and is seldom justifiable.

740. **RIGHT,** just, fit, proper. Right is determined by the unwritten laws of God. Just is what is fixed by the written laws of man. The fit and proper are defined by the established rules and customs of society. Right is absolute. There are degrees of just, fit, and proper. Right is applicable to everything. Just refers to matters of important interest. Proper relates to the minor concerns of life. Fit is a more exact term than proper. Several courses of action might be proper under certain circumstances. Only one would be the fit thing to do.

741. **RIPE,** mature. Ripe denotes merely a completion of growth. Maturity is a state of perfection in development. Ripe is a condition of a brief time only. Mature designates a state of more or less continuance. There is an opportune moment when a thing is ripe; beyond that is the stage of decay. Hence the figurative use of the word. The people were ripe for revolt. The project is ripe for execution.

742. **ROUTE,** road, course. The route is any way or road chosen for any particular occasion. Route is used to designate the entire plan of the course taken in an extended journey. Course indicates any place where one runs or walks. Figuratively, course is a plan of action. Road is the beaten track, the regular way.

743. **SAFE,** secure. To be exempt from harm is to be safe. To be exempt from all danger of harm is to be secure. Security is absolute and final. Safety may be comparative and temporary.

744. **SECRET,** hidden, latent, occult, mysterious. What is secret is known to some one. That which is hidden may be known to no one. Latent is that which is secret and ought not to be secret. Occult is that which is concealed from all but the few because of the difficulty of finding it out. Mysterious is that which is hidden from all because of the impossibility of finding it out.

745. **SEEK,** search. We seek that which is not at hand. We search for that which is hidden. Also we invariably seek the thing we want to find; we search the place where it is likely to be found.

746. **SIGN,** signal. A sign makes it possible for us to recognize an object and may be natural. A signal is always the work of a conscious agent. A signal always implies attracting the attention of those at a distance. We converse with the deaf by signs. Ships signal each other at sea.

747. **SILENT,** mute, dumb, speechless. Silent is the indefinite term. Silent means the absence of all noise. Dumb is the state of being physically incapable of speech. Speechless is to be temporarily dumb. He who is mute is in a state where he will not speak. A man is mute from fear because he dares not speak, or mute because he does not wish to speak.

748. **SIMULATION,** dissimulation. Simulation is putting on an appearance of what one is not, as a simulation of virtue. Dissimulation is a concealment of what one is. Good writers make this nice distinction.

749. **SIZE,** magnitude, greatness, bulk. Size is an indefinite general term. A thing may be of small size. Magnitude and greatness always indicate a large size. Magnitude is a scientific term. Greatness is the more usual term for things in general. Bulk is a considerable degree of size. It applies to masses of matter, hence used in any other sense implies shapelessness.

750. **SLACK,** loose. Slack refers to things which are tied, or that with which they are tied. Slack is opposed to taut. Loose is a more general term, and is opposed to tight. A knot may be loose so that the rope soon becomes slack. A garment may be loose, but not slack.

751. **SLEEP,** slumber, doze, drowse, nap. Sleep is the general and indefinite expression. To slumber is to sleep lightly. To doze is to incline to sleep, to nap fitfully. To drowse is to be half asleep. To nap is to sleep briefly. A nap, though short, may be a sound and deep sleep. An invalid may drowse all day, and yet be conscious of all that transpires.

752. **SLIP,** slide, glide. To slip is an involuntary motion. To slide is voluntary. Slip and slide indicate merely a movement forward, backward, or sidewise. Glide is a mode of progression without apparent motion. A ship glides. To glide is to walk so smoothly that the feet seem not to move at all.

753. **SLOW,** dilatory, tardy. Slow applies generally to all bodily and mental activity. Dilatory refers to the habit of mind. Tardy indicates the quality of being late. A man is tardy at his place of business in the morning. He may be dilatory about getting at his work after his arrival.

754. **SMELL,** scent, odor, perfume, fragrance. Smell and scent apply equally to that which gives and that which receives the odor. Odor, perfume, and fragrance are said only of that which gives the smell. Smell refers to all creatures. Scent is an extremely keen sense of smell and applies particularly to animals. Everything that can be perceived by the olfactory sense has a smell. Odor is an artificial smell. Perfume is an agreeable smell. Fragrance is the sweetest and strongest of perfumes. In this sense scent is synonymous with smell.

755. **SOFT,** mild, gentle, meek. Any substance which yields easily to pressure is soft. That which acts weakly upon the senses is mild. Soft is opposed to hard. Mild is opposed to sharp, or strong, or severe. Gentle is opposed to violent. Meek denotes submissiveness and lack of courage. The first three terms have both a physical and a moral application, the last only a moral application.

756. **SOLITARY,** sole, only, single. Solitary refers to material things. Sole refers to intangible things. Both signify one left by itself. A solitary tree. The sole cause of the delay. Only implies a lack. One might prefer a solitary tree in his grounds, but only one tree suggests a need for more. Single indicates simply a state of being detached. Ten single dollars would be said in contradistinction from a ten dollar bill, but the dollars are not solitary. Solitary includes the idea of desertion. Only contains no such meaning.

757. **SOME,** any. Some refers to a particular part in distinction from the rest. Any is applicable universally without distinction. Some do this, others do that. Anybody who lacks patience may acquire it.

758. SOON, early, betimes. Soon has reference to a relatively short period of time after the present moment. Early is before the time appointed. Betimes is before it is necessary. Soon may mean in a few minutes or in a few weeks.

759. SPACE, room. Space is the general term referring to any portion of the universe unoccupied by a solid body. Room is limited in its meaning; it is bounded space, an artificially formed portion of space, or a limited space.

760. SPEAK, say, tell. Speak is an intransitive verb, say a transitive verb. Also say is a somewhat more comprehensive word, generally including the idea of expressing a thought, which speak does not necessarily do. To tell refers to the communication of some definite fact.

761. SPREAD, scatter, disperse. Spread applies chiefly to indivisible bodies. Water spreads. We spread honey on bread. A bird spreads its wings. Scatter refers exclusively to divisible bodies. One scatters seeds. The wind scatters leaves. Disperse is to separate individual bodies which are collected. Disperse the crowd.

762. STRAIGHT, right, direct. Straight denotes that which has no turning or curvature: mechanically, the shortest line between two points. Direct means simply clear, plain, uninvolved. A direct road is one which, though it may turn if desirable, is yet easy to follow and turns no more than is necessary. Right is that which is as it ought to be.

763. STRICT, severe. Severe is the stronger term and includes the idea of positive harshness. Strict means absolute inflexibility in the enforcement of discipline. Strictness is not incompatible with kindness.

764. SYSTEM, method. System expresses more than method. System refers to complex concerns. Method may be applied to any task, however simple, which is to be done. System relates to the arrangement of many different affairs which must be made to work together smoothly.

765. THICK, dense. Thick and dense are almost synonymous. Dense applies rather to the consistency of bodies exclusively, while thick is used also to designate the actual measurement of the third dimension. Thus one says a thick slice of bread, or thick cream; but either thick or dense woods, thick or dense smoke.

766. THREAT, menace. Threat and menace are practically interchangeable, though threat is rather the familiar term, and menace is used more often in reference to great dangers only.

767. TURN, bend, twist, distort, wring, wrest, wrench. Turn is the general term, meaning to put a thing out of its position or direction. To bend is to turn out of its direction. To twist is to turn spirally, to convolve, to wind. Distort is to twist grotesquely out of its proper shape. Wring is to twist and compress with force. Wrench is a sudden, short, and violent twist. To wrest is to wrench away from.

768. UNDER, below, beneath. Under signifies the situation of being low, also concealed or hidden by something else which is directly on top. Below is lower than something else which is higher but not necessarily directly overhead. Beneath is a stronger term than under. Beneath suggests the state of being under the surface. Beneath the river bed. Under water, under the table. Below sea level.

769. UNHAPPY, miserable, wretched. Unhappy is merely the state of being positively not happy. Miserable is the extreme of unhappy. Wretched is the extreme of miserable. Wretched may also include outward circumstances, while unhappy and miserable refer rather to the state of mind.

770. UNLESS, except. Unless is used in relation to actions; except in relation to things or individuals. I shall not go unless he does. No one is happy unless he wills to be. All may go except those who are incapacitated. All are happy except those who will not be happy. All plums are sweet except our plums.

771. UNTRUTH, falsehood, falsity, lie. An untruth, what is not true, may be unintentional. Falsehood and lie are intentional untruths. Lie is a stronger term than falsehood. Falsity is the characteristic of what is false. One cannot speak a falsity, but he may make a statement the falsity of which is apparent.

772. UNWORTHY, worthless. Unworthy has reference to some particular thing or circumstance. A man may be unworthy of another's kindness or hospitality; or unworthy of high honors. Worthless is an abstract condition, meaning unworthy of anything, entirely without worth.

773. UTTER, speak, articulate, pronounce. Utter is the general term, meaning to make a vocal sound. Speak is to utter something intelligible. Articulate is a mechanical act. One articulates sounds. Pronounce is a method of speech through the action of the intelligence. One pronounces words. One articulates distinctly. One pronounces correctly.

774. VALUABLE, precious, costly. That which has intrinsic value is valuable. That which brings a high price is costly. That which is precious is valuable to certain persons exclusively, or only under peculiar conditions. In times of famine bread is precious, and on a desert water is precious. A souvenir which cost nothing and is not valuable may be precious to an individual.

775. VALUE, worth, rate, price. Value is relative. Worth is absolute. There may be artificial value; there can be no artificial worth. Whatever we give in exchange for a thing is a rate. Rate may be indefinite. Price is a fixed rate.

776. VALUE, prize, esteem. We value a thing according to its market price. We prize it according to its worth to us. Esteem refers to things not salable. We esteem our friends; we esteem qualities in men.

777. VIEW, prospect, landscape. A view is that which is seen. A prospect is what may be seen. A prospect, therefore, exists all the time whether looked at or not. But a view may be intercepted. A prospect is a wide, comprehensive view. A view may be of a single object, a house, or a town. A prospect is as far as one can see. Landscape, formerly landshape, is a portion of country which may form a view or prospect.

778. VIOLENT, furious, boisterous, vehement, impetuous. Violent is the general term, all the others representing some form of violence. Furious is excessively violent. Boisterous is noisy and rough; violence in action. Vehement refers rather to the emotions. Impetuous signifies sudden and extreme violence in action or speech. That which is impetuous cannot be withstood. That which is vehement is not under control.

779. WAIT, wait for, look for, expect. Wait, wait for, and look for indicate a certain preparation for a future event, also a calculation for it. Expect applies only to the latter sense. Expect is to believe an event is to occur. Wait and wait for imply a readiness for it. Look for is literally waiting and watching. Figuratively it is a momentary expectation.

780. WANT, need, lack. One wants when he is without that which is necessary for his comfort. He needs when he is without that which is necessary to his existence or purposes. Want includes the idea of desire. We may want luxuries. One may want what another has no use for. But all need essentially the same things. To lack is to be deficient, commonly to be deficient in one thing. Lack applies also to inanimate things. The door lacks a hinge.

781. WAY, manner, method, mode, course, means. Way is a general expression denoting the process by which anything is done. Manner is a way chosen for a particular occasion. Method is a way thought out by one's self. Method may be the result of experience, or be built upon a theory. Method is applied to matters requiring thought and contrivance. Mode refers to mechanical matters. One may have a good method of singing, but an awkward mode of handling his music, and an unattractive manner of carrying himself on the stage. Course is the measures collectively which we adopt in order to achieve a result. Means is the actual thing or things we do or use in order to succeed. Means might be regarded as tools.

782. WEAKEN, enfeeble, debilitate, enervate, invalidate. Anything that depletes strength is said to weaken. Enfeeble is to undermine vital power permanently. Debilitate may refer to the weakening temporarily or otherwise of force in one particular only. Enervate applies to the weakening of nervous force. Invalidate has reference merely to things. One's claim to an estate may be invalidated. One is enfeebled by the progress of a fatal illness, or old age. One's memory may become debilitated by excessive demands upon it.

783. WEARISOME, tiresome, tedious. Anything which requires expenditure of strength may become wearisome. Tiresome holds more the idea of a tax upon physical strength. Tedious refers rather to that which is mentally tiresome. Also, tedious suggests what is tiresome through inaction, or waiting and suspense.

784. WEARY, tire, jade, harass. Long continued effort and exertion weary. A slight exercise may tire. Tire is a more superficial effect. Exertion beyond one's strength jades. Jade contains the idea of weariness

approaching exhaustion. Exertion under conditions most annoying and unpleasant harasses. Harass includes mental irritation, and may refer only to excessive exasperation.

785. WEIGHT, burden, load. Anything that is heavy has weight. Load signifies a weight which is carried. Weight and load may be more or less heavy. A burden is that which is carried by animate bodies. A ship or a wagon may carry a load, but only a person or an animal can carry a burden. A burden is commonly a heavy load, though not necessarily so.

786. WEIGHT, heaviness, gravity. Weight is the quality of being heavy and is the effect of the force of gravity; it is also the quantity of heaviness. We may speak of the weight of even very light bodies; but we speak of the heaviness of only those of great weight. Gravity is the attractive force which the mass of the earth exerts upon all bodies, and is the cause of weight. In a figurative use we speak of the gravity of an offense or crime.

787. WELL-BEING, welfare, prosperity, happiness. Well-being is the state or condition of being well and may be regarded as a more or less normal condition; welfare is the state or condition of both well-doing and well-being; prosperity indicates an advance, gain, or successful progress towards the attainment of that which is desired; happiness is the state of mind which is brought about by prosperity, welfare, or well-being.

788. WHOLE, entire, complete, total, integral. What is whole has had nothing taken from it. That which is entire has not been divided. The complete is not in any way deficient. Thus, one eats a whole apple when he eats all of it, but he does not eat it entire because he eats it one piece at a time. However, the apple, if it were not grown to its full size, was not complete. Total implies the summing up of all the parts, and is used in speaking of intangible things. Integral is that which is both whole and entire.

789. WICKED, nefarious, iniquitous. Wicked, being the generic expression, may be used in a milder sense than the other two. Iniquitous is a species of wickedness which is extremely reprehensible. Nefarious is a still stronger term and denotes wickedness in the highest degree. That which is nefarious violates the most sacred trust and obligation.

790. WILL, wish. To wish is simply a desire toward an object. To will is to effect a wish by one's own active exertions.

791. WILLINGLY, voluntarily, spontaneously. What is done willingly is done without resistance of the will. What is done voluntarily is done of one's own accord without outside force or suggestion. Spontaneously refers to that species of the voluntary which requires no effort, hence is used also to describe inanimate action.

792. WISDOM, prudence. Wisdom is knowledge. Prudence is foresight in action. Prudence holds also the idea of caution.

793. WIT, humor, satire, irony, burlesque. Wit consists in a spontaneous perception of knowledge or truth. Wit expresses itself only in words. Humor, which is rather a capacity for perceiving the ludicrous, may express itself in both words and action. Satire is ill-natured wit. Irony is likewise more or less ill natured, but has the peculiar quality of expressing the opposite of what is meant. Burlesque is the lowest form of humor; it is grotesque and exaggerated representation and consists mostly of action rather than speech.

794. WONDER, surprise. What is unusual produces a feeling of wonder. That which is sudden and unexpected causes surprise.

795. WONDER, miracle, marvel, prodigy, monster. As above, the unusual is regarded as a wonder. A wonder is natural. A supernatural event is a miracle. What is excessively wonderful is a marvel. Marvels border on the fictitious. That which is a wonder because of premature development is a prodigy. Hence achievements disproportionately large to the means employed are called prodigious. A child who does anything as well as an adult could be expected to do it is a prodigy. A monster is a violation of the laws of nature.

796. WORD, term, expression. Any connected sounds which serve to communicate a thought are words. A word which has a specific meaning is a term. A word, or words, which convey a forcible meaning is an expression. A writer's purity of style depends upon his choice of words; his precision depends upon his choice of terms. His forcefulness depends upon the aptitude of his expressions. Usage determines words. Science fixes terms. Sentiment provides expressions.

797. WORK, labor, toil, drudgery, task. Anything that calls for exertion is work. Labor is hard work. Toil is the extreme of hard work. Drudgery is the most menial and unsatisfying work. Task is work imposed by others. Task comprehends also the idea of a particular piece of work.

798. WRITER, penman, scribe. Whoever writes is a writer. Whoever writes expertly is a penman. Who copies or transcribes is a scribe.

799. WRITER, author. Every one who writes is a writer, but only he who invents is an author; hence editors and compilers are writers, but not authors unless they also write original books.

800. YOUTHFUL, juvenile, puerile. Youthful is having the quality of youth. Juvenile is the state of being very young. Puerile, meaning childish, is more often used in a bad sense, as describing acts of men which mark the absence of manhood. Youthfulness in an older person is a beautiful attribute.

INDEX TO SYNONYMOUS TERMS.

The numerals refer to preceding sections in which the word occurs.

SELECTED LISTS OF ANTONYMS AND HOMONYMS.

ANTONYMS.

Antonyms are words of opposite; synonyms words of like meaning. Below is given a list of some common words with their antonyms. Only the ordinary equivalents are selected, but it is to be understood that a word may have several antonyms, not all of which express the exact opposite meaning, for some show a distinction relatively intermediate.

abandon—cherish
abate—aggravate, enlarge
abhor—crave
abide—depart
abolish—renew
abound—lack
absolve—convict
absorb—exude
abuse—conserve
accident—preparation
active—inert
adapt—disturb
add—subtract
adequate—worthless
adhesive—separable
admire—despise
adorn—deface
afraid—fearless
agree—contradict
alert—sluggish
alike—different
allow—forbid
also—in spite of
amend—debase
amid—far from
amplify—reduce
anger—love
animal—spiritual
apparent—doubtful
append—detach
ask—deny
attach—separate
auxiliary—opponent
awful—humble
awkward—dexterous
barbarous—urbane
barrier—passage
beautiful—ugly
because—although, however, yet
beginning—ending
bind—loose
bitter—sweet
body—mind
brave—cowardly
bright—dark, dull
call—listen
candid—foxy, crafty
catch—release
cease—begin
change—retain
check—accelerate
chief—underling
choose—reject
clear—vague, foggy
clever—dull
comfortable—wretched
company—solitude
condemn—justify
confess—secrete
confirm—cancel
conquer—surrender
convey—retain
criterion—guess
dark—radiant
defer—hasten
delicious—nauseous
delightful—hateful
despair—confidence
difficult—easy
discover—conceal
docile—wilful
doubt—trust
eager—apathetic
end—start
endure—yield
enmity—harmony
entertain—bore
esteem—contempt
evident—obscure
excess—dearth
exercise—rest
extemporaneous—memorized
faith—doubt
fallacy—fact, logic
fanciful—literal
fancy—fact
fickle—steady
fiction—history, reality
fine—coarse, huge
fix—detach, loosen
friendly—hostile
general—rare, singular
get—abandon
graceful—awkward
happy—melancholy
healthy—ill, delicate
help—oppose
hide—uncover
high—low
holy—wicked
honest—deceitful
horizontal—sloping, vertical
hypothesis—discovery
ideal—reality, act
idle—industrious
important—worthless
impromptu—prepared
infinite—measurable
inherent—external
insanitary—hygienic
justice—favoritism
large—microscopic
likely—dubious
make—destroy
meek—arrogant
mercy—cruelty
mind—matter
mix—divide
modesty—conceit
morose—genial
neat—slovenly
necessity—choice
new—old
normal—exceptional
obsolete—novel
order—license
pain—pleasure
pardon—sentence
particle—whole
perceive—overlook
perfect—worthless
permit—deny
persuade—deter
pertness—shyness
pity—brutality
pleasant—repulsive
plentiful—scanty
polite—rude
poverty—affluence
power—weakness
praise—censure
precarious—steady
prefer—hinder
prejudice—reasoning
previous—following
pride—modesty
primeval—recent
profit—loss, waste
promote—retard
proposal—refusal
prudence—folly
queer—usual
racy—flat, stale
radical—conservative
rare—common
reach—depart, leave
real—imaginary
religion—impiety
rend—mend
renounce—claim
revelation—mystery
revenge—forgive
riddle—axiom
rise—descend
royal—servile
rustic—urbane
sample—whole
scholar—ignoramus
send—bring
sensibility—numbness
severe—lenient
skeptic—believer
skilful—bungling
speech—silence
state—refute
steep—flat
subjective—objective
subvert—conserve
supernatural—ordinary
suppose—know
synonym—antonym
system—chaos
taciturn—garrulous
temerity—hesitation
terse—prolix
transient—eternal
tire—rest
utility—futility
vacant—crammed
venal—honest
venial—mortal
wit—stupidity
work—rest
youthful—decrepit
zealous—slothful

HOMONYMS.

Homonyms are sets of words that are sounded alike, but have no other connection, either in spelling or meaning. English is rich in these combinations, but it is necessary to print only those common ones most often confused in spelling. Careless writers frequently spell by sound alone, and so confuse these homonyms.

ail, to be ill.
ale, a beverage.

air, the atmosphere.
ere, before in time.
e'er, contraction of ever.
heir, one who inherits.

aisle, open space between rows of seats.
isle, short form of island.
I'll, contraction of I will.

altar, part of a church.
alter, to change or modify.

ante, before in time, or order.
anti, against.

ascent, upward path or act of going up.
assent, to agree to; agreement.

bare, stripped, naked.
bear, to carry; a kind of animal.

beach, a shore.
beech, a species of tree.

beat, to strike or punish.
beet, a kind of vegetable.

borough, a kind of town.
burrow, hole made by an animal.
burro, a small donkey.

bread, baked flour.
bred, reared or raised.

canon, law, church rule.
cannon, a large gun.

canvas, a kind of coarse cloth.
canvass, to solicit; to seek orders.

cede, to give up or grant.
seed, that from which anything grows or springs.

cere, to wrap as in cloth.
seer, a prophetic person.
sere, dry, withered.

cite, to quote; to summon.
sight, ability to see, view; look.
site, position, place, or station.

climb, to mount; to go up.
clime, region; poetic for climate.

currant, a small seedless raisin; a species of the gooseberry.
current, moving water or air; figurative for time, etc.

faint, fatigued; a swoon.
feint, a sham or pretense.

fair, pleasant, clear; a kind of market.
fare, money paid for a ride or trip; food in general.

dying, expiring.
dyeing, coloring.

gait, manner of walking or moving.
gate, entrance to enclosure.

hail, frozen rain; to greet.
hale, in good health, robust.

hoard, to lay up miserly; a pile.
horde, moving crowd, tribe; group of animals.

hied, past of hie, to hasten.
hide, skin or covering.

leased, hired on terms or contract.
least, smallest in size or amount.

lead, a metal; verb, meaning to conduct.
led, past tense of verb lead.

loan, something temporarily granted by another, as money, articles; use always as a noun.
lone, solitary, single.

maize, corn of the American Indians.
maze, a labyrinth, thick growth of something.

OTHER WORDS OFTEN CONFUSED.

Because of their similarity, homonyms are often mistaken for each other in writing and speaking. Another considerable class of words, on account of likeness in sound or spelling, are frequently confused. Some of these fall into a class called heteronyms, which are two or more words spelled alike, but pronounced differently, and having no connection whatever in meaning. Thus heteronyms have nothing in common, beyond the accident of being spelled alike; they even come from totally different roots. While this class is not large in English, a few common members give no little trouble. A few of these to illustrate are given below.

might, power, strength.
mite, small bit; a tiny animal.

miner, a worker in mines.
minor, one under age.

ode, a certain kind of poem, usually divided into formal parts.
owed, past tense of owe; indebted to.

pair, two joined; a couple.
pare, to cut or shave off a part.
pear, a certain pome fruit and tree.

plain, flat, level country or land.
plane, uniform, flat surface, as in certain geometric figures; a kind of tree.

pore, to gaze intently upon or over; to study; minute openings in leaf, skin, etc.
pour, to discharge, or escape freely.

principal, adj., meaning chief; as adj. used as noun, it means head as of a school; or chief sum as in the term principal and interest.
principle, noun, means some fundamental rule or truth; is never used as adj.

rain, water from the clouds.
rein, to curb; a part of a harness to curb or direct a domestic animal.
reign, time of rule, or act of ruling, as of a monarch.

raise, to exalt, lift up, or grow.
rays, shafts of light.
raze, to destroy wholly, or level with the ground.

right, just, correct, honorable.
rite, ceremony or formal custom.
write, to communicate by letters or characters.
wright, a maker or workman, as wheelwright, playwright.

soar, to mount, or fly upward.
sore, tender, painful, infected.

stationary, fixed, firm, remaining in one spot.
stationery, writing paper, supplies for business offices.

straight, direct.
strait, a narrow place; restricted.

tare, a weed; allowance for weight of container.
tear, to rend, or divide into parts.

their, possessive case of they.
there, adverb, meaning in that place.

to, preposition.
too, adverb, meaning in addition to; too much.
two, one and one; a pair.

vain, proud.
vein, a bloodvessel.
vane, an indicator, as of the direction of the wind; web of a leaf.

vice, a moral fault; as prefix, one who acts for another.
vise, or vice; a grip.

waive, to concede, or give up a right or point.
wave, a ridge of water in motion, to undulate, to flourish.

SOME COMMON HETERONYMS.

bass (base), lowest notes in the musical scale; one who sings the low or bass part.
bass, a species of fish.

bow (bou), the forward part of a ship; a nod.
bow (bo), an instrument to shoot arrows; something bent or bowed, as a rainbow, a violin bow.

lead (led), the metal.
lead (leed), a verb meaning to conduct or guide.

row (ro), rank, file; to move a boat by means of oars.
row (rou), contest, loud commotion, quarrel.

sow (so), to plant seeds by casting.
sow (sou), female of the pig species.

wind (wind), air in motion.
wind (wind), to turn, twist, or coil.

CONFUSIONS OF SOUND AND MEANING.

accept, to receive or take something offered.
except, to rule out, refuse to admit to a class.

affect, verb only, to change or modify.
effect, as verb, to put into operation or carry out; as noun, the result of some specified cause.

all ready, completely prepared or furnished.
already, an adverb, meaning previously, or before the present time.

allude, to refer to casually or indefinitely.
elude, to escape or avoid by craft or stealth.

allusion, a general or casual reference.
illusion, an unreal or fancied image presented to the sight.

angel, a celestial messenger.
angle, space between non-parallel lines.

arraignment, legal term, meaning to call to answer an indictment.
arrangement, act or manner of disposing or ordering.

born, to come into this world; used as a passive verb.
borne, carried, brought.

breath, a single respiration; breeze, etc.
breathe, the act of breathing; to respire.

cavalry, a body of mounted horsemen in an army.
Calvary, place where Christ was crucified.

capital, a capital city, etc.
capitol, a legislative statehouse, as the U. S. Capitol at Washington.

cemetery, place of interment for the dead.
seminary, a seat of learning; a place of nurture or development.

choose, to select.
chose, past of same verb; selected or adopted.

coarse, not fine; large grained.
course, a certain space of ground covered; part of a meal; a study or group of studies.

complement, that which is used to complete, as predicate complement.
compliment, commendation with show of courtesy or flattery.

costume, apparel or ornamental dress.
custom, habit of action, usage; practice.

desert, a waste place.
dessert, part of a meal.

epithet, an adjective expressing appropriate quality; an expression.
epitaph, an inscription on a tomb, or one written for such.

formally, in a set or formal manner.
formerly, in some past time; previous to now.

forth, straightway; forward in time or space.
fourth, next after third; one of four parts.
fortieth, one of four times ten parts.

later, after something else happened.
latter, last of two things or events.

lead, present tense.
led, past of verb lead.
lead, a metal.

lessen, to diminish.
lesson, to teach or discipline.

lightning, electricity in the air.

which, pronoun.
witch, an ugly woman supposed to have uncanny powers; crone.

whose, possessive pronoun.
who's, shortened form of who is.

your, possessive pronoun, your or yours.
you're, shortened for of you are.

DOUBLETS.

Many pairs or sets of words in English, though apparently different in form, are nevertheless from the same original root, with certain changes in spelling, or certain additions. Those listed below are quite typical of the class.

abbreviate, abridge
adamant, diamond
amiable, amicable
an, one
arc, arch
army, armada
balm, balsam
blame, blaspheme
brother, friar
caitiff, captive
camera, chamber
cavalry, chivalry
champaign, campaign
chieftain, captain
church, kirk
confound, confuse
crimson, carmine
dainty, dignity
dell, dale
disport, sport
entire, integer
etiquette, ticket
faculty, facility
fiddle, viol
flour, flower
gage, wage, wed
gig, jig
guard, ward
guise, wise
hale, whole
history, story
hospital, hostel, hotel, spital
human, humane
influence, influenza
iota, jot
jealous, zealous
locust, lobster
minster, monastery
naive, native
onion, union
outer, utter
paralysis, palsy
parson, person
piety, pity
plateau, platter
poke, pouch
posy, poesy
regal, royal
round, rotund
scabby, shabby
scandal, slander
separate, sever
shirt, skirt
soprano, sovereign
species, spice
supersede, surcease
tamper, temper
tradition, treason
unity, unit
vast, waste
verb, word
wain, wagon
wrack, wreck

COMPLEXITY OF THE ENGLISH LANGUAGE.

English has borrowed words from the four quarters of the earth and even from the small islands of the seas. Some terms go through very curious transformations, and some even reverse

their original meaning. Some words grow more stately and dignified; others degenerate in a shocking degree. By looking up the words listed below, one can see how interesting a book the dictionary really becomes.

abominable
algebra
alkali
academy
affidavit
ambition
ammonia
auctioneer
biscuit
blackguard
candy
cemetery
church
criticism
demagogue
diamond
electricity
geranium
handkerchief
hussy
incandescent
infant
ink
knave
mausoleum
mob
monk
nice
presently
school
secure
shrewd
silly
sincere
sinecure
solecism
squash
subpoena
taboo
treacle
vassal
villain

SOME OF THE COMMON PREFIXES.

a, in, on, by, toward; abed, aground.
a, not: anarchy, adamant, avocation.
a, ab, abs, from: avert, absent, abscond.
ac, af, ag, al, an, etc., to: accept, adopt, affix, allude, annex.
ana, up, back: anagram, analysis.

ulous, given to: credulous, bibulous.
ward, in direction of: backward, forward, outward.
y, having quality of: crafty, hilly, jolly, windy.

BRIEF LIST OF LATIN WORDS

Four or five hundred Latin words enter into thousands of compounds in English. Below are many that have given us a large number of words in common use. Since the roots of the Latin originals are often disguised even in the Latin itself, it seems best to give the whole word in each case, rather than the primary roots. Long vowels are not marked in the Latin words, except wherein absolutely needed. In the main the list here used follows the work of Professor W. W. Skeat in his *Etymological Dictionary*.

ac, sharp: acerbity, acrid, acumen, acute, ague, eager.
aequ-us, equal: adequate, equal, equanimity, equation, equinox, equity, equivalent, iniquity.
ag-ere, to drive: act, agent, agile, agriculture, coagulate, cogent, essay, exact, exigent, pilgrim.
al-ius, other: alias, alien, alibi, alter, alteration.
ang-ere, to choke: angina, anguish, anxious, anger.
anim-a, breath: animal, animate, equanimity, unanimous.
ann-us, year: annual, biennial, superannuate.
aqu-a, water: aquatic, aquarius, aqueduct, sewer.
arm-a, arms: alarm, armada, armament, armadillo.
art-em, accusative case, skill: art, artificial, inert.
audi-re, to hear: audible, audience, audit, obedient.
aur-um, gold: aureate, dory, oriel, oriole, orpine.
bass-us, low: abase, basement, bass, debase.
bat-ere, to beat: abate, battalion, battery, battle.
bib-ere, to drink: beverage, bib, imbibe, imbrue.
breu-is, short: abbreviate, breve, brevet, brief. (Latin *u* also includes English *v*.)
caball-us, a horse: cavalier, cavalry, chivalry.
cad-ere, to fall: accident, cadence, cascade, case.
caed-ere, to cut: concise, decide, precise, suicide.
cal-are, to summon: calends, council, calendar.
camer-a, a chamber: camera, chamber, comrade.
camp-us, a plain: campus, camp, campaign, champagne.
cand-ere, to shine: candid, candle, chandler, incandescent, incendiary, incense.

phain-ein, to show: epiphany, fancy, fantasy.
phon-e, sound: anthem, euphony, phonetic, symphony, telephone.
chron-os, time: anacronism, chronicle, synchronism.

WORDS ADOPTED FROM OTHER LANGUAGES.

Where do all the words in the English language come from? Most have been adopted from older tongues, including the parent English or Anglo-Saxon, as it has been called. Latin has furnished a great number of words, the native about as many, and a third group comes from many different sources. To show the great number of languages that have furnished us with words, a few of the more prominent are taken here to illustrate.

From the Scandinavian, directly or through some other language, come the words geyser, dahlia, slag, gauntlet, sloyd, floe, jib, barb, bet, bondage, brandish, cromlech, flummery, maggot, gallop, gawky, strive, waif, pocket, wicket, and knout.

From the Welsh, Gaelic, and allied dialects: braggart, crowd, flannel, clan, claymore, coronach, inch, loch, reel, slogan, whisky, colleen, skain, Tory, shillelagh, bound, vassal, charge, carpenter, dolman, garter, chariot, and barge.

From the Spanish and Portuguese and through them originally from the Latin: alligator, armada, cork, corral, desperado, matador, olio, negro, renegade, duenna, grandee, sierra, sombrero, sherry, salver, tornado, vanilla, casque, comrade, creole, grenade, molasses, pimento, punt, quadrille, tank, and parasol.

From the Dutch: aloof, avast, boom, bruin, clamp, dapper, deal, drawl, gas, deck, jerkin, knickerbocker, skipper, sled, slim, sloven, sniffle, trigger, uproar, wagon, yacht, and spook.

From the Russian, Polish, Bohemian, and allied tongues: cravat, sable, trump, trombone, polka, howitzer, slave, vampire, ukase, samovar, and steppe.

From the Hebrew: alleluia, bedlam, cherub, homer, gopher, jug, log, shibboleth, satan, teraphim, alphabet, delta, sabbath, damson, abbey, jockey, lazar, cabal, camel, cider, elephant, ebony, leviathan, mammon, and jesuit.

From various Asiatic languages: bandanna, bangle, thug, shampoo, calico, tomtom, bamboo, teak, collie, peacock, caddy, gong, junk, muck, tea, bantam, mammoth, turkey, boomerang, taboo, tattoo, atoll, mogul, and camphor.

From some of the African languages: behemoth, sack, satchel, oasis, ammonia, gypsy, lion, fustian, morocco, canary, and guinea.

From North American Indian: hickory, hominy, moose, moccasin, racoon, squash, toboggan, tomahawk, wigwam, and skunk.

From other North American languages and dialects: coyote, jalap, copal, tomato, mahogany, potato, hammock, buccaneer, hurricane, tapioca, quinine, and tobacco.

WORDS OFTEN WRONGLY SPELLED.

Regardless of your own position in life, the habit of correct spelling is most essential. Modern improvements in communication and transportation have welded firmly together our entire social fabric, so that business can no longer be transacted without good methods of writing. Spelling is prerequisite to a common understanding and to achievement in any field of business or social life. Good spelling, then, becomes increasingly important.

Correct spelling, however, is more a matter of habit than the average person realizes. Many learn to spell with little apparent effort; others seem continually to misspell the same words, making no apparent advance from time to time. Every parent should realize how essential it is to train children in correct habits of spelling in the first grades of school. Little folks must be constantly encouraged to observe words carefully, to read print clearly, and to spell consistently.

Spelling in the common schools is no longer taught in a haphazard fashion. If the object of a spelling book were to provide all the words in English for classroom study, a whole lifetime itself would be consumed in doing little else but studying orthography. Since only a small portion of the common words,—to say nothing of the intricate and unusual ones,—may be given room in any spelling book, a careful selection may be made for practical purposes. It is hardly necessary to teach *parallelogram, cochineal, hydroptic,* and such uncommon terms in the schools. On the other hand, teachers must make sure that they include all the every-day words that one needs in business, in social correspondence, and in other writing common to all persons. First, then, principles and a few simple rules may be taught. Second, a list of words commonly misspelled may be prepared for any book or any classroom. Third, each person should keep his own list of words that have given him trouble.

If one could learn only two new words each day, in three or four years, he would have the foundation vocabulary of business or social life. Indeed the mastery of a list of a thousand or more words, like that given in this book, would decrease the average person's misspellings by not less than fifty per cent. What is more important—it would get one into the habit of observing and remembering how common words are correctly spelled. Half the familiar words that many persons always misspell are found daily in our conversations and in almost every chapter of all our books.

Parents may greatly assist the schools in fostering care, observation, attention, and good memory in spelling. A good ear to distinguish between sounds, a good eye to see the correctly written or printed word, and careful habit in pronouncing and writing are the main essentials to success in spelling. Of many possible suggestions to improve our spelling, the few given below have been chosen as practical and stimulating.

1. **The first step is to develop a spelling consciousness.** Children must soon learn to make good writing and spelling a matter of habit, almost a matter of conscience. Carelessness, hurry, poor observation always stand in the way. The more the pupil guesses, the more confused he becomes; the more he relies on mere memory of certain words, without mastering classes and types, the more he will retard his own progress. Much poor spelling is the result of impulsiveness. It has often been remarked by educators that poor spellers are likely to be imperfect observers. Some have indeed placed careful scrutiny of words above everything else as an aid to learning. Either good or bad spelling may be said to be a habit of mind. One results from training, persistence, and habits of seeing things rightly; the other, from a blundering, uncertain, inconsistent, and erratic haste.

2. Spelling involves the chief senses. We hear, see, speak, and write words. Thus we use the ear, the eye, the tongue, and the arm and hand eventually. The process is incomplete until all the elements are mastered. For instance, to pronounce and to write correctly are compensating elements, as are those of hearing and seeing. Many words are often misspelled because they are mispronounced. Many are missed because they are not observed closely, or because they are written in a slipshod manner. Unless a person always habitually spells a word as it should be written, he has no good right to claim that he can spell it. Some, on the contrary, spell a word all right when it is pronounced in a spelling lesson, and they habitually get it wrong when they transcribe it to a sheet of letter paper. This certainly is not good spelling; for the test is practical, every-day use.

3. The natural order of learning to spell is recognized now in most schools. First, the word is pronounced by the teacher, and then defined, and used in a sentence. Second, it is written on the board, so that all pupils may observe it accurately, while any uncertain or peculiar parts are pointed out. Hard letters or those often confused may be printed in large hand or in colored crayon. Third, the class pronounces it carefully, and then individuals in the class. A word like *perhaps* or *irrelevant,* in which some of the letters may be transposed, should be sounded by several members of the class. Fourth, the class may now write the word or spell it orally. Fifth, eternal vigilance and many reviews fix the word forever. By the end of the second grade in school, a pupil should know the values of sounds and how to recognize them.

4. **Pronunciation** must be careful and distinct, but no letter or syllable should be over-emphasized or distorted. In a spelling test, the words should be pronounced as they should ordinarily be sounded. First, one must recognize all the letters of the word; second, he must remember them in their right order, without transpositions or shifts; third, he must always recall any peculiarities, like exceptions to rules, silent letters, and the like; fourth, he must be sure that the accent is correctly placed. Teachers and parents should point out the pit-falls in words before they have their charges study the spelling lesson. Otherwise, habits of carelessness may persist, and the student fails to notice the important parts or letters. Always be on guard against confusions like *to* and *too, lose* and *loose, lead* and *led.* When such words are confused, be sure to stress the use and meaning of the word in connection with the way it should be written.

5. Good spellers recognize that a word is right by the way it looks. If it looks too short, it may be wrong. If it looks too long, some letters may have crept in without belonging there. Thus, any observing person should recognize that *candidate,* without the first *d,* does not "look right." Vizualizing helps to fix words in memory. Look at the word you often misspell, notice every single letter, notice just how they are arranged, and how they look when written or printed. In other words, photograph the word on the sensitive plate of your brain. Now erase the word, or shut your eyes. Can you see it precisely as printed or written? Can you see groups of words thus clearly? Many students have found the method of fixation of vision truly wonderful. All poor spellers should try it again and again for greater and greater results.

6. Always point out to pupils just where they make their characteristic mistakes. One person sees the words wrongly; another does not hear them as they are pronounced; a third, even though seeing and hearing rightly, may not speak the words as others do; and a fourth may make blunders like leaving out letters, writing, i. e. *ind* for *ing.* Whatever method is used in teaching spelling, the incorrect forms should not be written on the board by the teacher. If one feels he must write an incorrect spelling, for purpose of illustration, the correct one should be placed more prominently beside it, and should be left there long after the wrong form is erased.

7. Few definite rules for spelling are needed. Some have already been given in this book on pages 22 and 23. Pupils should constantly be asked to explain the spelling of words. For instance, why is there no *e* in

writing; why is it *disappoint,* with only one *s;* why is it *perspire,* with the first *e* before the *r;* why is there no extra *e* after the *h* in *athletics?* In the grammar school and afterward, the component parts of words, prefixes, suffixes, stems, and other elements of words should be stressed.

8. Danger signals need to be erected over certain classes of words. First, transpositions of letters may thus be marked, in words like *tragedy,* in which poor spellers often exchange the *d* and the *g;* or the *i* and the *s* in *business,* getting the order mixed. Second, from certain words like *sophomore, hygiene, Niagara, arctic,* and a score of other common ones, it should be noted, a letter often drops. Third, into many words a letter intrudes. Fourth, special signals should be set against common confusions of words like *accept* and *except; lose* and *loose; their* and *there; to* and *too.*

Several excellent treatises have been written on the subject of learning to spell. Some of these, unfortunately, are not often available to the general reader. A few are mentioned here: Pryor and Pittman's *Guide to the Teaching of Spelling;* F. N. Freeman's *The Psychology of Spelling;* the investigations of Prof. W. F. Jones, who compiled a list of "one hundred demons" and other works on spelling; Leonard P. Ayres, whose *Spelling Scale* of a thousand common words is published by the Russell Sage Foundation of New York, with B. R. Buckingham's additions, as published by the University of Illinois; and other discussions by E. J. Ashbaugh, S. A. Courtis, Daniel Starch, Henry Suzzalo, W. F. Tidyman, and J. E. W. Wallin.

During the last two decades various investigations have proved that it is possible to compile a simple list of words most often misspelled. Different classifications are proposed. Merely for the sake of convenience, the divisions used in this book have been chosen, and the words have been listed in several classes. First of all, a junior list shows those words that every child in school should master. Professor W. F. Jones, after elaborate investigations, collected one hundred words that have been termed the principal "demons" in elementary spelling. About sixty of these hundred demons from Prof. Jones' classification have been included in the list given below. Others have been added to make a relatively complete list of words that children misspell in the grades.

A JUNIOR WORD LIST

across	cries	lemon	safety
again	debt	liable	said
all right	decide	library	says
almost	despair	living	scene
already	develop	lose	seen
always	different	lying	seems
among	dining	making	separate

coming	imagine	really	writing
commit	instead	receive	yacht
conquer	its (pronoun)	refer	yield
course	laid	reference	
cousin	led (past of verb)	referred	

Adult lists might include those terms that are most often misspelled, those used in connection with study and criticism, those used in business and the arts, those often confused, and a special list of proper names that cause most difficulty. In the next list that follows below are included all words that are not technical or are not otherwise classified.

COMMON WORDS OFTEN MISSPELLED BY ADULTS

RECENT WORDS AND PHRASES.

The English language is constantly receiving phrases or words in new uses. Many of these have grown up since the airplane, radio, and other modern inventions have become popular. Not a few came to us from the Great War.

ace, a French aviator who brought down at least five enemy planes; hence, any great aviator.
aerial sickness, a malady somewhat resembling mountain and seasickness, caused by the pitching and motion of aircraft.
aerostat, a passive balloon.
aileron, stabilizing device or plane attached to aircraft.
Anzacs, soldiers from Australia and New Zealand, the name being formed from the first letters of Australian and New Zealand Army Corps.
Archibald, German mobile anti-aircraft gun.
aviette, heavier than air machine propelled by aviator himself.
barrage, a curtain of projectile fire, at first used to repel an attack but later also used to cover an advance of troops on the field.
bertha or big bertha, a large German gun so nicknamed from the name of Frau Bertha Krupp, head of the Krupp interests.
Binet test, a series of graded questions and tasks to indicate the intelligence of children; later extended to test adults as well.
black Maria, a shell imperfectly exploded so as to throw off dense clouds of smoke used as a screen to cover naval or military movements.
blimp, small balloon equipped to carry passengers and to produce its own internal power.
Boche, French slang for *caboche*, meaning thick head, as applied to a German.
Bolsheviki, party of the majority in Russia, according to meaning of the word; party given to extreme political measures.
bromide, a person or term that follows custom or convention.
camouflage, any device to disguise a camp, ship, army, or depot for supplies; originally, a painted device used to deceive; and figuratively any process of deception or fraud.
corona, the fringe of light around an object; as the corona of the sun, the irregular mass of light beyond the round ball that we usually see.
cubists, a school of modern painters who rely on geometrical forms and straight lines for effects in pictures, rather than on curves.
dactylogram, a finger print, as a means of identification.
decathlon, a meet consisting of the 400 meter run, broad jump, shot put, running high jump, 100 meter run, throwing the discus, pole vault, javelin throw, 1500 meter run, and running hurdle race.
decode, to translate any message from a code into ordinary language.
direct primary, nomination of candidates directly, not by party caucus.
endocrine, an organ secreting internally a substance used in some part of the body, as the thyroid gland.
fuselage, the long body of an airplane, now usually enclosed.
hormone, substance secreted in one gland of benefit to some other part of the body.
hyphenate, a citizen in one land who still holds allegiance to another country; used in disparaging sense.
imagist, in poetry, is one who relies little on rime and rhythm, but on beauty through clear and striking images.
lettergram, a message longer than an ordinary telegram, sent at the convenience of the telegraph company at a reduced rate.
Mensheviki, party of the left or minority in Russia.
moron, a person over twelve who has the mentality of a child about eight years old.
Octobrist, a moderate liberal in Russia.
Olympiad, celebration of Olympic games every four years.
pacifist, a zealous advocate of principles opposed to war of any sort.
participating policy, in insurance, a contract that allows the insured person a share of the profits of the business.
pilot balloon, a small balloon sent up to detect the direction of the wind, or air currents.
plumcot, a cross of the plum and apricot.
preferential voting, a scheme by which the voter marks both his first and second choices for an office; in case of any failure to obtain a majority, the person wins who has greatest number of first and second choices.
questionary, a set of inquiries or questions sent to a number of persons by one making special study or investigation of a subject; a questionnaire.
Soviet, meaning a council, is a local unit of democratic government in Russia under the Bolsheviki; the entire government consists of a federation of these large and small units.
strafe, to punish, a word from the German phrase *Gott strafe England*, a popular slogan during the Great War in Germany.
surtax, in the United States, a certain amount of extra tax on incomes of $5000 net or more.
syndicalism, principles of "direct action," or the desire to secure changes in social orders by general strikes or sudden popular movements.
Triple Entente, agreements between France and Russia, England and France, and England and Russia, by which a concerted action against the Central Powers in the Great War was produced.
twilight sleep, a form of partial unconsciousness induced through the use of scopolamine and morphine, or some form of it, to deaden the pains of childbearing.
volplane, to glide to earth in a flying machine.
war bride, a person married to a soldier about to leave for the war, or on temporary leave from the front; as slang, a corporation that derived great profits from the war industries.

WORDS OFTEN WRONGLY PRONOUNCED.

1. DIVISION OF COMMON WORDS.

KEY TO MARKED LETTERS.

1. Native or English Sounds.

ä = *a* in arm.
å = *a* in ask.
ă = *a* in at.
â = *a* in air.
ā = *a* in ale.
b = *b* in be.
ch = *ch* in chew.

s = *s* in see.
sh = *sh* in she.
t = *t* in to.
t͟h = *th* in thy.
th = *th* in thigh.
û = *u* in urge.
ŭ = *u* in up.
v = *v* in van.
w = *w* in we.
y = *y* in ye.
z = *z* in zebra.
zh = *z* in azure.

2. Foreign Sounds.

ȯ = *ö* in Göthe.
ü = *ü* in Müller.
äN = *en* in encore.
ăN = *in* in vin.
ȯN = *on* in bonbon.
ŭN = *un* in un.
K = *ch* in Richter.
G = *g* in Leipzig.

3. Diphthongal Sounds.

ī = *i* in ice.
oi = *oi* in oil.
ow = *ow* in now.
u = *u* in duke.

abdomen, ăb-dō′mĕn, *not* ăb′dō-mĕn.
aborigines, ăb-ō-rĭj′ĭn-ēz.
abstemious, ăb-stē′mī-ŭs, *not* ăb-stĕm′ī-ŭs.
abstractly, ăb′străkt-lĭ.
abstruse, ăb-stru͞s′, *not* ăb-stro͞os′.
access, ăk-sĕs′ *or* ăk′sĕs; ăk′sĕs (Imp.).
acclimate, ăk-klī′māt, *not* ăk′klĭm-āt.
accompaniment, ăk-kŭm′păn-ĭ-mĕnt, *not* ăk-kŭmp′nĭm-ĕnt.
accouchement, ȧk-ko͞osh-mäN′.
accouter, ăk-ko͞o′tẽr, *not* ăk-kow′tẽr.
accrue, ăk-kru͞′, *not* ăk-kro͞o′
accurate, ăk′ku-rāt, *not* ăk′kẽr-ĭt.
acetic, ȧ-sēt′ĭk *or* ȧ-sē-tĭk.
acetylene, ȧ-sĕt′ĭl-ēn; ăs′ĕt-ĭl-ēn.
acorn, ā′kûrn; ā′kẽrn (Wor.).
acoustic, ȧ-kow′stĭk, or ȧ-ko͞o′stĭk.
across, ȧ-kros′, *not* ȧ-krost′.
acts, ăkts, *not* ăks.
acumen, ȧ-ku͞′mĕn, *not* ăk′yu͞-mĕn.
adagio, ȧ-dä′jō.
adamantine, ăd-ȧ-măn′tĭn, *not* ăd-ȧ-măn′tēn.
address (n.), ăd-drĕs′.
address (vb.), ăd-drĕs′.
adept, ăd-ĕpt′, *not* ăd′ĕpt.
adieu, ȧ-du͞′; Fr. pron. ăd-yö′.
ad infinitum, ăd ĭn-fĭn-ī′tu͞m, *not* ăd ĭn-fĭn′-ĭt-ŭm.
adjectively, ăd′jĕk-tĭv-lĭ.
admirative, ăd-mī′rȧ-tĭv.
adobe, ȧ-dō′bā.
adult, ȧ-dŭlt′, *not* ăd′ŭlt.
ad valorem, ăd vȧ-lō′rĕm, *not* ăd văl′ō-rĕm.
adventure, ăd-vĕnt′yu͞r.
adverse, ăd′vẽrs.
advertise, ăd-vẽr-tīz′.
advertisement, ăd-vẽr′tĭz-mĕnt *or* ăd-vẽr-tīz′-mĕnt.
æon, ē′ŏn.
aerate, ā-ẽr-āt, *not* ā-rē-āt.
aerial, ā-ē′rĭ-ăl.
ærie, ē′rĭ.
aerometer, ā-ẽr-ŏm′ē-tẽr.
aeronaut, ā′ẽr-ō-nôt; ā′rō-nôt (Smart).
ætiology, ē-tĭ-ŏl′ō-jĭ.
a fortiori, ā fôr-shĭ-ō′rī.
aggrandize, ăg′grăn-dīz.
agile, ăj′ĭl, *not* ăj′īl.
aid-de-camp, ād′dē-käN.
aiguille, ā-gwēl′; Fr. pron. ā-gwē′yŭ.
ailment, āl′mĕnt, *not* āl′mŭnt.
aisle, īl.
algæ, ăl′jē.
algebra, ăl′jē-brȧ, *not* ăl′jē-brā.
algebraist, ăl′jē-brā-ĭst.
alias, ā′lĭ-ăs, *not* ăl′ĭ-ăs.
alien, āl′yĕn, *not* ā′lĭ-ĕn.
allopathist, ăl-lŏp′ăth-ĭst, *not* ăl′lō-păth-ĭst.
allusion, ăl-lu͞′zhŭn, *not* ăl-lo͞o′zhŭn.
ally (n.), ăl-lī′.
alma mater, ăl′mȧ mā′tẽr, *not* äl′mä mä′tẽr.
almond, ä′mŭnd.
alpaca, ăl-păk′ȧ, *not* ăl-ȧ-păk′ȧ.
alternately, ăl-tẽr′nāt-lĭ, *not* ăl′tẽr-nāt-lĭ.
alto-rilievo, ăl′tō rē-lyā′vō.
alveolar, ăl-vē′ō-lẽr *or* ăl′vē-ō-lẽr.
amateur, ăm-ȧ-tu͞r′; Fr. pron. ä-mä-tör′.
ameliorate, ȧ-mēl′yō-rāt, *not* ā-mē′lĭ-ō-rāt.
amenable, ȧ-mē′nȧ-bl, *not* ā-mĕn′ā-bl.
amende honorable, ä-mänd′ ō-nō-rä′bl.
ament, ăm′ĕnt.
amœba, ȧ-mē′bȧ.
anæmic, ȧ-nĕm′ĭk, *not* ȧ-nē′mĭk.
anchor, ăng′kẽr.
ancien régime, äNs-yäN′ rā-zhēm′.
andante, ăn-dăn′tē; It. pron. än-dän′tä.
angiosperm, ăn′jĭ-ō-spẽrm.
aniline, ăn′ĭl-ĭn *or* ăn′ĭl-ēn.
animalcule, ăn-ĭm-ăl′ku͞l, *not* ăn-ĭm-ăl′kŭ-lē.
antarctic, ănt-ärk′tĭk, *not* ănt-är′tĭk.
anxiety, ăng-zī′ē-tĭ, *not* ăngk-sī′ē-tĭ.
anxious, ăngk′shŭs, *not* ăng′shŭs.
aperient, ȧ-pē′rĭ-ĕnt.
aperture, ăp′ẽr-tu͞r.
apices (plural of apex), ăp′ĭs-ēz.
apostle, ȧ-pos′l, *not* ȧpŏs′l *nor* ȧ-pôs′tl.
apotheosis, ăp-ō-thē′ō-sĭs, *not* ăp-ō-thē-ō′sĭs
apotheosize, ăp-ō-thē′ō-sīz.
appellate, ăp-pĕl′lāt.
appendicitis, ăp-pĕn-dĭs-ī′tĭs.
appetitive, ăp′pē-tī-tĭv.
appoggiatura, ăp-pŏj-ȧ-to͞o′rä.
apricot, ā′prĭ-kŏt, *not* ăp′rĭ-kŏt.
apropos, ăp′rō-pō, *not* ăp-rō-pō′.
aqua, ā′kwȧ.
aquarium, ȧ-kwā′rĭ-ŭm, *not* ä-kwä′rĭ-ŭm.
aqueduct, ăk′wē-dŭkt, *not* ăk′wē-dŭk.
archangel, ärk-ān′jĕl, *not* ärch-ān′jĕl.
archbishop, ärch-bĭsh′ŏp, *not* ärch′bĭsh-ŏp.
archduke, ärch-du͞k′, *not* ärch′du͞k.

archfiend, ärch′fēnd, *not* ärch-fēnd′.
archipelago, är-kĭ-pĕl′å-gō, *not* är-chĭ-pĕl′å-gō.
architect, är′kĭ-tĕkt, *not* är′chĭ-tĕkt.
archives, är′kīvz, *not* är′chīvz.
arctic, ärk′tĭk, *not* är′tĭk.
aria, ä′rĭ-å *or* ā′rĭ-å.
arid, ăr′ĭd, *not* ā′rĭd.
aristocrat, å-rĭs′tō-krăt *or* ăr′ĭs-tō-krăt.
artificer, är-tĭf′ĭs-ēr, *not* är′tĭf-ĭs-ēr.
artiste, är-tēst′.
ascetic, ås-sĕt′ĭk.
ask, åsk, *not* ăsk.
askance, ås-kåns′, *not* ăs-kăns′.
asphalt, ăs-fălt′, *not* ås′fålt.
astrakhan, ăs-trå-kăn′, *not* ăs′trå-kăn.
atheneum, ăth-ē-nē′ŭm, *not* ā-thē′nē-ŭm.
attaché, ăt-tå-shā′.
attacked, ăt-tăkt′, *not* ăt-tăk′tĕd.
attorney, ăt-tûr′nĭ.
auberge, ō-bârzh′.
au courant, ō kōō-răN′.
au fait, ō fā′.
aunt, ănt, *not* ånt, *nor* ânt.
au revoir, ō rŭv-wär′.
aurist, ô′rĭst.
aurora borealis, ô-rō′rå bō-rē-ā′lĭs.
automobile, ô-tō-mō′bĭl; *Fr. pron.*, ō-tō-mō-bēl′.
automobilist, ô-tō-mō′bĭl-ĭst.
avoirdupois, ăv-ēr-dŭ-poiz′ *not* ăv-ēr-dŭ-poi′.
backslide, băk-slīd′, *not* băk′slīd.
backslider, băk-slī′dēr, *not* băk′slī-dēr.
bade, băd, *not* bād.
banana, bă-nā′nå, *not* băn-ăn′å.
bandoline, băn′dō-lĭn, *not* băn-dō-lēn′.
bargain, bär′gĕn, *not* bär′gŭn.
barrel, băr′rĕl, *not* bär′rŭl.
bas-bleu, bä-blē′; Fr. pron. bä-blō′.
basin, bā′sn, *not* bā′sĭn.
basket, bås′kĕt, *not* băs′kĕt.
bas-relief, bä-rē-lēf′.
basso-rilievo, bäs′so rē-lē-ā′vō.
bass-relief, băs′rē-lēf.
bath, båth, *not* băth.
bdellium, dĕl′yŭm.
beau ideal, bō ī-dē′ăl.
beau monde, bō-mŏnd′ *or* bō-mōnd′; Fr. pron. bō-mônd′.
beaux-esprits, bō-zĕs-prē′.
bedstead, bĕd′stĕd, *not* bĕd′stĭd.
belles-lettres, bĕl-lĕt′tĕr.
bellows, bĕl′ŭs.
beloved (adj), bē-lŭv′ĕd.
beloved (part.), bē-lŭvd′.
belvedere, bĕl-vē-dēr′ *or* bĕl′vē-dēr.
benignant, bē-nĭg′nănt, *not* bē-nī′nănt.
bestial, bĕst′yăl.
bête-noire, bāt-nwär′.
betrothal, bē-troth′ăl, *not* bē-trō′thăl.
bicycle, bī′sĭk-l, *not* bĭ′sī-kl.
biennial, bī-ĕn′ĭ-ăl.
bijou, bē-zhōō′.
billet-doux, bĭl′ā-dōō.
bindery, bīnd′ĕr-ĭ, *not* bīnd′rĭ.
biographer, bī-ŏg′rå-fĕr.
biography, bī-ŏg′rå-fĭ.
bizarre, bē-zär′.
blasé, blå-zā′.
blatant, blā′tănt, *not* blăt′ănt.
bon-ton, bôN-tôN′.
bon-vivant, bôN-vē-văN′.
burlesque, bûr-lĕsk′, *not* bûr′lĕsk.
business, bĭz′nĕs, *not* bĭz′ĭ-nĕs.

butcher, bŏŏch′ĕr, *not* bōō′chĕr.
cacao, kå-kā′ō *or* kā′kō.
cachet, kåsh′ā.
cachou, kå-shōō′.
cacique, kå-sēk′.
cadaver, kå-dā′vĕr, *not* kå-dăv′ĕr.
cæsura, sē-zʊ′rå *or* sē-sʊ′rå; sē-zhōō′rå (Hal.).
café, kăf′ā; Fr. pron. kä-fā′.
caisson, kā′sŏn.
calf, kăf, *more properly* kåf.
caliph, kā′lĭf.
calk, kôk.
calm, käm, *not* kăm.
caloric, kå-lŏr′ĭk, *not* kå-lō′rĭk.
calve, kåv, *not* kåf.
calyx, kā′lĭks, *not* kăl′ĭks.
camelopard, kå-mĕl′ō-pärd *or* kăm′ĕl-ō-pärd.
campagna, käm-pän′yå.
campanile, kåm-på-nē′lā.
canaille, kå-nāl′; kăn-ăl′ (Stor.); Fr. pron kä-nä′yŭ.
cancel, kăn′sĕl, *not* kăn′sl.
candelabra, kăn-dē-lā′brå, *not* kăn-dē-lä′brå.
canine, kå-nīn′.
cañon, kăn′yŭn *or* kăn-yōn′.
cantalever, kăn′tå-lĕv-ēr.
cantatrice, kån-tå-trē′chē.
canyon, kăn′yŭn.
caoutchouc, kōō′chōōk.
capitulate, kā-pĭt′yʊ-lāt, *not* kā-pĭch′ōō-lāt.
capuchin, kăp-yʊ-shēn′, *not* kăp′yʊ-chĭn.
caret, kā′rĕt *or* kăr′ĕt.
caricature, kăr′ĭk-å-tʊr.
Carolinian, kăr-ō-lĭn′ĭ-ăn, *not* kăr-ō-lī′nĭ-ăn.
carte blanche, kärt-blänsh′.
cartridge, kär′trĭj, *not* kät′rĭj.
caseine, kā′sē-ĭn, *not* kā′sē-ēn.
cashmere, kăsh′mēr.
casino, kå-sē′nō.
castanet, kăs′tå-nĕt.
catalogue, kăt′å-lôg, *not* kăt′å-lôg.
catalpa, kå-tăl′på, *not* kå-tôl′på.
catch, kăch.
catchup, kăch′ŭp, *not* kĕch′ŭp.
catechism, kăt′ē-kĭzm, *not* kăt′ē-kĭz-ŭm.
catsup, kăt′sŭp.
caveat, kā′vē-ăt, *not* kăv′ē-ăt.
cayenne, kā-ĕn′ *or* kī-ĕn′.
cello, chĕl′lō.
cement (n.), sē-mĕnt′ *or* sĕm′ĕnt.
cemetery, sĕm′ē-tĕr-ĭ, *not* sĕm′ē-trĭ.
centennial, sĕn-tĕn′nĭ-ăl, *not* sĕn-tĕn′yăl.
cephalic, sē-făl′ĭk, *not* sĕf′ăl-ĭk.
ceramic, sē-răm′ĭk, *not* kē-răm′ĭk.
cerebrum, sĕr′ē-brŭm, *not* sē-rē′brŭm.
cerement, sēr′mĕnt, *not* sĕr′ē-mĕnt.
challis, shăl′lĭ.
chalybeate, kå-lĭb′ē-ăt, *not* chå-lĭb′ē-ăt.
chamois, shăm′ĭ *or* shå-moi′.
champagne, shăm-pān′.
chaos, kā′ŏs.
chaperon, shăp′ĕr-ōn.
chargé d'affaires, shär-zhā′ dăf-fâr′.
charlotte russe, shär′lŏt rōōs.
chasm, kăzm, *not* kăz′ŭm.
chasten, chā′sn, *not* chās′n, *nor* chās′tn.
chastise, chăs-tīz′, *not* chăs′tīz.
chastisement, chăs′tĭz-mĕnt, *not* chăs-tīz′mĕnt.
chauffeur, shō-fŏr′.
chef, shĕf.
chef-d'œuvre, shā-dĕvr′.
chemise, shē-mēz′.

chenille, shē-nēl′.
cherubim, chĕr′ʊ-bĭm, *not* chĕr′ŭb-ĭm.
chestnut, chĕs′nŭt, *not* chĕst′nŭt.
cheviot (cloth), chĕv′ē-ŭt.
chiaro-oscuro, kē-ä′rō ŏs-kōō′rō.
chicken, chĭk′ĕn, *not* chĭk′n.
chiffonier, shĭf-ŏn-ēr′.
children, chĭl′drĕn, *not* chĭl′dĕrn.
chimera, kĭm-ē′rȧ, *not* kī-mē′rȧ.
chiropodist, kī-rŏp′ō-dĭst.
chisel, chĭz′ĕl, *not* chĭz′l.
chock-full, chŏk′fo͝ol, *not* chŭk′fo͝ol.
chorister, kŏr′ĭs-tẽr, *not* kō′rĭst-ẽr.
chyle, kīl.
chyme, kīm.
cinchona, sĭn-kō′nȧ, *not* sĭn-chō′nȧ.
circuit, sẽr′kĭt, *not* sẽr′kŭt.
civil, sĭv′ĭl, *not* sĭv′l.
clairvoyant, klâr-voi′ănt.
clandestine, klăn-dĕs′tĭn.
clapboard, klăb′ôrd, *not* klăp′bôrd.
clarinet, klăr′ĭn-ĕt.
cleanly (adj.), klĕn′lĭ.
cleanly (adv.), klēn′lĭ.
clematis, klĕm′ȧ-tĭs, *not* klē-mā′tĭs.
clique, klēk, *not* klĭk.
coadjutor, kō-ăd′jʊ-tẽr, *not* kō-ăd′jʊ-tẽr.
cocaine, kō′kȧ-ĭn.
codeine, kō-dē′ĭn.
cognomen, kŏɢ-nō′mĕn, *not* kŏɢ′nō-mĕn.
coiffure, kwä-für′.
colander, kŭl′ăn-dẽr, *not* kŏl′ăn-dẽr.
cold-chisel, kōld′-chĭz-ĕl.
colosseum, kŏl-ŏs-sē′ŭm.
column, kŏl′ŭm, *not* kōl′yŭm.
comeliness, kŭm′lĭ-nĕs, *not* kōm′lĭ-nĕs.
comely, kŭm′lĭ, *not* kōm′lĭ.
comme il faut, kŭm-ēl-fō′.
commiserate, kŏm-mĭz′ẽr-āt, *not* kŏm-mĭs′ẽr-āt.
commodious, kŏm-mō′dĭ-ŭs, *not* kŏm-mō′jŭs.
commune (n.), kŏm′mʊn.
comparable, kŏm′pȧ-rȧ-bl, *not* kŏm-pâr′ȧ-bl.
complex, kŏm′plĕks, *not* kŏm-plĕks′.
comptroller, kŏn-trō′lẽr.
con amore, kŏn ȧ-mō′rē.
concrete (n. and adj.), kŏn′krēt.
concrete (vb.), kŏn-krēt′.
condolence, kŏn-dō′lĕns, *not* kŏn′dō-lĕns.
conduit, kŏn′dĭt *or* kŭn′dĭt.
confidant, kŏn-fĭd-ănt′, *not* kŏn′fĭd-ănt.
congenial, kŏn-jēn′yȧl.
congregate, kŏng′ɢrē-ɢāt.
connoisseur, kon-nā-sör′.
conquest, kŏng′kwĕst, *not* kŏn′kwĕst.
conscientious, kŏn-shĭ-ĕn′shŭs, *not* kŏn-sĭ-ĕn′-shŭs.
conservatoire, kôɴ-sĕr-vä-twär′.
considerable, kŏn-sĭd′ẽr-ȧ-bl, *not* kŏn-sĭd′rā-bl.
consignee, kŏn-sīn-ē′.
constable, kŭn′stȧ-bl, *not* kŏn′stȧ-bl.
consul, kŏn′sŭl, *not* kown′sŭl.
contemplative, kŏn-tĕm′plā-tĭv, *not* kŏn′tĕm-plā-tĭv.
contiguous, kŏn-tĭɢ′yʊ-ŭs.
contretemps, kôɴ-trŭ-täɴ′.
conversant, kŏn′vẽr-sănt, *not* kŏn-vẽr′sănt.
coquet, kō-kĕt′.
coral, kŏr′ăl, *not* kō′răl.
cordial, kôr′jăl *or* kôrd′yăl.
cornet, kôr′nĕt, *not* kôr-nĕt′.
corolla, kō-rŏl′ȧ.
corps (military), kōr; pl. kōrz.
cortége, kôr-tăzh′.
cosmetic, kŏz-mĕt′ĭk, *not* kŏs-mĕt′ĭk.
cote (n.), kōt, *not* kŏt.
cotillion, kō-tĭl′yŭn.
coupé, kōō-pā′.
coupon, kōō′pŏn.
courteous, kûrt′ē-ŭs.
cousin, kŭz′n, *not* kŭz′ĭn.
covetous, kŭv′ĕt-ŭs, *not* kŭv′ē-chŭs.
cowardice, kow′ärd-ĭs, *not* kow′ärd-ĭs.
craunch, kränch, *not* krônch.
crèche, krāsh.
credence, krē′dĕns, *not* krĕd′ĕns.
credulous, krĕd′ʊlŭs, *not* krĕj′ōō-lŭs.
creek, krēk, *not* krĭk.
crematory, krĕm′ȧ-tō-rĭ.
crouch, krowch, *not* krōōch.
cuirass, kwē-răs′ *or* kwē′răs.
cuisine, kwē-zēn′.
culinary, kʊ′lĭn-ā-rĭ, *not* kŭl′ĭn-ā-rĭ.
cupboard, kŭb′bẽrd.
cupola, kʊ′pō-lȧ, *not* kʊ′pȧ-lō.
curator, kʊ-rā′tẽr.
cycle, sī′kl, *not* sĭk′l.
czarowitz, zär′ō-wĭts *or* tsär′ō-vēch.
daguerreotype, dȧ-ɢĕr′ō-tīp, *not* dȧ-ɢĕr′ē-ō-tīp.
dais, dā′ĭs.
damagé, dăm′āj, *not* dăm′ĭj.
daub, dôb, *not* dŏb.
débris, dā-brē′.
débutante, dā-bʊ-tŏnt′.
decade, dĕk′ād, *not* dē-kād′.
décolleté, dā-kōl-tā′, *not* dā-kŏl′tā.
decorous, dē-kō′rŭs *or* dĕk′ō-rŭs.
deficit, dĕf′ĭs-ĭt, *not* dē-fĭs′ĭt.
deign, dān.
delirious, dē-lĭr′ĭ-ŭs, *not* dē-lē′rĭ-ŭs.
demesne, dē-mēn′; dē-mān′.
depths, dĕpths, *not* dĕps.
de rigueur, dŭ rē-ɢör′.
deshabille, dāz-ȧ-bēl′; dĕs-hȧ-bĭl′ *or* dĕz′ȧ-bēl.
desideratum, dē-sĭd-ēr-ā′tŭm, *not* dē-sĭd-ēr-ä′tŭm.
despicable, dĕs′pĭk-ȧ-bl, *not* dē-spĭk′ȧ-bl.
destine, dĕs′tĭn.
de trop, dŭ trō′.
different, dĭf′fẽr-ĕnt, *not* dĭf′rĕnt.
digitalis, dĭj-ĭ-tā′lĭs, *not* dĭj-ĭ-tā′lĭs.
dilettante, dĭl-ĕt-ăn′tā *or* dē-lā-tȧn′tā.
diploma, dĭ-plō′mȧ, *not* dī-plō′mȧ.
direct, dĭ-rĕkt′, *not* dī-rĕkt′.
discourse, dĭs-kōrs′, *not* dĭs′kōrs.
disease, dĭz-ēz′, *not* dĭs-ēz′.
disputant, dĭs′pʊ-tănt, *not* dĭs-pʊ′tănt.
distich, dĭs′tĭk, *not* dĭs′tĭch.
district, dĭs′trĭkt, *not* dē-strĭkt.
diverge, dĭv-ẽrj′, *not* dī-vẽrj′.
dolce far niente, dōl′chā fär-nē-ān′tā.
domain, dō-mān′, *not* dō′mān.
donkey, dŏng′kĭ, *not* dŭng′kĭ.
douche, dōōsh.
drawers, drô′ẽrz, *not* drôrz.
drought, drowt.
drowned, drownd.
ductile, dŭk′tĭl, *not* dŭk′tēl.
eau de cologne, ō dŭ kō-lōn′.
eczema, ĕk′zē-mȧ, *not* ĕk-zē′mȧ.
elegiac, ē-lē′jĭ-ăk *or* ĕl-ē-jī′ăk.
eleven, ē-lĕv′n, *not* lĕv′n.
élite, ā-lēt′.
elongate, ē-lŏng′ɢāt, *not* ĕ-lŏn′ɢāt.
enchant, ĕn-chănt′, *not* ĕn-chănt′.

encore, äng-kōr′.
engine, ĕn′jĭn, *not* ĕn′jīn.
ennui, än-wē′; Fr. pron. äN-nwē′.
enquiry, ĕn-kwī′rĭ, *not* ĕn′kwĭr-ĭ.
entente cordiale, äN-täNt′ kôr-dyäl′.
erasure, ē-rā′zhur, *not* ē-rā′shur.
erysipelas, ĕr-ĭ-sĭp′ē-lăs, *not* ĭr-ĭ-sĭp′ē-lăs.
esoteric, ĕs-ō-tĕr′ĭk.
espionage, ĕs′pē-ōn-āj *or* ĕs′pē-ŏn-äzh.
esprit de corps, ĕs-prē′ dŭ kōr.
etiquette, ĕt′ĭ-kĕt.
étude, ā-tōōd′.
exaggeration, ĕgz-ăj-ĕr-ā′shŭn.
examine, ĕgz-ăm′ĭn, *not* ĕks-ăm′ĭn.
example, ĕgz-ăm′pl.
exist, ĕgz-ĭst′, *not* ĕks′ĭst.
exit, ĕks′ĭt, *not* ĕgz′ĭt.
exogenous, ĕks-ŏj′ē-nŭs.
expedient, ĕks-pē′dĭ-ĕnt, *not* ĕks-pē′jĕnt.
expiratory, ĕks-pīr′ā-tō-rĭ.
exponent, ĕks-pō′nĕnt, *not* ĕks′pō-nĕnt.
exquisite, ĕks′kwĭz-ĭt, *not* ĕks-kwĭz′ĭt.
extant, ĕks′tănt, *not* ĕks-tănt′.
ex-tempore, ĕks-tĕm′pō-rē, *not* ĕks-tĕm′pōr, a gross error.
extraordinary, ĕks-trôr′dĭn-ā-rĭ *or* ĕks-trā-ôr′-dĭn-ā-rĭ.
façade, fā-säd′ *or* fā-säd′.
falcon, fô′kn.
faucet, fô′sĕt, *not* făs′ĕt.
faux pas, fō-pä′, *not* fōō′pō.
favorite, fā′vĕr-ĭt, *not* fā′vēr-ĭt.
fecund, fē′kŭnd, *not* fē′kŭnd.
fellow, fĕl′lō, *not* fĕl′lŭ.
feminine, fĕm′ĭn-ĭn, *not* fē′mĭn-ĭn.
fête, fāt.
fiancé, fē-äN-sā′.
fiancée, fē-äN-sā′.
fibril, fī′brĭl, *not* fĭb′rĭl.
figure, fĭg′yur.
finale, fē-nä′lā, *not* fī-năl′ē.
finance, fĭn-ănz′, *not* fī′năns.
financier, fĭn-ăn-sēr′, *not* fī′năn-sēr.
florid, flŏr′ĭd, *not* flō′rĭd.
forbade, fôr-băd′, *not* fôr-bād′.
forest, fŏr′ĕst, *not* fôr′ŭst.
fragile, frăj′ĭl, *not* frăj′ĭl.
franchisement, frăn′chĭz-mĕnt.
fräulein, froi′līn.
friendship, frĕnd′shĭp, *not* frĕn′shĭp.
frontier, frŏn′tēr, *not* frŭn′tēr.
fungi, fŭn′jī, *not* fŭng′gī.
furniture, fûr′nĭt-yur.

gallery, găl′ĕr-ĭ, *not* găl′rĭ.
garage, găr′äj; Fr. pron., gär-äzh′.
garçon, gär-sôN′.
garrulous, găr′rōō-lŭs.
gaucherie, gōsh-rē′.
generally, jĕn′ĕr-ăl-ĭ, *not* jĕn′răl-ĭ.
generic, jē-nĕr′ĭk, *not* jĕn′ĕr-ĭk.
genre, zhäNr.
genuine, jĕn′yu-ĭn, *not* jĕn′yu-īn.
gerund, jĕr′ŭnd, *not* jē′rŭnd.
get, gĕt, *never* gĭt.
ghastly, gäst′lĭ, *not* găst′lĭ.
giaour, jowr.
gist, jĭst, *not* gĭst.
gives (fetters), jĭvz, *not* gĭvz.
gladiolus, glä-dī′ō-lŭs.
glottis, glŏt′ĭs, *not* glō′tĭs.
glycerine, glĭs′ĕr-ĭn, *not* glis′ĕr-ēn.
gneiss, nīs.
gondola, gŏn′dō-lä, *not* gŏn-dō′lä.
gone, gon.
government, gŭv′ĕrn-mĕnt, *not* gŭv′ĕr-mĕnt.
granddaughter, grănd′dô-tĕr, *not* grăn′dô-tĕr.
grandson, grănd′sŭn, *not* grăn′sŭn.
grasp, gräsp, *not* grăsp.
gratis, grā′tĭs, *not* grăt′ĭs.
grimace, grĭm-ās′, *not* grĭm′ās.

habitué, â-bē-tü-ā′ *not* hăb-ĭt-yu-ē′.
handbook, hănd′bo͝ok, *not* hăn′bo͝ok.
harass, hăr′ăs.
hautboy, hō′boi.
hearth, härth, *not* hĕrth.
height, hīt, *not* hītth.
heinous, hā′nŭs, *not* hē′nŭs.
herring, hĕr′ĭng, *not* hĕr′ĭn.
highwayman, hī′wā-măn, *not* hī-wā′măn.
history, hĭs′tō-rĭ, *not* hĭs′trĭ.
homestead, hōm′stĕd, *not* hōm′stĭd.
honest, ŏn′ĕst, *not* ōn′ŭst.
honorable, ŏn′ŏr-ă-bl, *not* ŏn′rà-bl.
hoof, hōōf, *not* hŏŏf.
horizon, hō-rī′zŏn.
horrid, hŏr′rĭd, *not* hôr′rĭd.
hors d'œuvre, ôr döv′r.
hovel, hŏv′ĕl, *not* hŭv′ĕl.
hundred, hŭn′drĕd, *not* hŭn′dĕrd.
hydraulics, hī-drô′lĭks, *not* hī-drŏl′ĭks.
hypocrisy, hĭp-ŏk′rĭs-ĭ.

ice-cream, īs′krēm, *not* īs-krēm′.
idiosyncrasy, ĭd-ĭ-ō-sĭng′krà-sĭ.
ignoramus, ĭg-nō-rā′mŭs, *not* ĭg-nō-rā′mŭs.
illustrate, ĭl-lŭs′trāt, *not* ĭl′lŭs-trāt.
impious, ĭm′pĭ-ŭs, *not* ĭm-pī′ŭs.
importune, ĭm-pôr-tun′.
impotent, ĭm′pō-tĕnt, *not* ĭm-pō′tĕnt.
inaugurate, ĭn-ô′gu-rāt, *not* ĭn-ô′gŭr-āt.
incomparable, ĭn-kŏm′pà-rà-bl, *not* ĭn-kŏm-pâr′-ā-bl.
indisputable, ĭn-dĭs′pu-tà-bl, *not* ĭn-dĭs-pu′tà-bl.
inexplicable, ĭn-ĕks′plĭk-à-bl.
infamous, ĭn′fà-mŭs.
innocent, ĭn′nō-sĕnt, *not* ĭn′nō-sŭnt.
inquiry, ĭn-kwī′rĭ, *not* ĭn′kwĭr-ĭ.
insatiable, ĭn-sā′shà-bl *or* ĭn-sā′shĭ-à-bl.
instead, ĭn-stĕd′, *not* ĭn-stĭd′.
interesting, ĭn′tĕr-ĕst-ĭng, *not* ĭn-tĕr-ĕst′ĭng.
international, ĭn-tĕr-năsh′ŭn-ăl, *not* ĭn-tĕr-nā′-shŭn-ăl.
inundate, ĭn-ŭn′dāt, *not* ĭn′ŭn-dāt.
iron, ī′ŭrn.
isinglass, ī′zĭng-glàs, *not* ī′zĭn-glàs.
italic, ĭ-tăl′ĭk, *not* ī-tăl′ĭk.
ivory, ī′vō-rĭ, *not* ī′vrĭ.

joist, joist, *not* jois.
jonquil, jŏn′kwĭl.
jostling, jŏs′lĭng, *not* jŏst′lĭng.
jowl, jōl, *not* jowl.
judgment, jŭj′mĕnt, *not* jŭj′mŭnt.
jugular, ju′gu-lĕr, *not* jŭg′yu-lĕr.
just (adv.), jŭst, *never* jĕst.

kaleidoscope, kà-lī′dō-skōp.
kept, kĕpt, *not* kĕp.
kettle, kĕt′l, *not* kĭt′l.
kiln, kĭl, *not* kĭln.
kinetograph, kĭ-nē′tō-grâf.
knout, nowt or nōōt.

laboratory, lăb′ō-rà-tō-rĭ, *not* lăb′rà-tō-rĭ.
lamentable, lăm′ĕnt-à-bl, *not* lā-mĕnt′à-bl.
language, lăng′gwăj, *not* lăng′gwĭj.
languor, lăng′gwĕr.
laryngitis, lăr-ĭn-jī′tĭs, *not* lăr-ĭn-jē′tĭs.

laugh, läf.
laundress, län′drĕs.
lava, lä′vȧ *or* lā′vȧ, *not* lăv′ȧ.
legate, lĕg′āt, *not* lē′gāt.
length, lĕngth, *not* lĕnth.
library, lī′brā-rĭ, *not* lĭ′brĭ.
licorice, lĭk′ō-rĭs, *not* lĭk′ō-rĭsh.
literature, lĭt′ĕr-ȧ-tur.
lithographer, lĭth-ŏg′rȧ-fĕr, *not* lĭth′ō-grăf-ĕr.
long-lived, lŏng′līvd, *not* lŏng′lĭvd.
mackerel, măk′ĕr-ĕl, *not* măk′rĕl.
maestro, mä-ās′trō, *not* mā′strō.
magna charta, măg′nȧ kär′tȧ.
magnolia, măg-nō′lĭ-ȧ, *not* măg-nōl′yȧ.
malpractice, măl-prăk′tĭs, *not* măl′prăk-tĭs.
mange, mānj, *not* mănj.
mania, mā′nĭ-ȧ, *not* mān′yȧ.
maniacal, mȧ-nī′ăk-ăl, *not* mā′nĭ-ăk-ăl.
manœuvre, mȧ-nōō′vr.
maritime, măr′ĭt-ĭm.
marquis, mär′kwĭs; Fr. pron. măr-kē′.
masculine, măs′kŭ-lĭn, *not* măs′kū-lĭn.
massacre, măs′sȧ-kĕr.
mattress, măt′rĕs.
mausoleum, mô-sō-lē′ŭm.
mauve, mōv.
mayonnaise, mȧ-yō-nāz′.
megrim, mē′grĭm.
meningitis, mĕn-ĭn-jī′tĭs.
menu, mē-nōō′; Fr. pron., mē-nü′.
meringue, mē-răng′.
mesne, mēn.
metric, mĕt′rĭk, *not* mē′trĭk.
migraine, mī-grān′.
minuet, mĭn′yu-ĕt, *not* mĭn-yu-ĕt′
mirage, mē-räzh′; mē-räzh′.
miserere, mĭz-ē-rē′rē.
mischievous, mĭs′chē-vŭs, *not* mĭs-chē′vŭs.
misconstrue, mĭs-kŏn′stru, *not* mĭs-kŏn-stru′.
mistletoe, mĭz′l-tō, *not* mĭs′l-tō.
mobile, mō′bĭl; mō-bēl′ *or* mōb′ĭl (Wor.).
modiste, mō-dēst′.
moire antique, mwär ăn-tēk′, *not* mō′rē ăn-tēk′.
musicale, mu-zē-kȧl′.
nature, nāt′yur.
nausea, nô′shē-ȧ *or* nô′shȧ, *not* nô′sē-ȧ.
necessarily, nĕs′ĕs-sĕr-ĭl-ĭ, *not* nĕs-ĕs-ser′ĭl-ĭ.
née, nā.
négligé, nā-glē-zhā′.
nephritis, nē-frī′tĭs.
nervine, nĕr′vĭn, *not* nĕr′vēn.
neuralgia, nu-răl′jĭ-ȧ, *not* nu-răl′jȧ.
nicety, nī′sē-tĭ, *not* nīs′tĭ.
nom de plume, nôN dŭ plüm.
nominative, nŏm′ĭn-ȧ-tĭv, *not* nŏm′nȧ-tĭv.
nonchalant, nôN-shȧ-läN′.
nonpareil, nŏn-pȧ-rĕl′, *not* nŏn-pȧ-rēl′.
nouveau-riche, nōō-vō-rēsh′.
noxious, nŏk′shŭs, *not* nŏk′shĭ-ŭs.
nuptial, nŭp′shăl, *not* nŭp′chăl.
oaths, ōthz, *not* ōths.
obeisance, ō-bē′sȧns *or* ō-bā′sȧns.
obesity, ō-bĕs′ĭt-ĭ, *not* ō-bēs′ĭt-ĭ.
obligato, ŏb-lē-gä′tō.
obligatory, ŏb′lĭ-gā-tō-rĭ.
oboe, ō′boi *or* ō′bō-ā.
ocelot, ō′sē-lŏt.
often, of′n, *not* of′tĕn.
olden, ōld′n, *not* ōld′ĕn.
on dit, ôN-dē′.
ordeal, ôr′dē-ăl, *not* ôr-dē′ăl.
oust, owst, *not* ōōst.
overalls, ō′vĕr-ôlz, *not* ō′vĕr-hôlz.
oxide, ŏks′īd *or* ŏks′īd.
pæony, pē′ō-nĭ.
pajama, pȧ-jȧ′mȧ.
palmistry, päl′mĭs-trĭ, *not* pä′mĭs-trĭ.
papa, pȧ-pä′ *or* pä′pȧ.
papier-mâché, pap-yā′ mä-shā′.
papyrus, pȧ-pī′rŭs, *not* păp′ĭr-ŭs.
pariah, pä′rĭ-ȧ *or* pā′rĭ-ȧ.
participle, pär′tĭ-sĭp-l, *not* pärt′sĭp-l.
partridge, pär′trĭj, *not* pät′rĭj.
passé, pä-sā′.
pâté de foie gras, pä-tā′ dŭ fwä grä.
patriot, pā′trĭ-ŏt.
patron, pā′trŭn, *not* păt′rŭn.
penchant, päN-shäN′.
perhaps, pĕr-hăps′, *not* prăps.
peritonitis, pĕr-ĭ-tō-nī′tĭs, *not* pĕr-ĭ-tō-nē′tĭs.
persist, pĕr-sĭst′, *not* pĕr-zĭst′.
petite, pē-tēt′.
pharyngitis, făr-ĭn-jī′tĭs.
phial, fī′ăl.
photographer, fō-tŏg′rȧ-fĕr.
photogravure, fō-tō-grä-vūr′.
physicist, fĭz′ĭs-ĭst.
piano, pē-ä′nō.
plait, plāt.
pneumatics, nu-măt′ĭks.
poem, pō′ĕm, *not* pō′ŭm.
poignant, poin′ănt, *not* poin′yant.
polygamy, pō-lĭg′ȧ-mĭ, *not* pōl′ĭg-ā-mĭ.
portemonnaie, pōrt′mŭn-nā.
potato, pō-tā′tō, *not* pō-tā′tŭ.
portière, pôr-tĭ-âr′; Fr. pron., pôrt-yâr′.
precedence, prē-sē′dĕns, *not* prĕs′ē-dĕns.
preferable, prĕf′ĕr-ȧ-bl, *not* prē-fĕr′ȧ-bl.
prelate, prĕl′āt, *not* prē′lāt.
pretense, prē-tĕns′, *not* prē′tĕns.
prettily, prĭt′ĭl-ĭ, *not* prĕt′ĭl-ĭ.
prima donna, prē′mȧ dŏn′nȧ.
program, prō′grăm, *not* prō′grŭm.
propinquity, prō-pĭng′kwĭt-ĭ.
protégé, prō-tā-zhā′.
pseudonym, su′dō-nĭm.
psychic, sī′kĭk.
publicist, pŭb′lĭs-ĭst.
puisne, pu′nĭ.
puissant, pu′ĭs-ănt *or* pu-ĭs′ănt, *not* pwē′sănt.
pumpkin, pŭmp′kĭn, *not* pŭng′kĭn.
pursuivant, pûr′swē-vănt.
pyrites, pĭr-ī′tēz.
quash, kwŏsh, *not* kwăsh.
queue, kyu.
qui vive, kē-vēv′, *not* kwē-vēv′.
quoit, kwoit *or* koit.
quorum, kwō′rŭm, *not* kwôr′ŭm.
raceme, rȧ-sēm′.
radish, răd′ĭsh, *not* rĕd′ĭsh.
raison d'être, rāzôN′ dātr.
rancor, răng′kĕr, *not* răn′kĕr.
ransack, răn′săk, *not* răm′săk.
réchauffé, rā-shō-fā′.
recherché, rŭ-shâr-shā′.
recipe, rĕs′ĭp-ē.
reconnoiter, rĕk-ŏn-oi′tĕr, *not* rē-kŏn-oi′tĕr.
referable, rĕf′ĕr-ȧ-bl, *not* rē-fĕr′ȧ-bl.
regalia, rē-gā′lĭ-ȧ.
régime, rā-zhēm′.
renaissance, rē-nā′sȧns; Fr. pron., rŭ-nā-sȧNs′.
rendezvous, rĕn′dē-vōō; Fr. pron., răN′dā-vōō.
reparable, rĕp′ȧ-rȧ-bl, *not* rē-pār′ȧ-bl.
répertoire, rĕp′ĕr-twär; Fr. pron., rā-pâr-twär′.

replica, rĕp′lĭk-ȧ.
repoussé, rŭ-pōō-sā′.
reputable, rĕp′yu-tȧ-bl.
requiem, rē′kwĭ-ĕm.
research, rē-sĕrch′, *not* rē′sĕrch.
resource, rē-sōrs′, *not* rē′sōrs.
restaurant, rĕs′tō-rȧnt *or* rēs′tō-răng.
résumé, rā-zōō-mā′; Fr. pron., rā-zŭ-mā′.
reveillé, rĕ-văl′yā.
reverend, rĕv′ĕr-ĕnd, *not* rĕv′ēr-ĕnt.
revocable, rĕv′ō-kȧ-bl, *not* rē-vō′kȧ-bl.
rheumatism, ru′mȧ-tĭzm, *not* rōōm′ȧ-tĭzm.
rinse, rĭns, *not* rĕns.
robust, rō-bŭst′, *not* rō′bŭst.
roil, roil, *not* rīl.
roof, rōōf, *not* rŏŏf.
root, rōōt, *not* rŏŏt.
rostrum, rŏs′trŭm, *not* rō′strŭm.
roué, rōō-ā′.
route, rōōt; rowt is perhaps the more common pronunciation in the United States.
rutabaga, ru-tȧ-bā′gȧ.
sachem, sā′chĕm, *not* săch′ĕm.
sacrament, săk′rȧ-mĕnt, *not* sā′krȧ-mĕnt.
sacrilegious, săk-rĭl-ē′jŭs, *not* săk-rĭl-ĭj′ŭs.
saengerfest, sâng′ĕr-fĕst.
sagacious, sȧ-gā′shŭs, *not* sȧ-găsh′ŭs.
said, sĕd.
salmon, săm′ŭn.
salve (ointment), säv.
satin, săt′ĭn, *not* sāt′n.
savage, săv′āj, *not* săv′ĭj.
says, sĕz, *not* sāz.
scalene, skȧ-lēn′, *not* skā′lēn.
scared, skârd, *not* skârt.
scherzo, skĕrt′sō.
séance, sē′ăns; Fr. pron., sā-äns′.
seckel (pear), sĕk′l, *not* sĭk′l.
secretary, sĕk′rē-tā-rĭ, *not* sĕk′ē-tā-rĭ.
separable, sĕp′ȧ-rȧ-bl.
sequin, sē′kwĭn, *not* sĕk′wĭn.
sesame, sĕs′ȧ-mē.
several, sĕv′ĕr-ăl, *not* sĕv-răl.
shriek, shrēk, *not* srēk.
signora, sēn-yō′rȧ.
sleek, slēk, *not* slĭk.
slept, slĕpt, *not* slĕp.
slough (cast-off skin), slŭf.
slough (ditch), slow.
snout, snowt, *not* snŏŏt.
solace, sŏl′ăs, *not* sō′lăs.
solecism, sŏl′ē-sĭzm, *not* sō′lē-sĭzm.
sonata, sō-nä′tȧ.
soprano, sō-prä′nō, *not* sō-prăn′ō.
sough, sŭf.
souvenir, sōō-vŭ-nēr′, *not* sōōv′nēr.
spoon, spōōn, *not* spŏŏn.
squalor, skwā′lôr (Web. and Wor.); skwŏl′ĕr or skwā′lĕr (Stor.).
steady, stĕd′ĭ, *not* stĭd′ĭ.
stoicism, stō′ĭs-ĭzm, *not* stō′ĭk-ĭzm.
stomach, stŭm′ak, *not* stŭm′ĭck.
suede, swād.
suite, swēt, *not* su-t.
supple, sŭp′l, *not* sōō′pl.
surprise, sûr-prīz′, *not* sŭp-prīz′.
surveillance, sûr-vā′lȧns *or* vā′lăns.
syringe, sĭr′ĭnj, *not* sĭr-ĭnj′.
syrup, sĭr′ŭp.

table-d'hôte, tă′bl-dōt.
tapis, tăp′ĭs, tā′pĭs, or tȧ-pē′.
technique, tĕk-nēk′.
telegraphy, tē-lĕg′rȧ-fĭ.
tenet, tĕn′ĕt, *not* tē′nĕt.
tepid, tĕp′ĭd, *not* tē′pĭd.
tête à tête, tāt-ȧ-tāt′.
theater, thē′ȧ-tēr, *not* thē-ā′tēr.
three-legged, thrē′lĕgd, *not* thrē′lĕg-ĕd.
tic-douloureux, tĭk dōō-lōō-rōō′.
tonsilitis, tŏn-sĭl-ī′tĭs, *not* tŏn-sĭl-ē′tĭs.
tortious, tôr′shŭs.
tour, tōōr.
tout-ensemble, tōōt ăn-săn′bl.
trichina, trĭk-ī′nȧ.
tricycle, trī′sĭk-l, *not* trī′sī-kl.
trilobite, trī′lō-bīt, *not* trĭl′ō-bīt.
trousseau, trōō′sō′.
turnip, tûr′nĭp, *not* tûr′nŭp.
ultimatum, ŭl-tĭm-ā′tŭm, *not* ŭl-tĭm-ä′tŭm.
umbrella, ŭm-brĕl′ȧ, *not* ŭm-bĕr-ĕl′ȧ.
uncivil, ŭn-sĭv′ĭl, *not* ŭn-sĭv′ŭl.
unctuous, ŭngkt′yu-ŭs.
undersigned, ŭn-dĕr-sīnd′, *not* ŭn-dĕr-zīnd′.
uninterested, ŭn-ĭn′tĕr-ĕst-ĕd.
unlearned (adj.), ŭn-lĕr′nĕd, *not* ŭn-lĕrnd′.
unlearned (part.), ŭn-lĕrnd′, *not* ŭn-lĕr′nĕd.
unprecedented, ŭn-prĕs′ē-dĕnt-ĕd.
untoward, ŭn-tō′ĕrd, *not* ŭn-tō-wôrd′.
used, uzd, *not* us-t.
usually, yu′zhu-ăl-ĭ, *not* yu′zhăl-ĭ.
usurp, yu-zûrp′, *not* yu-sûrp′.
vagary, vȧ-gā′rĭ, *not* vā′gȧ-rĭ.
vagrant, vā′grănt, *not* văg′rănt.
vanquish, văng′kwĭsh, *not* văn′kwĭsh.
vase, vās *or* väz.
vaudeville, vōd′vĭl; Fr. pron., vōd-vēl′.
vehement, vē′hē-mĕnt.
veinous, vā′nŭs, *not* vē′nŭs.
venous, vē′nŭs, *not* yā′nŭs.
verbatim, vĕr-bā′tĭm, *not* vĕr-bă′tĭm.
version, vĕr′shŭn, *not* vĕr′zhŭn.
vessel, vĕs′sĕl, *not* vĕs′l.
veterinary, vĕt′ĕr-ĭn-ā-rĭ, *not* vĕt′rĭn-ā-rĭ.
vice versa, vī′sē vĕr′sȧ, *not* vīs′vĕr-sȧ.
victim, vĭk′tĭm, *not* vĭk′tŭm.
vis-a-vis, vēz-ȧ-vē′.
vitriol, vĭt′rĭ-ŭl, *not* vĭt′rŭl.
volatile, vŏl′ȧ-tĭl, *not* vŏl′ȧ-tēl, nor vŏl′ȧ-tīl.
volume, vŏl′yum.
voluntarily, vŏl′ŭn-tā-rĭl-ĭ, *not* vŏl-ŭn-tā′rĭl-ĭ.
was, wŏz, *not* wŭz.
water, wô′tĕr, *not* wŏt′ĕr.
which, hwĭch, *not* wĭch.
whisk, hwĭsk, *not* wĭsk.
whole, hol, *not* hōl.
whooping (cough), hōōp′ĭng, *not* hŏŏp′ĭng.
widow, wĭd′ō, *not* wĭd′ŭ.
window, wĭn′dō, *not* wĭn′dŭ.
wistaria, wĭs-tā′rĭ-ȧ, *not* wĭs-tē′rĭ-ȧ.
women, wĭm′ĕn, *not* wĭm′ĭn.
wondering, wŭn′dĕr-ĭng, *not* wŭn′drĭng.
wrath, răth, *not* răth.
wrestler, rĕs′lĕr, *not* rĕst′lĕr.
yacht, yŏt.
yellow, yĕl′lō, *not* yĕl′lŭ.
yew, yu.
yolk, yōlk *or* yōk.
zodiacal, zō-dī′ăk-ăl, *not* zō′dĭ-ăk-ŭl.

2. DIVISION OF PROPER NAMES.

Aachen, ä′kĕn.
Abbassides, ăb-băs′sĭdz.
Abélard, ăb′ē-lärd; Fr. pron., ä-bā-lär′.
Abomey, ăb-ō-mā′.
Aboukir, ä-bōō-kēr′.
About (Edmond), ĕd-môn′ ä-bōō′.
Abraham, ā′brȧ-hăm, *not* ā′brăm, unless spelled *Abram*.
Acapulco, ä-kä-pōōl′kō.
Achaia, ā-kā′yȧ *or* ä-kī′yä.
Acheron, ăk′ē-rŏn, *not* ăch′ē-rŏn.
Achitophel, ȧ-kĭt′ō-fĕl.
Aconcagua, ä-kŏn-kä′gwä.
Adige, ăd′ĭj-ē; It. pron., ä′dē-jā.
Adonais, ăd-ō-nā′ĭs.
Adonijah, ăd-ō-nī′jȧ.
Adoniram, ăd-ō-nī′răm.
Ægean, ē-jē′ăn.
Æolus, ē′ō-lŭs, *not* ē-ō′lŭs.
Afghanistan, ăf-găn-ĭs-tän′, *not* ăf-găn-ĭs′tăn; ăf-gän-ĭs-tän′ (Gaz.).
Agape, ăg′ȧ-pē.
Agassiz, ăg′ȧs-ē *or* ăg-ăs′ĭz; Fr. pron., ä-gä-sē′.
Agincourt, ăzh-ăn-kōōr′.
Aguilar (Grace), ä-gē-lär′.
Agulhas, ä-gōōl′yäs.
Ahasuerus (King), ȧ-hăs-ū-ē′rŭs.
Ahasuerus (The Wandering Jew), ȧ-hăzh-ōō-ē′-rŭs.
Aïda, ä-ē′dä.
Aix-la-Chapelle, āks-lä-shä-pĕl′, *not* ā-lä-shä-pĕl′.
Akron (Ohio), ăk′rŏn, *not* ā′krŏn.
Alcæus, ăl-sē′ŭs.
Alcantara, ăl-kän′tä-rä.
Alcibiades, ăl-sĭ-bī′ȧ-dēz.
Alcides, ăl-sī′dēz.
Alcuin, ăl′kwĭn.
Alcyone, ăl-sī′ō-nē.
Aldebaran, ăl-dĕb′ȧ-răn.
Aleutian (Islands), ȧ-lū′shĭ-ăn, *not* ā-lū′-shăn.
Alexander, ăl-ĕgz-ăn′dēr, *not* ăl-ĕks-ăn′dēr.
Alfieri, äl-fē-ā′rē.
Algonquin, ăl-gŏn′kwĭn.
Alighieri, ä-lē-gē-ā′rē.
Alleghany, ăl-lē-gā′nĭ.
Alleyn, ăl′ĕn.
Alma-Tadema, äl′mä tä′dä-mä, *not* ăl′mȧ tȧ-dā′-mȧ.
Almagest, ăl′mȧ-jĕst.
Alnwick, ăn′nĭk.
Amiens, ăm′ē-ĕnz; Fr. pron., ä-mĭ-ăN′.
Amoskeag, ăm-ŏs-kĕg′.
Ampere, äN-pâr′.
Amphion, ăm-fī′ŏn, *not* ăm′fĭ-ŏn.
Amphitrite, ăm-fĭ-trī′-tē, *not* ăm′fĭ-trīt.
Amphitryon, ăm-fĭt′rĭ-ŏn.
Amurath, ä-mōō-rät′.
Anaximenes, ăn-ăks-ĭm′ē-nēz.
Anchises, ăn-kī′sēz.
Andalusia, ăn-dȧ-lōō-shĭ′ȧ; ăn-dȧ-lū′shĭ-ȧ (Gaz.).
Andorra, ăn-dō′rä.
Androcles, ăn′drō-klēz.
Andromache, ăn-drŏm′ȧ-kē.
Andromeda, ăn-drŏm′ē-dȧ.
Andronicus, ăn-drō-nī′kŭs.
Angostura, ăn-gŏs-tōō′rä.
Angoulême d', dăN-gōō-lām′.
Antietam, ăn-tē′tăm.
Antigone, ăn-tĭg′ō-nē.
Antinous, ăn-tĭn′ō-ŭs, *not* ăn-tĭn′ōōs.
Antiochus, ăn-tī′ō-kŭs, *not* ăn-tī-ŏk′ŭs.
Antiope, ăn-tī′ō-pē.
Apache, ä-pä′chā.
Apelles, ȧ-pĕl′ēz.
Aphrodite, ăf-rō-dī′tē, *not* ăf′rō-dīt.
Apollyon, ȧ-pŏl′ĭ-ŏn *or* ȧ-pŏl′yŭn.
Appalachian, ăp-pȧ-lā′chĭ-ăn, *not* ăp-pā-lā′chĭ-ăn.
Appomattox, ăp-pō-măt′ŏks.
Aquinas (Thomas), ȧ-kwī′năs.
Arab, ăr′ăb; Wor., ā′răb as secondary pron.
Aram (Eugene), ā′răm, *not* ăr′ăm.
Arapahoe, ăr-ăp′ȧ-hō.
Arbela (Assyria), är-bē′lä.
Arbela (Sicily), är′bē-lä.
Archias, är′kĭ-ăs, *not* är′chĭ-ăs.
Archimedes, är-kĭm-ē′dēz, *not* är-kĭm′ē-dēz.
Archytas, är-kī′tăs.
Arcite, är′sīt or är-sīt′.
Arequipa, ä-rā-kē′pä.
Aries, ā′rĭ-ēz.
Arion, ā-rī′ŏn.
Aristides, ăr-ĭs-tī′dēz.
Aristobulus, ā-rĭs-tō-bū′lŭs *or* ăr-ĭs-tō-bū′lŭs.
Arkansas, är′kăn-sô.
Arles, ärlz; Fr. pron., ärl.
Aroostook, ȧ-rōō′stŏŏk.
Artaxerxes, är-tăks-ĕrk′sēz; Bib. är-tăg-zĕrk′zēz.
Artemis, är′tē-mĭs.
Artemisia, är-tē-mĭsh′ĭ-ȧ.
Artois, är-twä′.
Arundelian, ăr-ŭn-dēl′yăn; ăr-ŭn-dē′lĭ-ăn (Wor.).
Aryan (Indo-European), ăr′yăn *or* ăr′ĭ-ăn; ā′rĭ-an *or* ăr′ĭ-ăn (Stor.).
Ascham (Roger), ăs′kăm.
Asiatic, ā-shĭ-ăt′ĭk, *not* ā-zhĭ-ăt′ĭk.
Asmodeus, ăz-mō-dē′ŭs.
Asturias, äs-tōō′rē-äs.
Astyanax, ăs-tī′ăn-ăks.
Atahualpa, ä-tä-hwäl′pä.
Ate (goddess of revenge), ā′tē, *not* āt.
Athos (Mount), ăth′ŏs, *not* ā′thŏs.
Atilla, ȧ-tĭl′ȧ.
Auber, ō-bâr′, *not* ô′bĕr.
Aubert, ō-bâr′.
Aubigné d', dō-bēn-yā′.
Audubon, ô′dū-bŏn; Fr. pron., ō-dü-bôN′.
Auerstadt, ow′ĕr-stĕt.
Augean, ô-jē′ăn, *not* ô′jē-ăn.
Augereau, ōzh-rō′.
Aurungzebe, ō-rŭng-zāb′.
Ausable, ô-sä′bl.
Austerlitz, ôs′tĕr-lĭts; Ger. pron., ows′tĕr-lĭts.
Auvergne, ō-vărn′yŭ.
Auxerre, ō-sār′.
Averroës, ä-vĕr′ō-ēz.
Avignon, ä-vēn-yôN′.
Avon, ā′vŏn, *not* ăv′ŏn.
Aytoun, ā′tōōn.
Badajos, bä-dä-hōs′.
Bagehot, băj′ŏt.
Bahia, bä-ē′ä.
Baireuth, bī′rŭth; Ger. pron., bī′roit.
Bajazet, băj-ȧ-zĕt′, *not* bā-jăz′ĕt.
Balboa de, dā bäl-bō′ä.
Balearic (Islands), băl-ē-ăr′ĭk, *not* băl-ē′rĭk.
Balthaser, băl′tä-zär.
Balzac de (Honoré), ō-nō-rā′ dŭ bäl-zäk′; anglicized, băl′zăk.
Banquo, băng′kwō; băn′kwō (Biog.).
Barberini (palace), bär-bā-rē′nē.
Barras de, dŭ bä-räs′ *or* dŭ bä-rä′.

Barthélemy, bär-tāl-mē′.
Bartholdi, bär-tōl-dē′, *not* bär-thōl′dā
Baruch, bā′rŭk.
Bathsheba, băth-shĕ′bå *or* băth′shē-bå.
Baton Rouge, băt′ŭn rōōzh; Fr. pron., bă-tôN′ rōōzh.
Bayard de, dŭ bā′ärd; Fr. pron., dŭ bä-yär′.
Bayard (Thomas F.), bī′ärd, *not* bā′ärd.
Bayreuth, bī′rŭth; Ger. pron., bī′roit.
Beatrice Cenci, bā-ä-trē′chā chĕn′chē.
Beauchamp (Fr.), bō-shäN′.
Beauchamp (Eng.), bē′chăm.
Beauharnais de, dŭ bō-är-nā′.
Beethoven van, vän bā′tō-vĕn.
Bellerophon, bĕl-ĕr′ō-fŏn.
Bellini, bĕl-lē′nē.
Ben-Cruachan, bĕn-krōō′ĸän.
Benguela, bĕn-gā′lä.
Bentivoglio, bĕn-tē-vōl′yō.
Béranger de, dŭ bā-rän-zhā′.
Berenice, bĕr-ē-nī′sē.
Bering (strait), bē′rĭng; Danish pron., bā′rĭng.
Bermoothes, bĕr-mōō′thēz.
Bernice, bĕr-nī′sē.
Bertuccio, bär-tōō′chō.
Besançon, bŭz-äN′sôN.
Betelguese, bĕt′ĕl-gēz.
Beust von, fōn boist.
Bewick, bū′ĭk, *not* bē′wĭk.
Beyroot, bā′rōōt, *not* bā-rōōt′; Turkish pron., bī′rōōt.
Bierstadt, bēr′stät, *not* bēr′stăd.
Biot, bē-ō′ *or* byō; bē-ō′ *or* bē-ōt′ (Biog.).
Bizet, bē-zā′.
Björnson (Björnstjerne), bē-örn-stē-ĕr′nĕ bē-yörn′son.
Blenheim, blĕn′ĭm, *not* blĕn′hīm.
Blois, blwä.
Blücher von, fōn blōō′kĕr; Ger. pron., fōn blü′kĕr.
Boadicea (Queen), bō-ăd-ĭs-ē′å.
Boanerges, bō-ăn-ēr′jēz.
Bode, bō′dĕ, *not* bōd.
Boerhaave, bōr′hāv; Dutch pron., bōōr′hä-vĕ.
Boethius, bō-ē′thĭ-ŭs.
Boïeldieu, bō-yĕl-dē-ö′; bwäl-dyö′ (Biog.).
Boileau, bwä-lō′.
Bokhara, bŏk-ä′rä.
Boleyn (Anne), bōōl′ĭn.
Bologna, bō-lōn′yä, *not* bō-lō′nä.
Bonheur (Rosa), bō-nör′, *not* bŏn′ŭr.
Bonnivard de, dŭ bō-nē-vär′.
Boötes, bō-ō′tēz.
Borghese, bōr-gā′zā.
Borromean (islands), bŏr-rō-mē′ăn.
Borromeo, bŏr-rō-mā′ō, *not* bŏr-rō′mē-ō.
Bossuet, bō-sü-ā′, *almost* bō-swā′.
Boucher de Perthes, bōō-shā′ dŭ pārt.
Boucicault, bōō-sē-kō′, *not* bōō′sē-kôlt.
Bouguereau, bōō-gĕr-ō′, *not* bōō-zhĕr-ō′.
Bouillon de (Godfrey), dŭ bōō-yôN′.
Bowditch, bŏw′dĭch, *not* bō′dĭch.
Bowdoin (college), bō′dn.
Bozzaris, bŏt′săr-ĭs.
Brahe (Tycho), tī′kō brā *or* brä; Danish pron., brä′ĕ.
Bremer (Fredrika), frĕd-rē′kå brē′mĕr; Swedish pron., brĭm′ĕr.
Breton (Jules), zhül brâ-tôn′.
Briareus, brī-ā′rē-ŭs or brī′ā-rŭs, *not* brī-ā-rē′ŭs.
Brockhaus, brŏk′hows.
Broglie de, dŭ brō′ĭ; dŭ brōg-lē′ (Biog.).
Brougham, brōō′ăm *or* brōōm.
Brown-Séquard (Dr.), brown-sā-kär′.
Brüges, brŭ′jĕz; Fr. pron., brüzh.
Brugsch Bei, brōōsh bā.
Brunehilde, brōō-nē-hĭl′dĕ.
Brunelleschi, brōō-nĕl-lĕs′kē.
Buccleugh, bŭk-klŭ′.
Bucharest, bŭ-kā-rĕst′.
Buda Pesth, bŭ′då-pĕst; Hungarian pron., bōō′-dŏ-pesht.
Buddha, bŏŏd′å.
Buddhism, bŏŏd′ĭzm;
Buddhist, bŏŏd′ĭst;
Buena Vista, bwā′nä vēs-tä *or* bō′nå vĭs-tå.
Buenos Aires, bō′nŭs ā′rĭz *or* ârz; Sp. pron., bwā′nōs ī′rĕs.
Buffon de, dŭ bŭf′ŭn; Fr. pron., dŭ bü-fôN′.
Bülow von, fōn bü′lō.
Buonaparte, bōō-ō-nä-pär′tā.
Buonarroti, bōō-ō-när-rŏt′ē.
Burgoyne, bûr-ɢoin′.
Bysshe, bĭsh.
Byzantine, bī-zăn′tĭn *or* bĭz′ăn-tīn.
Byzantium, bĭz-ăn′shĭ-ŭm, *not* bĭz-ăn′tĭ-ŭm.
Caceres, kä′thā-rĕs.
Caedmon, kĕd′mŏn *or* kăd′mŏn.
Caesarea, sĕs-ā-rē′å, *not* sĕz-ā-rē′å.
Caiaphas, kā′yā-făs; kī′ăf-ăs (Stor.).
Caius (college at Cambridge), kēs *or* kē.
Calais, kä-lā′.
Calaveras, kä-lä-vā′räs.
Callao, käl-lä′ō *or* käl-yä′ō.
Callimachus, kăl-lĭm′å-kŭs.
Callisthenes, kăl-lĭs′thē-nēz.
Cambacérès de, dŭ kăN-bä-sā-rĕs′.
Cambyses, kăm-bī′sēz.
Canandaigua, kăn-ăn-dā′gwå, *not* kăn-ăn-dā′-ɢu-å.
Candace, kăn′då-sē.
Canes Venatici, kā′nēz vē-năt′ĭs-ī.
Cannes, kän.
Canute, kā-nut′.
Capella, kå-pĕl′lå.
Capitoline, kăp′ĭt-ŏl-īn, *not* kăp′ĭt-ŏl-ēn.
Capri, kä′prē.
Caracci, kä-rä′chē.
Cardan, kär′dăn; Fr. pron., kär-dăN′.
Caribbean (Sea), kăr-ĭb-ē′ăn, *not* kăr-ĭb′ē-ăn.
Carnot, kär-nō′.
Carolinian, kăr-ō-lĭn′ĭ-ăn, *not* kăr-ō-lī′nĭ-ăn.
Carracci, kär-rä′chē.
Cartagena, kär-tå-jē′nå; Sp. pron., kär-tä-hā′nä.
Carthaginian, kär-thå-jĭn′ĭ-ăn, *not* kär-thå-jē′-nĭ-ăn.
Cartier (Jacques), zhăk kärt-yā′.
Casaubon, kå-sō′bŏn; Fr. pron., kä-zō-bôN′.
Cassiopeia, kăs-sĭ-ō-pē′yå.
Castiglione, käs-tēl-yō′nä.
Castlereagh, käs-l-rā′.
Castruccio, käs-trōō′chō.
Cattaraugus, kăt-å-rô′gŭs.
Caucasus, kô′kå-sŭs, *not* kô-kā′sŭs.
Cavour di, dē kä-vōōr′.
Cayenne, kā-ĕn′ *or* kī-ĕn′.
Cayuga, kā-yōō′ɢå.
Cecrops, sē′krŏps.
Cedric, sĕd′rĭk *or* kĕd′rĭk.
Cedron, sē′drŏn.
Cellini (Benvenuto), bĕn-vā-nōō′tō chĕl-lē′nē.
Cerberus, sĕr′bē-rŭs.
Ceres, sē′rēz.
Cesnola di, dē chĕs-nō′lä.
Cévennes, sā-vĕn′.

Chaeronea, kĕr-ō-nē′å.
Chagres, chä′grēs, *not* shä′grēs.
Cham, kăm.
Chamonix, shä-mō-nē′.
Chamouni, shä-mōō-nē′.
Champollion, shăm-pōl′ē-ŏn; Fr. pron., shäN-pōl-yôN′.
Champs-Elysées, shäN-zā-lē-zā′.
Chapultepec, chä-pōōl-tā-pĕk′.
Charon, kā′rŏn, *not* chā′rŏn.
Charybdis, kå-rĭb′dĭs.
Châteaubriand de, dŭ shä-tō-brē-äN′.
Chaudière (Falls), shō-dē-âr′.
Chautauqua, shå-tô′kwä, *not* chå-tô′kwä.
Chedorlaomer, kĕd-ôr-lā′ō-mēr *or* ō′mēr.
Cheops, kē′ŏps, *not* chē′ŏps.
Cherbuliez, shĕr-bü-lē-ā′.
Chersonesus, kĕr-sō-nē′sŭs.
Cherubini, kā-rōō-bē′nē.
Cheyenne, shī-ĕn′; shē-ĕn′ (Gaz.).
Chihuahua, chē-wä′wä.
Chillicothe, chĭl-ĭ-kŏth′ē, *not* chĭl-ĭ-kō′thē.
Chimborazo, chĭm-bō-rä′zō; Sp. pron., chēm-bō-rä′thō.
Cholmondeley, chŭm′lĭ.
Chryseis, krĭ-sē′ĭs.
Chuquisaca, chōō-kē-sä′kä.
Cimabue, chē-mä-bōō′ā.
Cimon, sī′mŏn.
Cincinnati, sĭn-sĭn-nä′tĭ, *not* sĭn-sĭn-năt′ŭ.
Cinque-ports, sĭngk′pōrts.
Circe, sĕr′sē.
Cirencester, sĭs′ĕt-ĕr *or* sĭs′ĭs-ĕr.
Civita Vecchia, chē′vē-tä vĕk′kē-ä.
Cleobulus, klē-ō-bu′lŭs, not klē-ŏb′yu-lŭs.
Cleomenes, klē-ŏm′ē-nēz.
Clough (Arthur Hugh), klŭf.
Cnidus, nī′dŭs.
Cockburn (Lord), kō′bûrn, *not* kŏk′bŭrn.
Codrus, kō′drŭs.
Cohoes, kō-hōz′, *not* kō-hōōz′.
Colbert, kōl-bâr′.
Coligny de, dŭ kō-lēn-yē′ *or* dŭ kō-lēn′yē.
Colman, kōl′măn, *not* kŏl′măn.
Cologne, kō-lōn′; Fr. pron., ko-lon′yŭ.
Colquhoun, kō-hōōn′.
Comanche, kō-măn′chē; kō-măn′chā (Gaz.).
Combe, kōōm *or* kōm.
Comte, kôNt.
Condé de, dŭ kôn-dā′.
Condillac de, dŭ kôn-dē-yăk′.
Condorcet de, dŭ kôn-dôr-sā′.
Cophetua, kō-fĕt′yu-å.
Coquelin, kok-lăN′.
Corot, kō-rō′.
Correggio da, dä kŏr-rā′jō.
Corydon, kŏr′ĭ-dŏn.
Cotopaxi, kō-tō-păk′sē; Sp. pron., kō-tō-pä′hē.
Courbet, kōōr-bā′.
Cousin, kōō-zăN′.
Coxsackie, kŏŏk-sô′kē.
Cracow, krā′kō.
Cruikshank, krŏŏk′shăngk.
Cumæan, ku-mē′ăn.
Cuvier, kü-vē-ā′.
Cuyahoga, kī-å-hō′gå.
Cuyp, koip.
Cuzco, kōōs′kō.
Cyaxares, sī-äks′å-rēz.
Cybele, sĭb′ē-lē *or* sĭb-ē′lē.
Cyprian, sĭp′rĭ-ăn, *not* sī′prĭ-ăn.
Czajkowski, chī-kŏvs′kē.
Czerny, chĕr′nē.
Daguerre, dä-gâr′.
Dahlgren, dăl′grĕn.
Damiens, dā′mĭ-ĕnz; Fr. pron., dä-mē-ăN′.
Damon, dā′mŏn.
Dandolo, dän′dō-lō.
Dannecker von, fŏn dän′ĕk-ĕr.
Darius, dā-rī′ŭs.
Daubigny, dō-bēn-yē′.
Daudet (Alphonse), äl-fôNs′ dō-dā′.
Davoust, dä-vōō′.
De Amicis, dā ä-mē′chēs, *not* dē ä-mē′sis.
Deborah, dĕb′ō-rå, *not* dē-bō′rå.
Delaroche, dŭ-lä-rosh′.
Delft, dĕlft.
Demetrius, dē-mē′trĭ-ŭs, *not* dē-mĕt′rĭ-ŭs.
Deneb, dē′nĕb.
Deptford, dĕt′fŭrd; dĕd′fŭrd (Gaz.).
Descartes, dā-kärt′.
Des Moines, dē moin′.
Desmoulins, dā-mōō-lăN′.
Détaille, dā-tä′yŭ.
Dhaulagiri, dow-lä-gē′rē.
Diderot, dē-drō′.
Didot, dē-dō′.
Dieppe, dē-ĕp′.
Dies Iræ, dī′ēz ī′rē.
Dijon, dē-zhôN′.
Dionysus, dī-ō-nī′sŭs.
Discobolus, dĭs-kŏb′ō-lŭs.
Disraeli, dĭz-rā′lē *or* dĭz-rē′lē; dĭz-rā′ĕl-ē (Biog.).
Dnieper, nē′pĕr; Russian pron., dnyĕp′ĕr.
Dniester, nēs′tĕr; Russian pron., dnyĕs′tĕr.
Dolce (Carlo), dōl′chā.
Dolci (Carlo), dōl′chē.
Domenichino, dō-mĕn-ē-kē′nō.
Doña, dōn′yå.
Donegal, dŏn-ē-gôl′, *not* dŏn′ē-găl.
Don Quixote, dŏn kwĭks′ōt; Sp. pron., dōn kē-hō′tā.
Dovrefield, dō-vrŭ-fī-ĕld′.
Drachenfels, drä′kĕn-fĕls.
Drogheda, drŏ′hĕd-å.
Du Chaillu, dü shä-yü′.
Duchesne, dü shān′.
Dudevant (Mme.), düd-väN′.
Dumas, dü-mä′ *or* dü-mäs′.
Duplessis, dü-plā-sē′.
Duquesne, dü-kān′.
Dürer (Albert), dü′rĕr.
Duyckinck, dī′kĭngk.
Ebers (Georg), gā-ôrk′ ā′bĕrs.
Ecbatana, ĕk-băt′å-nå.
Edam, ā-dăm′, *not* ē′dăm.
Eleanor, ĕl′ē-å-nôr.
Eleazar, ē-lē-ā′zär *or* ē-lē′ā-zär.
Elgin, ĕl′gĭn, not ĕl′jĭn.
Eliphalet, ē-lĭf′å-lĕt.
Elssler (Fanny), ĕls′lĕr, *not* ĕs′lĕr.
Emmaus, ĕm-mā′ŭs *or* ĕm′mā-ŭs.
Encke, ĕng′kē.
Enghien d', dän-gĂN′; dän-gē-ăN′.
Epaminondas, ē-păm-ĭn-ŏn′dăs.
Erasmus, ē-răz′mŭs, *not* ē-răs′mŭs.
Erato, ĕr′å-tō, *not* ē-rā′tō, *nor* ĕr-ä′tō.
Eratosthenes, ĕr-å-tŏs′thē-nēz.
Erectheum, ĕr-ĕk-thē′ŭm, *not* ē-rĕk′thē-ŭm.
Erigena, ē-rĭj′ē-nå *or* ĕr-ĭj-ē′nå.
Erostratus, ē-rŏs′trā-tŭs.
Escurial, ĕs-ku′rĭ-ăl; Sp. pron., ĕs-kōō-rē-äl′.
Estaing d', dĕs-tăN′.
Eugène, ö-zhăn′.

Eugénie de Montijo, ö-zhā-nē′ dŭ môn-tē-zhō′.
Euler, yōō′lĕr; Ger. pron., oi′lĕr.
Eunice, yu′nĭs; Bib. yu-nī′sē *or* yu′nĭs.
Euphrosyne, yu-frŏs′ĭn-ē.
Euripides, yu-rĭp′ĭd-ēz.
Eurydice, yu-rĭd′ĭs-ē.
Fahrenheit, fä′rĕn-hīt.
Faneuil (Hall), făn′ĭl, *commonly* fŭn′ĕl.
Farquhar, fär′kwär *or* fär′kĕr.
Fatima, făt′ē-mä.
Faust, fowst *or* fōst.
Fechter, fĕsh′tĕr.
Fénelon, fā-nē-lôN′ *or* făn-lôN′.
Fesole, fĕs′ō-lā.
Feuerbach, foi′ĕr-bäk.
Feuillet (Octave), ōk-täv′ fö-yā′.
Fichte, fĭk′tĕ.
Fiesole, fyĕs′ō-lā.
Figaro, fē-gä-rō′, *not* fē-gä′rō.
Flotow von, fōn flō′tō.
Fomalhaut, fō′măl-hôt.
Fontainebleau, fôN-tăn-blō′.
Fontenoy, fŏn-tē-noi′; Fr. pron., fôNt-nwä′.
Fortuny, fōr-tōō′nē.
Fouché, fōō-shā′.
Fourier, fōō′rē-ĕr; Fr. pron., fōō-rē-ā′.
Fra Diavolo, frä dē-ä′vō-lō.
Fraunhofer von, fōn frown′hō-fĕr.
Freischütz, Der, dĕr frī′shüts.
Frelinghuysen, frē′lĭng-hī-zĕn.
Fresnel, frā-nĕl′.
Freycinet de, dŭ frā-sē-nā′.
Friesic, frē′sĭk.
Froebel, frö′bĕl.
Froissart, frois′ärt; Fr. pron., frwä-sär′.
Froude, frōōd.
Galen, gā′lĕn.
Gallatin (Albert), găl′ä-tĭn; Fr. pron., gä-lä-tăN′.
Galle (Dr.), gä′lĕ.
Galvani, gäl-vä′nē.
Galway, gôl′wā, *not* găl′wā.
Garibaldi, găr-ĭb-äl′dĭ, *not* găr-ĭb-ôl′dē.
Gauss, Gows.
Gautier (Théophile), tā-ō-fēl′ gō-tē-ā′.
Gay-Lussac, gā-lü-säk′.
Geikie (James), gē′kē, *not* gī′kē.
Genghis Khan, jĕn′gĭs kän.
Genseric, jĕn′sĕr-ĭk.
Geoffrey, jĕf′rĭ.
Geoffroy, zhō-frwä′.
Geraldine, jĕr′ăl-dĭn.
Gérôme, zhā-rōm′.
Gesenius, gē-sē′nĭ-ŭs; Ger. pron., gā-zā′nē-ŏŏs.
Ghent, gĕnt, *not* jĕnt.
Ghiberti, gē-bĕr′tē.
Ghirlandajo, gĕr-län-dä′yō.
Gizeh, gē′zē.
Gila, hē′lä.
Gil Blas, zhēl bläs; Sp. pron., hēl bläs.
Gioja, jō′yä.
Giordano Bruno, jōr-dä′nō brōō′nō.
Giorgione, jōr-jō′nā.
Giotto, jŏt′tō.
Giovanni, jō-vän′nē.
Gironde, jē-rŏnd′; Fr. pron., zhē-rôNd′.
Giuseppe, jōō-sĕp′pā.
Gladstone, glăd′stŭn, *not* glăd-stōn.
Glück, glük.
Glyptothek, glĭp-tō-tāk′.
Gobelin, gŏb′ē-lĭn; Fr. pron., gō-blăN′.
Godavery, gō-dä′vĕr-ĭ.
Godiva (Lady), gō-dī′vȧ.
Goethe von, fōn gö′tĕ.
Golgotha, gŏl′gō-thȧ, *not* gŏl-gō′thȧ.
Gortschakoff, gôrt-chä-kŏf′.
Gotham, gō′thăm.
Gottschalk, gŏt′shälk, *not* gŏt′shôk.
Gough, gŏf.
Gounod, gōō-nō′.
Gower, gow′ĕr *or* gōr.
Granicus, grȧ-nī′kŭs.
Greenough, grē′nō.
Greuze, grŏz.
Grévy, grā-vē′.
Grosvenor, grōv′nĕr.
Grote, grōt.
Grotius, grō′shĭ-ŭs.
Grouchy de, dŭ grōō-shē′, *not* dŭ grōō′chē.
Gruyère, grü-yâr′.
Guelph, gwĕlf.
Guericke von, fōn gĕr′ĭk-ĕ *or* fōn gā′rĭk-ĕ.
Guido Reni, gwē′dō rā′nē *or* gōō-ē′dō rā′nē, *not* gē′dō rā′nē.
Guildhall, gĭld′hôl.
Guillotin, gē-yō-tăN′.
Guinevere, gwĭn′ē-vēr.
Guise de, dŭ gwēz; dŭ gwēz, dŭ gü-ēz′, *or* dŭ gēz (Biog.).
Guizot, gē-zō′ *or* gwē-zō.
Günther, gün′tĕr.
Gustavus, gŭs-tā′vŭs, *not* gŭs-tä′vŭs.
Gutenberg, gōō′tĕn-bĕrg, *not* gŭt′ĕn-bĕrg.
Guyot, gē-ō′.
Gwendolen, gwĕn′dō-lĕn.
Gyges, jī′jēz.
Habakkuk, hăb-ăk′ŭk *or* hăb′ăk-ŭk.
Haeckel, hĕk′l; Ger. pron., hâ′kĕl.
Haggai, hăg′ā-ī *or* hăg′ā.
Hague, hāg.
Halcyone, hăl-sī′ō-nē.
Halévy, ä-lā-vē′.
Halle, hä′lĕ.
Haller von, fōn häl′lĕr.
Hamilcar Barca, hȧ-mĭl′kär bär′kä.
Handel, hăn′dĕl; Ger. pron., hĕn′dĕl.
Hardicanute, här-dĭ-kă-nut′.
Harun-al-Raschid, hä-rōōn′äl-răsh′ĭd *or* hä-rōōn′-äl-rä-shēd′.
Havre de Grace, hä′vĕr *or* ä′vĕr dŭ grȧs.
Hawaii, hä-wī′ē.
Haydn, hā′dn; Ger. pron., hī′dn.
Hayti, hā′tĭ; Fr. pron., ä-ē-tē′.
Hazlitt, hăz′lĭt.
Heine (Heinrich), hīn′rĭk hī′nĕ.
Heligoland, hĕl′ĭ-gō-länd.
Héloïse, ā-lō-ēz′.
Helvétius, hĕl-vē′shĭ-ŭs; Fr. pron., ĕl-vā-sē-ŭs′.
Hemans (Mrs.), hĕm′ănz, *not* hē′mănz.
Hengist, hĕng′gĭst.
Hephæstion, hē-fĕs′tĭ-ŏn.
Heraclitus, hĕr-ȧ-klī′tŭs, *not* hē-răk′lĭt-ŭs.
Herat, hĕr-ät′.
Herculaneum, hēr-ku-lā′nē-ŭm.
Herodotus, hē-rŏd′ō-tŭs.
Hesiod, hē′sĭ-ŏd; hē′shĭ-ŏd (Biog.).
Hesse, hĕs, *not* hĕs′sē.
Heyne, hī′nĕ.
Himalaya, hĭm-ä′lā-yȧ; often pronounced hĭm-ā-lā′yä.
Hippocrates, hĭp-pŏk′rā-tēz.
Hoang-Ho, hō-äng-hō′.
Hobbes, hŏbz.
Hobokan, hō′bō-kĕn.
Hohenlohe, hō′ĕn-lō-ĕ.

Hohenzollern, hō′ĕn-tsŏl-ĕrn.
Holbein, hōl′bīn.
Holstein, hōl′stīn.
Holyhead, hŏl′ĭ-hĕd.
Holyoke (Mount), hōl′yōk, *not* hō′lĭ-ōk.
Hortense, ôr-tăns′.
Hôtel de Ville, o-tĕl′ dŭ vēl.
Houdon, ōō-dôn′.
Houston (Sam), hus′tŏn, *not* hows′tŏn.
Hudibras, hu′dĭ-brăs, *not* hu′dĭ-brä.
Hughes (Thomas), huz.
Huguenot, hu′gē-nŏt.
Huron (Lake), hu′rŏn.
Huygens, hī′gĕnz; Dutch pron., hoi′hĕnz.
Hyacinthe (Père), pâr ē-ä-săNt′.
Hyksos, hĭk′sŏs.
Hypatia, hī-pā′shĭ-ȧ.
Hyperion, hī-pē′rĭ-ŏn.
Iamblichus, ī-ăm′blĭk-ŭs.
Icarus, ĭk′ȧ-rŭs, *not* ī-kā′rŭs.
Ichabod, ĭk′ȧ-bŏd.
Ich dien, ĭk dēn.
Ictinus, ĭk-tī′nŭs.
Imogen, ĭm′ō-jĕn.
Ines, ē-nĕs′.
Ingelow (Jean), jēn ĭn′jē-lō.
Inkerman, ĭng-kĕr-măn′.
Invalides (Hôtel des), o-tĕl′ dāz ăN-văl-ēd′.
Iowa, ī′ō-wȧ, *not* ī-ō′wȧ.
Iphigenia, ĭf-ĭ-jē-nī′ȧ, *not* ĭf-ĭ-jē′nĭ-ȧ.
Irenaeus, ĭr-ē-nē′ŭs, *not* ī-rē′nē-ŭs.
Irene, ī-rē′nē.
Ischia, ĭs′kē-ä.
Isham, ī′shăm.
Isis, ī′sĭs.
Ismaïl, ĭs-mä-ēl′.
Isocrates, ī-sŏk′rā-tēz.
Isola, ē′sō-lä.
Isolde, ē-sōl′dā *or* ĭ-sōld′.
Israel, ĭz′rā-ĕl, *not* ĭs′rā-ĕl.
Isthmian, ĭs′mĭ-ăn *or* ĭst′mĭ-ăn.
Ithuriel, ĭ-thu′rĭ-ĕl.
Ivan, ē-vän′.
Ixion, ĭks-ī′ŏn, *not* ĭks′ĭ-ŏn.
Iztaccihuatl, ēs-täk-sē-hwät′l.
Jacobi, yä-kō′bē.
Jacquard, zhä-kär′.
Jacques, zhäk.
Jakutsk, yä-kōōtsk′.
Janauschek, yä′now-shĕk.
Japanese, jăp-ăn-ēz′ *or* ēs′.
Japheth, jā′fĕth, *not* jā′fĕt.
Java, jä′vȧ *or* jȧ′vȧ, *not* jăv′ȧ.
Jean Valjean, zhăN văl-zhăN′.
Jeanne d'Arc, zhăn därk′.
Jeddo, yĕd′dō.
Jena, jĕn′ȧ; Ger. pron., yä′nä.
Jephthah, jĕf′thȧ, *not* jĕp′thȧ.
Jerusalem, jē-ru′sā-lĕm.
Jesuit, jĕz′yu-ĭt, *not* jĕzh′yu-ĭt.
Jevons, jĕv′ŏnz, *not* jē′vŏnz.
Joachim, jō′ȧ-kĭm; Ger. pron., yō′ȧ-kĭm.
Joan of Arc, jōn′ ŏv ärk *or* jō-ăn′ŏv ärk.
Joinville de, dŭ join′vĭl; Fr. pron., dŭ zhwăN-vēl′.
Jordaens, yōr′dăns.
Joseffy, yō-sĕf′ĭ.
Joubert, zhōō-bâr′.
Jowett, jŏw′ĕt, *not* jō′ĕt.
Juarez, jōō-ä′rĕz; Sp. pron., hōō-ä′rĕth.
Jubilate, ju-bĭl-ā′tē *or* ā′tę.
Judaic, ju-dā′ĭk.
Juggernaut, jŭg′ĕr-nôt.
Juliet, ju′lĭ-ĕt.
Jungfrau, yŏŏng′frow.
Juniata, ju-nĭ-ăt′ȧ.
Junot, zhü-nō′.
Jussieu de, dŭ jŭs-su′; Fr. pron., dŭ zhü-sē-ö′.
Kansas, kăn′săs, *not* kän′zäs.
Kant, känt.
Katahdin (Mount), kä-tä′dĭn.
Kearney, kär′nĭ, *not* kē′rnĭ.
Kearsarge (Mount), kēr′särj.
Keble (John), kē′bl, *not* kĕb′l.
Kenelm, kĕn′ĕlm, *not* kĕn-ĕlm′.
Kennebec, kĕn-ē-bĕk′, *not* kĕn′ē-bĕk.
Keokuk, kē′ō-kŭk, *not* kē-ō′kŭk.
Khiva, kē′vä.
Kief, kē-ĕf′.
Kiel, kēl.
Kiev, kē-ĕf′.
Kilauea, kē-low-ā′ä.
Kléber, klē′bĕr *or* klā′bâr; Fr. pron., klā-bâr′.
Knollys, nōlz.
Köln, kölnː
Königsberg, kĕn′ĭgz-bĕrg; Ger. pron., kö′nĭgs-bĕrg.
Kosciusko, kŏs-sĭ-ŭs′kō.
Kossuth, kŏsh′ōōt.
Kotzebue von, fōn kŏt′sē-bōō.
Krause, krow′zĕ.
Krupp, krōōp.
Kurile (Islands), kōō′rĭl.
La Bruyère de, dŭ lä brü-ē-yâr′ *or* dŭ lä brü-yâr′.
Lachesis, lăk′ē-sĭs, *not* lăk-ē′sĭs.
Lachine (rapids), lä-shēn′.
Ladrones (Islands), lä-drōnz′; Sp. pron., lä-drō′nĕs.
Laertes, lā-ēr′tēz.
Laffitte, lä-fēt′.
Lafontaine de, dŭ lä-fŏn-tān′; Fr. pron., dŭ lä-fôN-tān′.
La Fourche, lä fōōrsh′.
La Guayra, lä gwī′rä.
Lalla Rookh, lä′lä-rōōk, *not* lä-lä-rōōk′.
Languedoc, läN′gŭ-dok.
Lannes, lăn or län.
Laocoön, lā-ŏk′ō-ŏn, *not* lā-ō-kōōn′.
Laplace de, dŭ lä-plăs′.
Laputa, lä-pu′tȧ.
Lares, lā′rēz.
La Rochefoucauld de, dŭ lä rösh-fōō-kō′.
Latin, lăt′ĭn.
Lausanne, lō-zăn′.
Lavoisier, lä-vwä-zē-ā′.
Layard, lā′ērd.
Lebrun, lŭ-brŭN′.
Le Clerc, lŭ klâr′, *not* lŭ klârk′.
Ledru-Rollin, lŭ-drü′-rō-lăN′.
Legaré, lŭ-grē′.
Leibnitz von, fōn līp′nĭts.
Leicester, lĕs′tēr.
Leigh (Aurora), lē, *not* lā.
Leila, lē′lȧ, *not* lī′lȧ.
Leipsic, līp′sĭk.
Leipzig, līp′tsĭg.
Lely (Sir Peter), lē′lĭ.
Lenape, lĕn′ä-pē.
L'Enclos de (Ninon), nē-nôN′ dŭ läN-klō′.
Leominster, lĕm′ĭn-stēr, *not* lē′ō-mĭn-stēr.
Le Sage, lŭ säzh′.
Lesseps de, dŭ lā-sĕps′; dŭ lā-sĕp′ (Biog.).
Le Sueur, lŭ sü-ör′.
Leutze, loit′sĕ.
Lever (Charles), lē′vēr, *not* lĕv′ēr.

Leverrier, lŭ-vĕr′ĭ-ēr; Fr. pron., lŭ-vā-rē-ā′.
Lewes (George Henry), lu′ĭs, *not* luz.
Leyden, lī′dĕn.
Lieber, lē′bĕr.
Liebig von, fŏn lē′bĭg.
Liége, lēj; Fr. pon., lē-ăzh′.
Lima (Peru), lē′mä.
Lima (U. S.), lī′mä.
Limoges, lē-mōzh′.
Lincoln, lĭng′kŭn, *not* lĭn′kŭn.
Linné von, fŏn lĭn′ā.
Liszt (Franz), fränts lĭst.
Lodi, lō′dē.
Lopé de Vega, lō′pā dā vā′gä.
Lopez, lō′pĕs; Sp. pron., lō′pĕth.
Los Angeles, lōs ăn′jĕl-ēz; Sp. pron., lōs äng′-hĕl-ĕs.
Lucrezia Borgia, lōō-krāt′sē-ä bōr′jä.
Luigi, lōō-ē′jē.
Luther, lu′thĕr; Gr. pron., lōō′tĕr.
Lycidas, lĭs′ĭ-dăs.
Lyell (Sir Charles), lī′ĕl.
Lyly (John), lĭl′ĭ.
Lyonnaise, lī-ŏn-āz′; Fr. pron., lē-on-āz′.
Macbeth, măk-bĕth′, *not* măk′bĕth.
Machiavelli de, dā mäk-ē-ä-vĕl′ē.
Mackay (Charles), măk-ī′ *or* măk-ā′.
Macleod, măk-lowd′.
Macready, măk-rē′dĭ, *not* măk-rā′dĭ.
Maggiore (Lake), mäd-jō′rā.
Magyar, măg′yär; Hung. pron., mŏd-yŏr′; mäd′-yär (Stor.).
Mahabharata mä-hä-bä′rä-tä.
Maintenon de, dŭ măn-tŭ-nôn′.
Mainz, mĭnts.
Malcolm, măl′kŭm.
Malebranche, mäl-brăNsh′.
Malesherbes de, dŭ mäl-zârb′.
Malibran, mä-lē-brăN′; anglicized, măl′ĭ-brăn.
Malpighi, mäl-pē′gē.
Malthus, măl′thŭs.
Manetho, măn′ē-thō.
Mansard, măN-sär′; anglicized măn′särd.
Maori, mä′ō-rē.
Maracaybo, mä-rä-kī′bō.
Marat, mä-rä′, *not* măr-ät′.
Mardigras, mär-dē-grä′.
Maria Theresa, mä-rī′å tē-rē′sä.
Marie Antoinette, mä-rē′ ăN-twä-nĕt′.
Marion, măr′ē-ŏn.
Marius, mā′rĭ-ŭs, *not* măr′ĭ-ŭs.
Marjoribanks, märch′bängks.
Marlborough (Duke) môl′brō; môl′bŭr-ŭ (Biog.).
Marochetti, mä-rō-kĕt′ē.
Marseillaise (hymn), mär-sā-yāz′.
Marseilles (Fr.), mär-sālz′.
Masaniello, mä-sä-nē-ĕl′lō.
Massasoit, măs′sā-soit.
Massillon, măs′ĭl-ŏn; Fr. pron., mä-sē-yôn′.
Mather (Cotton), măth′ĕr.
Mauch Chunk, môk chŭngk′.
Mauna Loa, mow′nä lō′ä.
Maupertius de, dŭ mō-pâr-twē′.
Maximilian (Emperor), măks-ĭ-mĭl′yăn.
Mayence, mä-yäNs′.
Mazarin, măz-ăr-ēn′; Fr. pron., mä-zä-răN′.
Mazzini, măt-sē′nē.
Medici de', dā mĕd′ē-chē *or* dā mā′dē-chē.
Mefistofele, mā-fēs-tō′fā-lā, *not* mĕf-ĭs-tŏf′ē-lē.
Mehemet Ali, mā′hĕm-ĕt ä′lē.
Méhul, mā-ül′.
Meissonier, mā-sō-nē-ā′.
Melanchthon, mē-lăngk′thŏn; Ger. pron., mē-länk′tōn.
Menai (Straits), mĕn′ī, *not* mē′nī.
Mencius, mĕn′shĭ-ŭs.
Mendelssohn Bartholdy, mĕn′dĕl-sōn bär-tōl′dē.
Metternich von, fŏn mĕt′ĕr-nĭk.
Meyerbeer, mī′ĕr-bār.
Miami, mī-ă′mĭ.
Michael, mī′kā-ĕl; coll., mī′kĕl.
Michael Angelo, mī′kā-ĕl ăn′jā-lō.
Michel-Ange (Fr.), mē-kĕl′-äNzh.
Michelangelo (It.), mē-kĕl-äṅ′jā-lō.
Millais, mĭl-lā′.
Millet, mē-yā′.
Mirabeau de, dŭ mē-rä-bō′; anglicized, mĭr′ă-bō.
Missouri, mĭs-sōō′rĭ, *not* mĭz-zōō′rĭ.
Mivart (St. George), mĭv′ärt.
Mnemosyne, nē-mŏs′ĭn-ē.
Mœris (Lake), mē′rĭs.
Mohammed, mō-hăm′ĕd.
Molière, mō-lē-âr′; Fr. pron., mol-yâr′.
Moltke von, fŏn mōlt′kĕ.
Montaigne de, dŭ mŏn-tān′; Fr. pron., dŭ môN-tân′yŭ.
Mont Blanc, môN-bläN′; often anglicized, mŏnt-blängk′.
Montcalm de, dŭ mŏnt-käm′; Fr. pron., dŭ môn-kälm′.
Mont Cenis, môN sŭ-nē′.
Montesquieu de, dŭ mŏn-tĕs-ku′; Fr. pron., dŭ môN-tĕs-kyö′.
Monticello (Italy), mŏn-tē-chĕl′lō.
Moore (Thomas), mōr *or* mōōr.
Moscheles, mŏsh′ĕl-ēs.
Moses, mō′zĕz.
Moultrie, mōō′trĭ *or* mōōl′trĭ.
Mozart, mō-zärt′; Ger. pron., mōt′särt.
Müller (Max), mül′ĕr.
Munchausen, mŭn-chō′sĕn.
München, mün′kĕn.
Münchhausen von, fŏn münk′how-zĕn.
Munkacsy de, dŭ mŏŏn′käch-ē.
Murat, mu-rät′; Fr. pron., mü-rä′.
Murillo, mu-rĭl′lō; Sp. pron., mōō-rēl′yō.
Musset de, dŭ mü-sā′.
Nantes, năntz; Fr. pron., năNt.
Napier, nā′pē-ĕr.
Natchitoches, năk-ē-tŏsh′ *or* năch-ĭ-tŏch′ĕs.
Nebuchadnezzar, nĕb-yu-kăd-nĕz′är.
Nepos (Cornelius), nē′pŏs.
Nesselrode von, fŏn nĕs′ĕl-rō-dĕ.
Neuchâtel, nö-shä-tĕl′.
Neumann, noi′măn, *not* nu′măn.
Nevada, nē-vä′dä.
Newfoundland, nu′fŭnd-lănd.
New Orleans, nu ôr′lē-ănz, *not* nu ôr-lēnz′.
Nibelungen-Lied, nē′bĕl-ŏŏng-ĕn-lēd.
Nice, nēs.
Niebuhr, nē′bōōr.
Nijni-Novgorod, nĭzh′nē-nŏv-go′rŏd; nizh′nē-nŏv-gō-rŏd′ (Gaz.).
Nismes, nēm.
Notre Dame, nō-tr dăm′.
Novalis, nō-vä′lĭs.
Ober Ammergau, ō′bĕr äm′mĕr-gow.
Odoacer, ō-dō-ā′sēr, *not* ō-dō′ā-sēr.
Odysseus, ō-dĭs′ē-ŭs *or* ō-dĭs′sus.
Oedipus Tyrannus, ĕd′ĭp-ŭs tĭr-ăn′ŭs.
Oehlenschläger, ö′lĕn-shlā-gĕr.
Oersted, ör′stĕd.
Ole Bull, ō′lē bŏŏl.
Opie, ō′pī.

Origen, ŏr′ĭ-jĕn.
Oude, owd, *not* ōōd.
Oudinot, ōō-dē-nō′.
Ouida, wē′dä.
Ovid, ŏv′ĭd, *not* ō′vĭd.
Paganini, pä-gä-nē′nē.
Paget, paj′ĕt.
Palfrey, pôl′frĭ.
Palgrave, pôl′grāv.
Palissy, păl′ĭs-ĭ; Fr. pron., pä-lē-sē′.
Pall-Mall (street in London), pĕl-mĕl′, *not* păl-măl′ *nor* pôl-môl′.
Palmerston, päm′ĕr-stŭn, *not* păl′mĕr-stŭn.
Paoli di, dē pä′ō-lē, *almost* pow′lē.
Parnell, pär′nĕl, *not* pär-nĕl′.
Parrhasius, păr-rā′shĭ-ŭs, *almost* păr-rā′shŭs.
Pascal, päs′kăl; Fr. pron., päs-kăl′.
Pasteur, päs-tör′.
Perugino, pā-rōō-jē′nō.
Pestalozzi, pĕs-tä-lŏt′sē.
Pesth, pĕst; Hungarian pron., pĕsht.
Petrograd, pyĕ′tro-grät.
Petruccio, pā-trōō′chō.
Phaedrus, fē′drŭs.
Philippi, fĭl-ĭp′ī, *not* fĭl′ĭp-ī.
Phocion, fō′shĭ-ŏn, *not* fō′shŏn.
Piccolomini, pĭk-ō-lō′mē-nē.
Pisa, pē′zä *or* pē′sä.
Pisistratus, pī-sĭs′trā-tŭs, *not* pĭs-ĭs-trā′tŭs.
Pizarro, pē-zär′ō; Sp. pron., pē-thär′ō.
Pleiades, plē′yà-dēz.
Pleiads, plē′yădz.
Pliny, plĭn′ĭ.
Plotinus, plō-tī′nŭs.
Pnyx, nĭks.
Poitiers, pwà-tĭ-ā′; sometimes anglicized poi-tērz′.
Pompeii, pŏm-pā′yē, *not* pŏm′pē-ī.
Ponce de Leon, pōn′thā dā lā-ōn′; anglicized pŏns dē lē′ŏn.
Pontius, pŏn′shĭ-ŭs, *not* pŏn′shŭs.
Popocatapetl, pō-pō′kăt-ā-pā-tl; pō-pō-kä-tä-pĕt′l.
Port au Prince, pōrt′ō-prĭns; Fr. pron., pōrt-ō-prăNs′.
Poughkeepsie, pō-kĭp′sĭ, *not* pō-kēp′sĭ.
Pouschkin, pŏŏsh′kĭn *or* pŏŏsh′kēn.
Powhatan, pow-hăt′ăn′, *not* pow-hăt′ăn.
Pozzuoli, pŏt′sōō-ō′lē.
Praxiteles, prăks-ĭt′ē-lēz.
Provençal, prō-vĕn′săl; Fr. pron., prō-văn-sàl′.
Psyche, sī′kē.
Ptolemy, tŏl′ē-mĭ.
Puebla, pwĕb′lä.
Pythagoras, pĭth-ăG′ō-răs, *not* pī-thăG′ō-răs.
Quatre Bras, kä′tr brä.
Rabelais, răb-lā′; rä-bĕl-ā′ *or* rä-blā′ (Biog.).
Rachel (actress), rä-shĕl′.
Racine, rä-sēn′.
Raleigh (Sir Walter), rô′lĭ.
Rameses, răm′ē-sēz; rä-mē′sēz (Stor.).
Ramillies, răm′ĭl-ēz; Fr. pron., rä-mēl-yē′ *or* rä-mē-yē′.

Tivoli (New York), tĭv′ō-lī; tĭv-ō′lē (Gaz.).
Tocqueville de, dŭ tŏk′vĭl; Fr. pron., dŭ tok-vēl′.
Tolstoi, tŏl′stoi.
Torricelli, tŏr-rē-chĕl′lē.
Toussaint L'Ouverture, tōō-săN′ lōō-vĕr-tür′.
Tremont, trē-mŏnt′.
Trieste, trē-ĕst′; It. pron., trē-ĕs′tȧ.
Trondhjem, trŏnd′yĕm.
Trovatore Il, ēl trō-vä-tō′rā.
Truxillo, trōō-hēl′yō.
Tschaikowsky, chī-kŭvs′kĭ.
Tuesday, tʊz′dā, *not* tōōz′dĭ *nor* tyʊs′dĭ.
Tuileries, twēl-rē′, *not* twĭl′ĕr-ēz.
Turenne de, dŭ tʊ-rĕn′; Fr. pron., dŭ tü-rĕn′.
Turgeneff, tōōr-gĕn′ĕf.
Tyndale, tĭn′dăl, *not* tĭn′dāl.
Tyrol, tĭr′ōl; Ger. pron., tē-rōl′.
Tyrwhitt, tĕr′ĭt.
Uhland, ōō′länt.
Ulrici, ōōl-rēt′sē.
Utrecht, yʊ-trĕkt′; Dutch pron., ü′trĕʀt.
Valenciennes, vȧ-lĕn-sĭ-ĕnz′; Fr. pron., vȧ-läN-sē-ĕn′.
Valhalla, văl-hăl′ȧ.
Vandyck, văn-dīk′.
Van Eyck, văn īk′.
Vauban de, dŭ vō-bäN′.
Vaucluse, vō-klüz′.
Vaud (Pays de), pā-ē′ dŭ vō′.
Vaughan, vôn *or* vō′ăn.
Velasquez, vȧ-läs′kĕth.
Verboeckhoven, vĕr-bōōk′hō-vĕn.
Vercingetorix, vĕr-sĭn-jĕt′ō-rĭks.
Verdi, vâr′dē.
Verestchagin, vā-rēs-tchä′gĭn.
Vernet, vĕr-nā′.
Veronese (Paul), vā-rō-nā′zā.
Versailles, vĕr-sālz′; Fr. pron., vĕr-sä′yŭ.
Vespasian, vĕs-pā′zhĭ-ăn.
Vespucci (Amerigo), ä-mā-rē′gō vĕs-pōōt′chē.
Vibert, vē-bâr′.
Vichy, vē-shē′.
Vienna, vĭ-ĕn′ȧ, *not* vī-ĕn′ȧ.
Villiers, vĭl′yĕrz.
Vincennes, vĭn-sĕnz′; Fr. pron., văN-sĕn′.
Vinci da, dä vĭn′chē.
Viollet-le-Duc, vē-ō-lā′ lŭ-dük′.
Virchow, vĕr′chow; Ger. pron., fĭr′kō.
Vladimir, vlăd′ē-mĕr; Russian and Polish pron., vlä-dē′mĭr.
Volapük, vō-lä-pük′.
Vosges, vōzh.
Wagner, wăg′nĕr; Ger. pron., väg′nĕr.
Wagram, vä′gräm.
Walhalla, wŏl-hăl′ȧ.
Wallenstein von, fōn wŏl′ĕn-stīn; Ger. pron., fōn väl′ĕn-stīn.
Waller, wŏl′ĕr.
Warwick (Eng.), wôr′ĭk.
Waterloo, wô-tĕr-lōō′; Dutch pron., vä-tĕr-lō′.
Watervliet, wô-tĕr-vlēt′.
Watteau, vä-tō′; commonly wä-tō′.
Waukegan, wô-kē′găn.
Weber von, fōn vā′bĕr.
Wednesday, wĕnz′dā, *not* wĕd′nĕs-dā.
Wellesley (Islands), wĕls′lĭ.
Wellesley (College), wĕlz′lĭ.
Wemyss (Castle), wēms.
Werther, wĕr′tĕr; Ger. pron., vär′tär.
Wesley, wĕs′lĭ.
Whitefield, hwīt′fēld, *not* hwĭt′fēld.
Wieland, wē′länd; Ger. pron., vē′länt.
Wilhelm, vĭl′hĕlm.
Wilkesbarre, wĭlks′bär-ĭ.
Winnepesaukee (Lake), wĭn-ē-pē-sô′kē.
Wolf, wŏŏlf; Ger. pron., vŏlf.
Wolseley (Sir Garnet), wŏŏlz′lĭ, *not* wŏŏl′zĭ.
Wolsey (Cardinal), wŏŏl′zĭ, *not* wŏŏl′sĭ.
Woolwich, wŏŏl′ĭj.
Worcester, wŏŏs′tĕr.
Worcestershire, wŏŏs′tĕr-shĭr.
Wörth (Ger.), vört.
Württemberg, vür′tĕm-bĕrg.
Wyandotte, wī-ăn-dŏt′.
Wyckliffe, wĭk′lĭf.
Ximenes (Cardinal), zĭm-ē′nēz; Sp. pron., hē-mā′nĕs.
Yang-tse-kiang, yăng-tsē-kĭ-äng′.
Yenikale (Strait), yĕn-ē-kä′lä.
Yenesei, yĕn-ē-sā′ē.
Ygdrasyl, ĭg′drȧ-sĭl.

COMMON WORDS AND PHRASES.

FROM THE LATIN AND THE GREEK.

ab extra, From without.
ab hoc et ab hac, From this and from that; confusedly.
ab inconvenienti, From the inconvenience.
ab incunabulis, From the cradle.
ab initio, From the beginning.
ab intra, From within.
ab origine, From the origin or beginning.
ab ovo, From the egg.
ab ovo usque ad mala, From egg to apples, i. e., from the beginning to the end of the menu of a Roman banquet; hence, from first to last, from beginning to end.
absit invidia, Let there be no ill-will.
absque argento omnia vana, Without money all is vain.
absque hoc, Without this.
absque ulla conditione, Unconditionally.
absque ulla fraude, Without any fraud.
abundat dulcibus vitiis, He abounds with pleasant faults.
ab uno disce omnes (From one learn all), From a single example judge the whole.
ab urbe condita, From the building of the city, i. e., Rome. [A. U. C.]
abusus non tollit usum, Abuse is not an argument against proper use.
a capite ad calcem, From head to heel.
accepta, The receipts in accounts.
accessit, He came near; applied to a testimonial for one second in merit.
accusare nemo se debet, nisi coram Deo, No one is bound to accuse himself, except before God.
acerrima proximorum odia, The hatred of the nearest relatives is most intense.
acervatim, By heaps.
acribus initiis, incurioso fine, With eager beginnings, but negligent ending.
a cruce salus, Salvation by the cross.
acti labores jucundi, Finished labors are pleasant.
actum est de republica, It is all over with the commonwealth.
a cuspide corona, A crown from the spear; glory from military exploits.
ad absurdum, To show the absurdity.
ad arbitrium, At will, at pleasure.
a dato, From date or from this time.
ad Calendas Graecas, At the Greek calends, i. e., never, since the Greeks had no calends.
ad captandum, To attract or please.
ad captandum vulgus, To catch the rabble.
addendum; (pl.) *addenda*, A thing to be added; an appendix.
a Deo et rege, From God and the king.
ad eundem (sc. *gradum*), To the same degree.
ad extremum, To the extreme.
ad finem, To the end.
ad gustum, To taste.
ad hominem, Personal; to the individual.
adhuc sub judice lis est, The affair is not yet decided.
a die, From that day.
ad infinitum, To infinity.
ad inquirendum, For inquiry.
ad instar, After the manner of.
ad interim, In the meanwhile.
ad internecionem, To extermination.
ad libitum, At pleasure.
ad modum, In the manner of.
ad multos annos, For many years.
ad nauseam, So as to nauseate.
ad patres, Gathered to his fathers; dead.
ad quod damnum, To what damage.
ad referendum, To be further considered.
ad rem, To the purpose; to the point.
adscriptus glebae, Attached to the soil.
adsum, I am present; I am here.
ad summum, To the highest point or amount.
ad unguem, To a nicety.
ad unum omnes, To a man.
ad utrumque paratus, Prepared for either event.
ad valorem, According to the value.
adversus, Against.
ad vivum, To the life.
aegrescit medendo, It becomes worse from the remedies employed.
aequam servare mentem, To preserve an equable mind.
aequanimiter, With equanimity.
aequo animo, With an equable mind.
aere perennius, More lasting than brass; enduring forever.
aetatis suae, Of his or her age.
afflatus, Inspiration.
agenda, Things to be done.
Agnus Dei, The Lamb of God.
αἱ δ' ἐλπίδες εἰσὶν ἐγρηγορότων ἐνύπνια, Hopes are but the dreams of those who wake.
ἀκόλαστα πάντα γίγνεται δούλων τέκνα, Unbridled ever are the sons of slaves.
alere flammam, To feed the flame.
alias, Elsewhere; otherwise.
aliena optimum frui insania, It is well to profit by the madness of others.
alieni appetens, sui profusus, Lavish of his own property while coveting that of others.
alieni temporis flores, Flowers of past time.
alitur vitium vivitque tegendo, Vice thrives and lives by concealment.
aliud corde premunt, aliud ore promunt, One thing they keep back in the heart, they express another with the mouth.
ἄλλος ἐγώ, A second self. (Definition of a friend.)
alma mater, Fostering mother.
alter ego, Another self.
alter idem, Another precisely similar.
alter ipse amicus, A friend is another self.
alterum alterius auxilio eget, The one needs the assistance of the other.
alterum tantum, As much more.
amantium irae amoris integratio, Lovers' quarrels are a renewal of love.
a maximis ad minima, From the greatest to the least.
ambiguas in vulgum spargere voces, To spread doubtful reports among the people.
amicus humani generis, A friend of the human race.
amicus usque ad aras, A friend even to the altars (of sacrifice); to self-immolation.
amo, I love.
amor nummi, Love of money.
amor patriae, Love of country; patriotism.
ἂν ἔτι μίαν μάχην Ῥωμαίους νικήσωμεν, ἀπολούμεθα παντελῶς, One more such victory over the Romans, and we are utterly undone. (Hence the phrase, "A Pyrrhic Victory.")
anguis in herba, A snake in the grass; a false friend; a lurking danger.
animal disputans, A disputatious creature.
animal implume bipes, An animal without feathers and having two legs. Plato's definition of man.
animus furandi, The intention of stealing.
animus imponentis, The intention of the author or composer.
anno aetatis suae, In the year of his or her age.
anno Christi, In the year of Christ. [A. C.]
anno Domini, In the year of our Lord.
anno humanae salutis, In the year of man's redemption. [A. H. S.]
anno mundi, In the year of the world.
anno salutis, In the year of salvation. [A. S.]
anno urbis conditae, In the year since the city—i. e., Rome—was built.
annus mirabilis, A year of wonders. (A term often applied to 1666 in English History, in which the chief events were: War with the Dutch, the Great Plague, and the Great Fire of London. The title of a poem by Dryden.)
ante, Before.
ante bellum, Before the war.
ante lucem, Before daybreak.
ante meridiem, Before noon.
ante tubam trepidat, He trembles even before the trumpet sounds (for the charge).
ἄνθρωπον ζητῶ, I am seeking a man.
anti, Against.
antiqua homo virtute et fide, A man of old-time virtue and fidelity.
a parte ante, From the part gone before; past.
aperto vivere voto, To live with desires freely expressed.
ἁπλοῦς ἐπ' ἐχθροῖς μῦθος ὁπλίζειν χέρα, An armed right hand is our sole reply to foes.
a posse ad esse, From possibility to reality.
a posteriori, From the effect to cause.
apparatus belli, Materials for war.
apparent rari nantes in gurgite vasto, A few appear swimming here and there in the vast whirlpool.
a priori, From the cause to the effect.
aptat se pugnae, He prepares for the contest.
aqua vitae, Brandy; spirit; alcohol.
arbiter elegantiarum, An authority in matters of taste; master of ceremonies.
arcana caelestia, Celestial secrets.
arcana imperii, State secrets.
arcanum, A secret.

argumentum baculinum, The argument of the club; an appeal to force.
argumentum ad crumenam, An argument to the purse.
argumentum ad hominem, An argument to the man.
argumentum ad invidiam, An argument to envy; an appeal to low passions.
argumentum ad judicium, An argument to the judgment.
ἄριστον μέτρον, The golden mean.
ἀριστον μὲν ὕδωρ, Water is the chief element, *i. e.*, the origin of all things.
arrectis auribus, With attentive ears.
ars est celare artem, True art is to conceal art.
artium magister, Master of arts.
a teneris annis, From tender years.
at spes non fracta, Yet hope is not crushed.
audi alteram partem, Hear the other side.
audit vocatus Apollo, Apollo hears when invoked.
aurea mediocritas, The golden mean.
auri sacra fames, The accursed thirst for gold.
auspicium melioris aevi, An omen of better times.
auxilium ab alto, Help from on high.
Ave, Maria, Hail, Mary.
a verbis ad verbera, From words to blows.
a vinculo matrimonii, From the tie of marriage.

beatae memoriae, Of blessed memory.
bella! horrida bella! Wars! horrid wars!
bella matribus detestata, Wars, so detested by mothers.
βέλτιον γὰρ ὀψιμαθῆ καλεῖσθαι, ἢ ἀμαθῆ, It is better to be called late-learned than unlearned.
beneplacito, At pleasure.
benigno numine, By the favor of Providence.
biennium, A period of two years.
bis pueri senes, Old men are twice boys.
bona fide, In good faith.
bona fides, Good faith.
brevi manu, With a short hand, offhand, immediately, summarily.
brevis esse laboro obscurus fio, If I labor to be brief, I become obscure.
brutum fulmen, A harmless thunderbolt.

cacoethes carpendi, A mania for finding fault.
cacoethes loquendi, A rage for speaking.
cacoethes scribendi, A passion for scribbling.
cadit quaestio, The question drops; there is no further discussion.
caetera desunt, The rest is wanting.
caeteris paribus, Other things being equal.
candida Pax, White-robed Peace.
cantate Domino, Sing unto the Lord. (The opening words in the Latin of many Psalms.)
caput, Head; chapter.
caput mortuum, The worthless remains.
caret initio et fine, It wants beginning and end.
casus belli, A cause justifying war; a ground of war.
casus conscientiae, A case of conscience.
casus foederis, The end of the league.
casus fortuitus, A fortuitous occurrence.
causa sine qua non, An indispensable condition.
caveat actor, Let the doer beware.
caveat emptor, Let the buyer beware.
cave canem, Beware of the dog.
cedant arma togae, Let arms yield to the gown; let military authority give place to law.
cede Deo, Submit to Providence.
Christo et Ecclesiae, For Christ and the Church.
χρυσὸς δ' ἄνοιγει πάντας κλίδου πύλας, Gold opens every gate, even that of hell.
circuitus verborum, A circumlocution.
circulus in probando, A circle in the proof; the fallacy of using the conclusion as one of the premises.
cis, This side of.
cito, Quickly.
coena Domini, The Lord's Supper.
cogito, ergo sum, I think, therefore I am.
comitas inter gentes, Comity between nations.
commune bonum, A common good.
communia proprie dicere, To say common things appropriately.
communibus annis, On the annual average; one year with another.
communi consensu, By common consent.
compos mentis, Of a sound mind.
con commodo, At a convenient rate.
concordia discors, Discordant harmony.
conditio sine qua non, An indispensable condition.
conjunctis viribus, With united powers.
conquiescat in pace, May he rest in peace.
consensus facit legem, Consent makes the law.
consuetudo pro lege servatur, Custom is held as law.
contra bonos mores, Contrary to good manners.
copia verborum, An abundant supply of words; fluency of speech.
coram nobis, In our presence.
coram non judice, Before a person who is not a judge; not before the proper tribunal.
corpus Christi, Body of Christ.
corrigenda, Corrections to be made.
corruptio optimi pessima, The corruption of the best becomes the worst.
cor unum, via una, One heart, one way.
cos ingeniorum, A whetstone for the wits.
crescit eundo, It increases as it goes.
crux criticorum, The puzzle of critics.
crux mathematicorum, The puzzle of mathematicians.
crux medicorum, The puzzle of physicians.
cui bono? What is the good of it?
culpam poena premit comes, Punishment follows close on crime.
cum grano salis, With a grain of salt; with some allowance.
cum privilegio, With privilege.
currente calamo, With a running pen; offhand.
custos morum, The guardian of morality.
custos rotulorum, Keeper of the rolls.

dabit Deus his quoque finem, God will put an end to these also.
damnant quod nŏn intelligunt, They condemn what they do not understand.
damnum absque injuria, A loss without an injury.
data et accepta, Expenses and receipts.
datum, pl. data, A fact or principle granted.
deceptio visus, An optical illusion.
decies repetita placebit, Though ten times repeated it will please.
decrevi, I have decreed.
de die in diem, From day to day.
de gustibus non est disputandum, There is no disputing about tastes.
Dei gratia, By the grace of God.
de jure, By the law; by right.
dele, Blot out, erase.
delectando pariterque monendo, By pleasing while admonishing.
delenda est Carthago, Carthage must be destroyed. (The phrase by which Cato the Elder urged the Roman people to destroy Carthage, the hated rival of Rome, and by which he is said to have concluded every speech which he made in the Roman Senate, even when an irrelevant subject was under discussion.
Δελφικὴ μάχαιρα, A Delphic sword. (A two-edged sword, in reference to the ambiguities of the Delphic oracle.)
de minimis non curat lex, The law does not concern itself with trifles.
de mortuis nil nisi bonum, Let nothing be said of the dead but what is good.
de nihilo nihil, in nihilum nil posse reverti, From nothing nothing, into nothing nothing can return. (The doctrine of the indestructibility of matter.)
de novo, Anew.
Deo date, Give to God.
Deo gratias, Thanks be to God. [D. G.]
de omnibus rebus, et quibusdam aliis, Concerning all things, and certain other things beside. (Said of the literary work of an immature author treating of many subjects.)
Deo monente, God giving warning.
Deo, non fortuna, From God, not from chance.
Deo volente, God willing.
de profundis, Out of the depths. (The first words of the Latin version of Ps. cxxx.)
desideratum, A thing desired.
desuetudo, Disuse.
desunt caetera, The remainder is wanting.
Deus nobis haec otia fecit, God has given us this ease.
Deus vobiscum, God be with you.
dextro tempore, At a favorable time.
dictum, A saying; a decision.
dictum de dicto, Report upon hearsay.
dies faustus, A lucky day.
dies infaustus, An unlucky day.
dies irae, Day of wrath; the title of a celebrated Latin hymn.
dii majorum gentium, The gods of the superior houses; the twelve superior gods.
dii penates, Household gods.
disjecta membra, Scattered remains.
docendo discimus, We learn by teaching.
doli incapax, Incapable of mischief.
dominus, Lord.
Dominus vobiscum, The Lord be with you. (The words by which the priest blesses the people in the Roman Church.)
δός μοι ποῦ στῶ καὶ κινῶ τὴν γῆν, Give me a standpoint, and I can move the earth.
do ut des, I give that you may give; the principle of reciprocity.

dramatis personae, The characters of the play.
dulce et decorum est pro patria mori, It is sweet and glorious to die for one's country.
durante vita, During life.

ecce homo, Behold the man! (Applied specifically to a picture of Christ wearing a crown of thorns, when delivered to the people by Pilate.)
e contrario, On the contrary.
editio princeps, The first edition.
ἐγὼ γάρ εἰμι τῶν ἐμῶν ἐμὸς μόνος, Of all my kin I am my only friend.
eheu! fugaces labuntur anni, Alas! our fleeting years slip away.
emeritus, One retired from active official duties.
ἕνα . . . ἀλλὰ λέοντα, One, but a lion.
ἐν νύκτε βουλή, In the night there is counsel; sleep on it.
eo nomine, By that name.
equanimiter, With equanimity.
e regione, In a straight line; exactly opposite.
e re nata, According to the exigency.
errare est humanum, To err is human.
erratum (*pl. errata*), An error.
ἦσω γὰρ καὶ ἐγὼ, τὰ δέ κεν Διὶ πάντα μελήσει, I hurl the spear, but Jove directs the blow.
esse, To be; existence.
est modus in rebus, There is a middle course in all things.
esto perpetua, Let it endure forever.
et caetera, And the rest.
et cum spiritu tuo, And with thy spirit.
et sequentes, et sequentia, And those that follow; and what follows.
et tu, Brute! And thou also, Brutus. (The dying exclamation of Caesar, when he saw Brutus among his assassins.)
εὕρηκα, εὕρηκα, I have found it! I have found it!
e vestigio, Instantly.
ex abrupto, Abruptly; suddenly.
ex abundantia, Out of the abundance.
ex adverso, From the oppósite side.
ex aequo et bono, According to what is right and good.
ex capite, From the head, from memory.
ex cathedra, From the chair or pulpit; spoken with authority; by virtue of office.
exceptio probat regulam, The exception proves the rule.
exceptis excipiendis, Due exceptions (or allowances) having been made.
excerpta, Extracts.
excudit, He made it.
ex curia, Out of court.
ex delicto, From the crime.
ex dono, By the gift.
exegi monumentum aere perennius, I have reared a monument more lasting than bronze. (Said by Horace in regard to his poems.)
exempli gratia, By way of example. [e. g.]
exeunt, They go out.
exeunt omnes, All go out.
exit, He (or she) goes out.
exitus acta probat, The result justifies the deed.
ex more, According to custom.
ex necessitate rei, From the urgency of the case.
ex nihilo nihil fit, From nothing nothing comes.
ex officio, By virtue of office.
ex opere operato, By outward acts.
ex parte, On one part or side.
experto crede, Believe one who has tried it, or who speaks from experience.
ex post facto, After the deed is done; retrospective.
ex propriis, From one's own resources.
ex tempore, Off hand; without preparation.
extra muros, Outside the walls.
extra ordinem, Extraordinarily.
ex usu, From, or by, use.

facetiae, Jokes.
facile princeps, The acknowledged chief; one who stands undoubtedly first.
facsimile, An exact imitation.
factotum, A man of all work.
fare, fac, Say, do.
fata obstant, The Fates oppose.
fata viam invenient, The Fates will find out a way.
favete linguis, Be silent.
fax mentis incendium gloriae, The passion for glory is a torch to the mind.
fecit, He made it.
feliciter, Happily; successfully.
felo de se, Self-felony; a suicide.
ferae naturae, Of a wild nature; applied to wild beasts.
fiat, Let it be done.
fiat justitia ruat caelum, Let justice be done though the heavens should fall.
fiat lux, Let there be light.
fidei defensor, Defender of the faith.
fides Punica, Punic faith; treachery. (Among the Romans the bad faith of the Poeni or Carthaginians was notorious.)
fidus Achates, Faithful Achates, the companion of Aeneas; a trusty friend.
filius populi, A son of the people.
filius terrae, A son of the earth; one of low origin.
finis, The end.

mirabilia, Wonders.
mirum in modum, In a wonderful manner.
miserabile vulgus, A wretched crew.
modo et forma, In manner and form.
modus, Manner.
modus operandi, The manner of working.
μοῖρα δέ τις καὶ πόλεων ἐστὶν ὥσπερ καὶ ἀνδρῶν, Cities have their destinies as well as men.
monumentum aere perennius, A monument more durable than bronze.
more majorum, After the manner of our ancestors.
more suo, In his own way.
mors janua vitae, Death is the gate of life.
mors omnibus communis, Death is common to all.
mos pro lege, Custom has the force of law.
motu proprio, Of his own accord.
mutatis mutandis, The necessary changes being made.
mutuus consensus, Mutual consent.

nec scire fas est omnia, It is not allowed to know all things.
ne exeat, Let him not depart.
nemine contradicente, No one contradicting.
nemine dissentiente, No one dissenting.
nemo reclamat, nullus obsistit, No one protests, no one makes opposition.
νέος ἀπόλλυθ', ὄντινα φιλεῖ θεός, He whom the gods love dies young.
ne quid detrimenti respublica capiat, In order that the commonwealth suffer no injury. (The form of words by which the dictator of the Roman republic was invested with supreme authority.)
nihil ad rem, Nothing to the point.
nihil tetigit quod non ornavit, He touched nothing without embellishing it.
νικᾶ δ' ὁ μειὼν τὸν μέγαν, δίκαι' ἔχων, And armed with right, the less o'ercomes the great.
nil admirari, To be astonished at nothing.
nil dicit, He makes no answer.
nolens volens, Willing or unwilling.

noli me tangere, Touch me not.
nomen et omen, Name and omen; a name that is ominous.
non compos mentis, Not in sound mind.
non constat, It does not appear.
non datur tertium, There is no third choice.
non ens, Nonentity.
non est, It is not; wanting.
non est inventus, He is not found.
non libet, It does not please me.
non liquet, It is not clear.
non obstante, Notwithstanding.
non omne licitum honestum, Lawful acts are not all honorable.
non omnia possumus omnes, We cannot, all of us, do everything.
non sequitur, It does not follow; an illogical conclusion.
non sum qualis eram, I am not what I once was.
noscitur a sociis, A man is known by the company he keeps.
nostro periculo, At our own risk.
nota bene (N. B.), Mark well.
notatu dignum, Worthy of note.
νοῦς ἐστὶν ὁ διακοσμῶν τε καὶ πάντων αἴτιος, Mind is the disposer and cause of all.
nudis verbis, In plain words.
nuptiae, nuptials; wedding.

obiit, He (or she) died.
obiter dictum, A casual remark; an unauthoritative opinion.
observanda, Things to be observed.
odi profanum vulgus, et arceo, I hate the vulgar crowd, and drive them away.
odium theologium, The hatred of theologians.
officina gentium, The workshop of the world.
οἷα κεφαλὴ ἐγκέφαλον οὐκ ἔχει, What a splendid head, and yet no brain!
ὀλίγοι γὰρ ἐσθλοὶ κρείσσονες πολλῶν κακῶν, Better a few brave men than many cowards.
omne ignotum pro magnifico, Everything unknown is thought to be magnificent.
omne solum forti patria est, Every land is a brave man's country.
omnia mutantur, nos et mutamur in illis, All things are subject to change and we change with them.
omnia vincit amor, et nos cedamus amori, Love conquers all things, let us too yield to love.
οἱ πολλοί, The many; the common people.
ora pro nobis, Pray for us.
orate pro anima, Pray for the soul (of).
orator fit, poeta nascitur, The orator is made; the poet is born.
ore rotundo, With a full voice.
origo mali, Origin of evil.
o tempora, o mores, Alas for the times and the manners.
otium cum dignitate, Ease with dignity.
οὐ τοὺς Λακεδαιμονίους (ἔφη) ἐρωτᾶν πόσοι εἰσίν, ἀλλὰ ποῦ εἰσὶν οἱ πολέμιοι, The Lacedemonians do not ask "How many are the enemy?" but "Where are they?"
pace tua, By your leave.
pacta conventa, The conditions agreed on.
palmam qui meruit ferat, Let him bear the palm who has deserved it.
Πὰν ὁ μέγας τέθνηκε, Great Pan is dead.
pari passu, With equal pace; together.
paritur pax bello, Peace is produced by war.
par negotiis, neque supra, Equal to, but not above, his business.
pars adversa, The adverse party.

ma chere, My dear.
mademoiselle, A young unmarried lady.
maitre d'hotel, A house steward.
major-domo (It.), One who has the management of a household.
mal a propos, Ill-timed.
mal de mer, Seasickness.
mariage de convenance, A marriage of convenience.
matinee, A musical or dramatic entertainment held in the daytime.
mayonnaise, A kind of salad dressing.
menage, Household.
menu, Bill of fare.
meringue, Sugar and white of an egg beaten to a sauce.
mesalliance, Marriage with one of lower station.
monsieur, Sir; master; gentleman.
morceau, Morsel.

naive, Having unaffected simplicity.
naivete, Native simplicity.
nee, Born.
neglige, A morning dress.
nom de plume, An assumed or literary name.
nonchalance, Coolness; easy indifference.
nougat, A mixture of almonds and sugar.
nuance, Shade; gradation; tint.

on dit, They say.
outre, Eccentric.

par excellence, Preëminently.
par exemple, For example.
partie carree, A party of four, two men and two women.
parvenu, A newcomer; an upstart.
passe, Worn-out.
pas seul, A single step; a dance.
pate de foies gras, Goose-liver pie.
patisserie, Pastry.
penchant, Inclination; liking.
petit, Small.
pommes de terre, Potatoes.
potage au gras, Meat soup.
pot-pourri, A medley.
pour prendre conge, To take leave.
prima donna (It.), Leading lady singer in an opera.
protege, One protected by another.
puree, A thick soup.
puree aux croutons, A thick soup with cubes of toasted bread.

quien sabe? (Sp.), Who knows?
qui vive? Who goes there?—hence on the alert.

raconteur, A relater; a teller.
ragout, A rich mixture.
raison d'etre, The reason for a thing's existence.
rechauffe, Warmed over, as food; hence, stale, insipid.
rencontre, An encounter.
rendezvous, A place of meeting.
repondez s'il vous plait (R. S. V. P.), Reply if you please.
restaurateur, One who provides.
rissoles, Small pastry, either of savory or sweets fried.
robe de chambre, A dressing gown.
robe de nuit, A night gown.
role, A part in a performance.
roue, A debauchee.
rouge, Red coloring for the skin.

salle a manger, Dining room.
sang-froid, Coolness; self-possession.

sans souci, Without a care, free and easy.
saute, To cook quickly over a hot fire with just enough butter to prevent sticking.
seance, A sitting.
sobriquet, A nickname.
soi-disant, Self-styled; pretended.
soiree, An evening party.
soubrette, On the stage a servant girl who acts in comedies the part of an intrigante.
souffle, A very light, much whipped up, pudding or omelette.
souper, Supper.

tableau vivant, The representation of a picture by persons grouped together, silent and motionless.
table d'hote, A common table for guests.
tendresse, Passion; affection.
tete-a-tete, A conversation between two parties.
timbale, A pie raised in a mold.
toujours, Always.
tout-a-fait, Entirely; wholly.
tout-a-vous, Wholly yours.
tout ensemble, The whole taken together.
trousseau, A wedding outfit.

valet de chambre, An attendant.
veloute, The stock for white sauce.
virtu (It.), Taste; art; skill.
virtuoso (It.), One skilled in matters of taste or art.
vis a vis, Opposite; facing.
vol au vents, Patties of very light puff paste filled with meat or preserves.

CLASS MOTTOES

ad astra per aspera, To the stars through difficulties.
ad vindictam tardus, ad beneficentiam velox, Slow to vengeance, swift to kindness.
age quod agis, Do what you do (*i. e.*, Mind your own affairs).
αἰέν ἀριστεύειν, To excel always.
alta petens, Seeking higher things.
alteri sic tibi, Do to others as to yourself.
ἅμα ὀρεγόμενοι, Pulling together.
ars longa, vita brevis, Art is long, but life is short.
astra castra, numen lumen, The stars my camp, the Deity my light.
audaces fortuna juvat, Fortune favors the bold or brave.
aude aliquid dignum, Dare something worthy.
aude sapere, Dare to be wise.
aut inveniam viam, aut faciam, I will either find or make a way.

bis vivit qui bene, He lives twice who lives well.

carpe diem, Enjoy the present day; seize the opportunity.
certum pete finem, Aim at a sure end.
coelitus mihi veres, My strength is from heaven.
consilio et animis, By wisdom and courage.
consilio et prudentia, By wisdom and prudence.
crux mihi anchora, The cross my anchor.

dant animos vicis, Mutual help gives strength.
dat cura quietem, Vigilance ensures tranquillity.
Dei memor, gratus amicis, Mindful of God, grateful to friends.
delectare in Domino, To rejoice in the Lord.
Deo adjuvante, non timendum, God helping, nothing need be feared.
Deo date, Give to God.
Deo duce, God being my leader.
Deo ducente, nil nocet, God guiding, nothing harms.
Deo favente, With God's favor.
Deo juvante, With God's help.
Deus major columna, God the greatest support.
Deus mihi providebit, God will provide for me.
Deus nobiscum, quis contra? God with us, who against us?
ducit amor patriae, Love of country leads.
dum spiro, spero, While I breathe, I hope.
dum vivimus, vivamus, While we live, let us live.

e pluribus unum, One from many.
esse quam videre, To be rather than to seem.
esto quod esse videris, Be what you seem.
excelsior, Higher.

facta probant, Let deeds prove.
fide et fortitudine, With faith and fortitude.
fide non armis, By faith, not by arms.
fides et justitia, Fidelity and justice.
fides non timet, Faith knows no fear.
finis coronat opus, The end crowns the work.
forsan et haec olim meminisse juvabit, Perhaps it will be pleasant hereafter to remember these things.
forti et fideli nihil difficile, To the brave and faithful nothing is difficult.

gaudeamus igitur, Therefore let us rejoice.
γνῶθι σεαυτόν, Know thyself.

hodie non cras, To-day, not to-morrow.
honesta quam splendida, Things honest rather than things splendid.

in Deo spero, In God I trust.

καιρόν γνῶθι, Know your opportunity.

laborare est orare, To labor is to pray.
labor omnia vincit, Labor conquers all things.

magna est veritas et praevalebit, Truth is mighty and will prevail.
μηδὲν ἄγαν, Not too much of anything.
medio tutissimus ibis, In a medium course you will go most safely.
memento mori, Remember death.
mens sana in corpore sano, A sound mind in a sound body.
mens sibi conscia recti, A mind conscious of rectitude.
μέτρον ἄριστον, The middle course is best.
multum in parvo, Much in little.

nemo me impune lacessit, No one wounds me with impunity.
ne plus ultra, Nothing further.
ne quid nimis, Not anything too much or too far.
nil desperandum, Never despair.
nil nisi cruce, Naught but the cross.
nisi Dominus, frustra, Unless God be with you, all your toil is in vain.
non multa, sed multum, Not many things, but much.
non nobis solum, Not for ourselves alone.
non quis, sed quid, Not who, but what.
non quo, sed quomodo, Not by whom, but in what manner.
non sibi, sed omnibus, Not for self, but for all.
non sibi, sed patriae, Not for self, but for country.
non videri, sed esse, Not to seem, but to be.
nulla dies sine linea, No day without a line; *i. e.*, without something done.
nulli secundus, Second to none.
nunc aut nunquam, Now or never.

omnia ad Dei gloriam, All things to the glory of God.
omnia cum Deo, All things with God.

palma non sine pulvere, No excellence without great labor.
patior, potior, I endure, I obtain.
per crucem ad coronam, Through the cross to a crown.
per crucem ad palmam, Through the cross to victory.
πόνῳ πόνον φέρω, I bear toil by toil.
possunt quia posse videntur, They can because they think they can.
principia, non homines, Principles, not men.
pro bono publico, For the public good.

quae nocent, docent, Things which injure, instruct.
quanti est sapere! How desirable is knowledge!
qui non proficit deficit, He who does not advance goes backward.
quod facimus bene faciamus, What we do let us do well.
quo fas et gloria ducunt, Where right and glory lead.

recta sursum, Right upwards.
respice, aspice, prospice, Look back, look forward, and look around.
respice finem, Look to the end.
revocate animos, Call back your courage.
sapere aude, Dare to be wise.
semper fidelis, Always faithful.
semper paratus, Always ready.
semper vigilans, Always watchful.
servabo fidem, I will keep faith.
spectemur agendo, Let us be judged by our actions.
spes sibi quisque, Let every one hope in himself.
σπεύδε βραδέως, Make haste slowly.
suaviter in modo, fortiter in re, Gentle in manner, but resolute in deed.

tentanda via est, A way is to be attempted.
thure et jure, By religion and justice.

vi et arte, By strength and skill.
vincit qui patitur, He conquers who endures.
vincit qui se vincit, He conquers who conquers himself.

PEDAGOGICAL AND PSYCHOLOGICAL TERMS.

ABNORMAL. Deviating from a standard or type.

ABSOLUTE. That which is not relative.

ABSORPTION. Complete occupation of the attention.

ABSTRACT. A relative term implying that an aspect, quality, or relation of an object is considered as having a separate or independent existence apart from the body possessing it. Abstract is the opposite of concrete.

ABSTRACTION. That process by which single ideas are separated from others and the attention fixed upon them.

ACCIDENTAL. That which is not essential or substantial. A further meaning makes it uncaused or fortuitous.

ACQUIRED. That which is added during the individual's life, from experience, to the original equipment of the mind.

ACQUISITIVENESS. Relative ease of acquiring or learning; generally regarded as a natural fitness.

ACTION. A general term for deeds or acts, and the doing of them. Voluntary actions are those performed by an act of will; non-voluntary, reflex, or automatic are performed independent of the will; involuntary are those which are opposed by the will, and occur in spite of a will to the contrary.

ADOLESCENCE. The period in the life of an individual preceding the attainment of maturity.

ANALYSIS. The act of separating a whole into its component parts for the purpose of studying their relation.

ANIMISM. The hypothesis, original with Pythagoras and Plato, that the universal soul (*anima mundi*), no matter how conceived, is the cause or principle of life.

ANTHROPOLOGY. The science of man or the natural history of mankind.

ANTHROPOMETRY. The science which deals with the measurements, physical proportions, and characteristics of the human body.

APPERCEPTION. A process of attention involving interaction between (1) the presentation of the subject to which attention is being given, (2) the whole of the previous matter relating to the subject and held in the mind, and (3) all of the performed mental processes. In education the term is used to denote the consideration and interpretation of new knowledge in the light and by the aid of that previously acquired.

ASSIMILATION. The union of thought elements by conscious process; or the association between like elements and compounds.

ASSOCIATION. In education the intentional and designed comparison of newly presented facts with other related facts already known.

ATTENTION. The act of the mind at work or beginning to work on a subject.

Reflex attention is drawn without the subject's foreknowledge by unexpected stimulation. Voluntary attention follows a purpose or an object that is interesting.

Voluntary attention is under the control of the will to attend, while non-voluntary or spontaneous attention is given without effort or fixed purpose.

ATTITUDE. Readiness for attention, or action, of a definite sort.

AUTO-SUGGESTION. The process of bringing about in oneself hypnotic or suggestive states.

BACONIAN METHOD. The inductive method of reasoning developed by Francis Bacon. Reasoning from particulars to the general.

BASEDOW'S METHOD. "Everything according to nature."

BELIEF. A mental acceptance of something thought of as real. **DISBELIEF.** A state of belief in a contrary truth.

CALISTHENICS. The art, science, or practice of muscular exercise to promote health, strength, or grace of the body.

CAPACITY. The power of receiving ideas, or of acting upon them; physical power of any sort.

CATECHETICAL METHOD. Instruction by means of questions and answers, usually for the purpose of examination.

CAUSALITY. The necessary connection between events in point of time. It is opposed to the idea of logical necessity and to chance or freedom.

CLASSICAL COURSE. A course of study which includes the Greek and the Latin languages.

CLASSIFICATION. The simplest form of generalization.

CLEARNESS. That stage of method in which the mind apprehends facts with distinctness of understanding; according to Herbart, the first formal step in method.

CO-EDUCATION. The education together of persons of both sexes or of different races in the same institution of learning.

COGNITION. The state of being aware of an object.

COLOR-BLINDNESS. An abnormal condition of vision characterized by the absence of particular color tones.

COMPARATIVE PSYCHOLOGY. Comparison of the minds of different animal forms, including man.

COMPARISON. The act of discerning the likeness and difference between two or more objects.

CONATION. The active element of consciousness which displays itself in tendencies, impulses, desires, and acts of the will.

CONCENTRATION. The voluntary centering of thought upon a subject.

CONCEPT. Cognition of a single whole as distinguished from the particular elements of which it is composed. It is a distinction between a universal and a particular. The formation of concepts is the first step in thinking.

CONCEPTIONS. Perceptions registered or pictured in the mind so as to be recalled.

CONCEPTUALISM. A psychological doctrine that the mind can form general conceptions of individual objects; it is opposed to both realism and nominalism.

CONCRETE. Belonging to actual things or events.

CONSCIOUSNESS. The characteristic which distinguishes mental from all other life. It divides all that is mind from all that is not mind.

CONTENT. A term referring to what is in the mind; whatever forms part of a total consciousness; the qualities which a concept contains.

CONTROL. Voluntary command of mind and body.

CO-ORDINATION (of studies). A grouping of subjects mutually related in parts but essentially independent as branches of knowledge.

CORRELATION. The forming of explicit relationships among the parts of a mental whole. In studies it is the arrangement of studies and topics with regard to their reciprocal relations. Topics in the same subject may be correlated as well as those which are related to topics in other subjects, as classical, scientific, and economic subjects.

CULTURE. The result of mental and moral cultivation; a breadth of knowledge and refinement. Culture epochs in education involve the idea of a connection between the development of each child and the historical development of the race, and that in this is found the reason for the sequence of subjects in the instruction given.

CURRICULUM. A specified fixed course of study in an institution of learning.

DEDUCTION. A mental process or method in teaching in which reasoning proceeds from the general to the particular, as in geometry.

DIAGRAM. A simple drawing used to illustrate an oral explanation.

DIALECTICS. In education it is the art of teaching by means of discussion.

DIDACTICS. The science and art of teaching.

DISCIPLINE. Systematic training through education. The term thus applies to both mental and physical training. The mental discipline resulting from some studies is greater than their cultural value. It expands and regulates the powers.

DISCRIMINATION. A decision upon the difference between objects, each judged by the whole context of experience.

DISTRACTION. Inattention produced by stimulation of the attention to something else.

EDUCATION. The science and art of mental, moral, and physical development; the cultivation of the mind and manners, and the training of the body, through instruction and exercise.

EDUCATIONAL PSYCHOLOGY. That department of psychology which investigates the inner reaction that accompanies the manifold activities of man. The inner activities of man are educational.

EFFORT. The performance of work by force of will.

EGO. Individual consciousness of the object-self as contrasted with the same individual's thought of another, known as the *alter*. Ego is the self; non-ego, the not-self.

EMILE. A romance, named for the principal character, in which Jean Jacques Rousseau promulgated his views on education and natural religion.

EMOTIONAL TRANSMISSION. The communication of ideas or knowledge by arousing or appealing to the emotions.

EMOTIONS. Vivid feelings arising from the consideration of objects perceived, remembered, or imagined. An emotion is a tendency to feel. An instinct is a tendency to act in the presence of certain objects of environment.

EMPIRICAL. Relating to experience by being based upon, directed by, or derived from it. Opposed to rational.

EMULATION. Imitative rivalry; incentive to surpass or equal others. The Jesuits, in their teaching, called it "the whetstone of talent, the spur of industry."

END. That which satisfies a tendency, impulse, desire, or act of will.

ENVIRONMENT. All the external circumstances or conditions surrounding an object at any stage of its existence.

ESSENCE. The necessary and constant nature of a thing as contrasted with its accidents.

ESSENTIAL. Relating to the constant and necessary nature of a thing. Opposed to accidental.

ETHOLOGY. The science of the formation of human character whether by individuals or in groups.

EUGENICS. Sex-education.

EXERCISE. Learning or training through practice; also the task, duty, or work which produces it.

EXPERIENCE. A phase or mode of conscious change; the events of the mental life as a whole.

EXPERIMENT. A change in phenomena purposely brought about in order to study the phenomena and to obtain knowledge regarding them.

EXPERIMENTATION. The process of trying or testing, as a method of securing results.

EXTERNAL OBJECTS. One of the oldest psychological theories of our perception of an external object by Hobbes. He says that sensation and sense-perception are due to the resistance offered by the organism to change produced by an external impression.

FACULTY. Capability for a certain kind of mental process. It is a power of the mind to change and to impart.

FEELING. A mode of self-consciousness, or subjective consciousness. As a sensation it is a simple state of mind; as an emotion it is complex.

FELLOWSHIP. In England, a position of privilege and emolument in a college which entitles the holder to the enjoyment of certain revenues and privileges. In America, an amount of money or a scholarship which enables a student to pursue his studies at a certain institution or abroad.

FORMAL CULTURE. The doctrine that mental power, derived from any form of exercise or by any means, is applicable to any department of human activity.

FORMAL STEPS. The essential stages of a rational method. Herbart considers four: Clearness, Association, System, and Method. Others have more: Preparation, Presentation, Association, Generalization, and Application.

FROEBELIAN MOVEMENT. The movement advocating the Froebelian or kindergarten system of instruction. Its first principle is that the end and means of a child's education should be unrestricted, creative activity.

FUNCTION. Any conscious process which takes part in a larger group or system of processes.

GENERAL CONCEPT. It always includes two essential and distinct parts, an image, and the meaning of this image.

GENERAL IDEA. It emphasizes the presence of the image.

GENERAL NOTION. This emphasizes consciousness of meaning.

GENERALIZATION. The act of recognizing a likeness not before discovered, which involves formation of a new concept or extends an old one.

GENETIC. Pertaining to or dealing with original production. Genetic science deals with the problems of origin and development. Genetic forces are those which produce results. Genetic method is the explanation of things according to the manner of their origin. Genetic psychology is concerned with mental evolution, development, and growth.

GRAMMARIAN. (1) One who has a fine knowledge of grammar. (2) Among the Greeks and Romans, one who was especially versed in any particular branch of learning, but expecially one who excelled in the interpretation of poetical works.

GRAMMAR SCHOOL. In England, a school preparatory for college where Greek and Latin are taught. In America, the grades above the primary.

GROWTH. This shows the part played by special circumstances and experiences in the life of the individual.

GYMNASIUM. (1) In ancient Greece a place for instruction of the mind and for athletic exercise. (2) A school where the higher branches of science and literature are taught, especially in Germany. It is a classical rather than a technical school.

HABIT. A fixed tendency to think, feel, or act, in a particular way under special circumstances. Habits are acquired tendencies.

HALLUCINATION. A sensation without objective stimulus.

HERBARTIAN MOVEMENT. In pedagogy the followers of Herbart, laying emphasis upon his doctrine of apperception, put great stress upon the content of studies and the different processes of the mind.

HIGH SCHOOL. In the United States, the highest department in the free graded schools, coming between what is commonly known as the grammar school and a college or technical school; a free secondary school.

HUMANIST. One who in the time of the Renaissance, following the example of Petrarch, advocated by precept and example the study of classical, and especially Greek, literature.

HUMANITIES, THE. Learning and literature of a secular nature in opposition to the learning and literature of the nature of divinity. More particularly such subjects as the classics, poetry, philology, grammar, history, and archaeology were included under this head.

IDEA. A group of sensations or sensory elements reproduced more or less clearly by the image of an object not really present. A mental picture or image of an object that is not present.

ILLUSION. A mental object, or its construction, which is accepted as real, but is not so.

IMAGE. A mental picture. Its chief merit lies in its distinctness or clearness.

IMAGINATION. An idea of objects and events. The power or process of having mental pictures. There are two kinds: constructive, characterized by a definite purpose, and a persistent effort to accomplish that purpose; aesthetic, which is characterized by feeling or emotion and aims at immediate enjoyment.

IMPULSE. A sudden or transient mental motive or feeling. It is the basis of will.

INDUCTION. The method of teaching by reasoning from particulars to generals.

INFERENCE. The act of passing from one judgment to another.

INHIBITION. It is the restraint by which one mental process prevents the simultaneous occurrence of others.

INSTINCT. An impulse which leads to action without knowledge of a reason for the action.

INSTRUCTION. That mode of teaching whereby the pupil is informed and at the same time exercised for the attainment of knowledge and mental power.

INTELLECT. The faculty or capacity of knowing.

INTEREST. The doctrine, in education, that the means (studies) should awaken the pupil's interest; and, conversely, that interest in the ends for which a pupil studies should arouse interest in the means. It is the name of the feelings evoked by an idea, and which give that idea the power of arousing and holding the attention, and is of two kinds: *natural*, which is the interest that the presentation of the object has in itself; *acquired*, the interest which the presented object gains on account of its associations.

INTROSPECTION. The close and critical examination by an individual of his own mental states and processes for the purposes of study.

INTUITION. In education, the grasp of knowledge through the use and employment of the senses.

INVENTION. The mental power or faculty of making or creating, the power of imagining new relations of ideas.

JUDGMENT. The assertion of agreement or disagreement between two ideas. Judging is the mental act by which the mind compares. Judgments are either intuitions or inferences.

KINAESTHESIS. The perception attendant upon muscular movements; the muscular sense.

KNOWLEDGE. The mind's certainty of objects presented through the senses. Presentative knowledge is acquired through the senses. Representative knowledge is brought before the mind in the form of images or notions. Intuitive knowledge is the immediate perception of truth without reasoning.

LABORATORY. A work room devoted to investigations or experiments in any branch of natural science.

LATIN GRAMMAR SCHOOL. A secondary school in which the study of the Latin grammar inordinately preponderated. It was introduced into America from England by the early colonists and the first such school was opened in Boston in 1635. It was of the gymnasium type of Germany and has been largely modified or in most cases displaced by the tendencies of modern education in the United States.

LIBERAL EDUCATION. An education of wide, ample scope and extent so that the mind is master of its own powers, irrespective of one's occupation.

MANUAL TRAINING. In schools, the educating of the hands to do various kinds of work, which supplements the mental training received.

MEMORIZING. The act of committing to memory, or learning by heart.

MEMORY. The mental process which reproduces and recognizes prior experiences in their proper relative time order. The three mental functions, reproduction, recognition, and localization, are concerned in an act of memory.

MEMORY, DEFECTS OF. The chief classes are excess and defect. Amnesia is the name given to failure of retentiveness; paramnesia is a false memory or illusory memory; hypermnesia is an unusual exaltation of memory.

MENTAL DEVELOPMENT. The sum total of the processes through which the individual mind passes from birth to death.

MENTAL GROWTH. An increase in the stock of mental materials, which are supplied by sensation and perception. Sensation is the beginning of mental life, and is followed by perception, memory, conception, judgment, and reasoning in turn.

METHOD. A systematic process, aiming at definite ends, controlled by fixed principles. Compayre says: "Method is the order we involuntarily introduce into our thoughts, our acts, and our undertakings."

MILITARY SCHOOL. A school where, in connection with other instruction, the students are taught subjects pertaining to war, and expecially the drills.

MIND. It is that which knows, feels, and wills. Soul, spirit, ego, self, and subject are synonymous terms.

MNEMONICS. Devices or rules intended to improve and strengthen the memory.

MONITORIAL SYSTEM. Introduced into England by Dr. Andrew Bell in 1797, who with Joseph Lancaster developed it until it became a substitute for a national system. The older boys were used as instructors for the younger.

Its greatest result was in the development of education as a function of the state; it also introduced a better system of grading. Its main defects were too formal work, extremely superficial instruction, rigid and mechanical discipline and too much formal memory work. It was popular in the United States for about 20 years.

MORAL SENSE. The specific feeling attached to the distinction between right and wrong.

MUSCULAR SENSE. It consists of the sum of simple mental states which accompany the action of the muscles.

NATURALISTIC MOVEMENT. This was the overthrow of that conception, developed by the Renaissance, that education is a mastery of books and forms. Social reform was the great aim. Rousseau was the leader. His fundamental theories were this: "Education is a natural process, it is a development from within, it comes from workings of natural instincts and interests, and is an expansion of natural powers; it is life itself." It was the foundation of all educational development in the nineteenth century. Rousseau was the forerunner of the psychologists in education.

NOMINALISM. The doctrine that ideas or universals have no objective existence. It goes further and holds that universals are only names adopted for convenience and that reality consists in the individual concrete objects.

OBJECT. Whatever consciousness cognizes and, cognizing, feels an interest in.

OBJECTIVE. Whatever belongs to the object recognized, in distinction from the process of knowing, feeling, and willing.

OBSERVATION. In education, the acquisition of knowledge by direct sense-perception. It is regarded as one step in a rational method of teaching.

ORBIS PICTUS. The first illustrated text-book for children, written by Comenius. In *The World of Sensible Things Pictured* each chapter was headed by a somewhat complicated picture in which various objects were numbered with reference to particular lines in the text below. It deals with things, and by induction leads to a generalized knowledge.

ORGANON. A series of treatises on logic by Aristotle, in which the basis for scientific thought in any line of intellectual activity was first formulated.

PEDAGOGICS OR PEDAGOGY. The theory and practice of teaching as a profession; in it the sciences of the mind, of body, and of society are systematically applied to the work of education. It depends upon psychology for its methods, and upon civilization for its ends. Its problems pertain to the curriculum, the methods of teaching, and the development of character.

PEDANTRY. The overestimate of mere knowledge; the vulgar or uncalled for display of learning.

PERCEPT. The cognition which results from actual sensation and not from a mental picture.

PERCEPTION. The consciousness of particular material things present to the senses. The process of localizing sensations and referring them to definite objects. An act of the mind in becoming cognizant of the sensation. Its elements are sensation, reference, and grouping.

PESTALOZZI'S NINE LAWS. (1) Activity is the law of childhood. Accustom the child to do—educate the hand. (2) Cultivate the faculties in the natural order. First form the mind, and then furnish it. (3) Begin with the senses, and never tell a child what he can discover for himself. (4) Reduce the subject to its elements. One difficulty at a time is enough for a child. (5) Proceed step by step; be thorough. (6) Let every lesson have a point. (7) Develop the idea, then give the term. (8) Proceed from the known to the unknown. (9) Synthesis, then analysis; not the order of the subject, but the order of nature.

PHILOSOPHICAL SCHOOLS. They afforded a training in argument in private upon questions of metaphysics and ethics. Plato, Aristotle, Zeno, and Epicurus each founded a school, in which the work finally became formal and artificial. Many minor schools of this sort also were established.

PHYSIOLOGICAL PSYCHOLOGY. Investigates the vital processes which require the simultaneous application of the external and internal tests and methods of observation. It deals with the corporeal manifestations of mind.

PRIMARY SCHOOLS. In the system of public schools in America the department of one or more grades that come between the kindergarten and the grammar grades.

PSYCHIC AND PSYCHICAL. These pertain to the mind or soul.

PSYCHOLOGY. The scientific study of mental operations. The science which deals with actual psychical processes, and treats of their objects, and of the conditions of their occurrence. Kulpe defines it as "the science of the facts of the experience in their dependency upon experiencing individuals." The science originated with Aristotle, who did more for psychology than any other individual contributor. Practically but slight advance was made in the science between his time and that of the birth of the modern science. Descartes, Hobbes, and Spinoza are among the illustrious names during the earlier modern period. Incidentally Locke made important contributions to the science; among others he invented the expression "association of ideas." Hartley, Hume, and the two Mills, Herbart, Bain, Condillac, and Beneke are the chief workers in the field of the "new" psychology. Darwin, Spencer, Romanes, Morgan, Dahl, Wasmann, Bethe, Mills, and others contributed largely through the field of biology. Tarde, Baldwin, and Durkheim in the field of anthropology; Preyer, Baldwin, Miss Shinn, Sully, and many others in the field of child study; and Weber, Fechner, Helmholtz, and Wundt in the field of physiological psychology, have been prominent contributors to the science.

RATIONAL. Pertaining to the reason, being derived from, directed by, or based upon it. Opposed to empirical.

RATIONALISM. The theory that reason is an independent source of knowledge.

REALGYMNASIUM. A German secondary school in which no Greek is taught but much time is given to the sciences. It is between the Gymnasium and the Realschule.

REALISM. (1) As the direct opposite of nominalism, this doctrine states that universals, such as genera, have an existence independent of our conceptions and are real things or entities. (2) As the direct opposite of idealism, this doctrine holds that to our sense perception a direct, individual, external object at once presents to our cognition itself, instead of an object representative of its genera or type. The term is also applied to that type of education in which natural phenomena and social institutions rather than languages are the chief subjects of study.

REALSCHULE. A secondary scientific school in Germany teaching no classics, but affording manual training, besides various industrial courses, German, French, history, geography, geometry, mechanics, and drawing.

REASON. That faculty and process of mind which consists in the drawing of inferences.

REASONING. The process of inference or arrangement of ideas according to the laws of thought. It is the third aspect of thinking. In *implicit* reasoning the general principle is implied, not brought before the mind. In *explicit* reasoning, the general principle is evident. *Inductive* reasoning is passing from the particular to the general, or from a part to the whole; it begins with individual facts, puts percepts before concepts, and judgments before conclusions; *deductive* reasoning is passing from the general to the particular, from the whole to a part, from the greater to the less.

RECOGNITION. The consciousness accompanying any mental object when it is perceived, as having been understood before.

REFORMATION, THE. In education, its effect was to emphasize reason, the right of private judgment, and the necessity of familiarity with original literary material as the source of true ideas. To it we owe our idea of universal elementary education, and its realization.

RELATIVITY. Every aspect or phase of experience is influenced by every other aspect or phase of the experience at the same instant. This is called the law of relativity. There is a sense of relativity which conveys the idea that we can know about things only as they affect our minds, and not as the things themselves really are.

RENAISSANCE, THE. It was a movement primarily in individualism. In the earlier part of the movement, and in the south of Europe, culture as a means of personal development was emphasized; later, and in the north, knowledge as a means of reforming society was the chief interest. The first was the revival of the Greek education, and the latter was the narrow humanistic education. Erasmus was the greatest educator.

RETENTION. The action upon the mind of the material when apprehended. To apprehend an object is to fix it in memory; to retain an impression is to hold it in memory; to reproduce an impression is to bring it into memory.

RHETORICAL SCHOOLS. By the latter part of the fourth century B. C., the work of the wandering sophists had divided into two distinct types, the rhetorical and philosophical. The former prepared for the practical activities of life, through training in oratory and the new knowledge of the times. Isocrates was a leader in this movement.

RHETORS, SCHOOLS OF THE. These were schools in Rome similar to the rhetorical schools of Greece, and furnished a preparation for the life of affairs at Rome by a thorough training in oratory.

SCHOLASTICISM. (1) The name applied to the system of philosophy, taught in Roman Catholic institutions of learning, which is based upon the teachings of the early church fathers, as Augustine and Jerome, and teachings of Aristotle and of certain Arabian commentators. (2) The type of intellectual life which prevailed from the eleventh to the fifteenth century. It was responsible for the origin of universities, and its purpose was to develop power of disputation, systematize knowledge, and make the individual master of this knowledge. It reduced religious thought to logical form. *The Sententiae* of Peter the Lombard and the *Summa Theologiae* of Thomas Aquinas were the most noted works; Anselm was called the father of scholasticism.

SCHOOLMEN. The leaders in the scholastic movement.

SCIENCE. Knowledge reduced to principles, classified and systematized.

SECONDARY SCHOOLS. Schools including the high school and others which are preparatory for college.

SELF. A term used to denote the mind, soul, ego, or spirit.

SELF-ACTIVITY. A change produced within a being through determination and without destroying the identity of the being.

SELF-CONSCIOUSNESS. The mind's knowledge of itself. It is the foundation of all knowledge.

SENSATION. A simple mental state resulting from the stimulation or excitation of the outer extremity of an incarrying or sensory nerve. The first thing in the way of consciousness.

SENSE. The power of the mind to know a particular external impression.

SENSE-ORGAN. That part of the terminal apparatus of the nervous organism which furnishes impressions.

SENSE-PERCEPTION. A mode of consciousness produced by the present operation of an external stimulus upon the nervous system. It takes cognizance of all objects, independent and real.

SENSES, TRAINING OF. The regular and systematic exercise of the senses, to make the sense-percepts clear and distinct, and to develop the conceptual and reasoning powers. "There is nothing in the mind that was not first in the senses."

SENSIBILITY. The power of the mind to feel, which feeling includes all pleasurable and painful conditions of the mind.

SIMILARITY, LAW OF. A principle of the association of ideas, according to which resemblance between two mental objects of any kind is the reason of the recall of the one on the presence of the other.

SOCRATIC METHOD. (1) The process of arriving at fundamental generalizations by an inductive method of question and answer. (2) The form of instruction described in the Dialogues of Plato, often called the "dialogic method." It is made up of two parts: (*a*) The Socratic irony to clear the mind of false or absurd ideas, and (*b*) the attempt to cause the student to discover fundamental definitions by inductive reasoning instigated by question and answer.

SOPHISTS. Greek teachers who taught by formal discourse or lecture, rhetoric, philosophy, and conduct. They were disliked by thinking Greeks because of their claim to teach all things, and their demand for pay for their services. They were prominent in the last half of the fifth century B. C. A period of great enlightenment followed.

SUGGESTION. Any impression which is consciously received through any of the senses.

SUMMA THEOLOGIAE. The most extensive work of Thomas Aquinas, attempting to give in the form of the scholastic method of philosophizing a complete theological survey of the divine, human, and natural worlds. Its chief contents are derived from the famous *Book of Sentences* collected from the Christian Fathers by Peter the Lombard and classified after the manner of Abelard into affirmative and negative statements (*Sic et non*). This work of Aquinas is one of a hundred similar expositions that exist in manuscript, and many of them in print.

SYLLOGISM. Deductive reasoning.

SYNTHESIS. The method, process, and function of putting things together.

TEACHING. "Teaching is a process by which one mind, from a set purpose, produces a life-unfolding process in another."

TECHNICAL SCHOOLS. Schools where the instruction tends to fit the students for some art, science, or trade; most frequently the mechanical arts are specified.

THINKING. Forming ideas, concepts, the knowledge of ideas or relations. It discriminates, assimilates, and detects differences and agreements. It has three aspects, conception, judgment, reasoning, none of which could occur without the others.

THOUGHT. The act, process, or power of thinking.

TRADE SCHOOLS. Schools where the pupils receive instruction in some craft or business, as well as mental instruction.

UNCONSCIOUS. Not possessed of mind or consciousness.

UNDERSTANDING. The mental instrument of scientific knowledge as opposed to reason, the instrument of philosophic knowledge. To the understanding all things are relative; and the faculty deals with all things and events dependent upon environment. A knowledge of the relations of things. It is the mother of interest; interest is the mother of feeling; interest and feeling aid retention.

UNIVERSITY. An institution for the instruction of students in the higher branches of literature, arts, and sciences with the power to confer degrees recognized throughout the world as valid. It may or may not include a college, or may consist of many under one general administration.

UNIVERSITY EXTENSION. A plan, originating in England, for extending the influence and instruction of universities outside the site of the institution by means of classes and lectures at important centers.

VOLITION. The decision upon a psychic issue by an individual, or the faculty of will by which the powers are directed to the attainment of a chosen end.

WHOLE. Psychologically, whatever is thought of, attended to, or otherwise acted upon as a single object though capable of treatment as two or more objects (parts of the whole).

WILL. The term *will* includes all active operations of the mind.

DICTIONARY OF TERMS USED IN JOURNALISM.

BANK OR DECK. One part of a series of headlines, in a single line or several. Banks are printed in varying sized types. Also used for table on which type or plates are kept in the printery.

BEAT OR SCOOP. Important item of news secured and printed in a paper before competitors learn of it,—the ambition of all good newspaper writers. A reporter's territory, like a policeman's, is also called a beat or run.

BULLETIN. Later important news printed at top of an article usually in bold face type. This gives developments after the main article was written, or the latest words off the wire as the paper goes to press. Sometimes printed in colored ink by means of a fudge plate (q. v.).

CAPTION. Heading or title of an article or part; now often confined to picture headings and texts that accompany them.

DUMMY. Sheet or set of sheets bound together to show the form size, arrangement of pages, and sometimes the literary material of a news page, book or other printed work.

ELECTROTYPE. A copper-covered duplicate of type or cuts with or without the metal or wooden base used as backing when it is run through the press. Material cast solid from impression of composed types, columns, and pages.

FEATURE STORY. Any news account emphasizing elements other than the usual facts of time, place, and persons concerned. The human interest story is a variety in which pathos, mystery, heroism or some other quality or emotion is emphasized or "played up."

FLASH. Brief or tabloid bit of news received over the telegraph wire or by radio; an important preliminary report, or supplement to news of more than usual interest.

FOLLOW COPY. As written in the margin by an author or editor means that the material is to be set precisely as indicated; used in cases where some intermediary might think a mistake had been made. George Eliot, for instance, might be misspelled by the printer; to guard against this "Follow copy" might be written in the margin of the manuscript.

FONT. Assortment of large and small type with all other marks ordinarily used in composing for the press. These are of many different sizes and styles of type as made by the type founders.

FUDGE. Small printing cylinder that may be attached to a large rotary press to add base ball scores, flashes, stock news, or sensational news (often in colored ink) to a page. This saves casting a whole new plate for the press, since a part may be cut from the large one and the fudge plate inserted in its place.

GALLEY. Long, shallow tray for holding lines of type till they are used for making plates or for use in a press. Printers often speak of a certain number of galleys of material. A galley proof is one taken directly from the types by placing a sheet of paper over them and then running a roller over that. Galleys are about two feet long, but usually are not entirely filled with type.

HANGING INDENTATION. In this form the first line fills the whole column or other space, the rest, however, being indented from the left-hand side or sometimes at both sides. Headlines are often so arranged. To indent is to run to the right a certain number of spaces, the exact number depending on custom and purpose.

JUSTIFYING. Filling in space between words or letters to make composed matter even at both ends according to the size of space allowed.

LEAD (pronounce leed). Initial sentence or brief paragraph of a news article telling, who, what, when, where, and why of the article; a summary or condensation of all essential facts.

RELEASE. Permission is given to print or release a story at a certain time and not before. For example, the President's message is usually submitted several days before it is read to Congress and held by the papers for release not earlier than the afternoon of the reading in Washington.

REWRITE MAN. One who revises or makes over articles and news as written or reported by another. A valuable man on any newspaper.

RUNNING STORY. An account or news article that develops from time to time and is printed from day to day in parts, or one that comes into the news office bit by bit and is set and assembled as it arrives.

STORY. Any narrative article for the regular columns of a paper. Burglar story means story of a burglary, etc.

STREAMER OR BANNER. Large heading that runs across the whole or large part of a page.

STYLE BOOK. Book of directions for editors or reporters issued by a printing or news organization.

SYNDICATE. Commercial organization that sells any form of news, feature articles, or pictures for use in papers, books, or magazines.

THIRTY. Usually written in figures as the telegrapher's symbol that the end of a story has been reached. Other forms used by writers are three upright parallel lines and the symbol "#." If "More" is written at the end of a bit of copy, the compositor knows that the end is not reached. If "Hold" is written, the make-up force knows that the material is to be held for further additions, corrections, or changes.

U. P. UNITED PRESS, a commercial organization selling news to papers.

A. P., a cooperative organization of papers that exchange news among each other.

YELLOW JOURNALISM. A term used about the time of the Spanish American War to indicate news that plays up the base side of human nature. News that shows the yellow in humanity. Now the term is used for almost any sensational, exaggerated, or distorted method of writing news.

GRAMMAR.

Drawing by SELDEN IRWIN.

EVERYDAY LANGUAGE, FIFTY LANGUAGE DEMONS, VALUE OF READING, POETRY AND THE CHILD, SENTENCES, PHRASES AND CLAUSES, NOUNS, PRONOUNS, ADJECTIVES, VERBS, INFINITIVES AND PARTICIPLES, ADVERBS, PREPOSITIONS, INTERJECTIONS, CONJUNCTIONS, ANALYSIS, DIAGRAMS.

OUR EVERYDAY LANGUAGE

Good English in the home. Habit is important in the use of our mother tongue. We often fall into careless customs in speaking. Even highly educated persons now and then make mistakes in grammar. Many believe they can change their habits of speech whenever they choose. All habits soon become fixed and hard to modify, and bad speaking is no exception. The drop of water at last wears away the flagstone. Little by little the small slips in grammar almost inevitably wear down the language of any person. If we do not wish the stone at last to be spoiled, we should begin early to stop the dripping of the water. In the same manner, if we do not wish the speech of our children to become spoiled by errors in language and grammar, we must begin to train them early to avoid many common faults.

Schools and homes may cooperate in teaching good English. Every home should encourage the best modes of speech. Not more than six per cent of our entire lives is spent in the schools. Ninety-four per cent must, therefore, be accounted for. Our fine schools in America are gradually spreading their influence among all our people. Children of every land have come to our shores, and they desire to learn the best that our language has to offer them. Parents are learning to help themselves. Almost daily, associations are formed to assist the teachers of the public schools in their planning of good education. Good speech days and weeks are held in hundreds of communities every year. More and more, then, both schools and homes are learning to assist each other for the improvement of all our people.

How may the home prepare the child for school? First of all, by setting a good example of correct speech. Little people are like those small animals called chameleons, which take on the colors of their surroundings. If you place them on a red background, they will look red; on a brown cloth and they take on a brownish tinge, and so on. Habits of good or bad speech are absorbed by children much as the chameleons absorb colors near them.

Possibly some of the following suggestions may interest those who are responsible for the training of little folks.

1. If an adult happens to make a mistake in grammar, he should correct himself when he thinks of it, and call attention of children to the right forms. Emphasis always should be laid on correct English. Tell children what they should be saying,—and not merely what they should not say. Let the good drive out the bad expression.

2. Do not nag children for making little mistakes in language. It is much better in every way to encourage them gently but persistently. Remember that it takes years to perfect our training in good speech. If a bad language habit is once formed, it may take weeks or months of careful thought to break it. Ordinarily children have to be warned repeatedly not to use a given wrong expression. When all of us hear so much bad speaking in almost every corner of life, it is hardly reasonable to expect little boys and girls to remember from the first time we correct them.

3. Be certain to select only the best reading for children. Books that are carelessly written

should not be purchased. Beware of jokes, pictures with slang or vulgar comments, and some of the professional funny men whose stock in trade is distortion of good English. All such are for adults only. A great store of cheap, but worthy books, are now available for children.

4. Encourage children to tell little stories, or relate personal experiences, in the freedom of the home circle. They may seem awkward in school, and so unable to do their best before a class and teacher. At home they develop powers rapidly, and soon can tell elaborate stories, full of imagination, and correct in their language.

5. In the home, as well as in school, be careful not to write incorrect expressions where children see them. If you must write a wrong form on the board or tablet, be certain to place the right one beside it and leave the latter long after the other is erased or cancelled.

Of course, it is necessary to avoid many faults that are common in the speech of careless adults or of children who know no better. A long list of such mistakes might be compiled, but we shall offer fifty samples as fairly typical of all.

Fifty Language Demons. Borrowing a term used by Prof. W. F. Jones, who compiled a list of one hundred common spelling demons, let us notice how the right forms are distinguished from the wrong. Some of the list here given are ungrammatical expressions, some confused meanings or uses, and others distorted pronunciations. Not all are found in every community.

RIGHT FORM.	WRONG FORM.
Almost all have arrived.	Most all have arrived.
And should be used sparingly.	*And* used in most sentences.
Are you going?	Be you goin'?
Between you and me.	Between you and I.
Can hardly see.	Can't hardly see.
Did it.	Done it.
Different from.	Different than.
Don't get angry.	Don't get mad.
Everybody look out for himself.	For themselves.
Ought not.	Hadn't ought.
Half an hour.	A (an) half an hour.
Have not, haven't.	Hain't.
Have not any, haven't any.	Haven't got none, haven't none.
Have not obtained, received.	Hain't got.
He is in the city.	He is to the city.
He and I did it.	Him and me done it.
He let us go, permitted us to go.	He left us go.
I am not, he is not, you are not, etc.	I ain't, etc. (no such word).
I am surely glad to see you.	I am sure glad to see you.
I find it nowhere.	I find it no place.
I can't find it anywhere.	I can't find it nowhere, no place.
I do not know, don't know.	I dunno.
I have a bad cold.	I've got a bad cold.
I think it is not.	I don't think it is.
I understand his schemes.	I'm onto him, wise to him.
It isn't anywhere.	It isn't no place.
It is nowhere.	It isn't, ain't, no place.
It is a pleasant (bright, fair, warm, delightful) day.	It is a nice day.
It is of no use to try. It is useless, foolish, to try.	It is no use to try.
It was an entertaining (well acted, etc.) play or motion picture.	It was a grand (swell, etc.) show.
He and I went.	He and myself went.
He lay down to rest.	He laid down to rest.
He would have gone.	He would of ('ve) gone.
John and I did it.	John he and I done it.
Lay the book down there.	Lie the book down there.
Lend me five shillings.	Loan me five shillings.
Let him alone.	Leave him alone, leave him be.
Let the book lie there.	Let the book lay there.
I was reared on the farm.	I was raised on the farm.
Saw (past tense of *see*).	Seen.
Seem unable to do it.	Can't seem to do it.
Set the basket down.	Sit the basket down.
Sit on the carpet by the fire.	Set on the carpet by the fire.
The cup is burst (broken).	The cup is bursted, busted.
The hose has burst (broken open).	The hose has bursted, busted.
Want to come in, go out, climb up, and so on.	Want in, out, up, and so on.
We had a bountiful dinner.	We had a sumptuous repast. we had a beautiful dinner.
We had a pleasant (agreeable, delightful, happy) time.	We had a swell (elegant) time.
Where is he?	Where is he at?
Wish not to (do something).	I don't want to.

How adults may assist children in learning the English language. Grammar and language are hard for certain people because they do not realize their true nature and purpose. Many false notions have been spread abroad by those who have expected too much of children and the books they are studying. A few of these wrong ideas may be noticed briefly here.

1. Contrary to belief of many persons, the dictionary does not fix the standard of usage. Words change in meaning constantly. The makers of dictionaries hope to keep up to date in recording the use of words by careful speakers and writers. Such books merely follow the customs of good writers; they do not attempt to dictate to everybody.

2. Short words are not always preferable to long ones. Sometimes a large word is the sole one that expresses the right meaning. Children must be taught to select the right word, not necessarily the smallest one.

3. Our every-day expressions do not guide the

usage. Only those who make it a business to write and speak carefully have a right to judge which words are best to use. We look to the physician for advice as to our bodies; to the lawyer for advice as to our property; to the clergyman for advice as to our souls; and likewise should we not look to professional authors for advice as to the right use of language?

4. Informal and colloquial speech is sometimes preferable to formal and precise. Purists, however, believe that language should be kept to a certain set form. They advise us never to use words like *isn't, don't, won't;* yet many good authors use them, especially in conversational passages. Some tell us never to end any sentence with a preposition; and yet the good authors repeatedly break this rule. In fact, sometimes a small word that is emphatic *should* come at the close of the sentence. Which do you prefer of these sentences? *About what are you thinking?* and *What are you thinking about?* By avoiding the small word at the end, do we not bring about awkwardness at the beginning of the sentence? Many more expressions, homely in themselves, are to be chosen in spite of any objections by purists.

5. "Peppy" expressions are not necessarily good. Some speakers like to use newly-coined and slang words, just as some people, in other regards, enjoy being different and even fantastic. Slang is a lazy man's substitute for clear, good, living expressions. Much slang like "rubber neck" and other combinations soon passes into oblivion. Now and then a word sticks in good use. Invented expressions, too, attract many persons. Has the combination "stick-to-it-iveness" anything to recommend it? Why not use the good old word *persistence?* Must we speak of "jumping on" a person, when we have a legitimate word *insult*, which originally meant *to jump on?* If we desire to get away from worn, trite language, why not search out some of the expressive and picturesque words already in our vocabularies?

6. Children learn less rapidly by oral than by silent reading of books. Recent tests by several investigators prove this true. Parents, therefore, should encourage their little folks to read much in silence at home.

Enlarging the horizon of child life. Imagination helps children to create a world of their own making. Little folks live in the same world as grown-up persons, but they have in addition their own realm, a fairyland that is real enough to them. Adults often fail to realize this, and so expect their children to grow up too rapidly. Soon enough will our little folks emerge into the world of common day,—of every-day consciousness. We must not, therefore, be too eager to push them along; for they all too soon will abandon their play and their fairies for the life of study and business. To live in dreams, to grow gradually out of the play world, is their birthright.

Books are the portals into a world of fancy. Through them the child widens and widens his vision of the world and of human kind. Together with the school and the home, books form a third vital force in life. Books in English are stepping stones also to the knowledge of language and grammar. From the first few grades in school, they lead up and up to a summit of noble realization. Books give a love for good reading, knowledge of human nature, and zeal for progress. Through reading we acquire much of the grammar that we often miss in the school texts.

Some specific ends attained by early reading are these:

1. Training the imagination and broadening the heart interests.
2. Introduction to a new world of nature, language and history.
3. Preparation of a basis for further studies.
4. Self-expression through reciting, retelling stories, and imitating what they see and read.
5. Teaching of ideals of justice, humanity, and honor, leading to a fine sense of right and wrong.

Reading as an aid to language study. Fortunate indeed are those children who have learned the Mother Goose at their mother's knees. For such simple, primitive verses have a peculiar charm. Children do not fail to observe their faults, and yet the jingles, the pictures, and the quick turns of thought appeal to every little person's imagination. Twenty years or more change the point of view, but the grown-ups still recall with some longing the joys of hearing about Humpty Dumpty, Mother Hubbard and her Dog, Little Jack Horner, Jack and Jill, Old King Cole, Bo-Peep, and Simple Simon. Do what we may, go where we will, and these remain with us as echoes of a happy childhood.

Then follow naturally the fables, animal stories, and the tales of fairies. Children draw largely here on imagination, and they accept as true any little discrepancies of fact; for they look for the spirit, and do not bother about the trifles and inconsistencies. They do not question the marvelous growth of the bean stalk in *Jack and the Beanstalk.* Nor is it difficult to think of Humpty Dumpty as an egg. So their imaginations grow and grow, and become fit for service in adult life, where much depends on vision and foresight. All the world loves fables. The early races put themselves to school at telling fables of men and beasts. Children, also, love tales of animals and human beings. Thus we pass through the early days of love for Little Red Riding Hood, Puss in Boots, The Ugly Duckling, Little Black Sambo, The Three Bears, The Lion and the Mouse, Brer Fox, Uncle Wiggily, Black Beauty, and the long and impressive list of wholesome children's classics for reading in school and home. Then come, a few years later, the Uncle Remus Stories by J. C. Harris, *The Jungle Book* by Kipling, the stories of the Brownies in the many books by Palmer Cox, *The King of the Golden River* by John Ruskin, *The Wonder Book* by Hawthorne, the *Blue Fairy Book* and *Red Fairy Book* compiled by Andrew Lang, and many other works like these. Nor do we forget the simple narratives of our *Bible*, the *Arabian Nights*, all of *Aesop's Fables*, or *Alice in Wonderland.*

Poetry and the child. No childish life is complete without a love of poetry. Few children indeed really dislike verse. Later some of us in the schools grow to hate poetry for various reasons. Yet the race began literature on this earth with poetry, and good poems existed long before good prose, so far as our historical records and legends testify. Verse more than prose

appeals to imagination; hence, the child is at home when reading or hearing good poetry. Rhythm always charms the ear and makes the blood quicken in our veins; for do not the beats of the heart, the ebb and flow of the blood itself, show kinship with sound and motion rhythms? Rimes assist to fix the meanings and sounds of words, as every teacher and reading book seems to know. Narrative poems abound in good, strong life, action that is noble, and ideals that are worth contemplating. Every normal child finds a certain delight in the motion of good rhythms, a certain satisfaction of soul in reading of brave men and worthy ladies, a certain grace and beauty in rimes, words, and combinations of terms into short, telling phrases. For all these reasons, we must never forget our poetry in a stern world of business and science.

By the time the child is eight or ten years old, he should have learned some of the simple, heart-felt lines of Stevenson's *Child's Garden of Verses*, the story of *Little Boy Blue* and other children in the poems of Eugene Field, the noble and majestic *Hiawatha*, Longfellow's poem of Indian life, Tennyson's lilting *Song of the Brook*, Browning's galloping *How they Brought the Good News* and the fable of the *Pied Piper*, together with many simple lyrics by Aldrich, Lowell, Bryant, and Whittier. For humorous verse, which should by no means be slighted, he should know many poems like Cowper's *John Gilpin's Ride*, Lewis Carroll's *Hunting of the Snark*, the *Nonsense Anthology* compiled by Carolyn Wells.

Practical results of this early reading. Aside from the joy of knowing good literature, the moral value of reading noble books, and the entertainment derived from reading stories and poems, many definite practical results are noticed as ends of good reading. Before the child enters the upper grades in school, he should be able to accomplish all of these requirements:

1. To answer questions simply and directly.
2. To describe objects he has seen.
3. To narrate the main elements of any story he has read or heard.
4. To recognize the words that are common in our vocabulary.
5. To make up little stories and tell them to others.
6. To enter freely into language and other games that instruct.
7. To recognize good from bad literature.
8. To analyze carefully any selection from the books he had read.
9. To write with some degree of correctness and simplicity.

Ways of getting children interested. Before the reading book comes the oral narrative. Children compose and tell elaborate stories long before they can read a single page in print. Story reproduction forms a staple method in the kindergarten and first grades. All children respond quickly to direct questions on their reading. Take the pathetic tale of Little Red Riding Hood. The adult reads it slowly to the child. Then he is ready for several questions; such as, Who was Red Riding Hood? Where was she going? Why? How far was it? Whom did she expect to meet there? What was she taking? Who met her on the way? and so on. The object is always to get children to recognize and use words. This is the foundation of all language study. Next, the child may be encouraged to translate the story into his own words. Perhaps at first he may need a great deal of coaching and prompting. Then, again, he may be encouraged to make up similar stories, and to recognize similar ones in other books, or in other oral narratives.

In many schools and homes the story hour is a regular event. Abundant material for reading to children is available to all. At comparatively minimum cost, the home and school library may possess a number of such books from which a great variety of narratives may be drawn. Children love to acquire, save, and often read such books when they have reached the third grade. Some of the many good volumes are Ingfen's *One Thousand Poems for Children*, Baker's *Stories from Northern Myths*, Burt's *Poems Every Child Should Know*, and a similar book of *Prose*, Bryant's *Stories to Tell the Children*, Palgrave's *Child's Treasury of English Song*, Richard's *Five Minute Stories*, Poulsson's *Child Stories and Rhymes*, Baldwin's *Fifty Famous Stories Retold*, and Wiggin and Smith's *The Story-Hour*.

Bryant's *How to Tell Stories to Children* is an excellent work on the art of narration; it is published by Houghton, Mifflin Company.

Study of language and grammar through play. Games often provide a convenient method of interesting children in language. If they are combined with instruction on how to speak correctly, they make fine aids to the school teacher or parent. Some of the plays and games mentioned below will readily suggest others.

1. Acting. All children love to imitate. Dialogue is one of the best class-room methods of reviewing a story. Children may represent the three bears, little Red Riding Hood, and many others. Indeed any simple narrative having two or more characters may be put into play form in the class or home.

2. Games of guessing. Part of the story may be read for the pupils to arrange a convenient ending. Sentences may be written with blanks left in them for children to fill up with correct words. Some child may be sent out of the room, while others decide on some object to be guessed by him on his return. Only words in a certain list may be among those chosen as the object for guessing games. The idea in all such exercises is to train children to speak, recall, and spell certain words. Different other variations on the game of guesses may be originated by any teacher.

3. The game of likes and opposites. One child begins with some familiar word and asks another to give one of similar meaning, or one of opposite meaning. Some one writes all the words on the board for further study. Cross word puzzles even might be introduced as aids to learning synonyms and antonyms.

4. The game of related words. One person says, The ball is *round;* another, The ball is *red*, and so on. Trees, birds, nations, studies, and many other groups may be used to vary the exercise. The object is to collect lists of related objects, or a great variety of adjectives that might refer to a single article.

5. The game of sound families. One may

begin with a word like *at*, while others think of similar variations like *bat*, *mat*, and so on. Every good spelling book now arranges words by sound families, or by phonograms, as they are called.

6. The game of anagrams, which may be purchased at almost any store. This provides a valuable exercise in word groups.

7. The postal game. Postal cards, or slips of paper, are written and circulated among the members of the class. The object is to teach the proper forms for address, salutation, close, and the simple things one may put into a good card or letter. The teacher acts as scorer or critic.

8. Rapid reading game. A page of new material may be assigned for pupils to read. After a sufficient interval, they are questioned to find out how they understood it as a whole, how many new words the readers found, how many familiar names of a certain kind, and so on.

9. Word relay race. Several words are placed on the blackboard. The children are divided into small groups. At a given signal one of them takes a dictionary, looks up spelling, pronunciation, and meaning of a word in the list; then he passes the book to another; and so on. Two or more groups compete against each other.

10. Speed test game. Select a certain class of words,—like names of animals, nouns, adverbs,—and see which pupils or groups can collect the largest number of words in a specified time.

By the time the little folks have reached the grammar school, they should be well grounded in the foundations of language. The chief constructions of simple grammar should also be well learned by this age. Then comes the formal study of grammar in a more complex form. For the purpose of home study or for those who never have had opportunities to sift English grammar thoroughly, the following summary has been compiled. Much has been omitted in an attempt to boil the main principles down to lowest terms.

SENTENCES

A sentence is the expression in words of a single, complete thought. It is the smallest unit of composition. The individual sentence, however, may be composed of two or more ideas, depending on the number of parts or modifiers. *We learn*, as a sentence, contains two ideas: that of several people, including the speaker, and that of the process or act of learning. The relation or comparison of these ideas constitutes a sentence. In similar fashion every sentence is composed of smaller parts or ideas as expressed in words. A word in itself cannot make up a sentence, unless it is like *Yes* or *No*, with the rest understood from the context.

Thus, at the outset, one must learn the difference between an idea and a sentence. It is wrong to say that a sentence contains one idea; for that properly is the definition of a word, which is a symbol of an idea. It takes a group of ideas to make a sentence. *Children learn rapidly in school*, as a sentence, contains four related ideas, making up a single thought or complete unit. These are the ideas of those who learn, of the learning itself, the rate of learning, and the place where the children learn.

Ideas are of two kinds. Sometimes we think of definite objects—concrete things, as we call them. Again, we think of abstract or general qualities. One is material; the other is immaterial. *My hat* is concrete; so is *house*, if we have a particular one in mind, or a concrete idea of a house. On the other hand, *truth, principles, justice, sourness*, are abstract, immaterial conceptions or ideas. Midway between these two extremes lies a common ground, where the two meet; and so *house, hat, desk, ball*, though not in themselves complete, arouse ideas of something tangible. When we say, *My hat, our house, the teacher's desk, John's base ball*, we go as far as possible in making these objects particular, single, and unmistakable.

Sentences must be distinguished from fragments. Every good sentence must be complete in itself. It must have a subject and a predicate, definitely expressed or at least clearly understood. All the parts must harmonize in thought and grammar, so that the whole is complete, well-rounded, and definite. Fragments are of four kinds. 1. Relative clauses, without definite connection. *Which we did*, for example, is not a complete sentence, but a subordinate clause, even though the meaning is clear from the context. Nor must *who* or *what*, in relative clauses, be used independently; for they are not major or independent subjects. 2. Participial phrases must not be used as sentences. *John won the track meet. Being a good runner.* Here the last four words are a real part of the first group. Together both parts should make up the sentence, the last four words being set off from the rest, not by a period but by a comma. 3. Other phrases do not make complete sentences. *With the best of intentions* or *Decidedly the best* are not complete units in themselves, but evidently belong to some part of the sentence that is not here expressed. 4. Adverbial clauses, likewise, may not stand alone as sentences. *John won the prize in spelling. When he was in grammar school.* Here again the two groups of words make up a single sentence, and the second must not be cut away from the first. The same is true of the groups that follow: *John won the spelling prize. Though he is the youngest student in the class.* 5. Stray groups of words should not stand as sentences. For instance: *He was the best student in the class. Evidently. The sooner, the quicker. Best of all.* The last three groups are fragments. The first is a complete sentence.

Sometimes two or more sentences are joined wrongly together as if they were one single sentence. A good sentence, as we have just seen, must be complete, logically and grammatically. On the contrary, a good sentence must be *single*, as the word itself in the definition indicates. Different forms are here illustrated:

1. *He hitched old Dobbin to the cart and drove to town, here he purchased his supplies for the following month.* In this sentence we really have two different thoughts; hence a new division should begin with *here*. Notice that some compound sentences, with parts joined by use of a semicolon, are really single. One should be on his guard, however, against putting two unrelated parts together. Merely because one act or part of a process follows in time order does not make the two connected in any other manner.

2. *It rained hard all day, so we remained indoors.* This sentence is incorrectly written; for there are two distinct parts. The comma, then, should give way to a semicolon. This type of error is one of the commonest in writing, but all recent books on composition teach us to avoid it altogether. Here, again, the two parts must have some logical connection, or two sentences should be formed. Another correct form would be made by placing *and* after the comma.

The two correct sentences would thus be written:

It rained hard all day; so we remained indoors.

It rained hard all day, and so we remained indoors.

3. *He was stingy, though he was an old soldier.* This illustrates a third type of incorrect sentence, since it is illogical and absurd. There is no real connection, necessarily, between the two parts. At best we have here two sentences, or the foundation for two.

Good sentences may be classified in various ways. They may be

1. Long or short or average.
2. Declarative, interrogative, imperative, and exclamatory.
3. Loose, periodic, balanced.
4. Normal or transposed in order.
5. Simple, complex, compound.

1. In length, sentences vary with different writers. Macaulay tends toward a rather short sentence, well knit or balanced, Ruskin toward a very long flowing, loose sentence. Bacon, Emerson, and Stevenson write sentences of average length; Milton writes those that are long and involved, and sometimes Dryden follows his example. No limit can be mentioned as the average, though, roughly speaking, after twenty-five or thirty words, sentences become long. They vary from a single word like *Yes*, which answers a question, to forms of many complex and compound parts.

2. According to intention of the speaker, sentences may be grouped as follows:

a. A declarative sentence affirms or denies, as *Children learn rapidly. The lazy child falls behind the class; for he does not apply himself.*

b. An interrogative sentence asks a question, as—*In which grades do children learn most rapidly?* In this type the verb precedes the subject in most cases.

c. An imperative sentence makes a request, command, or entreaty, as *Children, learn your lessons.* The normal form omits the subject of the verb, which is in the second person.

d. An exclamatory sentence expresses unusual emotion or surprise, as, *How slowly that child reads!* This type is usually characterized by some word like *how*, or some preliminary interjection like *alas, oh, well.*

3. According to arrangement, with reference to termination of the main ideas, sentences are loose, periodic, and balanced.

Loose is the normal form. Many sentences show their meaning before the last word is heard or read.

Dr. Johnson's style, critics once said, is a model for young beginners.

My father recommended this style to me when I began to write letters for him.

All my doubts on the subject were set to rest, but I have since wondered indeed if father really was right in such matters.

In these good loose sentences, the first might end with the word *model;* the second with *style* or *me* or *write* or *letters;* the third with *rest* or *wondered* or *indeed* or *right.*

Many loose sentences, however, are too involved, too rambling, or too disjointed to be thought good in form. These are corrected by division into their several logical parts. For instance, take the extract that follows and note how many real thoughts are expressed therein. "When there is sap enough to fill the large kettles, the boiling begins, as the sap becomes thicker, it is poured into smaller kettles, until it becomes a dark brown syrup, some of this is sent to the market in gallon cans." This quotation from a student composition obviously falls into three natural sentences, the second of which begins with the word *as*, and the third with *some.*

Periodic sentences differ strikingly from loose sentences. Unlike the loose variety, they are complete only with the last word or small group; and the meaning is not entirely clear until the period is reached. *Aye, tear her tattered ensign down!* and *In the spring a fuller crimson comes upon the robin's breast*, are good examples. This kind is used often for emphasis, where the last words are specially important. When employed to excess, or with small, unimportant elements last, periodic sentences quickly become an affectation.

Once the balanced type of sentence was in great vogue. In terse, epigrammatic poetry like that of Pope, it long was popular. Many big and little authors were imitating Pope's style: *To err is human; to forgive, divine.* Many of the *Psalms* are balanced in sentence form, as *A false weight is an abomination to the Lord; but a just weight is His delight.* Men like Macaulay and Carlyle used it almost to excess.

One may see, then, from the preceding discussion that good sentences should follow certain recognized principles. A writer may easily check himself of some of the common faults by asking a number of questions.

1. Is the thought completely expressed?
2. Is there more than a single, complete thought in the sentence?
3. Is the thought there expressed exact and logical?
4. Are the parts arranged so as best to bring out the meaning?
5. Which kind of sentence is preferable,—loose, periodic, or balanced?

4. Normal order in the sentence is subject, verb, and rest of predicate. Many times, however, it seems best to place some modifier or the verb itself before the real subject. In the sentence *Birds fly southward in the autumn*, the order is normal; but place the phrase *in the autumn* first, and the order becomes transposed. In sentences like *Strike for your altars and your fires*, and other imperatives, the emphasis is gained by omitting the subject and placing the verb first. In a sentence like *Generous he was to a degree*, the predicate adjective comes first, making the fact of his generosity all the more prominent. Though the average sentence falls naturally into the regular or normal order, one

should always be on the lookout for chances to emphasize by varying the arrangement.

5. Grammatically, sentences are also classed as simple, complex, and compound.

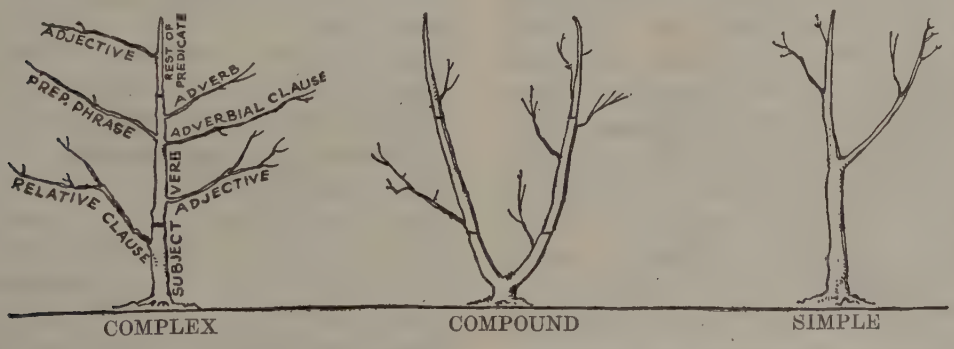
a. A simple sentence contains one statement in a single clause, without any subordinate clause. It has one predicate and one subject group, though either subject or predicate, or both indeed, may be compounded. *Flowers are plentiful here. Rains have been abundant this spring.* These are two simple sentences. If one says *Flowers and grass are abundant here,* the sentence is still simple; for its subject, though compounded, is still simple. *Flowers are abundant and beautiful this spring* has a compound predicate, but the sentence is still simple. *Flowers and grass are abundant and beautiful this spring,* though both subject and predicate are compounded, is still a simple sentence.

b. This last may be turned into a compound sentence by making a slight change. *Flowers are abundant, and grass is plentiful too this spring* is compound; for it has two complete subjects and predicates, combined independently each of the other set. Sometimes the compound sentence omits the conjunction, in which case the best punctuation, as already shown, is the semicolon. *Flowers are abundant; rain has been plentiful*—would illustrate.

c. A complex sentence is built up of one principal and at least one dependent clause. The second may not stand alone; for it is connected to the other and gets its status from the main clause. *Since rains have been abundant, flowers are plentiful this spring* is a good complex sentence. The first part, however, is the subordinate element, which in transposed order, often comes before the principal. *Since rains have been abundant* would be a mere fragment, standing alone. Add to the first part, *and the sun has been hot,* and the sentence becomes compound in its complex element, but is still a complex sentence, having only one principal clause.

d. Different additional combinations are also possible. For instance, the sentence might be both complex in its first element and compound in the second, as *Since rains have been abundant, the flowers have grown, and the grass is much taller than usual this spring.* This is called a complex-compound sentence. Or, the first element might be compound, the second complex, in which case the sentence would be called compound-complex. Since these are only combinations of the other forms, it is not necessary to recognize them as separate and distinct types of sentences.

We have now seen how sentences are built up in their main elements. Later we shall analyze them into their clauses, phrases, and even into separate smaller word groups. For the present, it is enough to get a fundamental idea of the sentence and its chief divisions and forms. This may be expressed in visual language. For a sentence is much like a tree, having a main trunk, and various modifiers or branches. If we take subject, predicate verb, and object or other main part as the trunk, in different sections, the adverbs, adjectives, and other modifying words and groups seem exactly like branches as they shoot off from the main body of the tree. Just as there are twin trees, or two or more growing from the same roots, so there are compound sentences, connected at the root by some conjunction. Just as there are main trunks, and other branchings almost as large, but not independent, just so the complex sentence has one main and at least one large dependent part. All this may be put in form of a pictorial illustration, as noted below:



Phrases and Clauses. Larger parts within sentences are called phrases and clauses. Though often confused, they are easily distinguished when one gets the chief distinction between them. Phrases do not contain either subject or predicate; while clauses have both, but are not complete sentences as such. A phrase never could be a complete sentence, but a clause could, if arranged properly. *While he was here, he bore a good reputation* contains both principal and subordinate clause. The first could stand as a sentence if *while* were omitted; the latter, as it stands could be a sentence, if it were detached from the rest.

As to form both phrases and clauses may be simple, complex, and compound.

1. Simple phrase,—We came *in the afternoon.* The last three words are a prepositional phrase.

2. Complex phrase,—We came *in the afternoon of the last day.* Here the last four words modify the other, preceding prepositional phrase.

3. Compound,—We came *in the afternoon* and *in the way appointed.* These two prepositional phrases are coordinate.

Infinitives are also used frequently in phrases. Any prepositional or infinitive phrase may have one of three uses.

1. As adjectives,—The man *in the moon* looked down too soon. Here the italicized words modify *man* as a single adjective.

2. As adverbs. Any of the illustrations given just above shows the adverb use, as *in the afternoon* modifies the verb *came*.

3. As substantives, that is, as subject of a verb. *To err* is human shows an infinitive as subject of the verb.

Clauses are classified in the same way as to form and use.

1. Simple clause,—*That he would come* is doubtful. The emphasized words are here used as substantive, subject of *is*. The clause is simple since it contains one main part.

2. Complex clause,—*When he came*, it was evident he would not tarry. Since the italicized words modify the verb, they are used adverbially. The clause is complex because it is subordinate to the rest of the sentence, or to the principal clause.

3. Compound clauses,—*That he would come or that he would not* was doubtful. Being on the same footing, these clauses are coordinate; and they are principal clauses, both being subject of *was*. They are thus substantive clauses. He *that would come* illustrates an adjective clause, since the emphasized words modify *he* as an adjective.

Clauses are also named according to their *rank* in the sentence. They are principal (main or independent), subordinate (or dependent), and coordinate.

1. A main clause is one that has subject and predicate, and is not dependent on any other part of the sentence.

2. A subordinate clause depends on a main or principal clause. It may not be written separately. *When man proposes*, God disposes. The italicized words are a subordinate clause, while the rest of the sentence is the main clause.

3. Coordinate means one of at least two. For any coordinate clause, there is, of course, another corresponding one. *Man proposes, but God disposes.* Here are two main coordinate clauses. Two subordinate clauses may also be coordinate if on the same footing.

Classification of the Parts of Speech. Various functions are recognized in the use of words. Some name or point out material and immaterial ideas. Some show action. Others modify or describe. Still others connect. One part of speech is independent of all others in a sentence. According to these functions, then, the following classification may be made:

1. **Name words** like nouns and pronouns.

2. **Action words** like verbs. These are, in turn,

a. Finite, as all regular parts of the verbs.

b. Non-finite, as infinitives and participles. These last may not stand alone, without other related verbs, in a sentence. In other words, every sentence must contain a finite verb, expressed or definitely understood.

3. **Modifiers**, as adjectives and adverbs.

4. **Connectives**, as prepositions and conjunctions.

5. **Independent**, as interjections and extra-grammatical words which are called expletives and which have no grammar connection with the rest of a sentence in which they form a part. In the sentence, *There are many kinds of truths*, the word *there*, for instance, is usually called an expletive.

Each part of speech has certain characteristics called **properties**. Any change or modification of a word is a property. Thus number is a property of both nouns and verbs. Inflection is the name given to any change or variation in words to show their grammatical connections. Other words used in classifying parts of sentences are also defined, below.

1. **Declension** is the inflection of name words.

2. **Comparison** is the inflection of adjectives and adverbs, or modifiers.

3. **Conjugation** is the inflection of verbs. A short form, in which only a certain part like one person in each tense is given, is called a **synopsis**.

4. **Parsing** is the naming of all the properties of a word, with its construction, and rules governing its use.

5. **Syntax** is the construction of a word or group of words with reference to the sentence in which it occurs.

6. **Analysis** is a division of a sentence into its parts to show the construction and syntax of all.

7. **Diagramming** is the representation of the analysis in visual form by means of related lines or other devices.

NOUNS.

Ordinary name words are called nouns. These name a general class without specific reference to individual members, as *boy, man, city, house, walk.* Or, they name a certain person or object that is separated from the general class, as *John Paul Jones, Henry, Washington Opera House, Wilson Plan, League of Nations.* The first group is called common or general; the second, proper or individual.

1. Common nouns, then, designate a group or class generally.

2. Proper nouns designate only certain, particular individuals.

Sometimes one kind becomes the other in use. The common noun *boy*, necessarily, becomes part of the proper name, *Mill Boy of the Slashes.* In the sentence *Birds fly southwest*, the last word is certainly a common noun; it is proper in the sentence, *Birds live in the Southwest in winter.* The same distinction lies in the use, *Birds fly southward in autumn, because they find the climate in the South more congenial than in the North.* In one case, only a general direction is meant; in the other, a definite locality or region. Again, in the sentence, *Daniel was a wise interpreter*, the name is proper; but in the sentence *A Daniel come to judgment*, it is certainly common, and perhaps should be written with a small initial letter.

Since proper names are definite and conventional, they do not fall into different sub-classes. On the other hand, common nouns may be either abstract, or collective, or simple class names.

1. Abstract nouns usually name attributes and qualities. Some of the many words in this class are *bitterness, death, goodness, foolishness, knowledge, valor*, and *warmth.* By personification they become proper.

2. A collective noun groups individuals into a class, which is thought of as a unit. Gram-

matically a collective noun is singular, taking a singular verb.

A few of the many are *committee, company, government, bevy, herd, group, swarm.*

Note: In England many such words are thought of as plurals, such as *committee, company, government;* and the sentence *The committee are* or *The Government are* is common.

3. Class nouns include the hundreds of common words like *day, desk, house, window, men, clothes.*

Properties of nouns. All nouns have four properties; these are person, number, gender, and case.

1. Both singular and plural nouns have three persons, first, second, and third. In the first person, a noun is used only in apposition (usually with a pronoun) or in an absolute construction: I, *Ozymandias,* am king of kings. The second, or person spoken to, is common in direct address: *Ozymandias,* you are king of kings. Most nouns belong to the third person, or person spoken of, as commonly used: *Ozymandias* is king of kings.

2. Number is the property of a noun which shows whether an object is single or more than one. The two numbers recognized in English are singular and plural. These are shown in various ways.

a. By change in the ending of the word, such as by addition of *s* or *es* to the singular to indicate the plural. Desk, desks; box, boxes; ax, axes; church, churches; boy, boys.

b. By changing the main part of the word or the root. Thus: *man, men; woman, women; goose, geese; tooth, teeth; mouse, mice; ox, oxen; foot, feet.*

c. By irregular end changes, as *y* to *i* when *es* is added, as in *cry, cries; fly, flies; lady, ladies; glory, glories;* or by changing *f* or *fe* to *v* when *s* is added, as in *calf, calves; half, halves; beef, beeves;* or by adding *s* only instead of *es* to words ending in *o,* as in *canto, cantos; quarto, quartos; two, twos; solo, solos.* One must learn whether these words end in *oes* or *os,* since no rule includes all, without many exceptions.

d. By adding *s* alone to most proper names. It is a common blunder to write these plurals of personal names with an apostrophe. The correct forms are, *Mary, Marys; Brown, Browns; White, Whites; Henry, Henrys.* Some names already ending in *s* follow the regular rule in adding *es* for the plural. The correct forms are: *Jones, Joneses; Dickens, Dickenses; Edwards, Edwardses.*

e. By adding the apostrophe and *s* to make the nominative and objective plural of letters, signs, symbols, and figures. Thus: mind your *p's* and *q's;* cross your *t's* and dot your *i's;* 3 *9's; *'s; the's; x's.* These forms must not be confused with the possessive case. They illustrate the only forms using the apostrophe for any cases except the possessive.

f. By pluralizing the important part of compound words. *Attorneys-at-law, chess-men, courts martial, commanders-in-chief, spoonfuls, cupfuls, wagon-loads, foemen, hangers-on, knights-errant.* Some in this class add *s* to both parts of the compound: *knights-templars* (or *knights-templar*).

Irregularities in number. Exceptional to the rules, or to any of the six classes of plurals already mentioned, several groups show peculiar formations.

a. Certain abstract nouns conveying indefinite ideas of quantity, with no thought of measure or division into parts, always are thought of as plural. Some of them are *greatness, harshness, meekness, wisdom.* Now and then they may be pluralized by adding *s,* but in such cases a new meaning is apparent.

b. Many common words are plural in form, but singular in meaning and use. Thus: *ethics, news, molasses, physics, mathematics, riches, thanks.*

c. Many words are used only in the plural, as *alms, eaves, dregs, pincers, scissors, scales, colors* (the flag), *bitters* (medicine, plural of bitter).

d. Many words have two plurals, with different meanings.

singular	*first plural*	*second plural*
brick	bricks (individually)	brick (collectively)
cannon	cannons (individually)	cannon (collectively)
cloth	cloths (pieces of goods)	clothes (made into garments)
die	dies (stamping metals)	dice (cubes for gaming)
fish	fishes (individually), or	fish (in bulk)
foot	feet (to stand on)	foot (in compounds, foot-rule, footman)
genius	geniuses (individuals)	genii (spirits)
head	heads (individuals)	head (collectively for number of)
horse	horses (animals)	horse (mounted men)
index	indexes (tables of contents)	indices (as in mathematics)
medium	mediums (people)	media (means, things)
penny	pennies (number of)	pence (by value, or a measure)
shot	shots (loads fired)	shot (in bulk)
staff	staffs (as military)	staves (sticks)

e. Many foreign words adopted into English have two plurals, one foreign, the other English. Sometimes the foreign is technical or scientific; the native popular or general. A few of them are noted here.

singular	*foreign plural*	*English plural*
bandit	banditti	bandits
cherub	cherubim	cherubs
fungus	fungi	funguses
memorandum	memoranda	memorandums
nebula	nebulae	nebulas
nucleus	nuclei	nucleuses
seraph	seraphim	seraphs
stamen	stamina	stamens
tableau	tableaux	tableaus
virtuoso	virtuosi	virtuosos
vortex	vortices	vortexes

f. Foreign nouns with foreign plurals, without corresponding English forms.

singular	*plural*
alumnus	alumni (masculine)
alumna	alumnae (feminine)
analysis	analyses
antithesis	antitheses
axis	axes
bacterium	bacteria
basis	bases
crisis	crises
crucis	cruces
datum	data
ellipsis	ellipses
focus	foci
oasis	oases
parenthesis	parentheses
synopsis	synopses
thesis	theses

Gender is a property of nouns and pronouns related to sex. Four kinds of gender are usually recognized,—masculine, feminine, common, and neuter.

Nouns that represent a male object are said to be masculine. Likewise, those that represent feminine are said to be feminine. Since many words are used without thought of whether they apply to males or females, they are called neuter; and most words belong to this class, like *tree, house, pen, engine, grapes, water* and *street.* Another considerable class like *servant, person, one, somebody, worker, agent,* may indicate either males or females, as the context shows. These are called common; and they are used without any reference to sex.

English is fortunate in that natural and grammatical gender in our language usually are the same. By a sort of personification, some objects like *ships, cities, beauty, college* are said to be feminine; but this type of figurative use, except in poetry, seems to be on the decline at present. Some foreign languages do not follow logical gender in their nouns and pronouns In German, for instance, the word for *boy* is *neuter;* so is the word for *maiden* or *girl;* the word for *key* is masculine; so is *evening, distance, excursion, rising,* and many others that in English are neuter. In fact, in learning German and some other languages, one needs to know the gender of almost every word, and this is marked in the vocabularies. With but few exceptions in English, one knows at once whether a word is masculine, feminine,—either, or neither.

Gender is shown in English in three main ways according to the form of words.

1. Names are known usually to belong to males or females; for we have one set for men and another for women. A few like *Marion, Shirley,* and certain family names as bestowed names, do not in themselves indicate that the person bearing one of them is masculine or feminine.

2. Sometimes entirely different words are used.

masculine	*feminine*
bachelor	maid, spinster
beau	belle
billy-goat	nanny-goat
boy	girl
brother	sister
bull (ox)	cow
colt	filly
drake	duck
drone	bee
earl	countess
father	mother
gander	goose
husband	wife
king	queen
lad	lass
lord	lady
monk or friar	nun
son	daughter
sir	madam
stag	hind
tercel	falcon
wizard	witch

3. Sometimes feminine gender is shown by a slight change from the masculine ending.

masculine	*feminine*
actor	actress
administrator	administratrix
baron	baroness
count	countess
czar	czarina
don	donna
equestrian	equestrienne
fiance	fiancee
Francis	Frances
god	goddess
heir	heiress
infante	infanta
Marion	Marian (Marion)
signor	signora, signorina
testator	testatrix
widower	widow

4. Sometimes prefixes or suffixes show change in gender from masculine to feminine.

masculine	*feminine*
man-servant	maid-servant or woman-servant
peacock	peahen
salesman	saleswoman
guinea-cock	guinea-hen
tom-cat	tabby-cat

Case is determined largely by usage in a sentence, or by the syntax of a noun or pronoun. English recognizes only three cases, the nominative, possessive, and objective.

1. The nominative case has various ordinary uses, chief of which is to indicate that a certain word is the subject, but there are a number of others easily recognized.

a. Subject of a finite verb. *Grammar* is not a difficult study. *It* can be explained simply. The average *person* can understand it.

b. Predicate nominative (attribute complement), when the subject is nominative and the verb is some form of *be, seems, appears* or other link-verbs. Grammar is not a difficult *study.*

c. In apposition to the nominative subject. Henry of Navarre, the French *knight,* was brave. He is your brother, *Henry.* He, your *brother,* should willingly aid you.

d. Subject of an independent participle. *He* having permitted us, we entered the garden. In such sentences, the subject of the participle is different from the subject of the finite verb in the clause.

e. Complement of the participial form of the link-verb. He being our *guide,* we entered the garden.

f. In ordinary absolute constructions. *Child,* come here. Kind old *king!* The good old *days,* where are they? In such cases the construction is independent of the remainder of the sentence; or, as in the second example, it stands alone.

2. The possessive case shows actual ownership or continual possession. When possession is not real, or is temporary, most authorities advise us to use the phrase form. Especially in the case of inanimate objects, the *of* form should be used. Thus, *the streets of the city, mayor of the town, banks of the river* are preferable to *the city's streets, town's mayor,* and *river's banks.* Sometimes, as in the last instance here, the form may be changed from the possessive to the ordinary modifying adjective construction, as *river banks.*

a. The regular form of indicating possession is by the use of the apostrophe and *s. The boy's book, men's houses, the dog's ears.* This applies to both numbers.

b. Plurals ending in *s* already add the apostrophe without a second *s. Boys' games, authors' rights, homes' joys, sailors' snug harbors.*

c. Singulars sometimes also omit the second *s*, especially in words of more than one syllable.

d. Modern authors, however, tend to prefer to use the second *s* in the case of monosyllable proper names and some polysyllables also.

Thus: Burns's poems, Dickens's novels, Jones's store are well recognized among such forms.

Note: the possessive form *'s* is a remnant of an old case ending in English, which was either *es* or *is* for the genitive or possessive case. At present the *e* is replaced by the apostrophe. The possessive in modern English is the only case form consistently different from the others. Nominative and objective of nouns and most pronouns are identical.

e. As an English idiom the possessive case is often used before a participle, which itself has an object or other modifier. *His speaking ill* of them was wrong. *John's shouting to them* was effective.

Note: a common mistake lies in the use of the objective in such cases, as I do not like *him* going, which should be *his going*. Again, there is a difference between *John shouting* to them was effective, and *John's shouting*. In one case it is John that is effective; in the other his shouting. So much confusion results from awkward uses of this construction that one had best avoid it unless he is absolutely certain it is both correct and pleasing. Grammarians differ as to whether the possessive should be classed as the subject of the participle in a sentence like the first above (*His speaking*) or whether it should be called a possessive pronominal adjective.

f. To indicate common ownership by two persons or by a firm, the second name only needs the possessive form. *Reed and Barton's store* is correct, if the store is owned by the two men. Conversely, to indicate single ownership, the form must be used with each separate name in the series. *Men's and women's shoes, Boys' and girls' hats, Washington's and Lincoln's farewell address.* If the last word, *address*, is pluralized, it means that each man spoke more than one farewell address.

Likewise in compound terms like knight-errants, the last of the parts takes the apostrophe and *s*, or the apostrophe only for the plural possessive.

3. The objective case. The third case of the noun is used in several constructions, some of which give considerable difficulty. Below are found the various uses of the objective.

a. Object of a transitive verb. Intransitive verbs take no objects. This object is often called the direct object, or the object complement. God made the *country*, but man made the *town*. Strike up the *drum*. In this latter case *drum* is object of the verb phrase *strike up*, not of the preposition *up*.

b. Object of a preposition. He went to the *town*. Here *town* is the object of the word *to*, not of the verb.

c. Indirect object. Give *me* the book. Here *book* is the direct object, and *me* is another of somewhat different meaning. In many such cases the indirect object might be thought of as the object of a preposition not expressed, as here, Give the book *to* me, would be the full sentence. Notice that the indirect object occurs only when there is already a direct or regular object of the verb.

d. Adverbial objective. Another form somewhat resembling a prepositional phrase without the sign is the adverbial objective. This has to do mainly with measures of time, space, value, and the like. Some examples are: He walked *four miles* (that is a distance of four miles or *for* four miles); The bells rang *all night;* He went too *far*.

e. Subject of the infinitive. He wishes *John* to remain here. They took *Walter* to be a freshman. He wants *me* (to be) *punished*. Let *him* (to) remain. In all such cases the word following the verb is not the object; but is the subject of the following infinitive. All the sentence after the verb, not the noun or pronoun, is the object of the verb. This construction gives constant trouble, because students forget these facts. English, along with most modern languages, has the same idiom,—the subject of the infinitive in the objective case. Historically this construction is rather old; and it is not entirely possible to explain just why it has become idiomatic.

f. Objective complement. If the subject of the infinitive is always objective, and any predicate noun or adjective is used as a complement (or with the verb *be, seems, appears,* or link equivalents), then that complement must also be in the objective case. For, complements agree in case with the subject of the verb in the sentence. They took John to be *me;* here *me* is correctly objective, agreeing with *John*, which is objective, being used as subject of the infinitive.

Warning: The term *objective complement* must not be confused with *object complement*, as the regular object is sometimes called. Because of this possible confusion, due to similarity of the names, it seems wise not to use the term *object complement* at all.

g. False objects. Passive verbs do not take regular objects. Indeed the passive is much overused by ordinary writers. In the sentence *They called him John*, undoubtedly *John* is objective since the infinitive *to be* is understood. He was called *John* is a difficult sentence to construe; for *John* cannot be a real object of the passive. One may say that it remains in the objective form because it is a real objective case in the first sentence. The sentence *The teacher gave me a lesson*, may be changed to *I was given a lesson by the teacher*. In this case *lesson* remains in its old place, and looks like an object, though in all logic it is not. Notice incidentally that the indirect object *me* becomes the subject in the new sentence, while the old subject now becomes object of the preposition *by*.

Parsing of nouns. To explain a noun in any sentence, all the information should be kept in mind. The complete parsing must name these elements: 1, kind and subdivision if there is one; 2, person; 3, number; 4, case; 5, construction; 6, rule; 7, anything unusual.

TABULATION OF NOUN FORMS.

Kinds:

1. Common
   - a. Abstract
   - b. Collective
   - c. Class
2. Proper

Properties:
1. Person
   a. First
   b. Second
   c. Third
2. Number as shown by
   a. Change in ending of word
   b. Change in root
   c. Change irregularly
   d. Change of *y* to *i* with *es*
   e. Addition of *s* to proper names
   f. Addition of *s* to important parts of compounds.

   Number as shown irregularly
   a. No plural of some abstract nouns.
   b. Plural in form, singular in use
   c. Plural only
   d. Double plurals
   e. Foreign singular, foreign and English plurals
   f. Foreign singular, foreign plural
3. Gender: kinds
   a. Masculine
   b. Feminine
   c. Neuter
   d. Common

   Gender as shown in four ways
   a. Different personal names
   b. Different words
   c. Change in ending for feminine
   d. Prefixes and suffixes
4. Cases

   Nominative in
   a. Subject
   b. Predicate complement
   c. Appositives
   d. Subject of independent participle
   e. Complement with participle
   f. Absolute constructions

   Possessive in
   a. Regular singular forms
   b. Regular plural forms
   c. Singulars ending in *s*
   d. Proper names
   e. Possessive with participle or gerund
   f. Possessives in compounds

   Objective in
   a. Object of transitive verb
   b. Object of preposition
   c. Indirect object
   d. Adverbial objective
   e. Subject of infinitive
   f. Objective complement
   g. False objects

Parsing
1. Kind and subclasses
2. Person
3. Number
4. Case
5. Construction
6. Reason or rule for use
7. Anything unusual

PRONOUNS.

Sometimes a word points out an object without naming it. Such a term is used in place of a noun and is called a pronoun. The prefix *pro*, in this case, means *for* or *instead of*.

Pronouns are divided into three classes or kinds. They are personal pronouns, interrogative pronouns, and relative (conjunctive) pronouns.

1. Personal pronouns are used to avoid repetition of corresponding nouns. If one wishes to repeat the essential idea contained in a word, he may use a synonym of that word, or he may use one of the pronouns. For example, one may say *Houses* are costly these days; *they* have risen gradually in price for several years; or, he may say, *Houses* are costly. Such *buildings*, etc., using a synonym.

Corresponding to the three persons, in each number, there are pronouns, as follows:

a. First person, *I* and *we*.
Second, *you* or *thou* and *you*, or *ye*.
Third, *he*, *she*, or *it* and *they*.

You was once plural only, and so at present takes a plural verb; we understand from the context whether one or more than one person is meant. *Thou*, once the only second pronoun, is now used in poetry, in reverential address, or among certain sects like the Quakers. *Ye* is the corresponding plural, but it is less frequently used. Possessive forms are *my* and *mine*, *your* and *yours*, *thy* and *thine*, *his*, *hers*, *its*, and *theirs*. Separate objective forms are *thee*, *him*, *them*.

For convenience, the declension of personal pronouns may be represented in tabular form:

Singular

Nominative, first person, I; second, you, thou; third, he, she, it.
Possessive, first person, my; second, your, thine; third, his, her, hers, its.
Objective, first person, me; second, you, thee; third, him, her, it.

Plural

Nominative, first person, we; second, you, ye; third, they.
Possessive, first person, our; second, your; third, their.
Objective, first person, us; second, you; third, them.

b. Compound personal pronouns are formed by the addition of *self* to the simple forms just described. They are *myself*, *thyself*, *yourself*, *himself*, *herself*, *itself*, *ourselves*, *yourselves*, *themselves*.

They are used intensively and reflexively. *He himself* is to blame, *I myself* will do it; *we ourselves* decline the honor are examples of the intensive use, which is more emphatic, or used to distinguish between one person and another possible person who might but does not do something as specified. So, *I myself* may be taken to mean, I will do it, not someone else. Notice that at present grammarians consider it wrong to use the intensive form without the corresponding other pronoun. *Myself* did it is considered wrong. *He* and *myself* went should be *he* and *I* or *he* and *I myself*. The reflexive use, always objective, shows that the subject of a verb does something that affects or concerns himself. Thus: I hurt *myself;* they deceive *themselves;* the dog hurt *himself;* it hurt *itself*, illustrate. Sometimes in poetry or in certain peculiar idioms in English these distinctions are not maintained.

c. *It* is sometimes used in general or peculiar senses. We call the baby *it*, if we do not know whether the child is male or female,—but no mother feels complimented by this use. *It* is often used as a false subject; or to point out the fact that the real actor is unknown, or is general, that is typical of all persons. *It* is I; *it* is he; *it* is who or who is *it?* illustrate. *It* is human to err; *it* rains; *it* (whatever we see) seems to be a crow, are more general.

The habit of using *it is*, *there are*, and similar expressions frequently is one that speakers and writers should check.

2. Interrogative pronouns are used in questions. *Who* and *what* are the simple interrogatives. *Which*, though often called one of this class, in use really is an adjective; for it is always followed by some noun or pronoun that it modifies. *Which* book is it? *Which* one do you mean? *Which* do you want? In the last

of these illustrations *one* is understood after *which*.

Who is declined as follows:

Nominative, who
Possessive, whose
Objective, whom

Who is among the few words in English that have three forms for the corresponding cases. Though *whose* is recognized as the possessive form of *which*, some grammarians insist that *of which* should replace this form for the possessive.

Questions are either direct or indirect. *Who was it that came?* is a direct question, but *I know not who it was that came* is indirect. One asks the question; the other implies it. Otherwise there is no difference in the uses.

3. Relative pronouns, which also usually connect, are divided into three classes.

a. The simple relatives are *who*, *which*, *that*, and *as*. *Who* is used for reference to persons. In personification this pronoun also may refer to animals, but otherwise it may not. *Which* refers to animate or to inanimate things. As an adjective pronoun, it is used as in the sentence *which person* was it, but this is distinct from the relative use. *That* refers indefinitely to either animate or inanimate beings. After words like *Many*, *such*, *same*, *the like*, the pronoun *as* is used relatively; and in this connection does not change its form for the cases and is used for all persons and both numbers.

Examples:

Who is your aged friend?

The fox, *who* saw his enemy, calmly waited for him. (*Fox* here is personified.)

Whose coat is that? I do not know *whose* it is.

Whom do you wish to interview? Any person *whom* you desire to have speak for the firm. (Why is *whom* objective?)

Whom is it *that* you desire to see?

He is the person *that* is wanted. What animal was it *that* the fox desired to outwit?

It is the same *as* the others. Such articles *as* these should never be sold in bulk.

b. Compound relatives are made by suffixing *ever* or *soever* to *who* and *which*. *Whoever* will may come. *Whosoever* will may *come*.

c. *What* is a single double relative, since it is equivalent to two words *that which*, with *that* as the antecedent of *which*. For this reason, no other antecedent is necessary.

Syntax of Pronouns. So far as construction of the sentence is concerned, or the syntax of its parts, pronouns have various uses.

1. Personal and relative pronouns may have most of the uses of nouns. The main ones have already been discussed in relation to nouns. They are: a, subject; b, predicate complement; c, apposition; d, subject of a participle; e, complement with a participle; in the possessive case, most of the forms that are common; in the objective, a, object of verb; b, object of preposition; c, indirect object; d, subject of the infinitive. Relatives are not used in apposition or in absolute constructions.

Examples: *I* am the man; It is *I*; the donor, *I*, am pleased; *my* studying is all done for today; my studying *him* revealed his purpose; possessives—*my* house, the house is *his*, etc.; objectives—They found *him*; they went to *him*; they gave *him* the book; they took *him* to be *me*. (Here *me* is predicate objective, agreeing with *him*, objective subject of the infinitive.)

2. A pronoun agrees with its antecedent in person, gender, and number. The antecedent of a pronoun may be another pronoun, as *Everyone* should be careful of *his* books. One of the crudest blunders results from the use of the plural pronoun in reference to a singular antecedent. If one says, Every person should look out for *their* books, he is thereby guilty of using the plural *their* when the antecedent is *person*, a singular.

If the antecedent consists of two different words, one being masculine and the other feminine, the use of the masculine pronoun in reference is quite enough. It is stilted to say, Everyone should be careful of *his or her* books. Some purists defend this construction logically, but we must remember that *his*, like *its*, is sometimes used when the antecedent is not strictly in accord in gender.

Being a third personal word, a collective noun requires some corresponding pronoun like *it*. Here, once more, the plural must not be carelessly used for the singular, since collectives are treated always as singular words when they refer to a whole group as a unit.

3. Certain phrases like *it seems*, *he thought*, *we believe*, and *I know* are often parenthetical in a sentence; and hence do not affect the grammar of other parts.

He told us the plan *which he thought* the best one.

He spoke to those who *he thought* would help him.

They are the people, *it seems to me*, who should help.

This is the best article, *we believe*, that we have made.

The underscored words do not change the construction of the pronouns in these sentences.

4. Relative clauses fall into two classes, restrictive and explanatory.

a. A restrictive clause makes more particular or more narrow the meaning of the antecedent. Both the significance and the punctuation should be studied carefully.

Sailors *that are superstitious* will not set sail on Friday.

Oysters *that are stale* are poisonous.

Such restrictive clauses as these are used as adjectives that limit the meaning of the preceding nouns. They are not set off by commas, since an adjective or limiting word is not separated thus from the word it modifies. The first sentence says that some sailors are superstitious and those men will not sail on Friday; or those particular sailors (not all sailors), who are superstitious will not embark on Friday. Those oysters that are stale (but not all oysters) are poisonous.

Now place commas before and after the restrictive clauses and see how the meaning changes. The first sentence now means that all sailors are superstitious and all sailors will not set sail on Friday; and the second that all oysters are stale and therefore poisonous. Both these statements, of course, are false.

b. An explanatory clause merely adds information. It is not absolutely necessary to the thought, but the restrictive clause is. To find out whether a clause is restrictive or explana-

tory, apply this test: if it may be omitted without essentially changing the thought, it is explanatory; otherwise, it is restrictive, since the meaning would be quite different if the clause were omitted.

Lincoln, who is called the Great Emancipator, loved his fellow men.

Washington, Father of his Country, lived a simple, kindly life.

The foregoing subordinate clauses are explanatory, descriptive, or non-restrictive. They may be omitted, without destroying the rest of the sentence meaning.

Errors in the use of Pronouns. Some errors in syntax of pronouns have been pointed out. These are summarized below, and additional mistakes are also noted:

1. A plural pronoun must not be used when the antecedent is singular. The use of *their* when the antecedent is *one, person, somebody, he,* or any other singular word should be especially condemned. Though a common blunder, it has nothing to justify it either in logic or idiom.

2. The use of the objective case as a predicate complement, when the subject is nominative, is equally wrong. Though we hear sentences like *It is me,* for the correct form *it is I,* almost every day, this construction has nothing to recommend itself, beyond the fact of commonness. We must remember that good language is not necessarily that of the great mass of people, but that used by those who write and speak as a profession,—the authorities, so to speak.

3. The third most common mistake is to use the nominative, after a preposition, for the objective case. They gave the books to Mary and *I* should, of course, be to Mary and *me.* This error usually occurs, as in the sentence just given, when the preposition has a double object, and the second one is wrongly put in the nominative case.

4. In modern English the pronoun *them* should not be used for *those.* In the Lord's Prayer, the older form is, "Forgive *them* that trespass against us." This is a survival of the old dative case (common in Old English), with the prepositional prefix *for* in *forgive.* Likewise, *them* should not be used for *those* as a pronominal adjective in sentences like this, Give me *them* books. In the forms, Give it to *them;* He gave *them* the books; Forgive *them;* for they know not what they do, the pronoun is used correctly.

5. *But what* should not be used for *but that* in sentences. I do not know *but that* the report is true is the correct form.

6. *Which* should not be used indefinitely for an idea, a whole preceding clause, or vague grouping of words. *He asked to bring the plans for the building, which he did* should be condemned; for *which* refers neither to *plans* nor to *building.* You will be safe in refusing to use *which* except for a definite antecedent that just precedes the pronoun, or at least when the antecedent may not be confused with some word intervening.

7. *And which* or *and who* should not be used in a sentence unless another preceding *which* or *who* has been used. Thus: He is a prosperous merchant, *and who* is respected by all. All such constructions are wrong, since the *who* introduces a subordinate construction, and this may not be coordinated with a principal; for only similar main or subordinate constructions may be coordinated.

8. *Whom,* the objective, gives no end of trouble, since this is among the few forms that differ as between nominative and objective cases. *Whom* is incorrect in the sentence, *Whom* do men say that I am, since it should agree with I, to which it is a predicate nominative. Men do say that I am *who,* is the normal order.

9. The subject of the infinitive is often mistaken for the object of the main verb. He took *him* to be me, the usual type of troublesome sentence, has *him* in the objective because it is subject of the following infinitive. Though the form would be the same, a student, in parsing, usually errs in saying that *him* is object of *took.* All the rest of the sentence after the verb is the real object. Again, in sentences of this kind, it is often said that *me* is object of *to be,* but this link-verb never takes objects. Sometimes, moreover, *I* is incorrectly written for *me* here.

10. In a dependent clause, the case of the pronoun is determined by its construction in the clause, not by its antecedent.

He is the man, *who* is to go. *Who* is nominative, subject of the verb *is.*

I am the one *who* is to go. (Not who *am* to go.)

11. When *than* is a conjunction, the pronoun following is often put into the wrong case. He is taller than *I,* but I am older than *he* is correct. The corresponding objectives would be wrong.

12. *He* is often used ambiguously in sentences that contain two nouns, either of which might be the antecedent of *he.* He asked him where the school is, and *he* said, "Turn to the right at the next corner." Evidently the second *he* refers to the person previously represented by the *him,* but the sentence does not make this relationship clear. English sadly needs a second pronoun for such cases. Most other languages, if not all, have two pronouns. In our language, we have to resort to cumbersome expressions like *the former, the latter,* or to some other synonym, to make the meaning unmistakable.

13. Most authors avoid using a *he* in sentences where only a possessive or objective has been used. Byron's poetry is full of vigor. *He* rushes on swiftly from scene to scene. Here the *he* has no real antecedent; for the antecedent must be nominative, and the only form used is a possessive.

14. Pronouns modifying the participle or gerund should ordinarily be in the possessive case, in sentences as *I do not like his doing this.* Evidently, I do not like *him* doing this is wrong; besides, it conveys a meaning not intended.

15. Plural pronouns should never be used to refer to singular nouns, as in the sentence, Our forefathers never heard of a *match,* whereas we use *them* every day.

16. Do not use a pronoun obscurely with its antecedent in parenthesis to make the meaning clear. This is a crude mistake. They told him of *his (John's)* good luck. Commonly, in all such sentences, the pronoun may be replaced by the appropriate noun, as, They told him of John's good luck.

17. The pronoun in a relative, subordinate clause does not affect the case of any other pronoun in the main sentence. Let *him* (not he) who will hear these words, lay them up in his heart.

TABULATION OF PRONOUNS AND THEIR USES.

Kinds:

1. Personal
   a. First, second, third, singular and plural.
   b. Compound personal pronouns, used intensively and reflexively.
   c. *It* in some special uses.
2. Interrogative
   Who and *which*.
   What as pronominal adjective.
3. Relative
   a. *Who, which, that, as.*
   b. Compound relatives: *Whoever, whosoever.*
   c. Double relative: *what.*

Syntax:

1. Personal and relative resemble nouns in syntax.
   a. Nominative about the same as that of nouns in use.
   b. Possessive similar.
   c. Objective about the same as that of nouns in use.
   (Relatives not used in apposition or absolutely)
2. Pronouns agree with antecedents in person, gender, and number.
3. Certain phrases like *it seems* do not affect syntax of the rest of the sentence.
4. Relative clauses are
   a. Restrictive or limiting (adjective) in use.
   They are not set off by commas, and are essential.
   b. Explanatory or non-limiting in use.
   They are set off by commas, and may be omitted usually without damage to the rest of the sentence.

Errors in Use:

1. Plural with singular antecedent.
2. Objective for nominative as complement.
3. Nominative with preposition.
4. *Them* misused for *those.*
5. *But what* misused for *but that.*
6. *Which* without definite antecedent.
7. *And which* or *and who* without previous *which* or *who.*
8. Whom in place of *who* or some other correct form.
9. Subject of infinitive mistaken for object of verb.
10. Case of *who* mistaken in dependent clause.
11. Objective instead of nominative after conjunction like *as.*
12. Use of *he* ambiguously.
13. Use of *he* when only a possessive of the antecedent has been given.
14. Use of *him* for *his* in gerund (participial) constructions.
15. Plural pronouns when only a singular word has been used that might be a possible antecedent.
16. Use of pronoun with explanatory noun in parenthesis.
17. Wrong use of pronoun in main clause by attraction to case of pronoun in relative clause.

Parsing of Pronouns. The outlines given just above will provide a review of the information about pronouns. In parsing or explaining the use of these words, one should cover the following items:

1. Kind. 2. Class and sub-class. 3. Antecedent or relation to other words. 4. Agreement in person, number, gender. 5. Case (pronouns need not agree with antecedents in case). 6. Use of the pronoun in the sentence. 7. Reason for its use. 8. Anything unusual or any correction needed.

ADJECTIVES.

Nouns and pronouns, as we have seen, designate ideas and concrete objects. Sometimes it is not enough to know a name or word, or to think of something as a whole; for we desire to know something of its limits or qualities. Certain words make a noun more definite or name its characteristics. These terms are called adjectives.

Adjectives may be defined as words that limit nouns and pronouns or that name some of their qualities. If we say the hill is *steep*, it may also be *long, slippery, icy*, or any one of several other things. We speak of the qualities of the noun. If we say *a* hill, *that* hill, or *many* hills, we designate them without naming any of their qualities. If we say *that* hill is *steep*, we use both classes of adjectives.

Adjectives, then, fall into two main classes. A descriptive adjective is one that refers to the quality of the word it modifies, as *tall* mountains, *fresh* streams, *gay* persons, *grave* old men, *wise* counsellors, *beautiful* ladies. **A limiting or definitive** adjective refers to an object or person to point it out or name it, without specifying any of its qualities, as *a* mountain, *mountain* streams, *no man's* land, *one hundred* guns, *many* old men, *several* gay youths. These two main classes will now be sub-divided and described more fully.

1. Descriptive adjectives divide into three classes:

a. Common, those that name well-recognized qualities of the nouns they describe, as *good* man, *vile* medicine, *insipid* water, *genial* judge, *fertile* plains. Hundreds of these common adjectives are in literary use in English.

b. Proper, those derived from place or personal names, as *Trojan* army, *Dobell's* solution, *Ciceronian* diction, *Elizabethan* age, *Macadam* roads. When the combination becomes familiar and is in good use, the adjective tends to be written with a small letter.

c. Participial, those that are derived from the verb in its present and past participles, as *growing* crops, *waning* moon, *playing* blocks, *deadened* sounds, *weakened* laws, *assumed* powers.

2. Limiting adjectives also divide into three classes:

a. Articles. These are *a*, used before words beginning with a consonant; *an*, before words beginning with a vowel, or *h* silent (usually) followed by a vowel; and *the*, the definite articular adjective, which points out a particular thing, or something well known or just mentioned.

b. Pronominals. These words are numerous, having four or five sub-classes, and some grammars class them as pronouns. Here they are placed among the adjectives, because of their limiting nature.

Some, called demonstratives, point out definitely, as *this, that, these, those, both.*

Some, called distributives, divide the noun into parts or refer to a number singly, as *each, every, either, neither.*

Some, called indefinites, do not specify which one or how many are included, as *all, any, some, few, certain, little, much, none* (singular or plural according to context).

Some, called interrogatives, that are used in questions, as *which* man? and *what* number?

3. Numerals. These adjectives have to do with number, either definitely, as *nine, forty-ninth, fourth, forty-fourth, third from the last;* or indefinitely, as a *few, several, many.*

Cardinals are regular numbers, like *one, twenty-nine, one hundred three, seventy-two.* Ordinals *first, ninth, one hundred third, seventy-second.* The distinction may easily be held in mind, if one remembers that ordinal has to do with the *order,* namely *first, second, third fourth, fifth,* etc.

Uses of adjectives in the sentence. Three chief ways of using adjectives are frequently distinguished. These are the direct, predicate, and resultant adjective uses.

1. Direct adjectives are those that modify the noun or pronoun in the usual way. These adjectives may be placed either before or after their substantives. A *wise* man; the man, *wise* and *good; tall* trees; trees, *tall* and *stately.* Though the normal position of the adjective is before the word it modifies, often it is placed afterward for certain emphasis.

2. Predicate adjectives are those that complete the meaning of the verb and refer to the subject. These occur with *be, seems, appears,* the main link verbs, so named because they link the subject and the predicate noun or adjective. The man is *wise* and *good;* trees are *tall* and *stately* in this wood.

3. Resultant adjectives are those that complete the meaning of a direct object, telling what results to the object. This construction is often used after verbs of making, naming, appointing, and the like.

They made him *president.*

They chose Harold the *secretary.*

The president appointed him a chief *justice.*

Some would supply the infinitive *to be* in such constructions; thus: They made him [to be] president.

Notice that the resultant (sometimes called factitive) adjective becomes a predicate nominative virtually in passive constructions, like,

He was appointed president. (He was president.)

He was chosen secretary. (He was secretary.)

In such cases the passives are thought of as if they were simple active link-verbs.

Comparison of Adjectives. We have already seen, first, that nouns and pronouns are often used without modifying words; and, second, that these may be described or limited by adjectives. Again, in the third place, the form of adjectives is changed so as to bring out different degrees of the qualities they represent. We say that something is *good,* another is *better,* and a third is *best* of all.

The process of varying the form of an adjective to show different degrees is called comparison. Adverbs, too, may be compared, as we shall see later. Three degrees are recognized, positive, comparative, and superlative. Just as things are compared when one is said to be greater than another, they may also be compared by saying one is less than another, and a third is least of the lot. Thus we recognize the minimizing form of comparison, as *good, less good, least good;* or, as more commonly, *good, worse, worst.*

The positive is the original, simplest form, as *good, wise, blue.*

The comparative is the form that expresses the idea of more, or that something is greater than another, as *better* men, *wiser* councils, *bluer* skies. Here the implication is that the men, councils, skies in mind are superior to others.

The superlative degree is the form that shows the highest, lowest, or greatest of all that are considered, as *best* men, *wisest* councils, *bluest* skies.

Different ways of comparing:

1. By changing the end of the word. Comparison here is regular.

positive	comparative	superlative
red	redder	reddest
rosy	rosier	rosiest
rare	rarer	rarest
sick	sicker	sickest

2. By employing the prefix. Long words often are compared by adding *more* for the comparative and *most* for the superlative, or *less* and *least.* A few common words use either the first or second methods of comparison.

positive	comparative	superlative
beautiful	more beautiful	most beautiful
beautiful	less beautiful	least beautiful
preferable	more preferable	most preferable
gracious	more gracious	most gracious
skilful	more skilful	most skilful
skilful	less skilful	least skilful

3. By employing different words, or irregularly.

positive	comparative	superlative
bad, evil, ill	worse	worst
far	farther, further	farthest, furthest / farmost, farthermost
good	better	best
late	later (time) / latter (position)	latest (time) / last (position)
in (also adv.)	inner	inmost / innermost
many (number)	more	most
much (quantity)	more	most
little	less (quantity) / smaller (number, size)	least / smallest
old	older / elder	oldest / eldest

4. Some adjectives are defective in comparison. Several of these have adverbs for their positive degree.

positive	comparative	superlative
[aft, adv.]	after	aftermost
[up, adv.]	upper	uppermost / upmost
[out, adv.]	outer / utter	outermost / uttermost
[eld, obsolete]	elder	eldest
————	under	undermost
————	hither	hithermost

5. Some adjectives, already expressing ideas of fullness or completeness, cannot be further compared.

circular, round, full (logically), dead, empty, golden, perfect, square, everlasting, eternal, perpetual, universal, void.

To be sure, there is some tendency to compare words like *full, round, empty,* and other words logically in this class, but many grammarians and authors carefully avoid using anything but the positive degree. Terminations like *-ish, -ock, -kin* have virtually the effect of comparison, as in *greenish, hillock, bullock, mannikin, bunnikin.*

One and *other*. These two pronominal adjectives (or adjective pronouns) may be declined as shown below:

	singular	*plural*	*singular*	*plural*
Nom.	one	ones	other	others
Poss.	one's	ones'	other's	others'
Obj.	one	ones	other	others

Notice that these pronouns take the regular apostrophe in both singular and plural, but that they are almost alone among pronouns in this respect. Others like *ours, hers, his, theirs* do not take the apostrophe.

ERRORS IN THE USE OF ADJECTIVE.

1. Adjectives and adverbs should not be confused in use. Some forms for both parts of speech are the same, but in other instances the distinctions are worth observing.

He looks *good* means He looks like a good man. As such it is correct. It should not be used for He looks *well*, that is, in good health.

I *sure* was pleased, glad, sorry, etc., combinations frequently heard, are vulgarisms for I *surely* was pleased, and so on.

Less refers to quantity; *fewer* to number. *Less* people were present, therefore, is incorrect.

Most must not be used for *almost*. *Almost* all people is correct; so is *most* people, but not most all people, where the adjective is wrongly used for the proper adverb.

Many hesitate as to whether to use an adjective or adverb in a given construction. If the word refers to the subject, expressing some quality of the subject, the adjective is proper; if, on the contrary, it relates to the verb, and expresses some quality of the action, the adverb is proper. We feel *cold* (adjective) is correct; so We feel *coldly* (adverb) on that subject, is also correct; but the meanings are quite different. He looks *bad* (a bad man) may be true enough, but should not be used for He looks *badly* (in poor health). Silk feels *smooth* (is smooth to the touch), and it does not feel *smoothly* in any case.

2. Adjectives should keep to their own proper meanings. Good writers use epithets carefully. They do not speak of *splendid* dinners; *nice* furniture; *elegant* days; *awful* fine people; *grand* cakes. All these words have their own meaning, as any dictionary points out; they must not be used vaguely or incorrectly, without precise regard to actual significance. Every adjective should describe its noun or pronoun simply, accurately, picturesquely.

3. Adjectives agree with their nouns also in number. Plurals must not be used with singular nouns or vice versa. I do not like *those kind* of people is obviously incorrect. It should be either *that kind*, or *those people*. *These here, those there*, likewise, are evidently wrong in phrases like *These here* baskets, meaning *these at hand;* for in such cases *here* and *there* are superfluous, since *these* and *those* point out objects at hand and at a distance respectively.

4. Comparative and superlative are often confused. The comparative is used when two are compared, the superlative when more than two are. Hence, Which one of the two is *best* is an evident blunder.

5. *Each* and *every*, in a sentence make any corresponding noun singular; and so the verb must also be singular.

Each should be careful of his book.

Each man *goes* to work at eight.

Every person at some time *is* liable to a fine.

Many a man *longs* for his country, when he is abroad.

6. The articular adjective especially should be repeated if two nouns in a sentence are to be taken separately. Thus *a* black and white dog indicates only one animal; if two are meant, the sentence must read *A* black and *a* white dog. We found *the* secretary and *the* treasurer busy in the office, if two men are meant; if one, the second *the* may be omitted.

7. Mixed comparisons should be avoided. *Our team is as good if not better than last year's* is not only ungrammatical but decidedly awkward. One complete comparison should be made before the second is begun. Thus: Our team is *as good as last year's, if not better.*

8. In using the comparative degree, one must not include the subject of comparison (first member) in the class with the thing it is compared with (second member). Thus it is wrong to say, Washington was *greater than any general* of the Revolution, because the second member of the comparison includes Washington himself, since he, too, was one of the generals. It is right to say, Washington was greater than any *other* general of the Revolution. The wrong form is both logically and grammatically inadmissable.

In comparison, one must remember, a single thing is likened to another, similar thing. Two different objects cannot be compared; but they may be contrasted, that is, the dissimilarities may be pointed out.

In using the superlative degree, the original member should be *included* in the second part of the comparison, or in the large group. Washington was the *greatest* of all generals of the Revolution, both in grammar and logic, is correct. So is, Our team is the *best of all* our conference,—including the team itself.

Parsing of Adjectives. To parse adjectives we should give the

1. Kind; 2, class and subclass; 3, comparison; 4, degree and reason; 5, relation to noun or pronoun; 6, rule for construction.

TABULATION OF ADJECTIVES AND USES.

Kinds:
1. Descriptive
   a. Common
   b. Proper
   c. Participial
2. Limiting
   a. Articles
   b. Pronominal
   c. Numerals

Uses:
1. Direct adjectives
2. Predicate adjectives
3. Resultant adjectives

Comparison:
1. By changing the endings
2. By using a prefix
3. By using different words
4. Defective comparison
5. Adjectives not compared

Errors in Use:
1. Confusion with adverbs
2. Improper meanings

3. Disagreement with their nouns
4. Confusion of comparative and superlative
5. *Each* and *every*
6. Failure to repeat article with two nouns
7. Mixed comparisons
8. Ungrammatical comparisons

VERBS.

We have already seen that nouns and pronouns are name words, and that adjectives are modifying or descriptive words. No sentence is possible, however, without a verb; in fact, this is about the only part of speech rarely dispensed with in the sentence. We can get along well enough when subjects are understood, and many nouns stand without modifiers; but it is not possible to infer a verb, except when it or an equivalent is expressed near by.

Verbs are words that express the idea of action. Such a statement must be taken somewhat broadly; for some verbs have to do with states of rest, being, condition, and some (especially the non-finite infinitive and participle) infer or assume action without definitely asserting it. This definition must also apply to questions and other forms that vary from straightforward statements.

Verbs according to meaning, or completeness of assertion. Some verbs tell enough about the subject; others relate the subject to another word or group called an object. The first class may stand alone; the second must have help of the object to complete their meaning. Verbs that have no object are called intransitive; others are transitive, a word which means "passing over," from *trans*, the prefix meaning *across* or *over*, and the Latin word for *go* or *pass*, with an English termination. Since *in* means *not*, it is easy to remember that intransitive means no object is required. On the other hand, one easily sees that a transitive verb is a bridge over which the idea of the subject passes to join the object. Strictly speaking, a transitive verb does not "take" an object; it rather carries the thought begun in the subject over to the related object.

Transitive verbs:
The president *signed* the bill.
In spring we *plow* the fields.
Young boys *love* to play ball.
Worry not work *kills* men.

Intransitive verbs:
It *rains*.
John *plays* well.
Worry not work *kills*.
Animals *live* in the wilds.
The field *has been plowed*.

Some verbs may be either transitive or intransitive according to the meaning intended in the sentence. We *study* hard and we *study* arithmetic illustrate, the latter being transitive. Worry not work *kills* also contains a transitive verb, but the last sentence under transitive verbs above contains an object of *kills*.

Verbs are regular and irregular. They will now be discussed.

1. Regular verbs form their past and past participles by the addition of *-ed*, *d* or *t* to the present form: *climb, climbed, climbed; wish, wished, wished; bless, blessed (blest), blessed (blest)*.

2. Irregular verbs form their past and past participle by some change in the vowel of the words themselves. These are often called strong verbs to distinguish them from the regular forms ending in *ed, d*, or *t*, which are called weak. In our earliest English several classes of strong verbs changed the vowels in different manners; and many of these forms exist today. Each class had its pattern verb, like *drive, choose, bind, shake, fall*, and *bear*. With certain changes in spelling, these classes have come down to modern times, but we usually list all irregular verbs in one group, noting some of the variations from the pattern. Of one hundred fifty fairly common strong verbs, some of the chief ones are listed below. A few are reserved for a special list containing variations from the normal types.

present	*past (preterit)*	*past participle*
abide	abode	abode
bear	bore	born, borne
beat	beat	beaten
begin	began	begun
bid	bade, bid	bidden
bind	bound	bound, bounden (old)
bite	bit	bitten
blow	blew	blown
break	broke	broken
chide	chid	chidden
choose	chose	chosen
cleave (split)	clove, cleft / clave (old)	cloven, cleft
cling	clung	clung
crow	crew, crowed	crowed
dive	dived, dove	dived
drink	drank	drunk, drank (new)
fly	flew	flown
forsake	forsook	forsaken
get	got	got, gotten (new)
hang	hung / hanged (executed)	hung, hanged
hew	hewed	hewn
hide	hid	hidden, hid
kneel	knelt, kneeled	knelt, kneeled
lay (to place)	laid	laid
lead	led	led
lie (to recline)	lay	lain
make	made	made
mean	meant	meant
pass	past, passed	past, passed
say	said	said
seek	sought	sought
sit	sat	sat
smite	smote	smitten, smit
sow (scatter)	sowed	sown, sowed (new)
stand	stood	stood
steal	stole	stolen
stay (to cause to stop)	stayed	stayed
stride	strode	stridden
strive	strove	striven
swear	swore	sworn
swim	swam	swum
swing	swung	swung
take	took	taken
think	thought	thought
throw	threw	thrown
wear	wore	worn
weave	wove	woven
wind	wound	wound
work	worked / wrought (poetic)	worked / wrought

3. In the list below are given certain other verbs that vary from the strong or the weak types. Some have double parts, one strong, the other weak; some are alike in all three parts; some are defective in one or more parts; some have different verbs or spellings altogether in either the past or past participle. The verb *am, be* shows the most irregularities; since it is made up of not less than three different verbs from as many distinct older English dialects. This composite origin explains the different

forms, some of which go back eventually to ancient Latin and Greek.

present	*past (preterit)*	*past perfect*
am, be	was	been
clothe	clothed, clad	clothed, clad
do	did	done
dream	dreamed, dreamt	dreamed, dreamt
go	went	gone
have	had	had
hit	hit	hit
hurt	hurt	hurt
knit	knit, knitted	knit, knitted
let	let	let
light	lighted, lit	lighted, lit
quit	quit, quitted	quit, quitted
set	set	set
shut	shut	shut
spell	spelled, spelt	spelled, spelt
beware	————	————
can	could	————
do (auxiliary)	did	————
have (auxiliary)	had	————
may	might	————
must	must	————
ought	ought	————
shall	should	————
will (auxiliary)	would	————
will (to wish, decide, bequeath)	willed	willed

Principal and Auxiliary Verbs. According to whether they are complete in themselves, verbs are called principal and auxiliary.

1. A principal verb is one that expresses the idea completely, as to time and assertion. The verbs in the lists already given are mostly principal. Boys *play* ball, boys *played* ball are complete assertions, having principal verbs. Boys *can* play, *do* play, *will* play, *have played*, *shall have* played are assertions modified by the attached or helping verbs.

2. An auxiliary verb is one that helps another with reference to mode and tense,—or manner and time of the assertion. All the chief auxiliaries with their present and past tenses, are here given; *be (was)*, *do (did)*, *have (had)*, *shall* and *will (should* and *would)*, *can (could)*, *may (might)*, and *must (must)*. Sentences given here illustrate their principal forms. I *was going*, he *did go*, he *had gone*, he *will have gone*, he *has gone*, I or we *shall go*, he or they *will go;* we all *should go*, he *would go* if he were asked; he *could*, I *can go* now, they *may go*, he *might go* if he got a chance.

Notice that auxiliaries are used in many different senses:

a. *Do* and *did* are mainly emphatic, as I *do promise*, he *does like* to play football; he *did* not *do* it, I *did tell* you that before.

b. Ability or permission. You *can do* it (are able), and you *may* do it (have permission). This distinction,—*can* for ability, *may* for permission,—is carefully maintained by all good writers and speakers.

c. Continued action. They *are building* the house; they *were* still *working* on it. Here the action is continued in the present, and was continued in the past in these two sentences. The use of *are* or *were*, in such cases, is called the progressive form of the verb.

d. Time. Somewhat different, and often hard to distinguish from the progressive forms, are those which merely denote an element of time, as They *are taking* it seriously; they *were coming* home; they *will refuse* to come; they *will be coming* here soon.

e. Necessity or determination is expressed by *must*, and by the verbs *shall* and *will*, as We *must*, they *must*, all *must;* you *shall* do this (that is, I shall force you if it is necessary), I *will* do it (I feel that I must do it). We often say *He should do this*, meaning he is morally obligated to do it; one *should respect* the aged. We also say, in about the same meaning, I *ought to go;* he *ought to find* out.

f. Willingness, I *will go* with you gladly; I *would gladly* pay you if I had the money.

g. Custom. He *would* always *do* this (he was in the habit of doing it). We *would go* always if we could (it was our habit to go whenever we could). He *would be doing* it is sometimes used in a similar meaning.

h. Completeness at a certain time. The work *is finished*, *has already been finished*, *will be finished* tomorrow, *was finished yesterday.*

SHALL AND WILL. Many persons in speaking, and not a few in writing, often confuse the uses and meanings of *shall* and *will.* Several things may be remembered to avoid confusions.

1. Always the point of view is that of the one speaking. He is the one who wishes, promises, determines, or merely thinks that he is going to follow a certain course of action.

2. *Shall* has the ideas of futurity, expectancy, contingency, or something that may be wished for or hoped, or planned, but still may not come to pass, because of forces beyond the power of the one speaking.

Will has the idea of determining. To *will* something is to do all in one's power to bring it to pass, or to carry into execution a plan over which the speaker has complete control. Notice that *will* is more absolute than *shall*, depends less on futurity (often indeed has nothing to do with the future), but sticks to the present intention.

3. *Shall* with the first person expresses mere possibility or something that may or may not come to pass. *Shall*, from the point of view of the speaker, when used of the second and third persons means determination. *Will*, with the first person, is used to express determination, and with the others, mere futurity.

I shall go; we shall go (I and we expect to go, but may not).

I will do it; we will do it (I and we either promise to do it, or determine to do it).

You shall go; he shall go; they shall go (I am going to make them, if they will not voluntarily).

You, he, she, it, they will go (I expect they are going, but here again they may not).

Tabulated, the complete forms are as follows:

Futurity or possibility. (The speaker does not will it, nor can he bring it to pass necessarily).

singular	*plural*
I shall (should)	we shall (should)
you will (would)	you will (would)
thou wilt (wouldst)	they will (would)
he, she, it will (would)	

Determination, Promise, Willing (The speaker can choose and is able to determine).

singular	*plural*
I will (would)	we will (would)
you shall (should)	you shall (should)
thou shalt (shouldst)	they shall (should)
he, she, it shall (should)	

4. *Should* and *would* are used in a similar way as just illustrated. The chief rules that apply to *shall* apply likewise to *should;* those that apply to *will* apply likewise to *would.* Both *should* and *would* are used in conditions. If one is in doubt as to whether the conditional form as used is correct, all he has to do is to translate the word into the corresponding direct form. Thus: he said he *would* go,—Is this correct? What would the original be? If he were promising, it would be, He says he *will* go; if mere future, it would be, He says he *shall* go. The meaning, then, determines the form to be used.

Questions normally employ the form expected in the answer. These sentences illustrate,—

Shall you go? Answer expected is, I *shall* (I expect to) or *Yes.*

Will you go? Answer expected is, I *will* (Yes, I promise); or (I have made up my mind to go).

5. In subordinate clauses *shall* and *should* are used correctly for all persons.

If he shall come, I shall rejoice.

If he should come, I should rejoice.

Notice, finally, that *should* often means *ought,* expressing the idea of obligation. *Would* sometimes means a customary action.

He *should* do this (he ought to do it).

He *would* always fail in arithmetic (customary for him to fail).

Properties of verbs. Verbs change in various ways to adjust themselves to different shades of the ideas they express. These changes are called properties; or, more accurately, they bring out the different properties. Voice, mode, tense, person, and number are the five properties of verbs commonly mentioned. These will now be explained.

1. Voice shows whether the subject of the verb acts or is acted upon. Two voices are recognized,—the active, and the passive.

a. The active voice speaks of the subject as doing something, or being in a certain relationship.

Troy *fell* after a siege.

Falling walls *are* dangerous.

Do you *like* algebra?

Will you *pass* this examination?

I *will assist* you in preparing for it.

Both transitive and intransitive verbs may have voice. A verb does not need an object to express the idea of action. In *Troy fell after a siege,* there is much action asserted, but the verb has no object. Some grammarians, however, inform us that intransitive verbs have only the active voice, since an intransitive verb, logically, may not be changed into a passive.

b. The passive voice speaks of the subject as acted upon.

Troy *was destroyed* by a stratagem.

Bricks *were strewn* all about.

Algebra *is made* too difficult sometimes.

This examination *will be passed* by you.

You *will be helped* by these questions.

Transitive verbs make their passives by adding the past participle to some form of the verb *be* or *is. Was destroyed* consists of the past of *be,* followed by the past participle of *destroy; is made* is the present, singular, with *made,* the past participle. We should be on guard against mistaking a form like He *was going,* for a passive. Here the verb is progressive, past, active, not passive; it shows the action as continuing, and the subject as acting, not acted upon.

c. In certain idiomatic construction active and passive are interchanged. The hotel *is building* is the active voice for the passive, *is being built,*—and many good authors prefer the first of these two expressions. The guests *are* not yet *arrived,* for The guests *have* not yet *arrived,* a form rejected by many as being awkward.

One is always safe in avoiding a passive construction unless the subject is really acted upon, or changed definitely, or at least the receiver of some attention from the verb. For a long time newspaper *funny* men have ridiculed sentences like A pleasant time *was had,* for The company *had* a pleasant time. *Can be seen, could be seen,* are rather illogical expressions for *one can see, one could see,* and so on. Used rightly the passive fills a real place in English grammar, but the genius of our language prefers the active in every case where it is allowable.

Mode in English. Not all statements are made as the truth. Mode is the manner of relating a thought to reality. It may be real, possible, doubtful, contingent or something else, hoped or wished for,—according to the number of modes in English. Some of the older languages had several more modes than our language recognizes. In English three modes are usually classified, indicative, subjunctive, imperative. These are the finite modes, but two others that are non-finite (or in-finite) are the infinitive and the participle, which are usually discussed with verbs.

1. The indicative mode asserts something as true or not true, or questions if it be true. I came an hour ago. The others have not yet arrived. How long have you been here?

2. The subjunctive mode expresses doubt as to whether something is real or true, or certainty that it is not true as supposed. So thought and reality are compared. In English the subjunctive mode is now used less and less frequently. Certain constructions need to keep up the distinction which this mode brings out.

a. Conditions that express something as not true, on which something else depends.

If he *were* here, he would assist us. *(But he is not here* is the inference).

If *he had been* here, he would have helped us.

Here *were* is past subjunctive and *had been* is past perfect. If the past is used, the condition is not true *in the present;* if the past perfect is used, it was not true *in the past.*

Other forms of the same sentences are, O, that he *were* here! and O that he *had been* here. Both these are also contrary to the facts, for he is not here now, and he was not in the past. Apart from the sentences just given, the subjunctive mode is usually distinguished by the conjunctions *if, though, lest, unless, except, whether, till,* when they are used in *subordinate* clauses.

b. Another form is found in the sentence, If it *be* true, then we shall have to arrange differently. This expresses a doubt whether it is true or not, and the present subjunctive is used for this purpose.

In a few other occasional sentences, the subjunctive may be used, but most authors avoid all except the two just mentioned. In forms, the subjunctive conjugation once differed largely from the indicative; at present, however, the present and past show all the important variations, and they are known by the *be* and the *were*, in place of the *am (are, is)* and *was* and *were* of the indicative.

The potential form in English is characterized by the auxiliaries *can, could, may, might, must, could, would,* and *should.* We prefer to call these words ordinary auxiliaries, and so to abandon the use of the term potential mode altogether. The potential shows the relationship between powers or permission and reality.

Can you *do* it? I can, but *may* I? (ability, permission)

Could you believe it? I suppose I *might.* (possibility)

I *would* enjoy seeing the ocean again. (wish)

You *must* not go now. Yes, I *should.* (duty)

May you be happy. (wish)

May there be no moaning of the bar. (wish)

3. The imperative mode expresses the idea of determination on the part of some person other than the speaker. One is entreated or commanded, and he may or may not respond.

Let him *go* his way. Pray, *tell* me why. *Let* there be no crossing of bridges now. *Go* thy way in peace! Ill luck *be* ne'er thy lot.

The imperative mode is used in principal clauses, just as the subjunctive is mainly used in subordinate constructions.

4. Non-finite modes of the verb do not express or assert any action, but take it for granted from the sentence as a whole. They are the infinitive and the participle, to be treated later in a separate section.

Tense is the third property of verbs. Not all actions take place at the present time; for some occurred in the past, and some will probably occur in the future. Tense is that property of the verb which shows the time of the action, being, or state of being. It is not a fancied or possible relation, but an actual one. Tenses are of two general kinds, primary and secondary, and each has another minor division.

1. Primary tenses are present, past, future, illustrated by the forms, I *go,* I *went,* I *shall go;* I *see,* I *saw,* I *shall see;* I *lie,* I *lay,* I *shall lie.*

a. Present denotes that the action goes on now, or is habitually going on, that is, continuous. It has three forms, the progressive, which shows that the action is still in progress, as I *am plowing;* the simple, I *plow,* habitual action or one true at all times; and the emphatic, I *do plow.* Something universally true is expressed in the present, as, The chemist showed us how water is *composed* of hydrogen and oxygen; he said that God *is* always good.

b. Past tense indefinitely states that something happened at a time before the present moment, as I *went,* which does not tell the exact time of the going except that it was in past time.

c. The future states that something is likely to happen after the present moment. It is like the past in not stating definitely when the event will occur.

2. The Perfect tenses (secondary) to the primary, show that the action happened at a relatively definite time.

a. The present perfect states that something began at some indefinite time in the past and continued up to the present. I *have gone;* they *have* already chosen; we *have sent* the message are fair examples.

b. The past perfect tense states that something occurred before some second event in the whole past. I *had gone* before he *came;* we *had sent* the message before we *received* the countermand. This combination really divides the past into two portions.

c. The future perfect tense states that something will occur before some second event occurs in the future. Within a month, I *shall have* completed this work; By the end of the year we *shall have* learned considerable about grammar. One event in the future is to be entirely completed before another begins.

Like the present, these tenses have more than a single form.

Simple past: I went; progressive, I was going; emphatic, I did go.

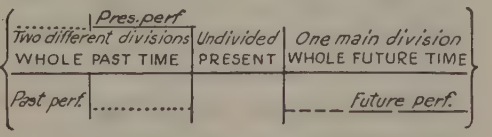
Future: I will go; progressive, I will be going.

Present perfect: I have gone; progressive, I have been going.

Past perfect: I had gone; progressive, I had been going.

Future perfect: I shall have gone; progressive, I shall have been going.

The time relationships among the various primary and secondary tenses may be shown by a simple line diagram. Let the middle line, in various divisions, represent whole past, present (relatively short), and the whole future. Notice the past may be divided into parts and the future into similar ones, but not so many. For convenience parallel lines are drawn to show the division of the past and future into their parts, which are to be thought of as divisions of the main line itself. Dotted lines represent indefinite time; dashes represent the part of the future that leads up to future perfect; upright lines represent the end of the time concerned.



Verbs in the indicative mode have all the tenses named above; in the subjunctive, they have present, past, and past perfect, and others occasionally, with little variation from the indicative, except as described already; in the imperative, only the present; in the infinitive, present and present perfect; in the participle, present and present perfect.

4, 5. **Person and number**, are the fourth and fifth properties of verbs. Three persons and both singular and plural number are represented. Non-finite forms do not show any changes to represent person and number. No particular changes to show person and number exist beyond the present tense. Some verbs having *it* as a subject are used impersonally, as Can *it* be true? *It* grows colder.

Inflection of Verbs. The different changes that show voice, mode, tense, person, and number are called collectively, inflection. Synopsis is the inflection of a verb in all forms, but in a single person and number only, as a sample of the whole.

Inflection of the Verb Be. Present, be; past, was; present participle, been.

INDICATIVE MODE.

Present.

Singular.	*Plural.*
I am	we are
you are, thou art	you are
he, she, it is	they are

Past.

I was	we were
you were, thou wast	you were
he, she, it was	they were

Present Perfect.

I have been	we have been
you have, thou hast been	you have been
he, she, it has (hath) been	they have been

Past Perfect.

I had been	we had been
you had, thou hadst been	you had been
he, she, it had been	they had been

Future.

I shall be	we shall be
you will be, thou wilt be	you will be
he, she, it will be	they will be

Future Perfect.

I shall have been	we will have been
you will (thou wilt) have been	you will have been
	they will have been
he, she, it will have been	

SUBJUNCTIVE MODE.

(*If* is often used with the subjunctive)

Present.

I be	we be
you be, thou be	you be
he, she, it be	they be

Past.

I were	we were
you were, thou wert	you were
he, she, it were	they were

Present Perfect.

I have been	we have been
you have been, thou have been	you have been
he, she, it have been	they have been

Past Perfect.

I had been	we had been
you had been, thou hadst been	you had been
he, she, it had been	they had been

IMPERATIVE MODE.

second person, be, do you be	be, do you be

Participle.

present	Perfect
to be	to have been

Infinitive.

Present	Past
being	having been, or been

Do you be in the imperative is the only emphatic form of *be*. The solemn or familiar form with *ye* in the plural is omitted because it is now practically obsolete. All forms of *be* are intransitive.

Synopsis of a Regular Verb. For the sake of showing all forms of a verb, both active and passive, the regular verb *call* is taken as typical. This verb is either transitive or intransitive. Since the third person singular is the only form that shows variation, this is given in the synopsis.

ACTIVE VOICE.

Indicative.

Present Simple	Present Progressive	Present Emphatic
he calls	he is calling	he does call

Present Solemn
he doth call

Past Simple	Past Progressive	Past Emphatic
he called	he was calling	he did call

Future	Future Progressive
he will call	he will be calling

Present Perfect	Present Perfect Progressive
he has called	he had been calling

Future Perfect	Future Perfect Progressive
he will have called	he will have been calling

Subjunctive.

Present Simple	Present Progressive	Present Emphatic
(if) he call	(if) he be calling	(if) he do call

Past Simple	Past Progressive	Past Emphatic
he called	he were calling	he did call

Present Perfect	Present Perfect Progressive
he have called	he have been calling

Past Perfect	Past Perfect Progressive
he had called	he had been calling

Imperative.

Present Simple	Present Progressive	Present Emphatic
(you) call	(you) do be calling (you) be calling	(you) do call

Infinitives.

Present Simple	Present Progressive
to call	to be calling

Past Simple	Past Progressive
to have called	to have been calling

Participles (Gerunds).

Present	Past	Past Progressive
calling	having called	having been calling

PASSIVE VOICE.

Indicative.

Present	Present Progressive
he is called	he is being called

Past	Past Progressive
he was called	he was being called

Future	Present Perfect
he will be called	he has been called

Past Perfect	Future Perfect
he had been called	he will have been called

Subjunctive.

Present	Past
(if) he be called	(if) he were called

Present Perfect	Past Progressive
(if) he have been called	(if) he were being called

Past Perfect
(if) he had been called

Imperative.

Present	Present Emphatic
(you) be called	(you) do be called

Infinitives.

Present	Past
to be called	to have been called

Participles.

Present	Past
being called	having been called, or called

In the conjugation given above, the reverential or solemn forms like *He hath been called* are omitted. The second person has a corresponding *art, wast, hast, hadst, wilt; thou be, wert, hadst been; mayst, mightst, mayst, have been, mightst have been* for the various tenses of the indicative, subjunctive, and potential. These are now rarely used except in poetry and in prayers.

Notice that the sign of the subjunctive in the past progressive for the third person is *were*. This is singular and must not be confused with the *were* of the past indicative.

If is often used with the subjunctive; to illustrate, it is placed before some of the forms given above, and should be understood as possible before all of them. Since the subjunctive is commonly used in subordinate clauses like *If he were only here, he would aid*, words like *if* are used as the subordinating conjunctions.

Some grammarians do not recognize the potential, which differs little from the indicative, except in regard to the use of the auxiliaries *may* and *might, could* and *would, can*, and the rest.

Parsing of a Verb. To parse a verb is to show its form as used in a sentence. This should include,—

1. Class (transitive or intransitive; regular or irregular).
2. Principal parts.
3. Voice.
4. Mood.
5. Tense.
6. Person and number.
7. Construction and comment on any peculiarities.

Errors in the Use of Verbs. Among the many errors in the use of verbs, or the relation between verbs and their subject, the majority fall into the classes named below.

1. Errors in regard to number.

a. Since *each, every, many a, either, neither* are all singular pronouns, the corresponding verbs must be singular. Notice well these correct forms:

Each person *is responsible* for his own actions. (The pronoun referring to *each* must be singular.)

Every person *is* his own architect.

Many a man does not *realize* his ambitions.

Either he or *I am* wrong; *neither* of us *may be right*.

b. Words joined to prepositional phrases may not be a part of a main subject. John, together with his brother, *is* here. We must remember that *with, together with, in addition to*, are not conjunctive expressions.

c. Collective nouns may take a singular or a plural verb. If they express the idea of unity, or of a group taken as a whole, they must be plural; if they express the idea of the varied individuals in the group, they must be singular. Ordinary collective nouns take singular verbs; and yet a writer or speaker sometimes prefers to think of the parts individually.

The committee *is* ready to report; the Senate *is* in session; the mob *seems* bent on destruction.

British writers are likely to say the committee *are*, the government *are*, parliament *are*.

d. Two singular subjects joined by *or* take a singular verb. The same applies to *nor*. Either *he* or *I am* mistaken. Neither beast, bird, nor fish *is* here in this desert.

e. If the subjects are of different numbers, the verb agrees with the nearer or nearest. *He* or his friends *have* come. In such instances, custom dictates that the plural be placed last; and so the verb is usually plural.

f. In case of two pronouns, the verb agrees with the nearer. Neither he nor I *am* pleased.

g. *Don't* is often incorrectly used for *doesn't*. Since this word means *do not*, it must not be used except with plurals, or with *I*, that is, where the original verb is actually *do* not; while doesn't is confined to the third person singular. *Aren't* is a proper plural form, but there is no such word as *ain't*.

h. Syncopated forms like those mentioned are colloquial. In writing and speaking they are not used, except in quotations in which the original speakers may have used these forms; and then it is pedantic to correct them in dialog that is quoted.

i. When *there* begins the sentence, followed by the real subject of the verb, the subject and verb must agree; for *there*, being independent (an expletive) has nothing to do with the number of the verb.

There *are* many kinds of steel; the real form is, Many kind of steel *are* (exist). *There* is diagrammed by itself. In such sentences a frequent error is the use of the singular verb followed by a plural subject. Use, *there is, there are, it is, it was* sparingly in such sentences

j. Some illiterate people often use the subjunctive *you be* for the indicative *you are*.

k. Though *you* is always construed as singular or plural, according to context, the verb is always plural,—*you are, you were*, etc. Our grammar does not recognize the forms *you is* and *you was*.

l. Plural words in titles of books do not make the verb singular. *Emerson's Essays* is an inspiring volume; Thackeray's *English Humourists* has been a popular study of the eighteenth century writers.

We say, however, *Emerson's Essays* are interesting to thoughtful people. Here the essays are thought of singly, and not as a collection as found in a title name.

2. Errors in regard to tense mainly:

a. Sequence of tenses should be carefully observed. Ordinarily the tense of the subordinate clause corresponds with that of the main clause. This does not mean that it is the same tense, but it is relative as to time. First, if the time is the same, the tense should be similar. Second, if the time is anterior to that of the main part, it should represent this priority. Third, if the time is subsequent to that of the main clause, the verb should represent that time relationship. More often the times correspond.

He said that *he would go*. (Indirect discourse.)

He said that he *will go*. (If the time of going is still in the future.)

He said that he *was going*. (Probably the time of going is now past.)

He said that he *had intended to go*. (That is, he expected to go at some time before the time of the *said*.)

I am not sorry that I *went*. (I went in the past; I am glad now that I went.)

b. Infinitives cause much trouble in regard to time relations.

He *wanted to go* is correct; whereas, *He wanted to have gone* could not be correct, since the time of the infinitive is previous to the time of *wanted*. We *want* to do something in the future or at least in the present. The direct form, present, is, He *wants to go*.

I am sorry not *to have gone* is also correct. It means that I am now sorry that I could not go at some previous time.

I am sorry not *to go* is likewise correct, but the meaning is different. It means I am now sorry that I cannot now go, or cannot go at some time after the present.

c. Transitive and intransitive verbs are frequently confused. *Raise* and *rise*, *lay* and *lie*, *set* and *sit* give rise to the most trouble.

Raise is transitive and requires an object. We *raise* potatoes, grain, hogs, and dust.

Rise is intransitive and does not require an object. We *rise* in the morning; so does the sun.

Lay is transitive and requires an object. We *lay* the book down, concrete roads, bridges, and many other things. Hens *lay* eggs.

Lie is intransitive and requires no object. We *lie* down at night; the dog *lies* on the rug by the fire; books *lie* on the table. *Lie* means to rest upon or recline.

Set is transitive and requires an object. We *set* the jug on the table; we *set* bread, saws, and so on.

Sit is intransitive and requires no object. We *sit* by the fireside; the chair *sits* on the rug; the dog *sits* on his haunches.

(Other forms arise to represent the various tenses, but these can be made when one knows the principal parts of these verbs as they are given in the list in a previous section.)

d. Use the present for expressing the idea of truths that are universal or always the same.

He showed us that an airplane *is* heavier than air (not *was*)

Our teacher showed how water *runs* uphill through a siphon (not *ran*).

e. Do not use the present tense for the present perfect. It is not idiomatic in English to say, *I am already here five weeks*, for *I have been here already for five weeks*. The use of the present in certain cases for the future is a well-established idiom, as *I am to be here for five weeks* for *I shall be here for five weeks*.

f. One tense or number may not be inferred from the use of some other in the same sentence. It is wrong to say, I always *have* and *will do* this. A much less awkward form is I always *have done* this and *will do* it.

g. Nor should the conditional be used for the simple indicative. I *should be glad to see* you, ought to read, *I shall be glad to see* you.

h. Nor should the indicative be used for the idiomatic subjunctive.

First, in conditions contrary to fact, as, If he *were* wise, he would not sell his property now (not *was wise;* since the inference is that he is not wise). Second, in statements implying considerable doubt, as If it *be* true, then I give up (but it may not be true). Here the indicative *is* does not express the right shade of meaning

i. *Shall* and *will* are frequently confused. For discussion of the correct uses see the preceding discussion.

j. No adverb, phrase, or other word should split the two parts of the infinitive. *To plainly see* should be *To see plainly*. Some good authors have sought to justify the split infinitive, but the majority of speakers and writers avoid it as being hardly necessary.

3. Errors in the Meaning of Verbs. Some common mistakes in the use of certain verbs have already been mentioned in the list beginning on page 36, and some in the list of homonyms, doublets, and other words later Now all we need do is collect a few examples to show how these errors may be classified.

a. Wrong combinations. Among the familiar ones are *can't seem* (for *seems not*), *don't think* (for *think* something is *not* as stated), *hadn't ought* (a foolish duplication for *ought not*), *had have* (for a doubtful past construction), *would of*, a phonetic spelling for *would've (have)*, *remember of* with object (for *remember* simply).

b. Doubtful usages. Some words are always striving to break into good society. Newspaper men and others who must write compactly are tempted to invent verbs to replace awkward or long combinations. Some of these not yet fully accepted by good writers are *suicided* and *Sundayed* (for *committed suicide* and *spent Sunday*), *suspicioned*, *electrocuted* (for similar expressions), and *enthuse* (for show enthusiasm).

Principal parts are sometimes confused. Many persons do not realize that *hanged* is the accepted term for legal execution, not *hung*. He *was hung* is, therefore, incorrect; he *was hanged* is correct. Many do not realize that the form *proven* for demonstrated is dialectic and a Scotch legal term never fully adopted into English. It is *proved* is, therefore, the correct expression.

Sometimes active and passive forms are confused. *Graduate* seems to give typical trouble. Purists still assert that a person *is graduated* by the school, which form is litera y correct. Taking the word thus strictly by derivation, then, *He graduated* is wrong, even though it is used by almost every adult, and is found in good authors.

Many homely or colloquial expressions are inadmissible in careful composition. Words like *underhanded* (for *underhand*), *second-handed* (for second-hand), *preventative* (for the correct *preventive*) show a tendency toward reduplication or doubling of certain parts of words. *Bursted* and *busted (burst)* and *dassent* (for *dare not*) are familiar variations that good use never could sanction. *Fix* (for *repair*) is another distorted meaning. *Show up* is a familiar but wrong term for *appear*. Yet it is correct in the sentence, "It is how you *show up* (act) at the show-down that counts."

Claim is often wrongly used for *assert*, *expect* for *suppose*, *leave* for *let*, to give permission, *loan* for the verb *lend*, *indulge in* for *partake of*, *learn* for *teach*, *wait on* for *wait for* or *to court* (as in some localities), and *partake of* for *eat*.

TABULATION OF VERBS.

Kinds:

1. Transitive and intransitive
2. Regular and irregular (weak and strong)

3. Principal and auxiliary (8 uses of auxiliaries)
4. *Shall* and *will*
5. *Should* and *would*

Properties:

1. Voice
   a. Active
   b. Passive
   c. Interchangeable
2. Mode
   a. Indicative
   b. Subjunctive—conditions contrary to fact; implication of doubt
   c. Imperative
   d. Non-finite (Infinitive, Participle)
3. Tenses
   a. Primary,—present, past, future
   b. Secondary,—present perfect, past perfect, future perfect

4, 5. Person and Number
6. Inflection of *be*
7. Inflection of *call*

Errors in the Use of Verbs:

1. Errors in regard to number
   a. Plural used for singular
   b. Plural used with prepositional phrase
   c. Plural with collective nouns
   d. Plural with *or* and *nor*
   e. Wrong verb with different numbers
   f. Wrong verb with two pronouns
   g. Don't for doesn't
   h. Syncopated forms
   i. Wrong use of *there*
   j. Subjunctive for indicative
   k. Singular with *you*
   l. Plural with names of books

INFINITIVES AND PARTICIPLES.

Participles and infinitives are the non-finite forms of the verb. Some grammarians have refused to call them verbs at all; but they have most of the properties exactly as regular finite verbs. In addition both infinitives and participles have many of the constructions of nouns, adjectives, and adverbs. No other words have such a variety of uses; and for this reason alone, participles and infinitives should be well understood by every adult.

1. First of all, let us illustrate the elements that are common between finite and these non-finite forms. Like regular verbs, participles and infinitives may be regular and irregular, transitive and intransitive, active and passive. They likewise have mode, in that they assume even though they do not plainly assert action; some of the tenses; but the same form for all three persons and both numbers.

He was known *to have gone.* Here the perfect infinitive of an irregular verb is illustrated. He was glad *to have repaired* the roof. In this case the perfect infinitive of a regular verb is illustrated. *Having gone* and *having repaired* are the corresponding participial forms.

He came *to visit* his old *friend.* Here the present infinitive has an object. *Visiting* his *friend,* he found some old letters. This illustrates the corresponding participle with an object. Past perfect forms are *to have visited* and *having visited. To be visited, to have been visited; being visited* and *having been visited* are the passive participles and infinitives.

So it is evident from these examples given above that the non-finite forms are intransitive and transitive, regular and irregular, active and passive, just the same as ordinary verbal constructions.

2. Mode is a property of the infinitive and the participle. It is to assume, but there are no indicative and subjunctive; for the participial form is on a similar footing in itself with these modes.

3. Tenses of the infinitive and participle are limited to the present and the present perfect. In use these do not follow the same plan as the tenses of finite verbs. Since the non-finite are subordinate constructions, never principal, the time of the participle and infinitive must depend largely on that of the main verbs. Certainly the present infinitive form takes its time from the rest of the complex sentence, as shown in the following sentences:

I should like *to go* (present, agreeing with *should*).

He went to find out what was *to happen* (present as future, since the time is after that of the main verb).

He will go *to find out* (future, agreeing with future verb).

He went *to find out* (past, agreeing with past verb).

On the other hand, the time of the present perfect infinitive is anterior to the time of the main verbs, as shown in the following sentences:

I would like (now) *to have gone* (past). That is, I am now sorry that I did not go at some past time.

He was sorry not *to have gone.* Both are past, and the time of *to have gone,* is previous to that of *sorry.* That is, he was sorry (past) that he did not go at some anterior time,—one before the time of the main verb.

Participles, in like manner, take their time from that of the chief verbs, as shown in the following sentences:

He passed by me *running* rapidly. Here he comes *running* rapidly. He will have to come *running* rapidly if he catches us. Here the participle, agreeing with the main verb, is past, present, and future in time, respectively. In every case, however, it is the present form that is used, since the participle has no regular past and no regular future.

He passed us *having run* more rapidly. Here he comes *having run* more rapidly than we have. He will have to come quickly *having run* more rapidly than we have. From these examples it is evident that the time of the *perfect* participle is previous to that of the main verb. In each of the three sentences he had to run rapidly before he overtook the rest. So it is seen that the time of the past participles, in every case, is prior to that of the main verb.

4. Person and number of infinitives and participles. No changes in the non-finite forms are made to indicate person and number. No matter whether the person is first, second, or third, and the number singular or plural, the participle and infinitive remain the same.

Subject of the infinitive. Much has been written to explain the case of the subject of the infinitive. In English and in most other modern languages it is in the objective; and in both Greek and Latin it is in the corresponding accusative case. We say that the construction is idiomatic, but we cannot explain just why it should be thus. Customarily we use the nominative or first case as the subject of a finite verb; customarily also we use the objective as subject of an infinitive. Some have sought to explain the idiom on the ground of similarity to the construction in which an object is in the

objective case. Surely careless persons are most likely to explain an infinitive subject as an object of a preceding verb where the two may be confused. They allowed *him* to go illustrates. Here *him* must not be called the object of *allowed*, but the subject of *to go;* therefore, it is objective, not because it is object of anything, but because it is subject of an infinitive. In fact, the whole group (*him to go*) is object of the verb, not the single word *him*.

The subject of an infinitive may be a noun, pronoun, participle, another infinitive, or a group of words:

1. We want *George* to study music abroad.
2. We think *him* well prepared (*To be* understood).
3. Do you not believe *rowing* to be great sport?
4. He likes *to row* to exercise all the muscles.
5. He thinks that to row with the school crew to be the height of any boy's ambition. (*That* perhaps should be omitted.)

The subject of a participle is a noun or pronoun in different constructions:

1. Noun also subject of verb: *John*, seizing the oar, began to row vigorously.

Notice that here the subject is expressed but once, but that, if the subject of the participle differs from that of the main verb, both must be clearly expressed.

Coming up the street, *the trees* swayed from side to side in the wind. Because the subjects are not the same, this sentence is absurd. As *we were coming* up the street, *the trees*, etc. is the correct form.

2. Noun also object of a verb; We saw *John seizing* the oar.

Notice the meaning of this sentence is not the same as that of the sentence that says *John's seizing* the oar.

3. Noun or pronoun used also as predicate nominative: He is *a man trusted* with any sum; he is *one trusted* in the bank. (*Trusted* is the perfect participle.)
4. Object also of a preposition: Go *to* the *man standing* behind the first window.

In apposition also:

5. In apposition: the *cashier*, that *man standing* behind the first window, is the person I mean.

All the nouns and pronouns have double constructions in these sentences; we are interested in them especially because they are used as subjects of participles.

Sign of the infinitive. *To* is the sign of both the present and present perfect infinitives. Usually it is not recognized as a preposition; for, if it were, the verb would be its object. Many verbs customarily omit the sign; some of these are, *make, let, see, hear,* and sometimes *dare, need,* and *help.*

Let him (to) *do* it; let me (to) *see;* let him (to) *dare;* make him (to) *help;* we need not (to) *go.*

Sometimes *in order to* is used in place of the simple sign *to.*

Participles are known by their ending in -ing and by their use.

Infinitives and Participles as Nouns. From the study of non-finite forms used as verbs we now pass to consider infinitives and participles as nouns in various constructions. Infinitives used as nouns are often called verbal nouns; participles similarly used are called gerunds. Yet these names are loosely used or interchanged by many writers.

Specimen sentences showing infinitives and participles as nouns:

1. Subject:

To shop delights most ladies.

Shopping is not a delight for some men.

We think *to study* hard disagreeable (*To be* understood).

We believe *studying* mathematics to be distasteful to many.

2. Object:

We hate *to shop.*

We hate *shopping.*

We like shopping except *to wait* for parcels.

We like shopping except for the *waiting* for parcels.

3. Predicate Nominative:

To study hard is *to learn* thoroughly.

Studying hard is *learning* thoroughly.

4. Objective Complement:

He ordered the cellar *to be filled up.*

He saw the workmen *filling* it *up.*

5. Appositively:

To study hard, *to work* every day, brings results.

Studying hard, *working* every day, brings results.

6. Independently:

To be perfectly frank, I do not like German.

The work *being finished,* the workmen packed up their tools.

7. Predicate Objective: They took him to be *me.* Here *me* is objective because the case must agree with the subject of the infinitive, and the subject is objective.

Infinitives and Participles as Adjectives. Non-finite forms are used in several ways as adjectives and other parts of speech. The examples show various uses of modifiers having adjective force:

1. Predicate adjective:

We are *to go* today.

We want those boys (to be) *punished.*

The house is *to be sold.*

Sleet is *cutting.*

Distinction must be remembered between the use of the participle in *Sleet is cutting* and *Knives are cutting.* In the latter case the verb is present indicative progressive, made up of both these words. *Cutting* here is not a participle.

2. Participle as regular adjective: The *driving* sleet cuts the skin; the *lowing* herd winds slowly o'er the lea; the book *lying* on the table over there is an algebra; the man *sitting* on the fence is a tramp.

Notice that the participial phrase is often used as an equivalent of a relative clause, as *The book lying* for The book, *which is lying* on the table; *The man sitting* for *The man who is sitting.*

3. Participle as factitive adjective: He made his remarks (to be) *displeasing.*

Some prefer to construe this participle as an objective complement with *to be,* having as its objective subject *remarks.*

Infinitives and Participles as Adverbs and Prepositions.

This is the best *to use*. Here *to use* qualifies the predicate adjective *best*.

That iron is *freezing* cold. *Freezing* modifies the adjective *cold*.

If it is true, I should like *to know* it. *To know* is here an adverb of purpose.

Regarding participles, there is much confusion. *Regarding* is used as a preposition.

During the day, some animals sleep. *During* is used as a preposition.

ERRORS IN THE USE OF INFINITIVES AND PARTICIPLES.

1. Use of the perfect for the present infinitive. I was sorry not *to have gone*, already explained, is correct if the time of the possible going was anterior to that of the main verb; otherwise the sentence should read, I was sorry not *to go*.

2. Use of nominative as subject of the infinitive. The normal subject of the infinitive, by English idiom, is placed in the objective case. He wants *him* to go.

3. Use of nominative for predicate objective with infinitive. *They thought him to be we, should be us*, since the case of the noun or pronoun in the predicate after the link verb must be the same as that of the subject, and here the subject is objective.

4. Confusion of progressive finite form with participle as predicate nominative adjective.

Progressive: he is going; he is running; he is interesting us.

Participial adjective: he is interesting; the problem is confusing.

5. Participles without definite substantives.

Right: Coming toward the shore, the wind blew a gale.

Wrong: Coming home, the wind blew furi ously.

Right: As we were coming home, the wind blew furiously.

Wrong: Being seven years of age, my grandfather brought us here.

Right: When I was seven, my grandfather brought us here.

Note: if the participle and the main verb have the same subject, the latter need be expressed but once. *John coming* home *lost* his way.

If the subjects are different, both must be expressed, as in the sentences just given above.

If the participle is used independently, its subject, as well as that of the main verb, must be expressed. John *having failed* to arrive on time, *they did* not wait for him.

6. Participles should not be used with *thus* to add a phrase at the end of a sentence. He did not arrive home on time, *thus delaying* the meal. *Thus* may be omitted; or the two parts may be made coordinate.

Parsing of Infinitives and Participles. Nonfinite forms of the verb should be treated in a way similar to finite verbs.

1. Class.
2. Subclasses.
3. Principal parts of verb.
4. Form found as to properties.
5. Construction and rule.
6. Any peculiarities.

Tabulation of Infinitives and Participles.

1. Elements common to regular verbs
   a. Transitive and intransitive
   b. Regular and irregular
   c. Active and passive
2. Mode: they assume rather than assert
3. Tenses
   a. Present
   b. Perfect
4. Person and number: unchanged throughout

Subjects of Infinitives and Participles

1. Of infinitives, always in objective

Infinitives and Participles as Adverbs and Prepositions

Errors in the Use of Infinitives and Participles

1. Perfect for present infinitive
2. Nominative as subject of infinitive
3. Nominative for predicate objective of infinitive
4. Participles without substantives (misrelated)
5. Confusion of progressive indicative with participle in predicate
6. Participles with *thus* at end of sentence (trailing)

ADVERBS.

Adverbs qualify verbs, adjectives, other adverbs, prepositions, clauses, and even whole sentences. Sometimes, furthermore, a single adverb like *yes, no, certainly* stands for an entire sentence, but this happens only when the rest is easily inferred. Shall you go? *Yes*, [I shall]. Will you go with us? *Yes*, [I will].

Classes of adverbs as to use. According to their general uses in English, adverbs are divided into two broad classes, simple and conjunctive, and these will now be explained.

1. Simple adverbs modify, but do not connect. Ordinary ones relate to measures of time, means of doing something, or other modifying conditions, such as might be mentioned in answer to questions like *how, when, how long*, and *how many*. Others ask questions directly or indirectly, and so are named interrogatives and indirect interrogatives, as illustrated below.

a. Ordinary class is illustrated by We have been here *a year; how* long it seems! We arrived *here* safely.

b. Interrogatives, as *How* old is Ann? *When* did you arrive? and *how* long will you remain?

c. Indirect interrogatives are found in subordinate clauses, they being used as subject, complement, object, subject of infinitive, and the

like. I am asking, *Where* is he now? I know *where* he ought to be, and *how* he should reach there.

2. Conjunctive adverbs both modify and connect. These again are divided into two groups, regular and relative.

a. Regular conjunctives connect an adverbial clause to a verb, adjective, or adverb. Do *as* I say, not *as* I do. Here *as* modifies *say* and connects *I say* to *do*.

b. Relative conjunctive adverbs resemble relative pronouns, in that they join a substantive and an adjective clause that modifies the substantive. I know the spot *where* the best orchids grow, but now is not the time *when* I should tell you where it is. The subordinate clause *where the best orchids grow* is joined to the main sentence by the conjunctive adverb *where*, and the whole modifies *spot*. Likewise. *when I should tell you* is joined by the conjunctive adverb *when* to the noun *time*.

Adverbs classified as to meaning. According to the ideas or measures expressed, adverbs fall into several classifications.

1. Adverbs of time tell when, how long, while, or how frequently. Some of them are *After, before, forever, heretofore, lately, monthly, recently, soon, sometimes, subsequently, nowadays, by and by, now and then.*

2. Adverbs of place, some of which are *Above, afar, about, behind, close by, down, hither, nigh, wherever, somewhere, nowhere, thereby*, and *whence.*

3. Adverbs of manner, answering the question how, or in what manner, some of which are *As, at length, anyhow, somehow, nohow, considerably, extensively, merely, nearly, namely, silently, wholly, likewise*, and *separately.*

4. Adverbs of degree, telling how great or much, how little or how extensive, some of which are *Also, besides, enough, even, farther, immensely, partly, partially, nearly, somewhat*, and *very.*

5. Adverbs of cause, giving reasons, or telling why, some of which are *Hence, then, therefore, consequently, it follows that, wherefore.*

Some adverbs may not readily fall into these classes, and therefore may be explained by themselves. *Yes, no, truly*, and others might be included.

Single adverbs and adverb phrases. Two or more words are often combined to make a single adverb, which should be explained and diagrammed as a single word. *By and by, here and there, up and down, through and through, hither and yon, day and night, at least, now and then*, and *at random* are some of the many.

Adverbs and expletives. Sometimes words that are adverb in form, but not really in significance, occur at the beginning of sentences. Many writers call these *expletives* and parse them as unconnected with the sentence. *There* are many kinds of steel gives an example. One may not say that the sentence means, Many kinds of steel are *there* (that is, in a certain place). *Why*, I think not. Here, too, it is difficult to explain *why* as a real adverb.

Comparison of adverbs. Adverbs and adjectives are compared in about the same ways. Like adjectives adverbs add *er* and *est* for the comparative and superlative; or use some prefix like *more* and *most;* or use the termination *ly.* It is a common blunder to say that all adverbs end in *ly;* for it is doubtful if even a majority of them so terminate.

Parsing of Adverbs should include these steps: 1, Kind; 2, subclasses if any; 3, comparison; 4, degree used; 5, relation to rest of sentence and rule; 6, anything unusual.

Errors in the Use of Adverbs.

1. Adverbs are often overworked. Some writers constantly use *very, grandly, gorgeously, terribly, only, mostly*, and many superlatives in ordinary senses. Meaning should, of course, suit the word used. If one constantly overuses adverbs, he at last will be like the boy who cried "Wolf, wolf," when there was no wolf; and when there is real need of a strong expression, none will come to his aid.

2. *Only, also, alone*, and other adverbs are often misplaced. Every modifier should be placed near the word it limits. Sometimes it should be placed just before, sometimes after. At any rate, it should not remain near some other word so as to be mistaken as to its real reference.

According to position *only* in a sentence conveys several distinct meanings. *Only* he lost his way. He *only* lost his way. He lost *only* his way. He lost his *only* way. He lost his way *only*. These may mean, taken in order, Everything went well, except that he lost his way. He and nobody else lost his way. He lost his way but not his money or anything else. He lost the only way there was. He lost his way and nothing more; this is similar to number three, but *only* at the end is doubly emphatic.

3. Adverbs should not be placed between *to*, the sign of the infinitive and the verbal part. They are often placed in the midst of verb phrases, as If he would *only* come. Split infinitives like One ought to *carefully* watch these words should read One ought to watch these words carefully.

4. If the natural position of the adverb is before the verb and adjective, the emphatic position is after them in any given case.

5. *Nor* is the correlative that goes with *neither.* In all other cases, however, *or* is the proper word following a first negative, as *either . . . or; not . . . or; never . . . or*, etc. Notice that *nor* is frequently used in the sense of *and nor*, as *Nor* is this true,—something is not true, and something else is not true.

6. Double negatives lead to considerable confusion of meaning. Some wrong expressions are I *can't hardly* see; we *scarcely never* go; we *could not* find *only* a few; we *cannot scarcely* get out of here.

Notice that a certain combination of negatives in English is idiomatic, established by long usage. It is *not improbable* means that it is rather probable. It is *not unlikely* that we shall go, means that it is rather likely, or we rather think we shall go. In these expressions, *not* or some equivalent is combined with a word having some negative prefix like *not, un, il, ig, in, ir.*

7. Adverbs and adjectives are often confused in meaning and use. Under errors in the use of adjectives, some of them have been mentioned. Below is found a list of words often confused.

adverbs	adjectives
nicely	good
poorly	ill
probably	likely
very	real
somewhat	some
well	good
previously	previous
above	foregoing
above	preceding
above	above-mentioned
near by	neighboring
promptly	prompt
differently	different
well, etc.	first-rate

Illustrations in sentences:

right	wrong
I am in good health (well)	I feel nicely
He is feeling ill	He is feeling poorly
He will probably come	He will likely come
The cake is very good	The cake is real good
I am somewhat better	I am some better
I feel well (not ill)	I feel good (not ill)
It happened previously	It happened previous
The foregoing sentences illustrate	The above sentences illustrate
He does well in school	He does first-rate in school
He acted differently	He acted different

Note: *Different* and *differently* are followed by *from*, not by *than*, as He acted differently *from* the others.

List

Illustrative sentences

PREPOSITIONS.

A preposition shows how its own object is related to some other part of a sentence. It is connective in use, governs an object, and has a definite antecedent, which may be almost any part of speech. Relative pronouns, some adverbs used as conjunctions, and all conjunctions show relationship, but they are not related to any substantive as a preposition is, since they do not govern any objects. The preposition and its object together are called a prepositional phrase.

Kinds of prepositions.

1. Simple, consisting of one word, like *About, above, after, among, before, beside, between, beyond, by, down, except, into, since, until, under, within.*

2. Phrasal, consisting of two or more words combined in use as if they were a single word. Most writers recognize a preposition phrase as such a group of words; but this must not be confused with a prepositional phrase, as defined above, which consists of a preposition (single or phrasal) plus its object. Some combinations may be both prepositional and preposition phrases. *To the extent of* three miles, illustrates; for the italicized words are used as a single preposition and so are a preposition phrase, and they plus *three miles* make up a prepositional phrase.

Some preposition phrases are, *Because of, in order to, from above, according to, alongside of, in opposition to, in consequence of, in addition to, with regard to, in front of, by means of.*

3. Participles that become prepositions, without retaining their verbal meanings, like *concerning, touching, resembling, following,* and many others, used in phrases as *Concerning* this point; as *touching* the matter in hand; *resembling* the others; *following* the leader.

Objects of prepositions may be almost any major part of speech.

1. Noun: Let us go to *school.*
2. Pronoun: Let us go to *him* and confess.
3. Adverb: Until *now* I did not believe it; they lost the money between *here* and *there.* Many adverbs of place fall into this type of construction as objects of prepositions.
4. Adjective: We are through with them for *good;* take her for *good* or *bad, better* or *worse.*
5. Infinitive: Do you do anything but *stare* at the board? (*To* is omitted before *stare*).
6. Participle: Some callers never think of *going* early.
7. Clause: What does he care what we think of him? How could he after *that which you said?*

In similar ways a preposition may connect its own phrase to a noun, pronoun, verb, adjective, adverb, or some other combination in a sentence.

Prepositions, Adverbs, and Verbs. Frequently the object of a preposition is omitted, not being felt as necessary, and the preposition itself becomes an adverb virtually if not actually.

This is nothing to wonder *at.*

This is something to be thankful *for.*

Feeling the awkwardness of some constructions with *go, visit,* and other verbs, certain speakers say, This is a good place to go (to), or This is a good place to eat (in). Neither grammar nor logic can justify such a phrase, without a preposition.

Sometimes a word which might be used as either a preposition or an adverb attaches itself inseparably to the verb. Such a phrase should be explained and diagrammed as if it were a single verb or a regular verb phrase. Do you like to be *laughed at?* People *laugh at* all inventors for a time. Here *laugh at* has the sense of ridicule. He *ran away* with the money, in a

similar manner is equivalent to he *absconded* with the money.

Parsing of Prepositions includes 1, the kind; 2, relation to object and to rest of sentence; 3, reason or explanation.

Errors in the Use of Prepositions. On the whole prepositions are rather carelessly used. The main errors fall into four or five well-defined classes.

1. Prepositions wrongly chosen. Each of these words has its own appropriate meaning, which must be strictly accounted for. The list given below includes some proper combinations about which there seems to be some misunderstanding.

absolve from
accord with
acquit of
adapted to (thing)
adapted for (purpose)
agree with (person)
agree to (plan)
angry at or toward
attend to (something)
attend upon (person)
beg of, from (not off)
buy from (not off)
compare with
conform to
correspond to (thing)
correspond with (person)
depend on (figuratively)
depend from (literally)
differ with (person in views)
differ from (in traits)
get from (not off)
keep off (not off of)
like to (not for to)
liken to
live in, at (not to)
need of
profit by
profit in (share)
sympathize with (person)
sympathize in (a loss)
taste for (art)
wait for (person, thing)
wait on (to serve, court)

2. Sets of prepositions often confused in use. *Among* should be used in referring to more than two persons or to groups of persons or things. *Between* should be used of two, or between two groups having a definite relationship.

At indefinitely refers to a place where, as He lives *at* Washington, but it might be in the suburbs or near by. *In* is used definitely for within a certain prescribed area. He arrived *at* Washington yesterday and will remain *in* the city four days.

Back of is not in good repute for *behind*.

Beside means literally *by the side of* and should be so used. *Besides* means *in addition to*, as both preposition and adverb. More people *besides* (adverb), More people *besides* us make this mistake (preposition).

But what should not be used for *but that*, in a sentence like, Nobody is present *but that* will agree with me.

By is used for the active force or agent; *with* for the means. He was hit *by* a crazed man *with* a hot poker.

Differ, different from is the idiom in America; in England *different to* is well established. *Different than* is always wrong.

Except is now used as a preposition, to which the corresponding conjunction is *unless*. Good use insists that these be not confused.

In should be used in mentioning objects enclosed in a certain space. *Into* should be used in case of motion from one space to a second. One goes from one room *into* another; he is *in* a room while he chooses to remain.

Like, the preposition, should not be used as a conjunction. *As if* properly connects one clause with another. It seems *like* it would would rain is incorrect for It seems *as if* it would rain.

Of, often used possessively, is also found in the idiom *to die of a* disease, as He died *of* pneumonia. *From* and *with* are not in good use in this phrase. In most cases *from* should be used to imply separation, as He obtained the book *from* us, not *of* us. *Of* an afternoon for during an afternoon is well established by usage. We take a walk *of* an afternoon.

Upon is used rather literally for position, *Upon* the mountain top we await the sunrise. *On* is used more generally and less literally. *Onto* is a needless substitute for *upon*.

Without means literally *on the outside*, or *except*. *Unless* means *were it not that* or *if not*. They should not be confused.

3. Prepositions improperly omitted or inserted.

Of what use is this? It is *of* no use. In these instances *of* must not be omitted. It is best to be sure of the English idiom before omitting a natural preposition.

We remember all that. I admit what you tell me. *Of* should not be inserted after *remember* and *admit*. Transitive verbs do not require prepositions before their objects.

In a group of objects, one preposition may be sufficient for the entire list; if more than one is used, all the objects should have prepositions expressed. The repetition of a single preposition adds emphasis. Have you been *to* New York, London, and Rome? Emphatic: Have you been *to* New York, *to* London, and *to* Rome?

4. Prepositions are sometimes improper at the end of the sentence. Sometimes the preposition adds force at the end of a sentence. Since the last word or group in a sentence is especially emphatic, any word in that position receives more than ordinary interest. If this interest is natural and justified, the preposition may be said to be used correctly at the end. When it is unnecessary and weak, it should certainly not be placed last.

Bacon says, Houses are built to live *in*, not to look *at*. How could this sentence be phrased any more forcefully?

I do not like to be laughed *at*. Could this be stated any more effectively by placing the preposition elsewhere?

On the other hand, the older books on rhetoric used to print this sentence, "A preposition is a poor word to end a sentence *with*." Here *with*, however, is not a poor word because it is a preposition, but more truly because it is superfluous, no matter what part of speech it is.

2. Sets often confused
3. Improperly omitted
4. Improperly used at end of sentence

CONJUNCTIONS.

Conjunctions connect words and parts of sentences, without having any other function. Verbs connect and assert action, being, or state.

Infinitives and participles connect and assume action. Prepositions connect and assume relation, and also govern substantives called their objects. Unlike all the rest, conjunctions merely connect.

Kinds of Conjunctions.

1. Coordinating, those which connect clauses and phrases of the same rank or grammatical construction. They may connect either principal or subordinate clauses, but not principal and subordinate at the same time. Some of the chief sub-classes may now be described.

a. Additive, such as *and, likewise, besides, moreover, first, second,* and so on (in series).

b. Adversative, such as *but, yet, still, nevertheless, on the contrary.* These always show that a succeeding part of the sentence takes a different turn in thought and meaning from the one before.

c. Alternative, such as *or, nor, either, neither, else.* These suggest the possibility of a choice between two or among several thoughts or plans.

d. Correlative, *either . . . . or; neither . . . . nor; both . . . . and; not only . . . . but also; whether . . . . or.* This group consists of the alternative conjunctions arranged in pairs to show a choice between two groups or among several.

e. Conclusive, such as, *therefore, hence, accordingly, so, thus,* and *then.* When properly used these show that a certain thought or conclusion grows out of what has been previously stated or done. In logic and mathematics these conjunctions are familiar signs of reasoned conclusions.

2. Subordinating conjunctions are used only in minor clauses to join them to the principal or major clauses. Some of the main sub-classes may now be described.

a. Causal, such as *because, for, since, inasmuch as.*

b. Conditional or concessive, such as *if, though, although, unless, except.*

c. Purposive, such as *that, so that, in order that, lest* (to introduce something that one would avoid).

d. Relating to time and place, such as *where, whence, when, while, until, before, after.*

Other words or groups, especially adverbs, are used as conjunctions on occasion, but these are not important enough to need emphasis here.

Parsing of conjunctions includes, 1, class; 2, subclass; 3, use and rule.

Errors in the Use of Conjunctions are not numerous. A few may be recalled.

1. Confusion of main kinds. When a coordinating conjunction is confused with a subordinating, it is because one has mistaken the nature of the clauses connected. In the use of any conjunction one must decide, first of all, what the grammatical construction is.

Under errors in using prepositions, the *and which, and who* constructions have been noticed.

Wrong: The new cement road is a great convenience, *and which* saves several miles.

Right: The new cement road is a great convenience and saves several miles.

In the *wrong* sentence, a subordinate is coordinated with a principal clause, a form forbidden by the laws of both logic and grammar.

Sentences like *He was cruel and was an old soldier* need not be mentioned here, since the trouble lies in putting two unrelated ideas together, and not in using a wrong conjunction. Such a jumbled sentence should be broken up into parts.

2. Correlative conjunctions should be rightly placed in the sentence. Aviation still is dangerous *both* in reference to control of the plane *and* landing—here the correlated elements are not clearly brought out. A better arrangement is, Aviation still is dangerous in reference *both to* control of the plane *and to* making good landings.

3. Confusion of conjunctions and other parts of speech. Already we have learned that certain prepositions are sometimes used for conjunctions,—*like* for *as* or *as if; except* and *without* for *unless; but what* for *but, but that,* or *that.*

Do *like* I do is wrong for Do *as* I do. He looks *like* me is correct.

Try *and* do this is wrong for the meaning Try *to* do it or See if you can do it. So is Try *and* go for Try to go. Sometimes in such phrases it is difficult to decide whether *and* has its own real force or whether it is misused for *to.* Usually the meaning is clear enough.

As is wrong for the conjunctive *that,* in sentences like I do not know *as* I shall go for I do not know *that* I shall go.

Whether (not *if*) is the proper correlative for *not.* I do not yet know *whether* or *not* I shall go is correct, whereas I do not know *if* I shall go or not should be condemned. Notice, however, in such sentences the phrase *or not* may be omitted, as in I do not know *whether* I shall go.

TABULATION OF CONJUNCTIONS AND USES.

Kinds:
1. Coordinating, which connect like clauses
   a. Additive
   b. Adversative
   c. Alternative
   d. Correlative
   e. Conclusive
2. Subordinating
   a. Causal
   b. Conditional or concessive
   c. Purposive
   d. Relating to time and place
   e. Other words or groups

Parsing of Conjunctions

Errors in Use of Conjunctions
1. Confusion of kinds
2. Misplaced correlatives
3. Confusion with other parts of speech

INTERJECTIONS.

Some exclamatory sentences begin with small words that express strong emotion. These terms are called interjections, since they are thrust in, interjected, between sentences or between parts. Ranging all the way from mild oaths and expressions of contempt, they at last often express calls for attention, as *holla, hallo,* and ship, *ahoy.* Sometimes they are used for a countersign or a rallying call.

Interjections have no special properties, do not relate to any other words in the sentence where they occur, and are parsed and diagrammed as independent parts of speech.

No classification is necessary, and the only one possible is a division of the various exclamatory

words according to their purpose, or the type of emotion expressed.

Some of the chief words are *Ah, alack, alas, avaunt, bravo, eh, fudge, ha, heigh-ho, hush, indeed, la, look, pshaw, tut, shoo, what,* and *zounds.*

Many others are readily identified as the favorite exclamations of our friends, and these run all the way from *goodness gracious* to *Whaddy yuh know about that?*

Older rhetorics and grammars advise school girls and the rest to use exclamations sparingly. In literature the list has shown a marked falling off in the last generation. Sentimental exclamations especially have come into great disrepute.

In punctuating exclamations, two courses are open: either place a comma after the exclamatory word itself or place it after the whole sentence. Except when the exclamation has no evident bearing on the entire sentence, a growing vogue dictates that the mark be placed at the end of the sentence.

ANALYSIS AND DIAGRAMS OF SENTENCES.

Already a brief analysis of the sentence and its parts has been made in the division headed *Sentences.* Having covered the salient principles of the various parts of speech, we are now ready to consider the structure of the whole sentence, its clauses, phrases, and single words.

Analysis shows how the different parts of the sentence are related. It dissects the larger units. Altogether analysis classifies, separates, and arranges all the clauses and phrases. No more beneficial exercise has been adopted to clarify one's thoughts on the subject of English grammar.

Sometimes analysis takes considerable explaining and many words to show the entire story of a sentence. For this reason a convenient device known as the diagram has been invented to show the analysis in visual form. No other purpose is accomplished by the diagram than to save time and to make the entire relationship in the sentence plain almost at a glance. Thus the diagram is something like a bird's-eye view of a sentence. Of late diagrams have been neglected in our elementary schools. Children do not always understand the syntax or arrangement of the sentence parts. For this reason alone, if for none other, diagrams should be made a small part at least of all grammar school study in English. Formerly some teachers and schools over-developed diagramming, to the neglect of other instruction; and so the method fell into considerable disrepute. Yet the pendulum has probably swung too far in the opposite direction.

Parts of Sentences according to Function. According to the part they take in expressing thought, the various word groups in a sentence may be classified as follows:

1. Subject
2. Predicate verb
3. Complements of verb
   a. Nominative (attributive)
   b. Objective (infinitive)
4. Other verb adjuncts
   a. Object (direct)
   b. Indirect object
   c. Adverbial objective (measuring)
   d. Object of make, etc. (factitive)
   e. Subject of infinitive
   f. Objective in apposition
   g. Retained object (in passive cons.)
5. Adjective modifiers
6. Adverbial modifiers
7. Noun clauses
8. Independent words and groups
9. Conjunctions

1. Subjects must be substantives,—nouns or groups of words used as nouns. A substantive is a word or more having the functions of a noun, or serving as subject, object, predicate nominative (attribute complement), and so on.

Noun: *Men* fly.

Pronoun: *We* fly in airplanes.

Infinitive: *To fly* for long was the ambition of inventors.

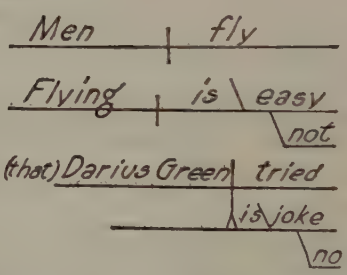
Infinitive phrase: *To fly successfully* is now possible.

A gerund (participial noun): *Flying* is not easy.

An adjective as noun: The *brave* only tried to fly.

Clause as noun: *That Darius Green tried* is now no joke.

Diagrams:



This style of diagram is simple and convenient; some that are labored and elaborate are no more clear or convincing. Let the subject and predicate verb be placed on a horizontal line, with an upright line cutting the horizontal. An object is shown by letting the upright come down to the horizontal, without cutting it. A predicate noun is nominative after the link-verb *is;* this relationship is shown by a slanting line toward the left. An objective complement is shown by placing the word after the regular object and slanting the line toward the right. A clause used as subject of a verb may be placed on a bracket, as shown above. For the present we leave the word *that* in abeyance. Other parts of this scheme of diagrams will be shown as we proceed to different modifiers.

This plan of diagrams resembles the main features in the Reed and Kellog grammars as published by the C. E. Merrill Company. They are used here by permission.

2. Predicates consist of all sentence parts that do not belong to the subjects. It is a mistake to call the verb the predicate, if the predicate is complex. Let us consider the verb first.

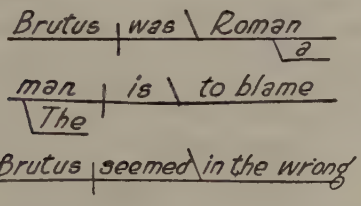
a. Some verbs, including most intransitives, constitute the whole predicate, as John *runs,*

children *learn*, we *ride*. Others require some helping word, which may be either a complement or an object of some sort. Complements may be of different elements as shown below:

Noun: Brutus was *a Roman.*
Pronoun: It is *I.*
Adjective: Brutus is *honorable.*
Infinitive phrase: The man is *to blame.*
Prepositional phrase: Brutus seemed *in the wrong.*
Noun clause: He appears to be *whatever they say of him.*

3. A complement has been given various names. Some grammarians call it a predicate noun, adjective, phrase, or clause. Since it refers to the subject, some call it a subjective complement. Since it completes the predicate verb, some call it a predicate nominative (agreeing with the subject). Since it often gives an attribute of the subject, some call it an attribute complement. No single name seems to win complete favor.

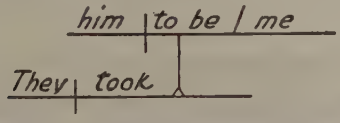
Diagrams:



b. Objective complement is found in connection with infinitives having objective subjects according to idiom.

They took him to be *me.*
They took John to be *wise.*

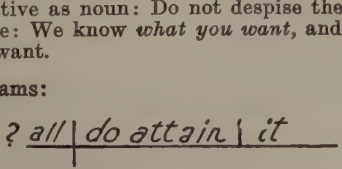
Diagram:



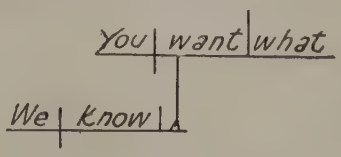
4. Objects or direct objects, as they are often named, are sometimes classed as complements and called object complements. Since this last name is likely to be confused with objective complements, just described above, it is allowable to place them in a separate division. An object may be:

Noun or pronoun: All men desire *immortality.* Do all attain *it?*
Infinitive: Most men desire *to live.*
Infinitive phrase: Men desire *life to continue forever.*
Gerund: We enjoy *living.*
Adjective as noun: Do not despise the *rich.*
Clause: We know *what you want,* and that is all we want.

Diagrams:



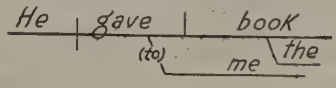
Note: Usually diagrams do not distinguish between a declarative and an interrogative sentence. To show the question form, a mark might be used, either after *it* or before the subject.



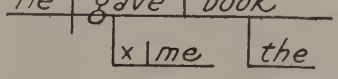
What you want is object of *know*, and *what* is object of *you want.*

b. Indirect objects resemble prepositional phrases with the prepositions omitted. In diagramming they are usually so treated.

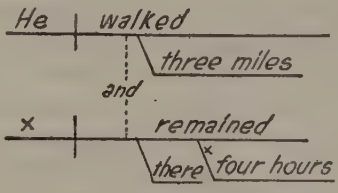
He gave *me* the book.



Note: *To* may be placed on the same line as *me*, leaving the oblique line vacant; or this line may be drawn straight down, in a box form, with *to me* on the horizontal.

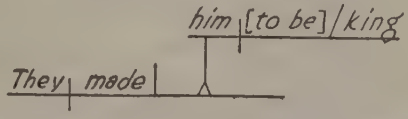


c. Adverbial objectives occur in sentences that mention units of time, distance, or other measures. He walked *three miles*, and remained there *four hours.*



Here *three miles* and *four hours* might be diagrammed as parts of prepositional phrases with the introductory word missing, as this diagram shows; or as simple adverbs. *Three* may be shown as modifying *miles*, and *four* as modifying *hours*, as cardinal adjectives.

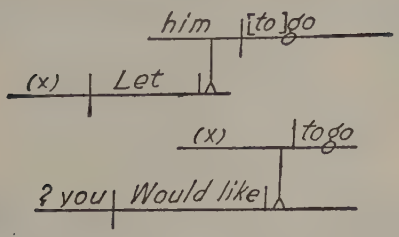
d. The factitive object occurs in sentences containing verbs of *making, naming, appointing,* or their like, and the direct object shows who was made, named, or appointed, while a second object tells what he was made, named, or appointed. The word *factitive* derives from the Latin root meaning *to make.* Many prefer to diagram the sentence as if *to be* were omitted,—



e. Sentences containing ordinary infinitives may be diagrammed in somewhat the same fashion.

Let him go. (Both subject and infinitive sign omitted).

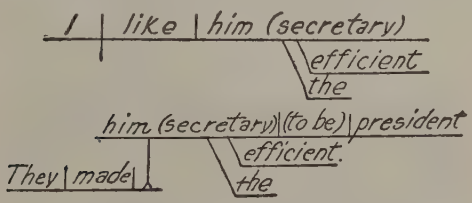
Would you like to go?



f. Sometimes a word or group is appositive to a direct or infinitive objective.

I like him, the efficient *secretary.*

They made him, the efficient *secretary,* president.

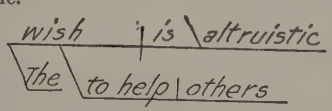


g. Retained objects are mentioned in the case of passive verbs. When the sentence, They made him *president,* is changed into the passive, He was made *president,* the word which was the factitive object in the active is retained, or seems still to be in the objective case.

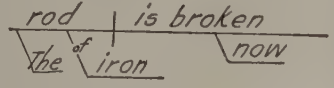
For want of a better name, it is called a retained object, since a passive verb may not logically have an object. Some grammars advise one to turn the passive into an active verb before diagramming the sentence. The sentence in the active would be diagrammed as the last one above is arranged.

5. Adjective modifiers. Simple adjectives give us little difficulty, either in parsing or in diagramming. Various combinations of words, however, may be used to modify nouns and pronouns as adjectives. Some of these will now be noted.

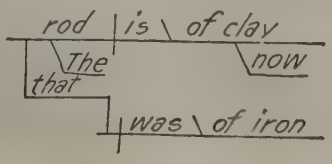
a. Infinitive. The wish *to help others* is altruistic.



b. Prepositional. The rod *of iron* is now broken.

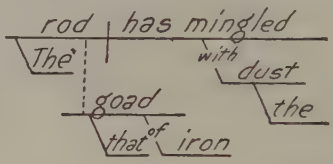


c. Adjective clause. The rod that was of iron is now of clay.



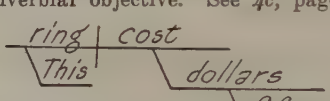
Here the connective nature of *that* may be represented by running part of the upright line horizontally and by placing the relative pronoun upon this line.

d. Sometimes it is difficult to distinguish an appositive use from a restrictive like the phrase *that was of iron.* Usually the form of the sentence guides us sufficiently, as in The rod, *that goad of iron,* has mingled with the dust. Here the phrase is non-restrictive and clearly appositional. For a discussion of restrictive and non-restrictive clauses see section on adjectives. In the diagram, an appositive may be shown by using parenthesis, or by continuing the upright line straight down to the appositive part, as shown here:

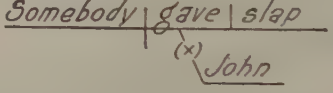


6. Adverbial modifiers. Ordinary adverbs are easily distinguished, but some of the phrases used to modify adverbs, adjectives, or verbs are not always recognized as adverbial in nature. Some of these are the following:

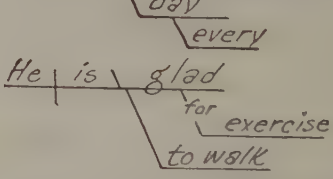
a. Adverbial objective. See *4c,* page 161.



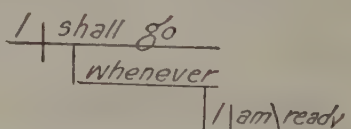
b. Indirect object, or object with *to* or *for* omitted. See *4b* above.



c. Prepositional or infinitive phrase. He walks *to town* every day. He is glad *of the exercise.* He is glad *to walk for exercise.*



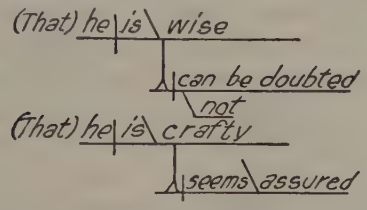
d. Adverbial clause. I shall go *whenever I am ready.*



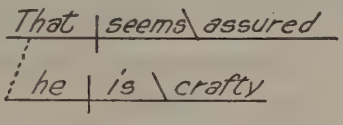
According to the adverb used, adverbial clauses are easily recognized as clauses of place, time, manner, degree, cause, and so on.

7. **The noun clause.** Already in 5 and 6 adjective and adverbial clauses have been mentioned among the various forms. A noun clause is similar, except that it is used as a noun in several ways:

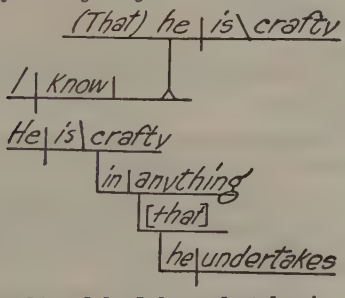
a. As subject of the sentence,—That he is wise cannot be doubted; that he is crafty seems assured.



That is treated as an introductory expletive, having little connection with the sentence, except logically. Notice another type of sentence, in which *that* may be taken as subject of the verb, and *he is crafty* in apposition to *that.*

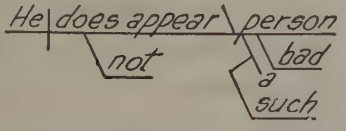


b. As object, I know *that he is crafty;* or is crafty in *anything he undertakes.*

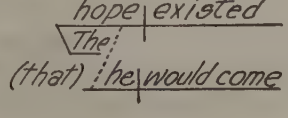


In anything [*that*] *he undertakes* is a prepositional phrase modifying *crafty* as an adverb; *that* understood connects *he undertakes* with *anything,* and *that he undertakes* modifies the noun *anything* as a restrictive adjective clause.

c. As a predicate nominative or attribute complement, as in He does not appear *such a bad person. Appear* is often used as a link-verb, and so the noun clause following [*to be*] *such a bad person* must be a nominative construction.

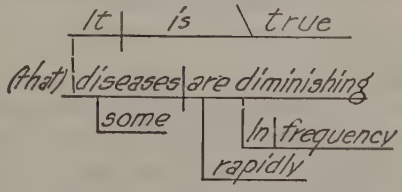


d. As an appositive, as in The hope, *that he would come,* long existed.



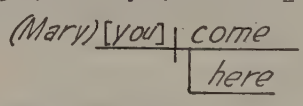
Noun clauses are introduced by relative pronouns and adverbs used conjunctively, such as *who, which, what, that* (often omitted), *whoever, whatever, where, when, whether.*

Some noun clauses are logical, if not grammatical, subjects of the verb, as It is true *that some diseases are rapidly diminishing in frequency.* In the diagram, however, it is customary to represent this clause as appositive to the grammatical subject, which, in the sentence just printed, is *It.*

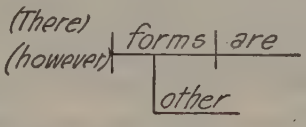


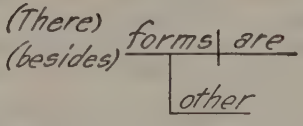
8. **Independent words and groups** are diagrammed independently. They may be placed at one side, as in the sentence just diagrammed; or connected with the sentence by dotted lines, but not placed on the same footing. Some of the independent expressions follow below:

a. A word in direct address,—*Mary,* come here; *child,* what are you doing? In the first sentence *you,* the subject, is understood.

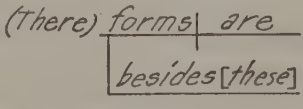


b. A parenthetical word used to connect the thought of one sentence (but not the grammar) with a preceding one,—There are, *however,* other forms. There are, *besides,* other forms.

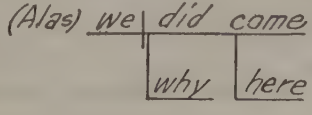




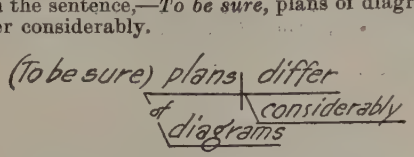
Even short sentences, like these, may have two expletives, or independent elements. If the second sentence just shown appears without punctuation, *besides* may be taken as a preposition governing *these* understood.



c. Interjections anywhere in the sentence,—*Alas,* why did we come here?



d. Phrases having no grammatical connection with the sentence,—*To be sure,* plans of diagrams differ considerably.

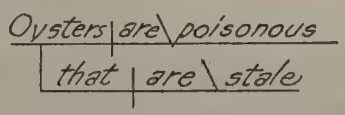


OTHER COMPLEX AND COMPOUND CONSTRUCTIONS.

1. Oysters that are stale are poisonous.

Analysis:

This is a complex declarative sentence, of which the principal clause is *Oysters are poisonous,* and the subordinate, *that are stale.* The subordinate clause is used as a restrictive adjective phrase, modifying oysters and explaining what oysters are poisonous. The sentence says merely that some oysters are stale, and that those that are stale are poisonous. Oysters is the simple subject without modifiers, except the relative clause *that are poisonous,* which is composed of the relative pronoun *that,* used to connect the whole clause as an adjective with *Oysters. Are* is the link verb of the subordinate clause and *stale* the adjective complement telling the quality of oysters. *Are poisonous* is the predicate of the subject *oysters,* consisting of the link verb *are* and the adjective *poisonous,* showing the quality of stale oysters *(oysters that are stale).*



Parsing further explains the syntax of the individual words. *Oysters* is a common, class noun, neuter gender, third person, plural number, nominative case, agreeing with the verb *are,* and subject of the predicate assertion *are poisonous.*

Are is an irregular, intransitive, link verb, active, indicative, present tense, third person and plural number, agreeing with its subject *oysters* and connecting the subject with the predicate adjective *poisonous.*

Poisonous is a descriptive, predicate adjective, positive degree, showing the quality of *oysters,* with which it agrees in plural number and nominative case. Compared: poisonous, more poisonous, most poisonous; poisonous, less poisonous, least poisonous.

That is an indefinite, relative pronoun, used to connect its antecedent *oysters* with *are stale,* the subordinate clause *that are stale* being used restrictively to show that not all oysters are stale. *That* agrees with *oysters* in third person, plural number, neuter gender. It is also subject of the verb *are* and has a predicate adjective *stale.*

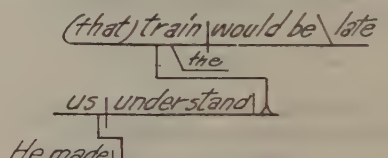
Are and *stale* need not be parsed, since they vary little from the similar words in the same sentence.

2. He made us understand that the train would be late.

Analysis.

This is a complex declarative sentence, of which *He made us understand* is the main and *that the train would be late* is the subordinate clause. *He* is the simple, unmodified pronoun subject of the main clause; *made* is the transitive verb, having as its object the infinitive [to] *understand,* etc.; *us* is the simple pronoun subject of the infinitive, in the objective case, according to idiom (not object of *made*). *Understand,* the infinitive with the sign omitted, has, as object, the subordinate clause entire. *That* is an introductory independent word (expletive), having no close connection with the sentence, except to introduce the subordinate clause, which has the phrase *the train* as a subject and *would be late* as the verb, which is future in meaning with reference to the verb in the main clause. *The* is a simple articular adjective, definite class, modifying *train; would be* is the predicate verb, corresponding to the direct *will be; late* is predicate adjective, nominative case, agreeing with *train.*

In sequence of tenses, *would be* follows the time of the main verb which is past, and *understand* follows the time of *made,* and so the present infinitive is used to show similar time.



Except for the possibility of confusing the three parts, this sentence could be diagrammed all on one line.

Parsing:

He is a simple, third personal pronoun, singular, nominative, subject of *made.*

Made is the past tense of *make, made, made;* it is third person singular, agreeing with its subject *he,* irregular weak form, transitive, active, having as an object the infinitive construction *us understand,* etc.

Us is subject of the infinitive *understand;* hence is in objective case (not object of *made*), plural, personal pronoun, simple (not compound).

Understand, infinitive, without the sign, present form, agreeing in time with that of the verb in the main clause, and with its subject *us,* in first person, plural number.

That is an expletive, being introductory, and having no direct bearing on the sentence. The subordinate clause needs no conjunction.

Train is a common noun, neuter gender, third person, singular number, nominative, subject of verb *would be.*

The, definite articular adjective modifying *train.*

Would be, conditional or subordinate clause form of *will be.*

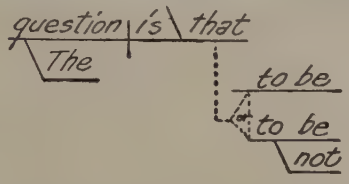
Late, descriptive predicate adjective, nominative to agree with subject of *would be.* Comparison: *late, later, latest.*

3. To be or not to be, that is the question.

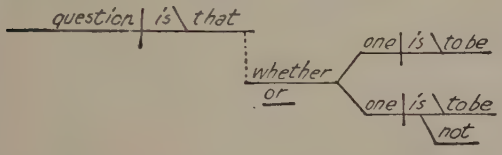
Analysis.

This simple declarative sentence has *that is the question,* as its main sentence element, with *to be or not to be* in apposition with that. The normal form of the sentence may be considered

as *The question is that*, in which *question* is the simple subject modified by the adjective *the; is* the link verb, intransitive, with *that* as a predicate adjective, nominative case to agree with the subject *question*. *To be or not to be* is an infinitive phrase, composed of two alternative elements, joined by the conjunction *or*, the second *to be* modified by the negative adverb *not*.

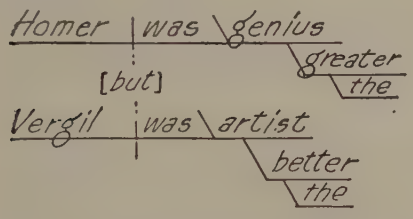


So far as parsing is concerned, nothing new is found in this sentence except the construction of *to be* and *not to be*. These are equivalents of nouns. If the sentence is taken to be equivalent to *The question is whether one is to be or not to be*, it may be diagrammed:



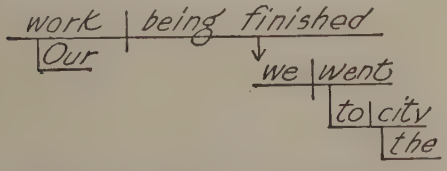
4. Homer was the greater genius: Vergil the better artist.

This sentence is compound, with the conjunction omitted. The two clauses are *Homer was the greater genius* and *Vergil was the better artist*. These parts give no special difficulty, for the analysis is similar to that of other sentences already explained.



5. Our work being finished, we went to the city.

This sentence contains an independent participial phrase attached to a simple sentence.



Diagraming independent elements. Some words or groups in sentences have only a logical connection with the rest. Though there are several kinds of these, the only two that give much difficulty in diagrams are the *expletive* and *independent participial phrases*. For expletive words a method of arrangement has been shown on page 163 in section 7; another on page 164 in section 2. Some books prefer to place expletives on dotted lines, others to place them in parentheses, still others to write them alone without underlining. Independent participial elements are not quite so simple to arrange. One plan is shown under sentence 5 on this page, where the arrow, pointing to *we went to the city* shows that the element, *Our work being finished*, is an independent participial prase. Parenthetical elements, and words and phrases used in apposition, may be treated in a similar way. Whatever plan for analysis or diagraming is used is not so important as is the consistent use of the scheme adopted. To use one line, or symbol, or arrangement for two different constructions is always confusing.

Analysis compared with diagraming. From the specimens shown, one may readily observe the comparative advantages of diagrams. They indeed show the sentence analysis in a form easily grasped by the eye, while all the relationships are instantly apparent. On the contrary, analysis in written form is more lengthy, therefore more cumbersome and not so easily seen as a whole. One who can analyze a sentence can ordinarily diagram it, if he has a plan for diagrams in mind; for the diagram is only a vizualization of the analysis.

Parsing. This form explains each word in the sentence with relation to its classifications and use. It is, therefore, more elaborate than analysis or diagraming. For instance, compare the diagraming of the sentences on page 164 with the parsing of the same ones.

Take the sentence *He made us understand that the train would be late*. Notice, for example, that the diagram as printed on page 164 is economical of space, whereas the analysis takes four times as much printing. The analysis is also not easily understood at a glance.

We may now sum up the advantages of studying grammar by means of analysis, diagrams, and parsing.

1. All forms show relationships clearly and simply. Diagrams are the best of the three forms for showing constructions; parsing for showing both constructions and word classifications; analysis is the literary equivalent of diagrams.

2. They teach one to keep in mind the theory of grammar.

3. They teach one to be alert toward unusual constructions that the average reader often overlooks.

4. They teach one to be regular and neat in arranging one's work, though they should never be made a mere exercise in drawing straight lines or in fancy writing.

5. Irregular forms teach one to be resourceful in showing relationships among sentence elements.

6. All three forms teach one to be logical and systematic; yet they should not be taught as an end in themselves, but as an aid to the intelligent study of the much neglected subject of good old English grammar.

BOOKS FOR FURTHER STUDY OF GRAMMAR.

Elementary grammars are numerous and are to be found in our schools and libraries. Most book publishers of texts have them listed. For the more advanced student, however a number of books might be recommended, of which only a few may here be specified. R. H. Bell: *The Changing Values of English Speech.* George O. Curme: *College English Grammar.* H. W. Fowler: *The King's English.* Otto Jespersen: *The Philosophy of Grammar.* Kittredge and Farley: *Advanced English Grammar.* G. P. Krapp: *Modern English.* T. R. Lounsbury: *Standard of Usage in English.* Brander Matthews: *The Parts of Speech.* J. D. M. Meikeljohn: *The English Language.*

RACES OF MANKIND

Human beings are white, black, brown, or red as to complexion and hair. Color, however, is no safe guide to race; for some Caucasians of India are coal black, and not Negroes. Today races are classified according to character of their hair, skin-color, height, shape of head, type of face, nose, and eyes. Once five races were recognized, —the Caucasian, Mongolian, Negro, Malay, and Indian, or the white, yellow, black, brown, and red. Dr. Ales Hrdlicka, American authority, recognizes but three races, the white, yellow-brown, and black, of which there are, necessarily, some sub-classes or combinations. We shall follow the older classifications, recognizing the Malay race as a composite people.

I. CAUCASIAN, living in much of the temperate zones, tropical America, some of the islands of the sea, parts of Siberia, India, Indo-China, and Malaysia. Modern authorities describe three main types. First, is the *Mediterranean,* such as the Italians, some Greeks, Berbers, and other Hamites, many Hindus, Malaysians, and Polynesians. These peoples have dark hair, medium to tall stature, quick minds, an inflectional language, and high culture, art, and religion. Second, the *Nordics* or blond peoples include those of northern and northwest Europe, non-aboriginal Australians, English and Dutch of South Africa, Kurds, Afghans, some Persians, and a few desert tribes of Asia. They have fair hair, eyes, and medium heads. Third, the *Alpine* type in Europe is recognized in the Swiss, French, and other romance language peoples. These peoples have round head, broad face, hair light to dark, varying heights, and stocky build. The Caucasians have often been called Aryans or the Indo-European group, but all single words are misleading as descriptive of them. Today, the Caucasians rule or protect 88% of the surface of the world. We shall now describe some of the sub-divisions of the Caucasian race.

1. *Eastern Hamites.* These include the Egyptians, Nubians, Abyssinians, Gallas, such as the Moors, Berbers (a remarkably pure race for many centuries), the Arabs, both nomadic and settled, and the Egyptians, who are very old, hard to explain, and persistent for some thousand years. Moors may be true Hamites, and Egyptians a mixture of earlier peoples like the Malaysians. The Danakils of Ethiopia seem to have settled among the original Gallas there, and some strange forms of religion and culture come down to our times.

2. *Semitic Caucasians* for centuries have figured in human history. These people swept westward in one of the early migrations of races. From one of these waves or western movements in Asia the great Assyrian empire sprang. This seems also to have contributed the Hyksos kings who conquered part of ancient Egypt before 2000 B. C. About a thousand years later, the Arameans made up a new racial migration into Mesopotamia, Babylonia, and Syria. Of these were the men of Edom, Moab, Canaan, Ammon, and eventually of Israel, as shown in the *Bible.* Then came the Phrygians and the Philistines. All

these may have been earlier Semites. In a second great period of western migrations, the Hittites established themselves firmly in southern Asia Minor, followed by the Habiri, who afterward were called the Hebrews. In later times these people took the name of Jews from the tribe of Judah, one of the ten tribes mentioned in early chronicles. Before them, doubtless the Hittites were the most powerful of the early Semites, for they ruled from the Aegean Sea to Mesopotamia, and were quite the equals of Egypt and Assyria.

3. *Western Caucasians.* Whether the Aryans originated in Africa, Asia, or Europe is still debated. These Indo-European folk were known in central and western Asia long before the dawn of recorded history. Various remains of these men and their implements prove this beyond question. By 2000 B. C. they were in central Italy, the Balkan mainlands, and in what we now call the Hellenic Peninsula. Some think the Greeks came from around the Baltic Sea. Germanic tribes like the Germani, Alemanni, Franks, and Celts perhaps came into north Europe, but from whence is uncertain. Into South Russia came the Iranians, ancestors of modern Persians, and the Phyrgians into Armenia, and the Celts into western Gaul, and evidently into the British Isles. Bronze Age antiquities are abundant in northern Europe, but no literary work dates from before 300 after Christ. Among early Nordics in Europe were the Cimbri who came into Italy and Gaul from the northeast possibly. Crassus of Rome defeated the Bastarnae in the Dobrudja in 28 B. C. Today Nordics are the purest strain in the Scandinavian lands; but in South Bavaria only 14% are of blond type. Some of the Alpine Caucasian type are as far east in Europe as Rumania and northern Turkey. In recent centuries, two branches of the Celts are recognized in Great Britain: the Goidelic, such as Irish, Manx, and Scotch Gaelic people; and the Brythonic, such as the Welsh, Cornish, and Bretons. The Picts of Scotland, hard to classify, are thought to be of a mixed ancestry.

Likewise the Basques of Spain, some of the Portuguese, some people along the Illyrian coast, the early Pelasgiams, and the Gypsies are not yet clearly distinguished, but seem of mixed race, partly Caucasic. Among the early Hellenic peoples were the Achaeans, Argives, Leleges, and possibly Ionians, which some think earlier still for they resemble somewhat other tribes in north and central Europe in early ages.

4. *Slavic Caucasians.* Present Slavonic peoples are descendants of the early Scythians, Saramatians, and Massagetes of the region of the Oder and Dneiper Rivers. Today the main Slavic peoples are the Russians, Ukrainians, Poles, Czechs and Slovaks, Slovenes, Croats, Bulgars, and Serbs. The Southern Slavs, now called Yugoslavs, came from the Carpathians into the Balkans and Greece before 600. By 680 they had settled down in the regions still occupied by their descendants. Today the Albanians are among the remnants of the Illyrians, an early Aryan group once powerful in Bosnia and Serbia. Some of the eastern Russians have undoubtedly a mixture of Mongolian blood in their veins. In Russia proper or White Russia, Lithuania, and Poland are the fairest of the Slavic peoples.

5. *Other Caucasian stocks.* India is the home of many peoples, including some branches of the Caucasian stocks. Another mysterious race in this country is the Dravidians, either a very early or a pre-Aryan people represented today by tribes like the Tamuls, Tagalus, Canarese, Todas, and Khonds. Among far-off Aryans are the Ainus, a very primitive stock in Japan, Indonesians and Micronesians in the isles of the south Pacific, and a few others that left the first home of the Caucasians many centuries ago. Certain traces of Aryan culture are apparent in Australasia also.

II. MONGOLIANS, for the most part, have dark hair, yellow skin, high cheek bones, small nose, stature below the average, monosyllabic speech, and pastoral or nomadic habits. Three main branches will be described below.

1. *Southern Mongols,* such as the men of Tibet, part of Indo-China, China, Formosa, and some of Malaysia, seem to be the original stock. In Tibet at present the earliest traits persist, among them great belief in magic, polyandry, close tribal and family organizations, and resistance to foreign influences. The Himalaya region seems to have cradled the Mongols. In early ages, however, Tibet sent emigrants to Burma, China, and Mongolia as we call that land today. Lamaism still is the official religion of Tibet, one of the most primitive of faiths among civilized folk. In Indo-China Mongolian culture in the lowlands has greatly advanced, while the primitive inhabitants of the uplands still follow the customs of their ancient ancestors. The so-called Shan Mongols of Burma and eastward are said to be of Chinese origin. The Shans of the western borders of China are "free," but after 2000 years of missionary effort by Hindu and other priests they remain true to their ancient literature, culture, and religion. Annam and Siam also are under influence of Shan traditions, dating from 543 or later when they first established Labong and drove out their aboriginal predecessors.

2. *Ocean Mongols,* coming from the Malay Peninsula, spread out to Indonesia, the Philippines, Madagascar, and other regions. Malays is a broad, vague term for such people, called the brown race in early books. The Orangs, a tribe that migrated in recent times, became important in Sumatra. All stages of culture and religion are represented among Malay tribes. The Javanese adopted Hinduism 2000 years ago, have beautiful art, and a great literature. Borneo, Celebes, and Formosa, however, remain low in the scale. The Battas, for ages cannibalistic, for a long time fought off the Dutch. Among the Filipinos, three classes are mentioned Indios, Inñeles, and Moros each with subdivisions.

3. *Northern Mongols,* because of nearness to some nations of Europe, interest us most. Modern scientists use the term Finno-Turkish to describe several branches of the Mongols. In Europe, however, they differ so widely from those in Asia that many have believed them to be either Caucasians or at least a mixed race. "Scratch a Russian, and you find a Tartar" is an old saying that means the Russians, after all, are really Mongols. Let us now consider some types of northern Mongols.

a. The *Scythians,* like the Altaic people, went east or west as fancy or convenience prompted.

Some went from the Russian steppes to Media, married foreign wives, and took on traits of Aryans; but today those who otherwise resemble Caucasians are shown to be Mongols by their long, coarse black hair. Similar to these Scythians are the Parthians and Turkomans, who settled first in Iran, then went west, fought ably against Rome, and only in recent times were subdued by the Russians. Indo-Scythian and Baltic branches, also like Aryans, still betray their Mongol descent by undisputed traits and looks.

b. *Original Turki,* in some respects, seem to be a distinct people, possibly allied to the so-called White Huns mentioned in ancient Chinese, Greek, and Arab records. The White Huns dominated India from 425 to 650, but today are not identified clearly. Both Turki and Finnish Mongols, however, seem to have descendants in modern India. Somehow related to them were the early Uigurs, whom the Chinese called Kao-che, a high civilized and settled (that is, not nomadic) tribe. Both Buddhist and Christian missionaries converted many of them; they adopted Syrian characters in China about 635; and closely resemble the Turki stock. Some of them, possibly a southern branch, went westward to the Aral Sea by 200 of our era, and merged with the Finns in the Ural region. Other Uigurs, perhaps a northern branch, broke away from other Mongol tribes, and at last became part of a vast empire under the Great Khan. They are clearly distinguished in Turkestan today. Yet another eastern Mongol people, called Oghuz and other wise, spread into the Ukraine, Dacia, Balkan lands, and the Russian Caucasus. In southwest Asia they are still numerous; but in southeastern Europe they have blended with Slav and Rumanian tribes, such as the Great and Little Russians, Serbo-Croatians, and Walachians.

c. *Seljuk Turki,* an important branch of the Oghuz Mongols, gained an important place in history, even down to the Ottoman empire of the 19th Century. Their original chief, named Seljuk, took Persia in 1040, his son founded the University of Bagdad, and with Omar Khayyam made revisions in the calendar and in astronomy. Later kingdoms sprang up in Asia Minor, Armenia was conquered, and also Byzantium, and the tribe became Mohammedans and fought against the Crusaders. In Rumelia, Anatolia, and other Balkan regions Christianity greatly modified their life, customs, and culture. Around the Caspian Sea, the Seljuk Turki retain more of their old habits, including that of horsemanship, for which one branch, the Cossacks, have long been noted. The Cossacks, in some ways, today are least Russian of all the peoples that make up the huge Soviet system.

d. *Tatars,* sometimes wrongly called Tartars, consist of several Mongol peoples, notably those now in Manchuria and China, some inhabitants of Mongolia, parts of the Crimea, the Caucasus, and in mixed form in Siberia. The Tatar Republic is a part of the Soviet empire, with capital at Kazan. In literature the word Tatar or Tartar is loosely applied to those Turks who migrated westward into Asia Minor and parts of Russia. The Kazan and Astrakan Tatars are descendants of the "Golden Horde," part of which under the grandson of Genghis Khan swept over Asia Minor and eastern Russia in the 13th century.

e. *Other European Mongols.* Some of the Mongol strains, greatly modified and westernized, persist among the Finns, who seem of Altaic stock once dominant in the Urals and then in the valleys of the Volga. From there they branched out into Lapland, the present Finnish Republic, Livonia, Courland, and adjacent regions. The Finns came after the Metal Ages, in comparatively late times. The Bulgars (the name is modified from Volga), came into the Danube basin about 700; the Avars and Hungarians, allied to the Finns, into the same regions, mainly Pannonia and Hungary, from which base they descended into Italy and into what is now Alsace, Lorraine, and Burgundy. Eight other tribes joined them, chief of which were the Mogers, predecessors of the modern Magyar people. With the Avars these subdued the neighboring Slav tribes, but the Magyars, after St. Stephen embraced Christianity, settled down and continue to speak their own language, a modified Ural-Altaic tongue. Other small and scattered tribes in both Asia and eastern Europe have at least some Mongol blood.

III. NEGROES, either of pure or mixed stock, comprise two-thirds of the peoples of Africa and nearly all of the south sea islands, save for infiltrations of Malays and other races. Hundreds of separate tribes exist, many of which are hard to classify; hence, only the main groups may be given here.

1. *Hamites* in the north, such as the Afars in Ethiopia and Ogadain, the Bejas in the Arabian and Nubian deserts mainly, the Gallas of Ethiopia, the inhabitants of east Nubia, and the Gold Coast, and the Somaili in Somaliland and East Africa. Similar racial mixtures are the Berbers of Morocco, the Fulahs in west and central Sudan, and others south of the Sahara Desert.

2. *True Negroes,* those of pure black race, include those of Nigeria, Fashoda, Sierra Leone, Marua, and Zugeru, and the regions as far south as the westward bend of the continent. They have twisted or crisped hair, tall stature, and bulging forehead.

3. *Negroids* are the mixed tribes, most of them hard to place or describe. Today the chief branches are in the north Gold Coast, the Hausas in the Kano, the Kanuri in Bornu and other districts, the Mossi, Serere, and the Songhi, or Sonike in Senegal and Walata. Most of these show some Egyptian or other foreign influence. They once built great empires, such as that of the house of Sonni Ali of Hausaland in the 15th century, and many are Islamites. The Hausas are the pride of Africa, 5,000,000 in all, good farmers, peaceful, and fairly progressive. In the Lake Chad region, we find the Kenem, Kanuri of Bornu, and those Baghirmi who came under influence of the French in 1901. As late as 1872 some of these tribes built elaborate citadels in trees to protect themselves from being sold as slaves to Islam. By contrast, farther west in central Africa are the Zanadahs who deal in human flesh.

4. The Bantus are also a somewhat composite people, of many single tribes, making up the majority of black peoples south of the lake region. Over 400 dialects of the parent Bantu language are spoken by about 50,000 Negrillos in central and southern Africa. The main ethnic

divisions of the Bantus are the Ama-Xosa, Ashanti, Batotse, Basuto, Bechuana, Dahomey, Luba-Lunda, Mashona, and the Xosa and Zulu Kaffirs. They seem unrelated to the dwellers by the lakes. Some are pastoral, some nomadic; some agricultural and pacific and some hunters and warlike; some sell slaves to foreigners or did until of late, and some are rather advanced in mode of life and thought. The Zulu-Xostas profess long genealogical records. The Wa-Giraymas speak an archaic, perhaps primitive Bantu, worship their ancestors, but believe in a single Supreme Being like the Indian Manitu. The Wa-swahili have adopted the ideas, dress, and manners of Arabs. The Bechuanas, who rule from the Orange River to Lake Ngami under British protection, claim descent from animals, which they hold in great veneration. The Makolas in 1833 entered the Zambezi territory and subdued the Bechuanas, but curiously enough took the language of the latter.

Near the Limpopo River live the Kattea or Bad Men as other tribes call them, the most degraded savages of Africa. They live in the ground, eat human flesh, are low in stature but not pigmies, and speak their own language.

5. *Negrillos* are the pigmies of Africa, known for many centuries. Pepi II of Egypt before 3000 B. C. had a specimen brought to his court. The pigmies seem an early people, much more numerous once than now, and natural dwarfs, not rendered small by disease or injuries. They are nomadic, hunt mainly for their food, and are not high in the human scale. Negritos or Negrillos of low stature are also found in Malaysia, the Deccan of India, and the Andaman Islands.

6. *Bushmen,* an incorrect term for San, a peculiar people of six groups in Kalahari, Bechuanaland, Cape Colony, and adjacent regions. They seem related to the Pigmies, and by some are considered the aboriginal inhabitants of Africa. They have developed art, oral traditions, and a very curious language made up of a series of "clicks" or sounds imitative of animals. Somewhat resembling the Bushmen are the Hottentots or Khoi-Khoin, once thought an offshoot of the former, later a cross between the Bantu and Bushmen, and by some as a Hamitic people, and now as a separate group. Two tribes are extinct and two divisions still living in Southwest Africa, Orange Free State, Cape of Good Hope, and other regions.

7. *Island Negroes* exist in Australasia, such as the Papuans, Melenesians, who seem like the Bantu and Sudanese, men of New Caledonia, the Malay Peninsula, and in the Andaman Island resembling Negrillos.

IV. INDIANS, consisting of nine great families in the Americas, extend from Alaska and the Arctic to Patagonia. The main language groups are the Eskimos, the Athapascan of the northwest; Algonquin, southern Canada and eastward in the United States to the Atlantic; Iroquoian, Ontario and Quebec, the lake regions of Canada and New York, and southward to Alabama; Caddoan, central and southern areas to the Gulf of Mexico; the Shoshonean, Rocky Mountains and Southern California; the Yuman of Arizona and Lower California; the Mexican and three groups south of them. Within these families, many separate tribes exist, only a few of whom may be named.

1. *Eskimos* are a dark, short, stocky race, serious, good workers, and innured to hardships. They live on land in summer in snow-houses or in skin-tents, and in winter in better huts of snow and ice. Stefanssen found some blond Esquimos in Victoria Land, which are not yet fully identified. Of all the American peoples, the Eskimos most nearly resemble those stocks of northeast Asia.

2. *Mackenzie and North Pacific Groups,* with three distinct types, are somewhat nomadic, hunt and fish for food, and are in the copper age of culture. Some Canadian tribes bear names like Yellow Knives, Dog Rib, Hares, Chipewyan, Beaver, and Carriers. North Pacific tribes are the Tlinget, Haida, and Tsimshian in the north, Coast Salish, Nootka, Chinook, Chimakuan, and Bellacoola in the central and south. Some trace through the mother and some through the father as to family groups. Some have three social orders and forbid marriage in the same clan. They have a system of totemism, believe in guardian spirits, and have a primitive mythology. Between these and the Indians of the plains region are tribes like the Nez Perces, Shoshoni, and Shushwap. The mountain or plateau tribes are intelligent and independent in family organization, with the old men as heads and leaders. The California Indians differ from the others in having little weaving or pottery, but good basketry.

3. *Plains Indians* once depended on hunting the buffalo, did not till the soil with any skill, lived in *tipis* or movable tents, made little pottery, but excelled in making clothing from skins. Some of the tribes are the Blackfoot, Crow, Cheyenne, Comanche, Omaha, Osage, Oto, Pawnee, Poncha, and Wichita. Of all plains Indians perhaps the Dakotas were highest in civilization. All these tribes called their great Manitu by the name of *Wakonda.*

4. *Eastern or Woodland Indians* are best known to us through the highly cultured Iroquois or six tribes of central New York, who excelled in agriculture, weaving, and bone and stone work. Others were the Ojibways, now surviving in Canada, the Ottawa, Peoria, Kickapoo, Shawnee, Sauk, and Fox, all these farther west than the Iroquois, while the Algonquins were south and east of them. Less highly developed tribes in the southeast were the Creek, Seminole, Chocktaw, and others less well known.

5. *Southwestern Indians* have recently attracted much attention because of their arts of weaving, pottery, and basketry, and their tribal religious ceremonies and dances. Two types have long existed,—the pueblo or settled Indians, living in clusters or apartments close together, and the nomadic tribes of the same regions.

6. Among the other groups are the *Mexican, Inter-Isthmian, South Atlantic,* and *South Pacific* tribes. The Aztecs and Toltecs in Mexico, the Incas in Peru, the Mixtecs and Zapotecks in Central America, the Mayas in Yucatan, the Quiches in Guatemala were all highly developed. The Mayas built great pyramids, the Incas developed a remarkable political system and accumulated great wealth, and the Toltecs developed peculiar arts of stone and wood.

COURSES AND CURRENTS
OF THE
WORLD'S HISTORY IN GRAPHIC OUTLINE.

A SURVEY OF THE RECORDED EVENTS IN THE HISTORY OF MANKIND IN ALL COUNTRIES FROM THE EARLIEST TIMES TO THE PRESENT DAY. ARRANGED SYNTHETICALLY TO SHOW THE GREAT MOVEMENTS OF EVENTS, THE ACTORS, THE TIMES AND COUNTRIES IN WHICH THEY LIVED. DESIGNED FOR COMPARISON, CONTRAST, QUICK REFERENCE, AND TO DISPLAY A CHRONOLOGICAL OUTLINE OF THE HISTORY OF ALL NATIONS.

A. PREHISTORIC TIMES.

B. PERIOD OF RECORDED EVENTS.

I. The Earliest Civilizations.

1. From the earliest known Records to the Age of Abraham (B. C. 4700-2200).
2. From the Age of Abraham to the Death of David (B. C. 2200-993).
3. From the Death of David to the Time of Cyrus (B. C. 993-558).
4. From the Time of Cyrus to the Time of Xerxes (B. C. 558-480).

II. The Greeks and Romans.

1. From the time of Xerxes to Hannibal (B. C. 480-200).
2. From Hannibal to the Death of Caesar (B. C. 200-44).
3. From the Death of Caesar to the Death of Alaric (B. C. 44-A. D. 410).

III. Middle Ages.

1. Death of Alaric to Coming of Charlemagne (410-768).
2. Coming of Charlemagne to the Death of Hildebrand (768-1085).
3. Death of Hildebrand to the Fourteenth Century (1085-1300).
4. Fourteenth Century to the Invention of Printing (1300-1450.)

IV. The Renaissance.

1. From the Invention of Printing to the Reformation (1450-1517).
2. From the Reformation to the Abdication of Charles V. (1517-1556).
3. From the Abdication of Charles V. to the Assassination of Henry IV. of France (1556-1610).

V. Period of Political Unrest.

1. From the Assassination of Henry IV. to the Death of Oliver Cromwell (A. D. 1610-1658).
2. From the Death of Cromwell to the Death of Louis XIV. of France (1658-1715).
3. From the Death of Louis XIV. to the Coming of George Washington (A. D. 1715-1775).
4. The Time of Washington (1775-1799).

VI. The Age of Science, Mechanical Progress and Democracy.

1. From the Beginning of the Nineteenth Century to the Introduction of the Railway (1799-1830).
2. From the Time of Stephenson to the Election of Lincoln (1830-1860).
3. From the Election of Lincoln to the Founding of the German Empire (1860-1871).
4. From the Founding of the German Empire (1871) to the World War.
5. From the World War to the Present Day.

A. MAN IN PREHISTORIC TIMES

When did man appear on this earth? Scientists hesitate to be positive. If we divide all geological time into three great parts, *Miocene*, the earliest, which some say was 900,000 years in duration; *Pliocene*, estimated at half that number; and *Pleistocene*, about 400,000 years, man appeared very recently on this earth, a statement which agrees with the *Bible*, if the word *day* there is taken as a long period of time. On the same scale, the age of man might be from 200,000 to 500,000 years.

Whether man originally belonged in a small area is not yet shown, but little evidence is found to contradict this theory. It is possible that the races of man, emigrating from one single place, developed marked differences in new habitats. Remains left by bygone generations have appeared in many parts of the world. Various strata have yielded definite traces of primitive cultures, thousands of years ago. Man passed from the time when he used whatever was at hand to help himself, as animals may do today; second he began to chip stones very rudely; then round them or put them into forms; next to make scrapers, cutters, awls; then to decorate his cave homes and to acquire rudiments of art; and finally to work in metals. Less than four centuries ago the Dutch found in Tasmania some aboriginal men who had no shelter, no bows and arrows, (only spears), no animals, no agriculture, for they never had heard of sowing grains. They had no arts of any kind, no clothing, no metal work. Indeed, they were Stone Age men. This illustrates that man has not developed all over the world with any degree of uniformity. Some tribes today are still in the early metal ages, or even emerging from the stone periods. The Tasmanians could build a fire, could make a good spear of wood, could chip a flint to make a rude knife, and could weave containers for food and natural products of tree and soil.

Once two *Stone Ages* were mentioned, the Old or Paleolithic; the new, or Neolithic. Now archaeologists speak of the Old, Middle, and Late divisions of the Stone Age. Objects made by man or artifacts (literally something fashioned by art) show the stages of culture. In Europe, particularly in France, excavations have shown that man existed along with animals, save that no dog, horse, or friendly domesticated animals existed; all wild creatures and men were natural enemies. Hence man learned to make a rude "fist-hatchet," simply by chipping some stones to fit the hand. Then the ice age came, and man could not survive in northern latitudes like Europe. He was driven into Asia, and in America southward below the Great Lakes. The Sahara desert then was fruitful and wooded. The Nile then was a vast river, just as the Mississippi and Missouri. It is possible that early man found his refuge in the valley of what is now Egypt and to the southward into central Africa. The *Middle Stone Age* when the ice came down a fourth time, man took to caves in Europe, had learned to chip stones to make sharp knives and cutters of all sorts, had learned to fashion objects from horns, ivory, and wood. He produced barbed spear-points of ivory, flint daggers, spear-throwers. All these are found in various parts of the world, layer after layer, many feet deep in the ground. Archaeologists today study these different layers and learn much of past ancestors of modern man. The Middle Stone Age developed some art, belief in superior beings, and even in life in some far-off future time, or a return from the dead. Along the Mediterranean is a cave at Grimaldi which shows the different layers of civilization; others have been found in France; and especially the cave where the Neanderthal bones were found in the Rhine valley.

By the end of the Middle Stone Age, black, fertile soil came down the Nile into the deep valleys. Even before this time a rich civilization seems to have existed on the north shore of the Mediterranean, such as in Crete, Greece, and farther inland even. In the *New Stone Age* agriculture developed, and man then became a food producer, and not merely a finder. Some tribes or groups settled in one place, made better weapons, learned that clay will harden when baked (first knowledge of brick-making), buried their dead along with weapons and utensils for their later use, and at last began a regular culture. Not long ago a pin made of copper was discovered in a grave that must be at least 7000 years old. This is at least 1000 years before the days of history or even of oral tradition,—some say 2000 or 2500. Egypt very early had copper mines in what is now Palestine. Flint from Britain, amber from around the Baltic, and other products were traded with men of other regions. No money or written language existed. Between 4000 and 3000 B.C. a civilization began to develop in the Near East,—the lands about the Mediterranean. Then history begins. In this period man had learned to work in iron, then in bronze, and at last in copper. This period just before authentic records begin has been called the *Metal Age.*

Prehistoric Man Himself. Much speculation has given little light as to what sort of creature man was some 10,000 to 15,000 years ago, if he existed that far back. In 1892 certain bones were found and named *Pithecanthropus erectus*, the scientists Latin description of a creature that stood up, had hands well developed, and could move about at will. Perhaps he could not talk, and doubtless did not think as we use that term. His skull resembles that of the gibbon and the lemur among animals known today, but he was advanced far beyond them. Since then it has been shown that this specimen belongs at the upper range of the Pliocene geological age. The *Homo Heidelberg*, since discovered, is placed later than *Pithecanthropus erectus*. His jaw resembles that of man in teeth, and simians or the man-like apes in the rest of the skull and absence of much chin. The *Neanderthal man*, found along a Rhine tributary in 1857, had a deep set skull, a head of abnormal size due to accident or disease, and may have been a simian. Other fragments have been found at Piltdown, England, at Gibraltar, in Croatia, and near Dordogne, France, the so-called Cro-Magnon man.

B. PERIOD OF RECORDED EVENTS

Archbishop James Usher (1580–1656) prepared a Bible chronology in which he fixed the Creation at 4004 B.C. Modern knowledge finds his dates impossible; for it is now sufficiently proved that man existed long before this time. Definite dates much before 1500 B.C., however, are uncertain, subject to adjustment, and still in dispute among the scholars. According to earlier estimates, Menes of Egypt began to rule in 5600 B.C.; later authors fix the date as 3600 or even 3000 B.C. The dates given below for Egypt are from the *Cambridge Ancient History*, Weigall, Breasted, and Baikie, who give us the results of recent excavations, interpretations of monuments, and other evidence. Much confusion in older chronology was due, in part, to the fact that many Egyptian kings admitted their sons or heirs to rule with them in their last years, and the time was counted for both monarchs. Manetho, an Egyptian priest, about 300 B.C. wrote histories and fixed the chronology, but only fragmentary quotations remain, with later distortions of his material. A papyrus now at Turin, inscriptions of the middle and later monarchies, and other lists give some uncertain light. For the other early dates,—for Babylonia, Assyria, and other nations,—the *Cambridge History* is the main authority used in the compilation printed below.

From the earliest known records to the time of Hammurabi, B. C. 4500-2200.

Dates B.C.	Egypt	Tigris—Euphrates Valley
5000	Legendary men and kings, descended from gods. No record of migration of Egyptians from other lands.	Sumerians established in Mesopotamia. Resemble early Semitic people. Middle Asia then perhaps well-watered.
4500	Calendar set up, 4241	Semites conquer Kish, east of Babylon. Tradition gave kings long reigns,—one 400 years, probably his dynasty.
4000	Hieroglyphic writings or pictographs lost to us. Abydos tomb had list of kings before Menes.	Good pottery made at Susa in Elam and at Sumer; remains of neolithic man near, 175 feet below surface.
3600	Still legends only of kings and their deeds. Men said to descend from the gods. Each early king chose special god.	Third dynasty at Kish, 3638. Definite records begun. Each town had its protecting god. Eight kings mentioned.
3500	Menes, first historical king, ruled upper (south) Egypt. Memphis mentioned. Eight kings ruled 264 years; one queen in dynasty. Art objects found in their tombs at Abydos.	Nippur was early sacred city. Names of other chief towns, Adab, Akkad, Akshak, Lagash, Sumer, and Umma. Rule passed first to one, then to another; some coalitions.

Dates B.C.	Egypt	Tigris—Euphrates Valley
3300	Second dynasty, with overlapping of reigns. Time of religious strife. Some worshipped animals; a few the sun. Gods had animal heads as pictured. Sixth king added name of sun to his title. Chenere, 9th king, restored south dynasty along middle Nile. War with north people.	
3200	Third dynasty, six kings. Libyia subdued; navy used against them. Stone work first used for temples. Cedar brought from Lebanon. Second king built great step pyramid at Sakkârah.	By end of century, Akshak became prominent in Sumeria. Babylon not yet founded. Towns of Legash and Umma also strong. Many early clay tablets found telling events of this age. First certain dates in Tigris valley.
3100	Fourth dynasty, seven kings Kheufu or Cheops great religious reformer, best known early king. Fought Bedouins. Built largest pyramid of all; Menkaura, his son, next largest; and latter's son, smallest of the great Gizeh group. Copper mines worked. One diorite statue of superb beauty has come down to us. Other fine works of art.	Lagash dominates. First important inscription of king Ur-Nina. Temples of biscuit-shaped bricks. Akurgal, son of Ur-Nina, priest and king, slew Ush, king of Umma. His sons and others powerful. They completed a canal to shut off Umma, but latter took it and diverted waters. Cuneiform (wedge-shaped) letters.
3000	Fifth dynasty, nine kings. Sephra, second, built great sun-temple at Abusir. Warred on Bedouins and Phenicians. The 8th king, Dedkere, had prince Ptanhotepe (perhaps his uncle) compile fine book of maxims, some say earliest written literature now known. The maxims look very modern. Onnos, last king, established custom of inscribing ritual of the dead on the walls of his pyramid.	Kish overthrew Lagash, during time of Akurgal. To commemorate this, he set up a stele (upright slab) with exquisite carvings on it.
2900	Arthur Weigall's' *History of the Pharaos* give all these dates about 375 years later. Fifth dynasty, for instance, 2708 to 2587.	Ukurgina threw off yoke of Kish, and assumed title king of Lagash. Sent offerings to gods at Nippur, sacred city. Great mass of records extant from this time. Literary style fixed for the chroniclers. Oldest code of laws compiled. Lugal-zaggasi claimed dominion from Persia to Mediterranean. Umma overcame Lagash. Sargon deposed Lugal (2870), and Agade became dominant. One story of Sargon like that of hiding Moses in the bulrushes. Sargon invades the west; founded Semitic kingdom. Priests prominent. Curious hepatic or liver prophesies resembling Roman auguries.
2800	Sixth dynasty, six kings, the first being Thoe or Toti. He retained his personal name, as Onnos did, a new custom. His death mask, first yet discovered, shows him as young man. Some say he was killed by palace guards. Pipp or Pepy, third, dated his reign back, as if second king, was usurper,—2795–2742, being exact date. Fine copper statue of him still extant. Menere, fifth king, went to Nubia in state. His mummy, found in 1880, shows him too as young man. He used Nubian troops to fight Palestine. Pepy II ruled 90 years; Manetho says 94. Last king of line sent to Sudan to get a pygmy for his court.	After Sargon, two priests ruled briefly, then his son, Naram-Sin, a great warrior, who put down a rebellion at home, a coalition of kings against him, and brought back much loot.
2700	Seventh to Tenth dynasties, an obscure period. About 23 kings, 300 years in all. One queen. Two foreign kings. Memphis now capital. Four in 9th dynasty all had last name or suffix Akhtoi. Story says first was eaten by a crocodile "because of his sins." In 10th age, Thebes came to rule by rebellion. Asiatics invaded Egypt in this time.	Town of Guti began to excel Sumer and Akkad. Gudes became king of Lagash. Ur restored many old works and monuments.
2500		Fifth dynasty of Erech founded about this time.
2400	With the eleventh dynasty, the Middle Kingdom began in Egypt, with capital at Thebes. (Early kings often built new capitals.) Fourth king conquered the delta region and ruled all Egypt, perhaps first to do so. This was the bronze age in Greece. All of 11th dynasty bore last name of Menotep.	Amor became prominent. Ur subdued by Amor and Elam. Sumer in power also, with king of Assyria paying tribute. Isin and Larsa now rising to rule. Old order breaking down. Cappadocia attached to eastern empires. Bronze age in Asia Minor and Crete.

From the time of Hammurabi to the Death of David 2200-about 1000 B. C.

2200	Twelfth dynasty, with 7 kings and 1 queen. New land made by dyking a lake. Copper mines highly developed near Mt. Sinai, controlled by Egypt. New arts of gold working. Nubia conquered to second cataract of the Nile. Egypt and Crete trading. Civilization moving westward on Mediterranean shores.	The great Hammurabi ruled for 43 years from 2123. Fortified Babylon, now an important town; conquered Rim-Sin of Ur, and took immense booty. Built a canal for Sumer and Akkad. Best known for his Code of 285 laws, inscribed on fine black diorite monument, discovered in 1901 at Susa. The laws came from Sumer and other ancient places; some original.
2000	Thirteenth and fourteenth dynasties, a time of uncertainty, with 130 princes contending for honor and power. No great progress. Foreign influences. Indo-Europeans appeared in the regions about the western Asiatic countries.	Kassites raid Babylonia in 2072. The sea-country developed. Ur and Uruk destroyed by son of Hammurabi, a great warrior. In 2042 a great dam was built to keep Nippur in subjection; floods prevented the making of permanent marshes as intended. Caravans now going east and west.
1900	Hyksos or shepherd kings from Syria took Egypt, after struggle with Thebes. Josephus says they were Semites. They confined their rule to the Egyptian Delta, and let native princes hold sway in upper Nile country. Used bronze scimitars. Apopis the name of several of them.	Kassites finally subdue Babylon in 1746. They came from the mountains to the east, were of a hardy but inferior stock, and destroyed much of the splendor and art that developed after the time of Hammurabi.

Dates B.C.	Egypt	Tigris—Euphrates Valley
1600	War arose because a Hyksos king said that the roaring of the royal hippos of Thebes disturbed his sleep at Avaris. Ahmose (Amosis) captured Avaris and ended the Hyksos line about 1600. Palestine and Phenicia conquered.	By 1700 also Assyria was growing in power as rival of Babylon, to which it had been subject. Recent discoveries in Greece, Crete, the Cyclades of the Mediterranean, and the shores about the Aegean Sea, show a rich art and high development, somewhat comparable to that of Egypt and Babylon.
1500	Eighteenth dynasty, of which Thothmes I and III, and the four Amenhotep kings were notably great. The wife of Thothmes sent a whole fleet to Put (*Phut* of our *Bible*). Thothmes III was a great warrior in 16 campaigns. Took Carchemish and many other towns and regions in Asia. Built the gigantic Ammon temple at Karnak. Amenhotep III built Luxor. Amenhotep IV, great religious reformer, built a new capital and took the name Ikhnaton, which see in index.	
	Ikhnaton died about 1358, leaving no son, but a daughter married King Tutankemen, whose tomb was found in Egypt in 1922. It contained undreamed splendors of precious things, showing the high state of art in this dynasty. Shortly after his death, the empire declined.	Palestine under Egyptian influence. Hatti, Mysia, Cilicia, Podesa, and others ally against Egypt.
1300	Twentieth Dynasty began about 1350 with usurpers after King Tut. Harmhab, before long, gained the throne and did much to restore the land to prosperity. Rameses I, 1315, succeeded, with Seti I, his son co-king, and successor in the next year. Bedouins overran Palestine, and Seti I drove them back and took the country even to Lebanon. Made his subjects furnish many cedar logs. Restored the monuments, built many more, and ruled in splendor. His tomb one of the most magnificent, and his mummy still extant. Seti I started the great obelisks. Ramses (Rameses) II, younger son, obtained throne. Made war on Kadesh, Palestine, Syria, and Arabia, and won them after an initial great defeat. Merenptah (1225) desecrated many of the works of art, revolt ensued, and final anarchy.	Sidon in Phenicia becomes strong. For three centuries or more this land had been perfecting the arts of dyeing, weaving, working in metals and in glass. Assyria and Rameses of Egypt make a "great treaty," 1266. By 1250 Hittite power on the wane. Shalmaneser I in 1276 reaches Carchemish, conquers Cappadocia and Hani. The Hatti, a new power, help the Hani. Tukulti, 1256, conquers the northwest, captures Babylon, but is murdered by his son. War with Kassites. Israel first mentioned. Bedouin tribes warlike and trouble Babylonia. Beginning of Greek heroic age.
1200	Rameses III (1198) fought off the Philistines and two attacks by Nubia. Egypt ceased working mines in Sinai. About 1150 tombs looted.	End of Kassite dynasty in Babylon. Philistines mentioned, and the Phenicians become more powerful. Aramean peoples migrate to the westward. Trojan war in this period in north Africa.
1100	Delta kingdom independent. Egypt loses Ethiopia (Abyssinia).	Edomites become important. Age of judges in Israel perhaps. Mycena in Crete declines after very high culture as shown by recent excavations there. Phenician arts greatly influence districts about the Mediterranean.
1000	Decline of Egypt under way.	Babylonia wars on Assyria (1107). Nebuchadrezzer defeats Elam, but is humbled by Assyria.

From the Death of David to the Time of Cyrus, about 1000 to 558 B. C.

B. C.	DISCOVERIES, ARTS, CRAFTS.	EGYPT.	TIGRIS-EUPHRATES VALLEY.	SYRIA. Hebrews.	OTHER COUNTRIES.	GREECE.
993?	The "Iliad" and "Odyssey" produced. New Tyre, on an island, and Old Tyre joined by earth fillings under Hiram, the friend of Solomon. Temple of Jehovah built by Solomon. New palace at Jerusalem. Ivory brought to Solomon from Tarshish. Commerce of the Hebrews very extensive. Assyrian architecture, building, sculpture, and literature at its height after 930.	Twenty-second Dynasty, 961-940. **Shishak**, 961-940. Invades Judea and plunders the Temple at Jerusalem, 949.	Brilliant epoch in Assyrian history begins, 930-626. Babylonians constantly at war with Assyrians down to 710.	**Solomon**, 993?-953? Rehoboam, king, 953? Rebellion against Rehoboam; afterwards two Hebrew kingdoms: Judah, loyal to Rehoboam, and Israel, the revolting tribes, under Jeroboam (953-927). Abijah, king of Judah (932?-929), takes Bethel and other cities from Jeroboam. Asa, king of Judah, 929-873. Nadab, king of Israel (927-925), slain. Baasha, king of Israel, 925. Elah, son of Baasha, slain by Zimri.	Zoroaster or Zarathushtra lived about 1000? in Persia. Ethbaal or Ithobalus, high priest of Astarte, murdered Phales, last of the line of Hiram, and becomes king of Tyre, 917?	Rhodians beg navigation laws, 9
900	Beginning of civilization in Mexico and Central America.		Assyrians invade Persia in the ninth century.	Omri, king of Israel, 899. Ahab, king of Israel (877?-853). Contest of the prophets with the idolaters.	The Phœnicians become subject to the Assyrians, 850.	Constitution a laws of Lycurgu 820?

From the Death of David to the Time of Cyrus, 993-558 B. C.

B. C.	DISCOVERIES, ARTS, CRAFTS.	EGYPT.	TIGRIS-EUPHRATES VALLEY.	SYRIA. Hebrews.	OTHER COUNTRIES.	GREECE.
900	Breastplates invented by Jason. Art of alphabet writing by Phœnicians, 900.		**Asshur-natzir-pal** or **Sardanapalus** reigns in Assyria, 886-858. Shalmaneser II., king of Assyria (858-823), wins a victory over Ahab, king of Israel, and allies, at Karkar. Later subjugates Jehu. Rammannirari, the king of Assyria (810-787), captures Damascus and makes Samaria and Philistia tributary. Sammuramit, or Semiramis, was his queen.	Famine in Israel; predicted by Elijah. Miracles of Elisha. Jehoshaphat, king of Judah, 873-848. Ahaziah, king of Israel (853-851). Jehoram, king of Judah (848-844), marries Athaliah. Joram, king of Israel (851-843), assassinated by Jehu. Ahaziah, king of Judah (844-843), slain by Jehu. Jehu, king of Israel (843-815), slays Jezebel and sons and grandsons of Ahab. Athaliah, queen of Judah, 843-837. Joash, king of Judah (837-797), purchases retreat of Hazael, king of Syria.	Carthage founded, 850. Decline of Phœnician power in Tyre.	Pheidon, eminent sculptor, flourishes, 900.
800	Solar eclipses recorded in Assyria, 763. Extension of Greek colonies in the Mediterranean and Black seas, 750. The Chaldeans first observe an eclipse of the moon at Babylon, 721. Roman calendar of ten months reformed and made twelve, 710. Priesthood, augurs, and vestals instituted in Rome, 710.	Twenty-third dynasty, 800. Sebacon invades Egypt, 735. Twenty-fifth dynasty, 730. Ethiopians, under Shabak, conquer Egypt, which they govern for 58 years, 730. Sennacherib's invasion, 705.	Tiglath-pileser II. or Pul (745-727) subjects Babylonia to Assyria, 730. Shalmaneser IV. (727-722) suppresses revolt of Phœnician cities and Israel. Sargon (722-705) destroys the kingdom of Israel, conquers Samaria; subdues revolts in Armenia, Media, and Babylonia, uniting the latter to Assyria; receives tribute from Arabia, Egypt, and Cyprus. Sennacherib (705-681) subdues revolts in Babylonia; unsuccessful in war with Egypt and in the siege of Jerusalem, (700); loses his supremacy over Syria.	Amaziah, king of Judah (797-792), murdered at the capture of Jerusalem by the Israelites. Uzziah, king of Judah, 792-740. Judah becomes tributary to Assyria to escape Damascus and Israel. Jeroboam II., king of Israel (790-749). gives Israel a brief revival of power. Israel made an Assyrian province by Pul, 741. Hoshea, last king of Israel, defeated and captured by Shalmaneser IV., 734. Hezekiah, king of Judah (728-697), allied with Egypt to evade tribute to Assyria. Carus (282-283), the præfectus prætorio, succeeded; appointed his sons Numerianus and Carinus Cæsars, and later Augusti; overcame the Sarmatians; killed (by lightning?) on an expedition against the Persians, after the capture of Ctesiphon. Numerianus (284) accompanied his father to the East; murdered by his father-in-law. Carinus (284), who had stayed in the West, fought, at first successfully, against Diocletianus (284-305), whom the soldiers had proclaimed imperator. Carinus eventually murdered by his own troops. Diocletian ruled the East from his court at Nicomedia in Bithynia, intrusting the West to his co-regent, Maximianus, 285. Constantius Chlorus appointed a Cæsar by Diocletian, and given the government of Spain, Gaul, and Britain, Maximianus receiving that of Italy and Africa, 292. Galerius, also made a Cæsar by Diocletian, appointed to the government of Illyricum, including Greece and Macedonia, 292. Revolt of Egypt quelled by Diocletian; and one in Britain, by Constantius, 296. Galerius fought against the Persians, at first unsuccessfully, but gained an important victory in 297, and again extended the frontiers to the Tigris. Insurrection in Africa put down by Maximianus. The Alamanni defeated by Constantius.	Independence of Britain under Carausius, 286-294. Varahran III., king of Persia 292. Narses, king of Persia (292-301), drives Tiridates from Armenia, 296; and is defeated by the Romans, 297. Tigris, the general boundary between Persia and Rome, 297.
300	Some of the leading principles of optics known to the Platonists, 300.	General persecution of the Christians (303), but discouraged in his province by Constantius. Diocletian, having obliged Maximianus to resign, abdicated (305) and retired to Salonæ in Dalmatia. Constantius and Galerius raised to Augusti. Maximinus and Severus appointed Cæsars, the former receiving Syria and Egypt, the latter Italy and Africa. Death of Constantius in Britain (306), following which his son, Constantine, assumed title of Cæsar and control of his father's provinces, Spain, Gaul, and Britain; fought successfully against the Bructeri and Franks. Maxentius chosen imperator (306) by the prætorians at Rome, his father, Maximianus, resuming his previous dignity. The Cæsar Severus, created Augustus by Galerius, proceeded to Italy (307) to attack Maxentius; but, deserted by his soldiers, he was slain at Ravenna. In his place Galerius appointed Licinius co-regent and Augustus, and Constantine assumed the same title. Maximianus captured in Massilia and slain by order of Constantine, 310.	Monachism begins in Egypt, 305. Britain re-subdued. Early Christian martyrs in Britain, *c.* 310. Hormisdas II., king of Persia. 301-309.

500	Greek School of painting, 500. Boethius writes his geometry and arithmetic, which formed the basis of mediæval mathematics, 510. Pamirs and Punjab visited by Hoe-sing of China, 518-521. Anthemius of Lydia and Isidorus of Miletus build church of St. Sophia at Constantinople, 525-537. Benedict (480-543) forms his first monastery on Monte Cassino, in central Italy, 529. Code of Justinian published, 529. Procopius says that eggs of silkworms were brought from China by monks, about 530. The *Aqua Paola* aqueduct at Rome restored by Belisarius, 537. Farm labor on Sunday prohibited by the Council of Orleans, 538. Earliest reference to wooden coffin in England, 542. Bells first known in France, 550. Notation by nine digits and zero, called Arabic figures, known in Hindustan, 550. Silkworms reared in Constantinople, 551. Quills used for pens, probably about 553. Fifth great council of the Church at Constantinople, 553. Monastery of Iona founded by St. Columba, in Scotland, 563.	Peace with Rome (533): 11,000 pounds of gold paid by Rome for fortification of the Caucasus; Daras to retain its fortifications, but not to be Roman headquarters; recent conquests surrendered by each; *eternal* friendship and alliance (causing this peace to be called the "endless peace"). War declared against Rome, 540. Antioch captured, 540. Ransom exacted from chief cities of western Asia Minor. Truce concluded, 545. War (549) with the Lazi (people of ancient Colchis), who were aided by Rome. Petra captured by the Romans and Lazi, 551. Chosroës's expedition to Arabia (562) against the Christian kingdom founded there early in the sixth century by the Abyssinians; Abyssinians expelled and country left to the control of Saif, leader of the native Homerites, after whose murder Arabia became a Persian province. Expedition of Chosroës to India? Unsuccessful invasion of Dezabul, khan of the Turks, who had conquered the Ephthalites, and became an ally of the Eastern Empire. Peace with Rome (563): Rome to receive Lazica and to make an annual payment to Persia; Christians in Persia permitted exercise of their faith; commercial intercourse between the empires limited to certain marts and roads; diplomatic intercourse to be free; Daras to keep its fortifications; arbitration to settle future disputes; allies of either party included in the peace; Persia to maintain the Caspian Gates alone; the peace concluded for fifty years. Victorious wars with the Khazars and Ephthalites. Mohammed or Mahomet, 570-632.	Belisarius, 535-560. Campaigns of Belisarius against the Vandals in Africa, 533-534; and the East Goths in Italy, 540, 544-549. Church of St. Sophia, built by Constantine (Hagia Sophia), burned and magnificently rebuilt. Empire's decline under successors of Justinian. Persians, and, later, Arabs, conquer a part of the African and Asiatic provinces. Narses destroys kingdom of the East Goths, 555. Exarchate. Almost entire Exarchate conquered by Longobards (Lombards); Calabria, Naples, Venice, Ravenna, retained by Eastern Empire. Death of Belisarius and of the Eastern emperor Justinian, 565. Justin II. emperor, 565-578. War with Persia renewed, 572. Tiberius Constantinus, emperor, 578-582.	Modern Berkshire conquered by Cynric, 534-556. Wessex made powerful by Ceawlin (556-591 [3]), later called the second Bretwalda of Britain. Battle of Deorham, 577. Power of Ceawlin extended to the Severn. Cymry of Cornwall (Devraint) separated from those of West Wales. East Saxons settle north of the Thames. Camulodunum (Colchester) sacked. Small kingdom established near the Wash. Middle Saxons settle about London. East Angles occupy region north of the East Saxons, the forest, and the great fens about the Wash. North Angles settle Deira and Bernicia (547), north of the Humber. Central Yorkshire conquered. Under Ida, "the flame bearer," conquests of the Angles extended to the Esk. Angles occupied (early in sixth century), the present counties of Leicester, Lincoln, Northampton, Nottingham, and Warwick; later united in the kingdom of Mercia (Cridda), 582 ?.	Provence obtained, 536. Supremacy over Bavaria and Swabia upon fall of East Gothic kingdom, 555. Kingdom reunited under Chlotar I. (558-561), who survived his three brothers. Death of Chlotar I., 561. Kingdom divided (561) among grandsons of Chlodwig: Charibert I. (561-567), Chilperic I. (561-584), Guntram (561-593), Sigibert I. (561-575).	Theudis assassinated, 548. Kingdom of the Suevi in Spain united with that of the West Goths, 585. Converted to Roman Catholic Church, 587.	Kingdom in Italy founded by Theodoric the Great (493-526); residence, Ravenna, sometimes Verona. Cassiodorus, the historian. A part of southern Gaul added (507) to the kingdom by Theodoric the Great, who also governed (507-526) the Spanish possessions and Gallic lands of the West Goths. Symmachus and Boëthius executed, 525. Death of Theodoric the Great, 526. Amalasuntha, daughter of Theodoric, regent for her son, Athalaric, 526. Death of Athalaric, 534. Amalasuntha made coregent with Theodahad, who murdered her. War with Eastern Empire, 535-555; King Vitiges carried captive to Constantinople. Belisarius, general of Eastern emperor, Justinian, offered Italian crown by the East Goths; declines. Under Totila, reconquered large part of Italy. Rome recaptured by Belisarius; taken a second time by Totila. Totila defeated and slain by Narses, general of Justinian, at Taginæ or Busta Gallorum, 552. Kingdom destroyed by Narses, 555.

500		War declared on Persia (572) by Justin, emperor of the East. Syria devastated by Chosroës, 572. Fall of Daras, 573. Empire divided into four governments. Fixed land tax in place of former variable tax on produce; tax collectors under supervision of the priests. Improved irrigation. Army reformed. Foreigners protected. Learning encouraged. Revision of laws of Artaxerxes. Shah-na-meh, or Book of the Kings, the basis of Firdusi's epic. Fables of Pilpay and game of chess introduced from India. Death of Chosroës in Mesopotamia, 579. Hormisdas IV. (Hormazd), 579-589; son of Chosroës; ruled wisely at first, but became the worst of Persian kings. Invasion by Maurice, emperor of the East, 579. Persians defeated at Constantia, 581. Alternate victory and defeat. Invasion (589) by Khazars, Arabs, and the great Khan of the Turks; the last defeated and slain by the Persian general, Bahram. Hormisdas invades Lazica and provokes war with Rome, 589. Defeat of Bahram on the Araxes. Bahram, insulted by the king, revolts. Hormisdas deposed and murdered, 589. Chosroës II., Eberwiz, 589-628. War with Bahram. Chosroës II. driven from the kingdom. Crown assumed by Bahram (Varahran VI.), 590-591. Chosroës II. restored to the throne by a Roman force. Flight of Bahram to the Turks.	Persians invade Byzantine territories, 572, and continue a war for 19 years. Maurice, emperor, 582-602. Period of decline caused by deficient or unfortunate rulers who drained upon the resources of the empire, and following the Persian War by a burden of taxation, and inroads by Slavs and Avars from the north. Gregory I. (the Great), bishop of Rome (590-604). Beginning of the Papacy.	Britain divided by 575 between Cymry and Teutons, by a line drawn almost north and south midway of the breadth of the land. Kingdom of Northumbria formed (588), by enforced union of Deira and Bernicia under Æthelric, king of Bernicia. Æthelbert, king of Kent, later named the third Bretwalda, ruler over East Anglia, Essex, Middle Britain, 590-616; married Catholic Christian princess Bertha, daughter of Charibert, king of the Franks. Augustine, legate of Pope Gregory the Great, arrived, 597. Kent converted. Quarrel between Augustine and the British church (form of the tonsure, date of Easter). East Saxons converted. Laws of Æthelbert. East Angles revolt against efforts for their conversion. Middle Britain subjugated (about 610-617) by Rædwald of East Anglia, later called the fourth Bretwalda.	Death of Charibert I., 567; his territory equally divided among his brothers: Austrasia, capital Rheims, population mostly German; Burgundy, capital Orléans; Neustria, capital Soissons; population of the two latter divisions Romano-Celtic or Romance. Family divisions and frightful wars. Feud of Brunhilde of Austrasia, daughter of Athanagild, king of the West Goths, and Fredegunde of Neustria (597), slave, and later wife, of Chilperic I. Decay of the Merovingian power following a period of anarchy. Entire kingdom united (613) under Chlotar II. of Neustria, great-grandson of Chlodwig.	Alboin (?-573) destroys kingdom of the Gepidæ on the lower Danube; leads the Longobards (Lombards) into Italy, which he conquers as far south as the Tiber, 568. Almost the entire exarchate of the Byzantines conquered. Kingdom of the Longobards in Italy (568-774) established. Cleph, son of Alboin, king (573-574?), pushes conquests to lower Italy and establishes independent Longobardian duchies, but rules helplessly amid anarchy. After an interregnum of about ten years Authari or Flavius, king (583-590), institutes an admirable form of government. Conversion of the Longobards to Christianity begun through the influence of Theodelinde, wife of Authari. Theodelinde, wife of Authari, unites the Lombards to the Church. Agilulf, (590-615). From his time may be dated the beginning of civilization among the Longobards.	Actual history remains practically blank from about 400 A. D. until the Mohammedan Period. Previous to 590 north China was ruled for about 200 years by Tunguse family called Toba. Simultaneously with the growth of the Tobas Tunguses in north China a power called the Jeujen has sprung up in the desert region, and was at the height of its power probably about 585-590. Yang Kien, Chinese general of the Chow dynasty, succeeds (590 once more in unifying China, founding the Suy dynasty which rules 590-618. Mohammed's flight (Hegira) from Mecca to Medina 622.
600	Suicide a crime, and those committing it denied funeral services and decent burial, 578. The eight musical modes begun by St. Ambrose and known as the "Gregorian modes" completed by Pope Gregory (590-604). Block-printing said to have been invented by the Chinese. Saddles were known in England, probably 595. Paper made from cotton, 600. The oath in judicial proceedings said to have been introduced into England, about 600.	War with Phocas, murderer of Maurice, 603-610; Daras captured; Armenia, Galatia, Phrygia, and Syria devastated; Antioch sacked.					

From the Death of Alaric to the Time of Charlemagne, 410-768 A. D.

A. D.	DISCOVERIES, ARTS, CRAFTS.	PERSIA.	EASTERN EMPIRE.	TEUTONIC TRIBES. Britons.	Franks.	Lombards.	Mohammed and the Caliphate.
600		Cappadocia invaded, 612. Damascus captured, 614. Jerusalem sacked, 615. Persian general Shahr-Barz captures Alexandria and Pelusium; Egypt subjugated, 616. Chalcedon captured, 617. Persian camp within a mile of Constantinople. Rhodes and Ancyra captured, 620. Limits of empire under Darius I. again attained. Romans land in Gulf of Issus; Shahr-Barz defeated, 622.	Heraclius, emperor, 610-641.	Battle of Chester, 607; Cymry of Strathclyde defeated by Æthelfrith of Northumbria, who, extending his realm to the sea, separated Strathclyde from Wales. Battle of the Idle; Æthelfrith defeated and slain by Rædwald. Eadwine of Northumbria (617-633) supreme over all Teutonic Britain except Kent; the fifth Bretwalda. Eadwine converted, 627.	Brunhilde seized, tortured, and dragged to death by a wild horse, 613. Majores domus become powerful; at first, superintendents of the royal household; later, leaders of the feudal retainers; hereditary claim to the office acquired first in Austrasia, later in Neustria, by the Pipins (Carolingians), of pure German blood.		Mohammed victorious in Arabia, 629. Death of Mohammed, 632. Abu-bekr, father-in-law of Mohammed, caliph, 632-634. Collection of the Koran, afterwards enlarged by the transcription of the Soona, an oral tradition. Believers separated into Soonees, who accepted this addition, and Sheeahs, who rejected it, and considered Ali, son-in-law of Mohammed, his only rightful successor.
	Sugar brought into Europe from Asia, 625. Cotton cloth known in Arabia, 627. Bronze throne of Dagobert, now in the Louvre, made about 630. First convent in England erected at Folkestone, 630. Enameling on gold and metals carried to high degree of perfection, 630. Byzantine styles predominate in articles of furniture, 630. Carvings in ivory, including cups and vases, made with some degree of artistic excellence, 630. Consular diptychs or folded two-leaved tablets of ivory are known to date from this time and earlier, 630. During the dark ages many of the processes of industrial arts were lost; notably those of pottery and glass.	Retreat of Chosroës. Romans winter in Albania. Battle of the Sarus, 625; Shahr-Barz defeated. Alliance of Chosroës with the Avars. Unsuccessful attack on Constantinople. Battle of Nineveh, December 12, 627; Persians defeated. Flight of Chosroës. Persian troops at Ctesiphon, under two of the king's sons, mutiny. Chosroës captured and murdered, 628. Kobad II. (Siroës), 628-629 (?). Peace with Rome concluded on a basis of exchange of captives and conquests. Death of Kobad.	Heraclius sails to Lazica and invades Armenia, 623. Jerusalem recovered from the Persians by Heraclius, 628.	Mercians revolt under Penda (627-655); in alliance with Cadwallon of Wales are victorious over Eadwine at battle of Heathfield, 633. Death of Eadwine. Penda of Mercia supreme (633-655) over East Anglia, Essex, and Middle Britain. Battle of the Hevenfeld, 635; Cadwallon defeated by Oswald of Bernicia. Conquest of Deira. Oswald of Northumbria, later called the sixth Bretwalda, supreme over Kent, Sussex, Wessex, Essex. Conversion of Northumbria by Irish missionaries.	Kingdom divided (622-678), with several temporary unions: (1) Austrasia, chiefly German, divided by the Scheldt from (2) Neustria (Romance, northern France to the Loire) and Burgundy. Bretagne independent, Vasconia and Aquitania nearly so. Dagobert, 628. Battle of Testri (near St. Quentin), 687; Pipin of Héristal, major domus of Austrasia, victorious over major domus of Soissons (Neustria), and made sole major domus of entire kingdom of the Franks.	Rothari (636-652) famous for declaring code of Lombard laws, 644. Lombards assimilate with and are refined by contact with the Italians.	Omar (634-644), founder of Arabian domination in the East; assumed title of Emir-al-Mumenin ("Prince of the faithful"), after wards held by all the caliphs. Syria (Damascus 635), Palestine, Phœnicia, subjugated. Empire of the Sassanidæ (New Persians) destroyed by the battle of Nehavend, 641. Egypt conquered by Amroo, general of Omar. Alexandria captured. Othman (Osman), 644-656. Northern Africa conquered Rhodes captured. Othman murdered during an uprising, 656. Ali (Mohammed's son-in-law) (656-661) not generally recognized.
	An Alexandrian library said to have been burned by the caliph Omar I., 640. Latin first taught in England. Mass in Latin introduced into England. It is said that the caliph Omar opposed a plan for cutting a canal across the isthmus of Suez.	Purandocht and Azermidocht, daughters of Chosroës II., reign. Period of anarchy; throne held successively by nine or ten nobles. Isdigerd III. (632-641 [651]), grandson of Chosroës II., last Sassanid king. Struggle against the caliphs Abu-Bekr and Omar. Kaled's expedition to Hira, 633; Persians defeated. Arabs capture entire region west of the Euphrates, their devastations extending throughout Mesopotamia.	The throne was usurped by Shahr-Barz, but before two months he was murdered by his own troops. Constans II., emperor, 641-668. Pope Martin seized and banished by Constans, 653.	Contest over East Anglia between Oswald and Penda; the former defeated and slain in battle of the Maserfeld, 642. East Anglia, Wessex, Deira, under Penda. Battle of the Winwæd, 655; Penda defeated and slain by Oswiu, brother and successor in Bernicia of Oswald. Oswiu of Northumbria, the seventh Bretwalda, supreme (655-659) over all Teutonic Britain except Kent, Sussex, and Wessex.			

From the Death of Alaric to the Time of Charlemagne, 410-768 A. D.

A. D.	DISCOVERIES, ARTS, CRAFTS.	PERSIA.	Mohammed and the Caliphate.	EASTERN EMPIRE.	TEUTONIC TRIBES.		
					Britons.	Franks.	Lombard
600	Organs introduced into churches, 660.	Persian army of 120,000 levied.	Muawwiyah proclaimed himself caliph in Syria.		Revolt of Mercia under Wulfhere, 659.		
		Battle of Cadesia, 636; Persians defeated by Sa'ad Ibn Abi Wakas; royal standard (Durufsh-kawani) lost.		Constantine IV., emperor, 668-685.	Kings of Northumbria henceforth sovereigns of local power only.		
	I-tsing, of China, travels through Java, Sumatra, India, 671-695.	Mesopotamia invaded by Sa'ad, 637.	Civil wars.	Sixth General Council of the Church at Constantinople, 680.	Rivalry between Rome and the Irish missionaries. Oswiu convened a council which decided in favor of Rome.		
	Bæda, 672?-735; "Historia ecclesiastica gentis Anglorum."	Ctesiphon captured.	Ali murdered.	Justinian II., emperor, 685-711.	The English church organized by Theodore of Tarsus, archbishop of Canterbury, 669.		
	French glass-makers installed at Wearmouth, England, by St. Benedict, 675.	Battle of Jalula; Persians defeated.	Sooneite or Sunnite Ommiads obtained caliphate, 661-750.	Justinian II., banished (695), and restored, 704.	Ine, king of Wessex, 688-726. Kent subjugated, 694.		
	Greek glass workmen called to France, 677.	Susiana and Persia proper invaded by Arabs, 639; Hormuzan, Persian general, captured.	Muawwiyah I., great-grandson of Omeyyah, 661-680.	First doge of Venice elected, 697.			
	Cædmon, ?-680.	Sa'ad recalled.					
	French glaziers at work in York, England, 699.	Persian army of 150,000 raised.					
	Byzantine mosaics and marble used in churches.	Battle of Nehavend, 641. Fall of Sassanid power.	Residence of the caliphs transferred from Medina to Damascus.				
		Persia hereafter governed by the caliphs.					
		Isdigerd III. a fugitive for ten years; murdered, 651.	Caliphate made hereditary.				
700		Conquest of Byzantine Africa as far as Atlantic ocean completed by the governor Musa about 700.		Philippicus Bardanes, emperor, 711-713.	Wars with the Cymry of Cornwall, 710.	Eudes, duke of Aquitaine, asks aid of Charles, son of Pipin, against Arab invaders.	Grimoal duke of Be eventur seizes t throne a complet conversion the Long bards.
	Embalming among the Egyptians probably ceased about 700.	Islam accepted by the Berbers, who, with the inhabitants of Greek Punic, and Roman descent, became amalgamated with the Arabians under the name of Moors. Moors in Spain, 711-1492.		Leo the Isaurian, 717-741. Worship of images prohibited.	Laws of Ine, the oldest West Saxon code.	Arabs defeated near Tours by Charles Martel (major domus 714-741), 732.	Liutpra (712-74 raised th Lombards highest pr perity.
		Battle of Xeres de la Frontera on the plains of the Guadalquivir, 711; kingdom of the West Goths (Spain) destroyed by Tarik, a general of Musa.		Contest over images, 726-842.	Ine abdicated, 726.	Pipin the Short (752-768), son of Charles Martel, raised upon the shield at Soissons, as king of the Franks.	Aistulf (7 756); effort conque Rome feated Pipin, king the Fran who co pletes the tinction the ex chate Ravenna.
		Province of the caliphate in Spain.		Separation of Greek and Latin Churches, 729.	Boniface (Winfrith), apostle of the Germans.	Poperecognized as head of the church by the Concilium Germanicum, 742.	Pipin, short, vades It and restra the Lo bards, 7 755.
	First mention made in history of the navy of Franks, 728.	Country of the Basques penetrated and Gaul invaded.			Willibrod, missionary to the Frisians.	Childeric III., last Merovingian king, deposed and placed in a monastery, 751.	Charlemag sends his w back to h father, Ki Desideriu 756-774.
		Battle between Tours and Poitiers, 732; Arabians defeated by Charles Martel.		Last confirmation of a Papal election by the emperor of the East, 731.	Cuthbert, bishop of Lindisfarne; Wilfrith, of York.	Pipin and his sons Charles and Karlmann are anointed as kings of the Franks by Pope Stephen III., 752; Carolingians in France, 752-986.	Charlemag invades It and ove throws Lo bardy, 774.
		Greatest extent of the caliphate under the last of the Ommiads, including southwestern Asia, northern coast of Africa, part of the Spanish peninsula, Narbona in southern France, Corsica, Sardinia, the Balearic Isles.			Benedict Biscop, abbot of Wearmouth.		
					Æthelbald of Mercia supreme (733-752) over all England south of the Humber.		
					Battle of Burford (Oxfordshire), 752; the West Saxon Cuthred victorious over Æthelbald of Mercia.		
	First public pharmacy erected by Al-Mansur, the Arabian, 745.	Constant wars with followers of Ali.		Constantine V., emperor, 741-775.	Teutonic Britain divided into three great kingdoms, Mercia, Northumbria, Wessex.		
		The Abbassides, 749-1258. Residence, Bagdad.			Strathclyde conquered for Northumbria by Eadbehrt, 756.		
		Merwan II., last Ommiad caliph, overthrown (750) by Abul Abbas, great grandson of an uncle of the prophet.			Offa, king of Mercia, 757-794.		
	A clock is said to have been sent by Pope Paul I. to Pipin, king of Franks, about 760.	All the Ommiad princes (90) murdered except one, Abd-er-Rahman, who fled to Spain and founded there (756) the caliphate of Cordova.					
	Astronomy and geography cultivated by the Arabs, 760.	Most brilliant period of Moorish civilization, 756-1031.					

From the Time of Charlemagne to the Death of Hildebrand, 768-1085 A. D.

A. D.	Discoveries, Arts, Crafts.	Franks Under Carolingians.	England.	Eastern Empire.	Caliphate.	Other Countries.
768	In the eighth century the progress in discoveries, arts, and crafts was very slight, especially during the last half of the period. The Byzantine and Basilical styles of architecture which rose in the sixth century, the one in the East and the other in the West, continued to flourish side by side, the Byzantine style undergoing some minor changes in its development. In sculpture, painting, science, and invention, the century is practically a blank.	Charles the Great (Charlemagne), 768-814; sole ruler after the death of his brother Karlmann, 771. War with the Saxons, 772-804. Eresburg captured, Irminsul destroyed, 772. Sons of Karlmann fled to Desiderius, king of the Longobards, who, upon refusal of the Pope to crown them, occupied the Pentapolis and threatened Rome. Pavia captured. Desiderius placed in a monastery. Charlemagne king of Italy (i. e., the kingdom of the Longobards, northern and central Italy), 774. Sigiburg captured, 775. Saxons west of the Elbe conquered. Eresburg destroyed by the Saxons, who were resubjugated, 776-777. First May-field (assembly) in the Saxon land at Paderborn. Wars with Spain, 778. Saragossa subdued. Frankish rear-guard defeated upon return by Roncevaux, or Roncesvalles. Death of Roland, margrave of the Breton coast. Fresh outbreak of the Saxons upon news of Charlemagne's defeat in the Pyrenees, 778; put down by an army of Alamanni and East Franks. Battle of Bocholt on the Aa, 779; Charlemagne victorious. Saxons subdued, 780; accept Christianity. General revolt of the Saxons under Widukind or Wittekind. Frankish army defeated. Slaughter of 4,500 Saxons on the Aller, 782; result, a formidable uprising, 783. Charlemagne successful at Detmold and on the Hase. Surrender (785) of Wittekind, who became a Christian. First landing of Danes, 787. Second revolt of the duke Tassilo; result, duchy of the Bajuvariæ (Bavarians) disestablished, 788. Wars with the Slavs and the Northmen. Wiltzi defeated by Charlemagne, who proceeded to the Peene, 789. War with the Avars, 791-799. Uprisings among Saxons in the North, who took refuge with the Danes. War with the Danes, 793-804. Frankish march invaded by Gottfried, king of Denmark. Coasts of the German Ocean harassed by Danes. King's Ring, principal camp of the Avars, stormed, 796.	Mercia: Oxfordshire won from Wessex, 777 (?); Welsh kingdom of Powys conquered; Offa's dyke from mouth of the Dee to that of the Wye; laws of Offa. First recorded landing of the Northmen in Britain on coast of Devonshire, 787; invasion, 789-866.	Boundaries extended both in Asia and Europe; administration reformed; commerce encouraged; and colonies planted by Constantine V., 741-775. Monasteries dissolved, 770. Leo IV., son of Constantine, emperor, 775-779. Constantine, son of Leo, emperor (779-797), with Irene, his mother, as regent. Irene has her son blinded and deposed, 780, and reigns until 803. The accession of a woman a pretext for transferring the crown from the Eastern Empire to the Western.	Abd-er-Rahman I. (756-788) receives the caliphate of Cordova in Spain from the Arab chiefs. Saracens expelled from Southern Gaul, 759. Caliphate in Spain divided into six provinces. Residence of Abbasside caliphs transferred from Damascus to Bagdad, 750. Al-Mahdi, caliph at Bagdad, 775-785. Spanish march established by revolting Christians, after 778. Al-Hadi, caliph at Bagdad, 785-786. Harun-al-Rashid, caliph at Bagdad, 786-809. Bagdad the center of learning and civilization. The height of power and splendor of the eastern caliphate. Hisham I., ruler of caliphate at Cordova, 788-796. Al-Hakem I., ruler of caliphate at Cordova, 796-812.	Military feudalism in Japan. Persia becomes the center of Abbas side rule after 750. Arabia loses the pre-eminence which Mohammed had given it and yields to Persian greatness. Many principalities enjoying complete independence arise in Arabia Inroads of the Tatars in China almost incessant from 763 to 780. Mohammedan invasion of India. Capital of the Japanese empire, the home of the mikado and the kuge, permanently fixed at Kyoto, near Lake Biwa, 794
	Cynewulf, early English author, writes two short poems. Christianity introduced into Saxony by Charlemagne, 785. Learning encouraged by Charlemagne, who founded schools, monasteries, and cathedrals, 790. Irish monks visit Iceland, 795.					

From the Time of Charlemagne to the Death of Hildebrand, 768-1085 A. D.

A. D.	Discoveries, Arts, Crafts.	Franks Under Carolingians.	England.	Other Countries.
768		Frankish empire annexed the country between the Raab and the Ems, 796. Kingdom of the Avars soon destroyed. Pope Leo III., driven from Rome (799) by relatives of his predecessor, went to Charlemagne's camp at Paderborn; re-established in Rome by Charlemagne.		Western Africa or Mauretania separated from Egypt and formed into a Mohammedan kingdom by Idris, 789.
800	Couriers instituted by Charlemagne, 800. Canonization instituted by Pope Leo III., 800. St. Mark's at Venice begun, 800.	Office of Emperor of the West revived by Charlemagne, who was crowned emperor by Leo III., on Christmas Day, 800. Ludwig, son of Charlemagne, strengthened the Spanish march, 801. Charles, eldest son of Charlemagne, repulsed the Danes, who retreated beyond the Eider, 808. Charlemagne conducted in person war against Gottfried, king of Denmark, 810. Gottfried murdered by his own servants. Peace with the Danes. Saxony north of the Elbe retained by the Frankish kingdom. Wends conquered. Charlemagne's residences were Aachen (Aix-la-Chapelle), in Austrasia, Ingelheim, and Nymwegen. Imperial rescripts (capitularii). Men of all rank, both laymen and churchmen, members of the assemblies. Alcuin a resident at the court of Charlemagne.	Ecgberht, king of Wessex, 802-837; Cornwall made tributary; Beornwulf of Mercia defeated at battle of Ellandune, 825; Essex and all England south of the Thames subjugated. Ecgberht overlord of Northumbria and Mercia, 828; submission of Wales, 828. All England south of the Forth, except, possibly, Strathclyde, united under Ecgberht.	Barcelona taken from the Moors by the Franks, 801. Nicephorus I., Eastern emperor (802-811), tributary to Harun-al-Rashid. Bulgarians invade the Eastern Empire and slay Nicephorus I., 811. Leo V., the Armenian, Eastern emperor (813-820), defeats the Bulgarians. Michael, the Amorian, Eastern emperor (820-829), loses Crete to the Saracens. Beginning of the Moslem conquest of Sicily, 827. Theophilus, Eastern emperor (829-842), in constant war with the Caliphs. Mohammedans conquer Messina in Sicily, 833. Netherlands invaded and Utrecht sacked by the Northmen, 835. Antwerp burned and Flanders sacked by the Northmen, 836.
	The emperor Charlemagne establishes postal service, 807.	Counts of the border districts; governors of counties; imperial messengers, who periodically visited different parts of the empire to hear complaints, which they reported, with suggestions and observations, to the emperor.		Northmen make their first expedition up the Rhine, 837. Asia Minor invaded by the Caliph Motassem, 838. Amorian War, 838.
	Clergy large owners of land, and dominant in state affairs.	Ludwig the Pious (Louis le Débonnaire), son of Charlemagne, 814-840. Bernhard, nephew of Ludwig, king of Italy under supremacy of Ludwig, revolted, was captured and slain. Empire divided among sons of Ludwig, 817; Lothar given the imperial crown and the greater portion of the empire; Pipin, Aquitania; Ludwig, Bavaria. New division of the empire (829) giving Karl, youngest son of Ludwig, the royal title and Alamannia. Rebellion of three elder sons of Ludwig; civil war. Ludwig the Pious deserted by his troops on the Field of Lies, near Colmar, Alsace, 833; captured (public penance in the church at Soissons); soon liberated by his son Ludwig, and established upon the throne, 834. Death of Pipin, 838; his part of the empire divided between Charles and Lothar, at which Ludwig rebelled. Death of Ludwig the Pious, 840.		Woo-tsung, emperor of China (841-847); temples destroyed, nunneries and monasteries closed; all foreign priests banished. Northmen sail up the Seine and sack Rouen, 842. Theodora, empress of the East, 842. Michael III., Eastern emperor, 842-867. Ludwig, the German, 843-876. Wars with the Slavs, Charles the Bald, and Northmen. Simultaneous attack by Northmen upon all three Frankish kingdoms.
	Romualdus, French architect, flourishes, 830. He built the cathedral at Rheims.		England under West Saxon kings, 828-1066. Sheppey devastated by the Northmen, 834. Ecgberht repulsed by the Danes, 834. Battle of Hengestesdun, 836; Ecgberht victorious over Danes and Welsh. Death of Ecgberht, 837. Æthelwulf, son of Ecgberht, 837-858. Picts and Scots united, 843. Kenneth II., Scotland.	Dublin taken by the Northmen under Olauf, 852. Eastern or Byzantine Empire ruled by the Macedonian line (867-1057). Magyars, Bulgarians, and Arabs attack the empire. Jarls or Vikings defeated at Hafurstfjord, 872. Rolf Ganger in Neustria, 876. Charles the Fat, son of Ludwig, 876-887; emperor, 881; king of the West Franks, 884; united again the monarchy of Charlemagne, except Burgundy; deposed by East and West Franks; abdicated, 887. Syracuse captured by the Saracens, 878
	Catechisms said to have been compiled in the ninth century, perhaps as early as 835. Arabian literature at its height, 840.			

From the Time of Charlemagne to the Death of Hildebrand, 768-1085 A. D.

A. D.	Discoveries, Arts, Crafts.	Franks Under Carolingians.	England.	Other Countries.	Caliphate.	Scandinavia.
800	Norsemen explore Faroe Islands and round the North Cape of Europe, 860. Naddod, Norseman, discovers Iceland, 861. Coast of Greenland explored by Gunnbjörn, a Norseman, 870. Drunkenness made an offense punishable by death by Constantine, king of Scots, 870.	Battle of Fontanetum (Fontenay or Fontenaille), 841; Lothar defeated by Ludwig and Charles. Bi-lingual oath of Strassburg, 842. Treaty of Verdun, 843; imperial dignity retained by Lothar, who received the central Frankish lands (bounded by the Alps and Rhine in the east, the Rhône, Saône, Meuse, Scheldt in the west, and Frankish Italy); Ludwig the German given eastern part of the Frankish lands (between the Elbe and the Rhine), from which in time the German nationality developed; Charles the Bald given western part of Frankish lands, from which the French nationality gradually developed. FRANCE AND SPAIN. Carolingian kings of the Franks, 843-987. Charles the Bald, 843-877. Jura, Meuse, Ourthe, French-German boundary. Normans in France, 860-932. Fiefs made hereditary, 877. Ludwig the Stammerer (Louis II., le Bègue), 877-879. Ludwig III. (Louis III.), in northern France, 879-882. Karlmann (879-882) in Aquitaine. Rebellion of Boso, duke of cisjurane Burgundy, 879. Ludwig victorious (881) over Northmen at Saucourt (Ludwigslied). Ravages of Northmen increase. Karlmann ruler of entire kingdom, 882-884. Charles the Fat of Germany (884-887) chosen king by the nobles; whole empire united. Deposed.	London and Canterbury captured by Danes, 851. Danes winter in Sheppey for the first time, 855. Æthelbald, son of Æthelwulf, 858-860. Æthelberht, brother of Æthelbald, 860-866. Æthelred I., brother of Æthelberht, 866-871. Northmen invade and conquer different parts of the country, 866-1003; settlement in Northumbria. Danes in East Anglia, 866; in Mercia, 868; conquer and settle East Anglia, 870. St. Edmund, king of the East Angles, a martyr. Croyland and Peterborough sacked. Danes in Wessex, 871. Nine battles with the Danes (871), who were defeated at Æscendun by Æthelred and his brother Ælfred. Ælfred the Great, 871-901. Guthorm, Danish king in East Anglia, entered Wessex, 876. Danes settled in Northumbria, 876. Lands in Mercia divided among the Danes, 877. Wessex ravaged by Danes, 878; defeated at Ethandun. 2 Battle of Lexington, The Minute Men.
3 Signing the Declaration of Independence (from painting by Trumbull).

Events in America in the Twentieth Century.

D.	Discoveries, Arts, Crafts	United States	Canada	Latin America
9	Textiles made from skim milk, glass and other substances. Progress in synthetic rubber. New lucite transmits electricity without wires. San Francisco-Golden Gate Exposition and New York World's Fair open.	Congress develops opposition. Approves cutting WPA lists, votes to expand defense forces, allows President to reorganize federal agencies, reduces corporation taxes, defeats Townsend plan. Political activity of employees curtailed by Hatch Bill. Refuses to fortify Guam. Budget reduced. Sitdown strike outlawed by Court.	George VI and Queen Elizabeth first monarchs to visit Canada. Continue tour into U. S. Dionne quints taken to Toronto to see the British monarchs. Canada makes agreement to support Great Britain against Germany.	Brazil obtains U. S. loan of 75 millions. New Popular Front government in Chile. Earthquakes kill 20,000 in Chile German Busch dictator in Bolivia. U. S. increases payments to Panama because of dollar devaluation.
0	Several new explosives announced, but hard to control. Further discoveries in chemical elements, especially as to power of uranium.	Myron Taylor ambassador to Vatican. Death of Senator Borah. Roosevelt pleads for peace in Europe. Congress repeals the Neutrality Act. Cash and carry plan adopted. Asst. Sec. of State Wells visits European capitals for President. Five billion voted for defense. U. S. joins Latin Republics in formation of economic cartel. Republicans Stimson and Knox become Sec. of War and Navy respectively. Willkie and McNary nominated by Republicans; Roosevelt and Wallace by Democrats. Aid to Britain becomes more open. 1940 campaign one of most intense in U. S. History. Roosevelt and Wallace elected. Two term tradition broken. Democrats win 38 states. Roosevelt trades 50 destroyers to England for air and naval bases on British land—Newfoundland, Bermuda, St. Lucia, Antigua, Trinidad. Trucks, munitions, tanks sent to Canada. National Registration Act, Sept. 16, 1940, affects all men from 21 to 36. National guard assigned active military duty. Philip Murray succeeds John L. Lewis as leader of the CIO. A. F. of L. says the New Deal has not solved economic problems. U. S. secures an agreement from Mexico to pay for oil wells.	McNaughton's Division to British Isles. Death of Lord Tweedsmuir. Mackenzie King wins election of March 26. Canada becomes air training center of British Empire, with air fields from coast to coast. Earl of Athlone new Governor-General. Canadian industry at full speed, especially in ship building and aircraft manufacturing. Receives tanks, planes from U. S. for training purposes. Agrees with U. S. on wheat production. Quebec gives women vote in province elections. Montreal sets up new form of government. R. B. Havison new opposition leader. All over 16 required to register for military service. Canada floats two large war loans at home. Factory production greatly increased.	Camacho defeats Almazon in Mexican election. Brazil receives loans from U. S. Export-Import Bank for steel plant. Severe earthquake in Peru. British ships drive German *Graf Spee* to port. Crew scuttles it. Uruguay and Argentina have trouble with interned Germans from *Graf Spee*. Brazil supports Chile in dispute with Spain over refugees. Pres. Vargas of Brazil advocates American solidarity; makes trade treaty with Argentina. Coffee Board formed to ration shipments from 14 nations,—50% from Brazil. Ecuador eliminates fifth columnists. Paraguay has new constitution. Uruguay opposes U. S. naval base. Pres. Ortiz of Argentina dies. Conference at Havana in July draws Americas together. Chile torn by party struggles.
1	Alaska unearths ancient town, 2,000 years old. Element thulium found in sun's atmosphere. Mushroom enzyme reduces high blood pressure. New electron microscope magnifies 100,000 times. Anti-rust agent found for light alloys. Influenza vaccine developed. Tannic acid relieves effects of poison ivy. National art gallery opened in Washington.	Lend-Lease Bill passed, giving huge supplies to Democratic nations. Closes certain Italian consulates. Seizes German and Italian ships in ports. Strikes become numerous and serious. Places Greenland within scope of Monroe Doctrine. May 1 extends patrol of American shipping. Radio frequencies adjusted. Supreme Court upholds 1938 wage-hour law. Employment up to 37 millions, but 4 millions still idle. President thinks war in Pacific unlikely. Enrollment drop of 9.1% in 669 U. S. colleges. Our citizens hold 58 billions of tax-exempt securities. Nearly 400,000 bituminous coal miners strike. Canada and U. S. plan to build a St. Lawrence-Great Lakes waterway. Supreme Court annuls California law against migrant workers. U. S. helps stabilize Mexican currency.	Government control of plants ends strikes. Coalition cabinets in Manitoba and British Columbia. Liberals continue in Nova Scotia. Canada provides unemployment insurance. Premier Mackenzie King visits Washington three times. The Duke of Kent and later Prime Minister Churchill visit Canada. Free French seize the islands of St. Pierre and Miquelon off eastern shore, but complications are avoided.	Closer cooperation with U. S. Mexico and U. S. joint air bases. Most countries take over German and Italian ships in ports. Panama has new constitution. Brazil halts yellow fever. Pres. Aguiree of Chile dies; socialists hold power in Congress. Party strife in Colombia abates. U. S. troops protect Surinam for the Netherlands. Argentine President and Congress at odds; radical party holds up actions. Brazil has hottest summer in 26 years. German agents busy in some areas.
2	First cable telephone coast to coast; from Omaha to Sacramento underground. Injection of blood plasma a success. Ultra-violet rays help locate ores in ground. Safe morphine substitute found. New vitamin discoveries, including molecule plan of biotin, valuable B vitamin.	War Labor Board set up. Senate Truman Committee says defense program lags. Liner Normandie, being reconditioned, burns and sinks at N. Y. pier. C. C. C. projects abandoned. Congress passes and then repeals bill to grant members pensions. New lend-lease agreement with Britain postpones payments. Soldiers pay raised to $50. Gasoline rationed in east; in west in November. Procedure code written for $1.00 a year men in Washington. Budget of 56 billion dollars submitted. House votes 209 billion in three years. Sugar ration in June; coffee in November.. Six Nazi saboteurs executed. Anti-inflation bill enacted. Willkie makes round-the-world flight.	Voters approve selective service. Premier King urges economic freedom. Relief ships sent to Greece. Overseas forces doubled in year. Unshackles Nazis in prison camps. Further economic plans made with U. S. Japan shells Vancouver Island telegraph station. Joins with other nations in pool of wheat. Alcan highway opened, Dawson Creek, Canada, to Fairbanks, Alaska, 1671 miles.	Brazil breaks with Axis after protesting loss of her ships. At last 21 American nations unite for common defense. Chile declares neutrality. Russia sends envoy to Mexico. Latter agrees to shelter 5,000 Poles. U. S. agrees to take Brazilian rubber; sends workers there. Uruguay adjourns Congress and the elections. Costa Rica continues work on the inter-American highway. Cuba executes a Nazi spy.
3		Vice-president Wallace visits South America. Ruml tax plan under discussion. Continued expansion of all services. Broadening of all rationing. Coal strike threatened. U. S. 2nd Army takes Bizerte.	Canadian navy being enlarged.	Chile breaks with Axis. Argentina remains neutral. Brazil aids in submarine campaign Roosevelt visits Camacho at Monterey.

DICTATORSHIP

Dictatorship, like Democracy, is no new way of governing men. Nor has the word always carried the meaning we now associate with it. "Good tyrant" was once not necessarily a contradiction in terms. In Aristotle's analysis, "Monarchy" is the rule of one man who governs in the interest of all. "Tyranny" is the perversion of this rule, he said. But today any one-man government inevitably is considered tyrannical.

In ancient times the Dictator was a recognized official legally appointed to rule during a crisis. From the sixth to the third century B. C. Roman dictatorship served at irregular intervals as emergency in domestic and foreign affairs required. All such dictatorships, continuing for a stated legal term, were ordinarily short lived. The dictators themselves were not irresponsible except within the terms of the appointment. The rule of dictators at Sicyon from 676 to 560 B. C. was more prolonged than in any other Greek state, while the Roman dictatorships of Sulla and Caesar are, for length of tenure, in a class by themselves. Sulla came into office with a mandate to reconstitute the commonwealth. His tenure was unlimited, his power absolute. No dictatorship, before or since, has quite matched the terrible use he made of his power. Under his regime nearly 5000 persons were massacred in cold blood. Caesar, on the other hand, of all dictators, old or new, was perhaps the most powerful, the most tolerant and the most merciful. Proclaimed dictator in 49 B. C. by the Roman populace, he had served only eleven days when he laid down his office for that of Consul. He was renominated dictator more than once, eventually for life, but he seemed never to have forgotten that the source of his power was in the people.

In our readiness to denounce present-day abuses, we tend to overlook the fact that dictatorships have been a stage, an essential device, in the development of nations. States, like individuals, do not emerge full-grown. Thus the history of fifteenth century England, more specifically the so-called War of the Roses, is the story of a nation "not yet ready for the efficient use of the liberties it had won." And yet, as a nation-state, England was already centuries old. Also, precocious England, though far ahead of any other European nation in national unity, in political and personal liberty, reverted from time to time to dictatorship. All constitutional limitations on the exercise of their dictatorial power were persistently violated. However, after the defeat of the Spanish Armada, Parliament successfully reasserted claim to power never altogether abandoned or ignored.

The essence of dictatorship, old style, is that it must not be prolonged beyond the period of the emergency which called it into being. The Stuart kings, among others, floundered on this rock. For, unlike their Tudor predecessors, they never understood the conditions on which absolute power had been conferred. James II, unlike Charles II, learned nothing from the intervening Cromwellian regime. A second reaction toward dictatorship was followed by a second revolution—that of 1688—which sealed indefinitely the fate of monarchial dictatorship in England. The history of France exhibits even more strikingly this fluctuation between constitutional and dictatorial rule, foreshadowing in the person of Napoleon the masterful strategy of present-day dictators.

Herein one may note an important distinction between dictatorship and despotism, between dictatorships of old and dictatorships today: the one served rather to train the people for self-government, while the other obviously seems designed to ensure the continuance of arbitrary rule.

England's long apprenticeship in self-government, her centuries of struggle to achieve national unity, her periodic reversions to dictatorship, should hearten those who fear that all mankind is now in danger of coming under the yoke of modern dictators. It should be recalled that as nation-states Italy and Germany are about seventy-five years old, while Turkey and Russia have hardly reached the age of a voter. These facts, quite apart from specific situations and causes, may explain, in part at least, the surge toward dictatorship which first manifested itself, October 1917, in Russia. After a brief flirtation with constitutionalism, the government fell into the hands of a revolutionary oligarchy and the limited freedom of the Czarist regime gave way to communist dictatorship. Only slowly did men enamored of the 18th-19th century democratic ideal realize that an important political experiment was in progress—a new kind of democracy Stalin proclaimed in announcing his Constitution of 1936—"dictatorship of the proletariat."

The year 1922 witnessed seizure of absolute power in Italy and our generation saw the emergence of dictatorship bearing the fancy label "Fascism." Again those regarding popular government as pre-destined were incredulous. They could not accept the view that any form of dictatorial rule expressly repudiating democracy and individual liberty could long endure. By 1933, however, both Stalin and Mussolini became thoroughly established and in that year the latter published his political and social doctrine—a dictatorial creed as challenging as Marxian communism. In 1933 also Adolf Hitler took over the government of Germany on the invitation of President von Hindenberg himself.

Meanwhile, dictatorships had arisen in Spain, Turkey, Poland, Japan and elsewhere. As these were chiefly military in character, they were not infrequently explained on the score of political immaturity, or as reflecting conditions of instability present in those countries. But Marxian communism as applied in Russia. National Socialism in Germany, Fascism in Italy could not be so easily explained away. All these new political creeds not only denied individual freedom, repudiated democracy, but made a virtue of doing so.

Contemporary dictatorships, especially Fascism, have been regarded as political by-products of the first world war, as something peculiar to the psychology of the country over which they have triumphed. Such explanations appear increasingly superficial. Post-war conditions did, however, undoubtedly aid Fascist success, viz: Acute economic crises, especially among ex-soldiers and wage earners; a stunned and embittered nationalistic humiliation; paralysis of parliamentarianism, inability of existing governments either to formulate or to execute a policy. The weakness of post-war democracies is measured by the fact that both Mussolini and Hitler were helped to accomplish revolution and dictatorship by the very democratic institutions they destroyed.

In general, modern dictatorships are characterized by the fact that they are designed and are proclaimed to be not merely temporary contrivances, serving to tide over an emergency. Offering as they do a well rounded, complete scheme of life, they are intended to endure into the incalculable future and their peoples are taught to accept this. Totalitarianism is the watch-word: "Everything within the state, nothing outside the state, nothing against the state." All things, human and material, are embraced within the political, subordinated to or controlled by the state,—industry, labor, agriculture, radio, sports, theatre, school and home. Whatever the theoretical differences between various dictatorial brands—Fascism, National Socialism, Communism, etc.—all are totalitarian in practice. That is, they all institute rule by one party to the exclusion of all others. Far from being one among many factional groupings, seeking office and power, the party is declared by law to be the government, the state. Towering above all, "to see, to oversee, and foresee everything" is the leader, Il Duce —der Fuehrer.

There are, of course, certain advantages under dictatorial rule as practiced today, where everyone takes orders from above, where public opinion is not permitted, where even the expenditure of the people's money—as in Germany—is a state secret. Under dictatorship, a nation's life can be and is planned, ordered at will; the people's standard of living can be and is lowered to meet the requirements of military aggression, and nobody may protest. Those who do so run the risk of being purged or locked up without warrant of arrest or trial.

Diplomacy and armament likewise move unhindered when they do not have to meet the requirements of democracy. No treaty, no principle of international law or morality sets a barrier against the dictator's will. He can turn his country into munitions factories without regard for the rights either of capital or of labor. Even in time of so-called peace (which for Mussolini is but "a pause between two wars") strikes and lock-outs are not to be tolerated.

Present-day dictatorships, like those of old, are born of crises. They can endure only as they are driven along by the dynamic, revolutionary spirit that produced them. But unlike their ancient prototypes, they cannot turn back or stand still or come at last to peace and stability. To exist for any period they must at all times keep the public mind stirred with the hope of a greater country, greater power, or some particular benefits for the people they dominate. In short, they must forever agitate, conspire, wage war.

DICTIONARY OF HISTORY

A. B. C. POWERS. Name given to Argentina, Brazil, and Chile in 1914 when President Wilson called upon them to arbitrate certain differences between the United States and Mexico. Representatives of these three countries met at Niagara Falls, Canada, but no tangible results followed, except that the nations themselves agreed on a treaty of arbitration for their own disputes. Already Brazil and Chile had signed treaties in 1899, Argentina and Chile in 1902, and Brazil and Chile in 1905. By 1909 the A. B. C. Powers were recognized as having common interests in maintaining the stability of South America.

ABDICATIONS, IMPORTANT.

Sulla, Roman dictator, voluntary	B. C. 79
Diocletian and Maximian, Roman emperors	305
Stephen II, of Hungary, became a monk	1131
Richard II, of England, forced to abdicate	1399
Charles V, of Spain, in favor of his son	1556
Mary, Queen of Scots, forced	1567
Charles I, of England, deposed by Commonwealth	1649
Christina, of Sweden, for life of study	1654
John Casimir, of Poland, became a monk	1668
James II, of England, fled from country	1688
Poniatowski, of Poland, forced by other nations	1795
Francis II, of Holy Roman Empire, resigned title	1806
Charles IV, of Spain, succeeded by his son	1808
Gustavus IV, of Sweden, forced	1809
Louis Buonaparte, of Holland	1810
Victor Emmanual I, of Sardinia	1821
Pedro IV, of Portugal, went to Brazil	1826
Charles X, of France	1830
Pedro I, of Brazil (IV of Portugal)	1831
William I, of Holland, in favor of his son	1840
Louis Philippe, of France, compelled	1848
Ferdinand, of Austria, by revolution	1848
Isabella II, of Spain	1868
Napoleon III, of France	1870
Alexander of Bulgaria	1886
Milan I, of Serbia, after quarrel with queen	1889
Pedro II, of Brazil, forced	1889
Abdul Hamid II, of Turkey, forced	1909
Emperor of Korea, deposed by Japan	1910
Manoel II, of Portugal, dethroned	1910
Nicholas II, of Russia	1917
William II, of Germany	1918
Ferdinand I, of Bulgaria	1918
Charles I, of Austria-Hungary	1918
Constantine, of Greece	1922
George II, of Greece	1923
(restored by plebiscite)	1935
Hussein, of the Hedjaz	1924
Prajodipok, of Siam	1935
Haile Selassie, of Ethiopia	1936
Edward VIII, of Great Britain	1936

ABOLITIONISTS. As early as 1700 the Quakers of Pennsylvania sought to exclude from their membership all who held slaves. In 1815 Benjamin Lundy, a Quaker, formed the first anti-slavery society in the United States, and in 1819 began the first abolitionist newspaper. In 1824 he was joined at Baltimore by William Lloyd Garrison of Bennington, Vermont; and in 1829 Garrison began to advocate immediate emancipation of all slaves. Lundy favored more gradual measures. Garrison, therefore, set up his *Liberator* at Boston, Jan. 1, 1831, the official organ of the movement until 1865. Societies against slavery multiplied rapidly from this time. In 1840, however, another division of opinion occurred. One group led by Garrison believed in moral and voluntary agitation, not in state and political action: the other group insisted upon political measures at once. Garrison for years was the leader of the moderate or conservative abolitionists. Wendell Phillips, the orator of the movement, spoke with calm but with deadly conviction. Samuel May led the Unitarians. Lucretia Mott organized many women's societies against slavery. Gerritt Smith led in assisting slaves to escape from servitude to Canada, or into friendly free territory in the North.

ABSENTEEISM. See Ireland, Land Question in.

ABUKIR. See Battle of the Nile.

ACADEMIES. Today every modern nation has its academy of science, literature, or political affairs. Such a body is made up of various scholars and specialists in different fields of knowledge or investigation. Some academies have been considered as the final arbiters in matters of taste, culture, or even of fact. Perhaps the most influential of all learned societies is the French Academy, which has at times dictated customs in writing and manners, and even the grammar and spelling of the French. It was founded in 1630, and, with five other academies, makes up the Institute of France. The Royal Society of Great Britain, dating from 1616, has had a powerful influence on the development of science and invention. Likewise, the Prussian Academy, founded in 1700, has done much to foster culture, science, art, and learning among the Germans. Some societies that foster arts have been the Milan Academy of Architecture, founded about 1380; the British Royal Academy of Arts, 1768; and the celebrated Madrid Academy founded by Philip V. The chief societies of this nature in the United States are the American Academy of Arts and Letters, a union of several groups in 1904; the American Institute of Architects, founded in 1857; and the American Academy of Philadelphia, the influence of which on scholarship and investigation has been widespread.

ACADIA. Name given by early settlers to part of Nova Scotia, which became known later as the home of French colonists who refused to adopt English ways, or submit to the government. Henry IV, in his charter to Samuel Champlain to explore the region of the St. Lawrence basin, intended that the French should claim everything down the river into the lands beyond, the later maritime provinces of "lower" Canada and Nova Scotia. All this territory was the battle ground for many years between England and France. The Acadian people went to one or the other, as victory should determine. When the British finally won this territory, they gave the Acadians in 1755 their choice of whether they would become English subjects and retain their land, or, refusing to become loyal, they should be sent to some other districts. Refusing to do either, the stubborn Acadians were at last distributed among other English colonies, some of the 3,000 being sent as far south as Georgia and Louisiana, though most were settled in the middle Atlantic states. Longfellow's *Evangeline*, though not historically correct in some ways, traces the wanderings of these Acadians. In some of his Louisiana stories, G. W. Cable writes of the Acadians in their new Louisiana homes.

ACHAEANS. Inhabitants of several cities in the northeast of the Peloponnese, said to be allied to the Dorians and Ionians, and possibly other early tribes of Greece. The Achaeans come into history about 1300 B. C. Recent excavations, notably in 1922, show that they belong to a culture much older than the Grecian. From a Hittite text lately deciphered, we learn that they were prominent in Asia Minor, and other parts of the Near East, in the 16th century before our era. Before the death of Alexander the Great, the cities of Achaia had a powerful league. This was broken up about 300 B. C., formed again sixty years later in the struggle against the power of Macedon, but again broken up by the Roman legions in 158 B. C., who carried off to Rome as hostages a thousand of the Achaeans. The Achaeans again revolted, but were finally brought under the yoke in 146 B. C. This powerful alliance of northern cities of Greece often threatened the supremacy of Athens and Sparta in the Hellenic Peninsula.

ACROPOLIS. Many ancient towns of Greece and Asia Minor had a citadel on their summits, and this was called the acropolis, meaning in Greek a "high place." The Acropolis at Athens was the glory of ancient Greece and the despair of modern artists who would imitate the best in the buildings of the world. Today on the Acropolis stands, even in its ruined splendor, the Parthenon, greatest of the works of the classic age of Phidias, the Greek sculptor, and called by many the noblest building known to man. Some of the other great architectural triumphs of the ancient Acropolis were the many statues and temples, now most of them entirely gone or badly battered by the rough hands of time, the great open-air theatre

of Dionysus, and a statue of Athena some 30 feet tall. The Acropolis suffered in the middle ages from military operations. As late as 1687 an explosion of gunpowder in the Parthenon caused great havoc in the walls. Since the Turks were driven out in 1835, the Greeks have done much to preserve and restore the ancient citadel and its artistic monuments.

ACTIUM. Off the promontory and town known as Actium, western Greece, Octavian (who later became the emperor Augustus) defeated a force of Antonius, known to modern times as Mark Antony, on Sept. 2, 31 B. C. Octavian had about 100,000 men and Antony 80,000, and each side had 12,000 cavalry. Antony had about 220 large and well-fitted ships, while Octavian collected 260 smaller, but much more agile craft. Cleopatra of Egypt had allied herself with Antony, furnishing about 96 ships for his navy. She is said to have persuaded him to risk the final issue by a naval, rather than a land battle. During the fight, she became alarmed, fled toward Egypt with her own ships, and Antony followed her. Thus Octavian, as an outcome of this campaign, became master of the Roman world. See *Mark Antony* in Biography.

ADMIRALTY COURTS. By 1360 in England the deputy of an admiral often tried cases arising out of piracy, prizes at sea, or other maritime affairs. Conflict arose with civil courts on matters of jurisdiction. In 1540 laws governing delays in sailing were set up; in 1834 the punishment for crimes at sea were determined; and, in 1840 and 1841, the scope of the courts was enlarged. Practice in admiralty courts was quite distinct from cases arising on land. At last in 1875 admiralty courts were combined with others in the new British High Court of Justice. Prior to 1925, such cases in the United States were handled by the Supreme Court, and afterward in appropriate district courts.

AEDILES. These Roman officials were first chosen in 494 B. C. For over 100 years they were taken from the ranks of the plebeians. Later patricians were allowed to serve, and in 44 B. C. Julius Caesar appointed two such in addition to supervise the corn supply. The main functions of the aediles were to see that the city was well kept; that provisions were plentiful and of good quality; and that the public games were properly conducted.

AFGHANISTAN. This turbulent district in central Asia has enjoyed something like independence since 1709, after being for generations a part of Persia or of the great Mogul empire at Delhi. After Nadir Shah died in 1747, Ahmed Shah Durani conquered the various provinces and in 1861 defeated the supposed invincible Mahrattas of west and central India. His son Timur, after ruling 30 years, left 30 sons and no end of trouble for the Afghans. A British army from India entered Kabul in 1839, but in 1841 the British garrison was besieged there for 41 days, and only one man escaped alive of the 16,000 who set out on the long trek to India. Another British force returned the next year and severely punished the Afghans, leaving them again in internal disorder and intrigue. During the next 40 years Great Britain and Russia agreed on the boundaries between their territory and Afghanistan. The king or emeer of that country smoothed these in 1880. Habibullah Khan, who reigned from 1901 to 1919, favored foreign influences; his successor was deposed in 1929 for following European customs. His brother died after ruling only three days, and a brigand assumed the throne, but Nadir Khan, uncle of the deposed emeer, killed the usurper in Oct. 1929. Nadir Khan himself was killed in 1933, and his son succeeded to the throne.

AFRICAN COLONIES. Excepting Liberia and one or two other small native districts, all of Africa in 1900 was dominated by white races after the fall of the government of Ethiopia. Great Britain and France control almost equal parts, with Italy, Spain, Belgium, and Portugal coming next in order as to size of holdings. Egypt, though nominally independent, is under protection of Great Britain. All this partitioning of Africa has come since 1844 when the Berlin Conference recognized Belgium as dominant in the Congo Free State. In 1890 Great Britain, France, and Portugal agreed as to their spheres of influence in Africa, except for Morocco, the Nile valley, and a few other portions. By 1914 France was admitted as dominant in Morocco, and England in the upper Nile valley. After the Boer War in South Africa, Orange Free State and the Transvaal fell to England; Tripoli to the French; and Congo Free State to Belgium. Settlements following the World War gave France mandates over the Kamerun and Togoland; both parts of the former German colonies to Great Britain, with a portion to Belgium and Portugal. Among the native populations, the sentiment for independence grew after 1910, and in 1919, 1921, and 1923, large groups of Negroes met in conferences to discuss the return of more advantages in Africa to the native peoples.

AFRICAN EXPLORATIONS. Today Africa is still the least known of the continents; until 1770 it was literally the "dark continent" to modern nations. Earliest exploration known was by members of the Theban kingdom in the 11th dynasty, about 2100 B. C. Islam gained great favor in north Africa before 800, and nomads came in the 11th century. Save for two or three brief colonies on the coasts, little was done to explore Africa until Vasco de Gama circled the Cape of Good Hope in 1498. James Bruce found the Abai sources of the Nile in 1770 and visited Ethiopia, and men like Lucas Lander and Houghton followed him before the time of Dr. Heinrich Barth, a German under English command, who did remarkable exploring after 1845. Meanwhile David Livingstone had penetrated from Bechuanaland to Lake Ngami in 1841–49; to the Zambesi in 1851; to Lake Nyassa by 1864; and to Bangweolo in 1866. At Luabala Cataract, in 1871 he was rescued by Sir Henry M. Stanley, but he returned and died at Bangweolo in 1873. Stanley himself made several discoveries, as did Burton and Speke in Somaliland. Sweinfurth of Russia in the valley of the White Nile and the Belgians in the Congo after 1876. Stanley, searching for remains of the expedition of "Chinese" Gordon, in 1889 discovered the pygmy race in the Congo. Grogan and Sharp first crossed Africa from south to north in 1899. Since then explorations have been numerous and fruitful.

AFRIKANDER BUND. See *Jameson's Raid*.

AGINCOURT. Here at a small village known today as Azincourt—in northern France, Henry V of England was opposed by a French army of 50,000. The English ranks had been cut down by privations and much disease, while Henry was trying to reach the coast to get back home. The battle began in Oct. 25, 1413 with an attack by the British archers who were supported by masses of infantry. Weighed down by their heavy ancient armor, and floundering in the deep mud, the French columns were driven into confusion, and many whole companies were cut down by the deadly aim of the English bowmen. The French lost 14 000 including the Duke of Orleans the French constable or chief general, three dukes, five counts and over ninety barons. The English lost not over 1,600. Shakespeare's *Henry V* has some stirring scenes from this battle.

AGRARIAN LAWS. The Romans took the lands of conquered peoples, but left owners usually in charge; after portions were distributed to the soldiers and some reserved for the state. They also had laws to prevent the accumulation of too much land by one person or family. In 133 B. C. Tiberius Gracchus, tribune at Rome, allowed 312 acres to each person, with half that for each of his sons. From the surplus taken from the great estates that had accumulated in violation of ancient customs, he gave each landless person 20 acres. After the time of Gracchus and his brother Caius land again began to accumulate, and the failure to give a chance to the great mass of the peasants was one cause of the disintegration of the empire. Before the Norman Conquest in England the king in theory owned all the land; in turn he granted it out to the nobles; and they in turn gave it to the common men for services in war and in protecting the estate from robbers. Later there grew out of this the custom of keeping estates intact for the eldest son. In the United States small tracts of land were given to former soldiers, those who paid a small settlement fee or agreed to live on the land a certain length of time. Much of the public domain has thus been distributed under the homestead acts. In colonial days patents to land, or great tracts like Pennsylvania, were given by the crown to companies and individuals who in turn sold or gave it out to actual tenants. In Ireland the land question has always been troublesome. In 1903 laws were passed to secure for Irish tenants compensation for new buildings or improvements while they occupied tracts of land. In several countries, notably Russia in communal or group farming, and Mexico, where there has been much individual dis-

tribution of land of late, since the World War the peasants have obtained some share in actual ownership of the soil. See *Homestead Acts.*

AGRICOLA, CNAEUS JULIUS (37-93). A Roman governor, who spent at least seven years in Britain, making improvements and confirming the conquest of the island. In four campaigns he subdued the Ordovices in North Wales, the country about the River Tay in Scotland, the region of the firths of Forth and Clyde, and then the Caledonians or ancient inhabitants in the north of Scotland. In 70 he commanded the twentieth Roman legion in Britain. He circumnavigated the island, built forts, and laid out some roads that exist to this day. The emperor Domitian recalled Agricola to Rome, and some say to his death. The historian Tacitus married his daughter and wrote his life.

AGUINALDO, EMILIO (1870-). Able Filipino leader in the war for independence against Spain, and after 1898 against the United States. He set up an independent government, appealed to the powers, and for some time carried on a guerrilla warfare against occupation by American forces. In March 1901 he was captured by Gen. Fred Funston, after a time took the oath of allegiance, and ceased to be prominent as an opponent of the United States, even at times acting as advisor in Philippine affairs. When the new government was organized in 1935, Aguinaldo was honored with recognition as one who early had shaped the events leading to Philippine freedom.

AISNE, BATTLES OF. During the World War, at times fighting was concentrated between the Aisne and Ailette Rivers on a plateau. The Germans fell back upon this position after the battle of the Marne in 1914, and here the battle of the trenches continued until early in 1917. Then, in April the Germans threw 300,000 men into this sector alone, whole regiments of attacking men being mowed down. In May, after resisting no less than 40 counter attacks, the French at last had to give some ground, and in the end the allies were forced from the sector. After the second battle of the Marne, July 1918, American guardsmen from Michigan and Wisconsin forced the Germans to retreat in late August and September. In only five days the 32d American Division lost nearly 3000 men. Later the French and Italian reenforcements drove the Germans back from the district. The Armistice cut short further operations.

ALABAMA CLAIMS. After the government at Washington had obtained an order to hold the *Alabama,* which had been built at Birkenhead, England, this craft escaped from the harbor, took on war equipment at the Azores, and in less than two years destroyed 70 northern ships. On June 11, 1864, while seeking to refit in the harbor of Cherbourg, France, the *Alabama* was at last sunk by the federal gunboat, *Kearsarge.* The United States demanded compensation from Great Britain for allowing the ship to be built and then to escape from English waters. Negotiations dragged on until 1871, when international commissioners, including men from Brazil, Switzerland, and Italy, awarded the United States $16,000,000. These and other claims were finally adjusted and paid in 1885.

ALAMO. This historic building at San Antonio, Texas, now a public memorial, was at first a Franciscan Mission, then a fort. Here in 1836 some 4000 Mexicans under Gen. Santa Ana besieged 180 Texans officered by Cols. W. D. Travis, James Bowie, and David Crockett. During an attack of 13 days, about 500 Mexicans had been slain. On March 6, a hole was made in the Alamo, and the Mexicans killed the six survivors left in the Alamo. Only a servant and her young daughter escaped. The child was adopted and educated by the republic of Texas. Shouting the cry, "Remember the Alamo," a band of Texans under Gen. Sam Houston defeated and captured Santa Ana at San Jacinto on April 21, 1836. Since 1883 the Alamo has been a state and city museum.

ALARIC I (d. 410). This Visigoth barbarian, trained by the Romans, marched on Constantinople and defeated Valens, the Emperor of the Eastern Roman Empire. Valens promised the invaders food and supplies, but his agents withheld most of the funds and food provided. Alaric afterward turned against Greece, where he sacked Corinth, Sparta, and other cities, but allowed Athens freedom for the payment of a ransom. After being checked twice by armies of Honorius, Emperor of the West, Alaric at last invaded Italy, where he hesitated twice before attacking Rome. Professing to be angered by an attempt from ambush on his life, he entered and plundered the city for three days in 410. He planned to invade Sicily and Africa, but death cut him off before he could collect his army. To protect the western empire from the Goths, many Roman legions had to be recalled from Britain and Gaul, and so Britain lay open to the inroads of the Angles, Saxons, and Danes from the eastward.

ALASKA. Ethnologists believe that the American Indian came from Asia across the bridge from Siberia to Alaska in early days, when the distance was shorter than it now is. The Russians came to Alaska in 1741, and by 1799 the Russian American Company gained control. The United States bought this land in 1867 and organized it as a Territory in 1912. The original purchase price was $7,200,000. Claims by the United States to exclusive rights to seal fisheries off the coast were rejected, but in 1903 a mixed boundary commission gave all the coast north of 54° 40′ to the United States. The interior is sparsely inhabited, the entire population of whites being only 60,000. Distinct languages are spoken by four native tribes, Esquimaux, Thlinket, Athabaskan, and Aleut, the first three being Indian in stock, and the Aleuts, Asiatic. The chief products are fish, furs, various metals, coal and some oil. Near Point Barrow oil fields are reserved by the government. Aviation is now playing a great part in developing Alaska, chiefly in the interior. In the gold rush across the Canadian border, Nome became the outfitting point for the prospecters; three years later, 1899, rich deposits were found nearby. In 1900 the population of Nome was 12,488; in 1910 it was only 2600. In 1935 the government sent to Alaska a large number of colonist families for settlement on land provided in the Manatuska Valley.

ALBANIA. Independent monarchy north of Greece, whose inhabitants call themselves *Skipetars,* and their land *Shkipria.* The people are of two main groups, often at war, and resentful of authority. From 1431 to 1478, Turkey ruled in Albania, after which Venice for some time shared with Turkey. Native chiefs often revolted, but never gained complete mastery, while often Mohammedans fought against Servian troops, and now and then the local rulers took one side or the other as advantage favored. The London Conference in 1912 agreed to establish Albania as a separate nation. William of Wied ruled from Feb. 21 to Sept. 3, 1914, when he felt it best to abandon the throne. After three years of uncertainty, Albania was proclaimed a republic under Italian protection in 1917, but in 1925 Ahmed Zogu became king. In 1930 a violent earthquake caused much destruction in the Valona district.

ALEXANDRIA. Great city of the ancient world, founded at the Canopic mouth of the Nile by Alexander the Great in 332 B. C. Here the Pharos lighthouse was built, a wonder of antiquity, the tomb of Alexander, the temple of Serapis, and other magnificent works. The *Septuagint,* or Greek translation of the Old Testament, was made in Alexandria, and here Jewish scholars were much influenced by Greek culture, which in turn greatly modified Christianity. At one time the city was the capital of Egypt, the seat of an extensive library, and the haven of scholars from the entire East. After the defeat of the navy of Mark Antony and Cleopatra, Egypt fell to Augustus in 30 A. D., came to be called "the granary of Rome," and for centuries was the crossroads of commerce between Europe and Asia, until Constantinople arose in the fourth century. After the Arabs destroyed much of Alexandria in 638 and a bit later, Cairo became the seat of the Egyptian caliphs. From 1517 to recent days, the main influence has been Turkish, though the European quarter has the appearance of a British or American city.

ALGECIRAS CONFERENCE. Great Britain and France agreed on their respective interests in Egypt and Morocco in 1904. Germany, however, landed a force at Tangier in 1905, while the sultan of Morocco also resisted the French authority in northern Africa. The Algeciras Conference of powers on April 7, 1906 awarded special Moroccan privileges to France. On July 2, 1911 Germany again interfered by sending a warship to Agidar, but a war was averted by a conference with French delegates. Since then France has maintained her hold on Morocco, save for the interests of Spain in a territory along part of the coast.

ALGERIAN WAR. Until 1830 piracy by Algerians was a menace to ships in the Mediterranean. In 1815 some natives captured an American boat and reduced its crew to slavery. The United States sent Commodore Stephen Decatur with a fleet, which captured the

chief vessel of Algeria. Decatur made the dey or ruler sign a treaty on the deck of his flagship. This recognized the rights of foreign craft in the Mediterranean and agreed to pay the United States adequate damages. In 1816 Great Britain and in 1830 France bombarded the coast of Algeria because of similar piracies by natives.

ALHAMBRA. This fortified citadel of the Moorish kings of Granada dates from the 9th century. It covers 35 acres, is a monument of medieval art, the product of men like Yusuf I in the century after 1248. The entire group of buildings includes the citadel proper, palaces, numerous smaller buildings, and other structures. When the Moors were driven from Granada in 1492, their successors almost at once began to spoil the marvelous beauty of the architecture. Charles V also rebuilt parts in incongruous Renaissance style, and Philip V, to show Italian influence, degraded many of the rooms by placing partitions within them. Even today some of the extant Moorish parts show rare taste and skill, such as the Court of Lions and the Hall of the Two Sisters. Washington Irving has delightfully recreated the age and splendor of Moorish art in his sketches in *The Alhambra.*

ALLEN, ETHAN (1739-1789) This American frontiersman was born in Connecticut, went to New Hampshire to take up land, and organized the band known as "Green Mountain Boys," or at least fought with them against the claims of New York to part of what is now Vermont. Their miniature civil war was interrupted by the necessity of driving away the British. With a small force of men, according to Allen's own narrative, he captured Fort Ticonderoga "in the name of the Great Jehovah and the Continental Congress." He went into Canada with the expedition under Schuyler and Montgomery, was captured near Montreal in 1775, and was not released by the British for two and a half years. Afterward he again opposed the "Yorkers," sought some alliance with the British in holding northern Vermont, and in 1787 removed to Burlington, where he died.

ALLENBY, SIR EDMUND (1861-1936). Distinguished British general, who obtained his early training in the campaigns in Bechuanaland, in the Zulu War, and in the War in South Africa. In command of cavalry, he invaded Palestine by way of Egypt during the World War, captured Jerusalem from the Turks in Dec. 1917, and in the following September, at the battle of Samaria, defeated 100,000 Turks under German leadership, captured most of the forces, and some 350 guns. This campaign at last freed Palestine completely from Mohammedan rule,—a dream that the various Crusades tried and failed to realize. Allenby led the way for the formation of the present government in Palestine under British mandate.

ALSACE-LORRAINE. This name became current after the two separate districts of France were ceded to Germany following the Franco-Prussian War of 1870-71. In ancient times the Gauls lived here, but in Lorraine a Latin Civilization followed the conquests of Julius Caesar; while in Alsace, the influence was from the German tribes after 500. Lorraine, though ruled chiefly by native nobles, up to the 18th century was long in dispute between Prussia and the Franks. In 1766 the district was incorporated with France. Part of Alsace went to France in 1648, more in 1697, and another part during the French Revolution. In 1872 the inhabitants were asked to declare their preference as to nationality. Over 50,000 left the region in 1872 when Germany took charge. By the terms of the Versailles Treaty in 1918, practically all this territory of Alsace and Lorraine went back to France, at which time over 100,000 Germans in turn chose to withdraw. By 1922 financial and, in part, religious questions had been adjusted in the three new governmental divisions set up under French rule.

ALVA, DUKE OF (1508-1583). Spanish general, who was called by a German historian "the hangman of the Netherlands." He defeated John of Saxony at Mühlberg in 1547, overran the states of the Church, but, after the abdication of Charles V, had to give up the lands he had annexed. Philip II sent him to the Netherlands, where he boasted that he caused over 18,000 persons to be put to death. At Antwerp he erected a statue showing himself trampling two figures designed to represent the lords and people of the Netherlands. Late in life he conducted a campaign in Portugal with similar cruelty.

AMEN HOTEP. See *Ikhnaton.*

AMERICA, DISCOVERIES OF. See *Historical Outlines, Explorations,* and *Colonial History.*

A. E. F. Popular designation of the American Expeditionary Forces sent from the United States to the World War. Congress on April 6, 1917 authorized President Wilson to declare war on Germany. General John J. Pershing on May 18 was appointed to take charge of operations in Europe, while plans were made to send over one division as soon as possible, a total of nearly 30,000 men of all classes. The Selective Draft Law, passed on May 18, provided for 500,000 men from 21 to 31, and an equal number if necessary. By Aug. 24, 1918, some 10,481,000 men had registered as likely to be called into service. In the first draft, July 20, 1917, 625,000 names were drawn. Meanwhile, on June 8, 1917 General Pershing and his staff arrived in England, and three days later in Paris. In May medical men, Red Cross Workers, and engineers had gone on ahead to assist the British and French. On June 27, 1917, the men in the First Division arrived in France, an event commemorated nine years later by a statue at St. Nazaire. Original plans called for increasing the Regular Army from 133,000 to 488,000; the National Guard from 67,000 to 470,000; and also for the creation of a third unit, the National Army. Many new officers were drawn from those who had previously attended the Citizen Training Camps. Altogether, upwards of 4,000,000 men were raised for service, over half of whom went to Europe, with 1,300,000 actually seeing service in front lines. On Oct. 21, 1917 American soldiers first reached the trenches in France at Somerville; the first American shot was fired on Oct. 27; first trench fighting on Nov. 3, with three men killed, five wounded, and 11 taken prisoners. By Jan. 1918, the 1st, 2nd, 32nd, 41st and 42nd Divisions arrived in France, the first exclusive American sector being northwest of Tours on the St. Mihiel salient. The first American offensive was at Cantigny on May 28, when that town was taken, three days before the 2nd and 3rd Divisions turned the tide at Château-Thierry.

AMERICAN LEGION. Largest American organization of World War veterans, both men and women, with honorable records regardless of rank or type of service. The Legion was organized in 1919 for the purpose of promoting the mutual interest of veterans. Legionnaires have done much to assist soldiers in need, to provide hospital facilities for the ill and disabled, to assist families, widows, and orphans of soldiers, and to secure for the veterans adequate compensation for services in time of war. The organization of the Legion consists of general offices, state divisions with complete roster of officers, and local units or posts of various kinds. Main headquarters are in Indianapolis. The membership of the Legion in 1931 was 766,850; in 1936 was over 900,000. The Grand Army of the Republic, composed of veterans of the Civil War, reached the highest peak of membership of 409,489 in 1890. Congress in 1936 authorized the payment of the Soldiers Bonus. By midsummer most of the veterans had taken advantage of the liberal provisions of the legislative act. The main provisions assure to ex-service men compensation at the rate of $1.25 for every day of service overseas, and $1.00 for service at home. The men received about the same money value in 1936 that they would have obtained in 1945, the time originally fixed for payment of the bonus.

AMHERST, JEFFREY, BARON (1717-1797). British general who succeeded Abercrombie in command of all the British forces in America. He led an expedition which captured Ticonderoga and Crown Point in northern New York in 1759. He was in personal charge in the campaign at Montreal, forcing the French to surrender all rights in Canada to England in 1760. He became governor-general of all British North America and was made a Knight of the Bath, next to the highest civil and military rank in England.

AMPHICTYONIC LEAGUE. Twelve states of Greece united to protect the sacred shrine of Apollo, first near Thermopylæ and later at Delphi. From this alliance three wars resulted. The first ended with the battle of Crissa in 585 B. C.; the second, ending in 346 B. C., was caused by the entry of Philip of Macedon into Greek affairs; and the third, ending with the battle of Chæronea in 338 B. C., was caused by the impiety committed by Amphissa in tilling the ground near the shrine. The influence of the League was considerable, down even to the time of Augustus, who increased its membership and powers. At certain times, however, the largest cities of Greece, like

Athens and Sparta, combined to restrict the power of the Amphictyonic towns.

ANDERSONVILLE PRISON. Stockade in Sumter County, Georgia, where almost 50,000 federal soldiers were confined during the Civil War, the number at one time being as high as 33,000 huddled together on less than 27 acres of space. Nearly 13,000 died of disease, filthy conditions of the prison enclosure, and lack of good food. Henry Wirz, who had been the superintendent of the prison, was tried by court-martial, convicted, and hanged on Nov. 10, 1865.

ANDORRA. This tiny state of 191 square miles, less than 6000 inhabitants in 30 villages, has been autonomous since about 1278. The district lies in the Pyrenees valleys, between France and Spain, and still pays a nominal tribute to France and to the bishop of Urgel. For a thousand years it was governed by a council of 24 selected from the older heads of families. In 1933, however, some 60 young men forced their way into the Parliament, and compelled the Council to grant universal manhood suffrage. French gendarmes broke up the Council itself, but an election on Aug. 31 gained some seats for the young men of Andorra. The language is Catalan, the religion Roman Catholic, the money French or Spanish, and many of the customs medieval.

ANDRE, JOHN (1751-1780). English spy, hanged for connection with the Arnold treason. Captured by Montgomery at St. John's (1775); exchanged (1776); captain (1777); major (1778); captured near Tarrytown, September 23, 1780, with incriminating writings of Arnold concealed in his boots. Tried by court-martial and hanged at Tappan, New York (1780). Washington declared that Major André was "more unfortunate than criminal."

ANGLES AND SAXONS. Beyond the southern part of England, the Romans did not greatly influence the inhabitants of Britain. North of the Tweed dwelt the Picts; beyond the Severn in the west, the Welsh. When the Romans left in 428, the southern Britons called for help against their northern and western enemies. From the lands about the North Sea came the Angles, Saxons, Jutes, and others. Hengist and Horsa drove the Picts back north, and received as reward the island of Thanet, but the visitors were not content with this gift. They invaded Sussex in 491; Wessex in 516; Essex in 526. The Angles settled in what is now Northumbria in 547; in East Anglia in 577; in Mercia in 584. The Jutes occupied Kent and other small areas. Edgar united these districts in 828, and Alfred confirmed this union in 886. For the composite language that developed from the dialects spoken by these tribes, the name Anglo-Saxon is applied, but a better term is Old English. See *Heptarchy*.

ANNAPOLIS. This town, settled by Puritans from Virginia, is famous for its many historic memories. Here the first royal government in Maryland was set up; here Congress met from Dec. 1783 to June 1784, and Washington resigned his command on Dec. 23, 1783; and here met the Annapolis Convention in 1786. Delegates from New York, Pennsylvania, Virginia, New Jersey, and Delaware assembled, passed resolutions for mutual aid, and led the way to the more representative gathering in Philadelphia in 1787, when the new Constitution was at last written. Annapolis has many old institutions, such as St. John's College, founded in 1696 as a preparatory school, and in 1786 as a college; the beautiful statehouse of Maryland with its lofty dome and grand portico, dating from 1772; and the buildings of the United States Naval Academy on a campus of 200 acres bordering on the River Severn.

ANTARCTIC EXPLORATIONS. Previous to the expeditions of Admiral R. E. Byrd, several parties explored the southern seas beyond latitude 60°. Some of the leaders were Capt. James Cook, 1772-75, who sailed around the Antarctic Continent; Bellingshausen, 1819-21, with a group of Russians, who brought away a mass of scientific data; American, French, and British navigators between 1827 and 1843; J. C. Ross, who found the sea that now bears his name; the *Belgica* party, the first to winter in the south Arctic; and Capt. R. F. Scott, who found King Edward Land in 1902-03, but laid down his life ten years later, after attaining the Pole, only to learn there that Roald Amundsen had preceded him on Dec. 14, 1911. Sir Ernest Shackleton returned from a fortunate voyage to the Antarctic in 1914; explored the north regions in Siberia; and in 1922 also lost his life in South Georgia on his second southern voyage. Admiral Byrd, on two occasions, made the most complete records yet attained. He first explored the Antarctic from his base in Little America on the Bay of Whales, in the winter of 1928-29, and again in 1933-35, when he found that the continent at the South Pole is one continuous mass of land and ice, and not two as many had supposed. With three companions he flew over the Pole on Nov. 28, 1929, explored part of the high polar plateau, discovered a new mountain range, and brought back many complete observations. Other explorers have been Sir Hubert Wilkins, Sir Douglas Mawson, and Lincoln Ellsworth with one companion, who set out by airplane in the fall of 1935, and was rescued early in 1936 near Admiral Byrd's base at Little America.

ANTIETAM. On the banks of the Antietam River, near Sharpsburg, Maryland, and nine miles from Harper's Ferry, Gen. G. B. McClelland sought to cut off the Confederates under Gen. Robert E. Lee, who were threatening the vicinity of the national capital. On September 16 and 17, 1862, the Confederates were caught between the Potomac and the armies of the North, but McClelland failed to press his advantage and to close the sole remaining bridge across the Potomac. The Confederates escaped at night, with a loss of 1546 killed and 7752 wounded, but the Federals lost one-third more of their men. Lee's strategy in this battle has been pronounced beyond reproach.

ANTIOCH. With Alexandria and Rome, Antioch shared the honors among ancient cities. Founded as one of 12 towns named in honor of Antiochus about 300 B. C., Antioch fell under control in turn of the Greek kings of Asia Minor and the Roman governors, who favored the city for their courts. Augustus Caesar, Herod, Tiberias, Antonius Pius, and Constantine all added beautiful structures there. It had a great library and school of philosophy. The city became the center of the early Christian faith, the home at times of St. Paul, the starting point of his missionary journeys. Between 538 and 1084, Antioch was overrun by Persians, Saracens, Greeks, and Mohammedans. Before 700 the city was damaged ten times by earthquake, and even as late as 1872. The Crusaders made this region their headquarters, and here they ruled from 1098 for about 200 years. From 1517 to 1920, Antioch was the center of Turkish power in Asia Minor, except for a brief time under Egypt from 1840. The League of Nations mandated the district to France in 1920. In the second part of the third century, several important church councils were held there, and in the next century Chrysostom said the city had 100,000 Christians. Today, Antakiek, as the place is known, has but 30,000 inhabitants.

ANTI-RENT WAR. In 1629 the States-General of the Netherlands gave the Dutch West India Company certain feudal or manorial rights to large tracts of land in the New Netherlands. Thus the Schuylers, Van Rensselaers, Roosevelts, and others became patroons, meaning in Dutch *patron* or *protector*. These patroons paid annual rentals or dues to the Company, and in turn farmed out the land for rental to tenants. In 1839 the last one of the patroons died. His heirs sought to collect back rents and other monies on the old feudal terms. Tenants insisted on the privilege of buying the land outright. Albany, New York, was the center of the disturbances that followed, called the Anti-Rent War. The tenants gained considerable political influence. Opposition to this special system of renting land, different from the rest of the country, increased until the Court of Appeals in 1852 ruled that the rents need no longer be paid. Then the tenants agreed with the heirs of the old patroons to buy the lands at fair prices. This patroon system was not unlike the English system in Virginia of setting up large estates.

ANTWERP. The main business city of Belgium, noted as one of the strongest fortresses in Europe, and one of the most beautiful cities in the world. During the World War, after Brussels fell to the Germans, Antwerp held out long enough to permit the army to take stands to better advantage. Since 1920 the forts have been restored and strengthened. Antwerp was mentioned in the 8th century, known for its commerce before 1300, and in the 16th century became the commercial capital of the world. The city had a free government and people well educated and cultured. When the Spanish took the city in 1576, nearly 8000 inhabitants were slaughtered, and the City Hall and hundreds of noble buildings were destroyed. Then followed a period of decline. Among the many beautiful buildings in Antwerp are the new picture gal-

lery, the Bourse of 1872, replacing that of 1531, and the noble Gothic cathedral of Notre Dame, the finest of its kind in northern Europe. In the cathedral are three pictures by Rubens, including his masterpiece, *The Descent from the Cross.* In 1930 Antwerp and Liége joined in holding an exposition to celebrate the centennial of Belgian independence.

ANZACS. See Australia.

ARABIA. Until the death of Mohammed in 632, Arabia was divided into districts inhabited by hostile tribes, some claiming to be of Semitic origin, descendants of Ishmael. Under the Caliphs of Islam after 632, prosperity followed for a time, but afterward much trouble occurred between the civil and religious authorities, since the caliphs always claimed temporal power, following the lead of Mohammed. Neighboring countries, like Abyssinia, Egypt, and Persia, often exercised some influence over Arabia, but the native tribes, unorganized and nomadic, usually held their own. To this day the conflict also between the towns and the tribes of the desert continues and prevents unity of the rule save in nominal respects. Yet Ibn Saud, since 1926 king of Hedjaz or Saudi Arabia, has exerted considerable influence. Arabia is divided into Saudi Arabia, Yemen, Kuweit, and Oman, the last three only nominally controlled by any outside political influence. See articles on *Caliphate, Hedjaz, Hegira, Hussein,* and *Mohammed.*

ARBELA. Here between Alexander the Great and Darius Codamanus was fought in Assyria on Oct. 1, 331 B. C., a battle which decided that the Persians would not rule in Europe. The Macedonian phalanx, or form of battle line, together with the stern discipline of Alexander, was altogether too powerful for the oriental hosts. When the Macedonians charged the Persian center, the king and all his men fell into a panic, giving Alexander a quick victory. In true ancient manner, the victors carried off all the spoil they could capture in cities like Susa, Persepolis, and Babylon. Some estimates place the booty at 100 millions in value, which tradition tells us required 20,000 mules and 5000 camels to transport.

ARBITRATION, INTERNATIONAL. Arbitration in civil disputes is as old as Roman jurisprudence, or as old as the history of man. International arbitration has had a slow growth, one reason being the difficulty in enforcing awards. Yet the idea has recently grown, and few nations now refuse to accept awards of arbitrations. Boundary claims, fighting about borders between nations, fishing rights, and damages to shipping are the subjects often referred to arbitral boards. Sometimes the dispute is submitted to a king or president of a neutral nation; sometimes a mixed commission is appointed, an equal number coming from each nation to the dispute, and then some third party acts as umpire. A few arbitrations grow out of diplomacy, or are combined with diplomatic settlements. Typical arbitrations were those by the Queen of Spain as between Holland and Venezuela over Aves Island; by the president of the United States as between Great Britain and Venezuela over boundary lines; by a mixed commission as between Great Britain and Russia over the boundaries of Afghanistan; various disputes between United States and Canada settled by mixed commissions; by the president of France as between the United States and Portugal over arrest of officers on ships. Agreements establishing the Permanent Court of Arbitration at the Hague in 1899, and the Covenant of the League of Nations, both furthered the interests of international arbitration. Some recent cases were in the settlement in 1929 by an American Commission and President Hoover of a dispute between Peru and Chile over Tacna and Arica, dating from 1882; and the cessation of hostilities between Bolivia and Paraguay in 1935 after an international conference, followed by arbitration. See also *Alabama Claims, Boundary Disputes, Hague Peace Conference, League of Nations,* and *United States Arbitrations.*

ARBITRATIONS, UNITED STATES. The nations of the American Continent have made various agreements to arbitrate international disputes. In 1910 a treaty was made to submit pecuniary claims to impartial boards for adjustment. In 1922 and 1929 conferences went much further in regard to all disputes, all important nations, save Argentina, coming to definite agreements. Perhaps the United States has led the world in willingness to arbitrate serious questions, three or four of which might elsewhere have led to wars. Prior to 1914, according to the Carnegie Foundation reports, some 88 disputes involving the United States were settled by diplomatic negotiations, by straight arbitrations, or by mixed commissions, with a neutral umpire. A mixed commission is made up of equal members from both disputing parties, with a neutral as umpire in the dispute; in some cases, the umpire renders the deciding vote, as when Lord Alverstone voted with the three Americans in the Alaskan boundary dispute in 1903. Canada and the United States led off in 1818 by agreeing not to fortify the boundary between them, and to submit disputes to outside parties for adjudication. Three boundary, one fishing, and several other disputes have been so settled. Other serious disputes, for instance, have been mutual claims of France and United States, growing out of the Civil and Franco-Prussian Wars, settled in 1884, by a mixed commission, with Brazil as umpire; the Pious Fund case involving property of the Roman Catholic Church in California damaged or confiscated by Mexico, settled by a mixed foreign commission in favor of the United States; seizure of ships by Venezuela, settled by a mixed commission, with Norway and Sweden, as umpire, and an award of $141,000 to the United States. Out of the 83 disputes mentioned above, 52 resulted in an award to the United States, and 17 split the award. See articles on *Alabama Claims, Boundary Disputes, Hague, League of Nations,* and the article just preceding this one.

ARCTIC EXPLORATIONS. Most early voyages into the arctic regions attempted to find a short cut over the top of the world to Asia. Some of the notable attempts to find a *northwest passage* were those of J. Rut, 1527; Portuguese navigators, 1574; Martin Frobisher, 1576; Henry Hudson, 1607, 1610; James Cook, 1778; Ross and Parry, 1818; and in 1926 Amundsen, Ellsworth, and Nobile crossed from Svalbard to Teller, Alaska in the dirigible *Norge.* Attempts to find a *northeast passage* were made by Sir Hugh Willoughby, 1553, who perished in Lapland, but Chancellor, of his expedition, got to Archangel, Russia; Henry Hudson, 1607, but was forced westward; Parry, 1827; and at last, Prof. Nordenskiöld, 1878, accomplished the feat for which men had tried 326 years. *Noted discoveries:* John Cabot, 1497, Cape Breton and Nova Scotia; Stephen Burrough, 1556, Novaya Zemlya and Kara Strait; Henry Hudson, 1607, Jan Mayen Land, and 1610, Hudson Bay; William Baffin, 1515–16, northern outlet to Baffin Bay; J. Parry, 1819, Prince Regent Inlet and Melville Sound; and V. Stefansson, 1908–12, a blond race of Eskimos. *Notable exploring expeditions:* Martin Frobisher, 1578, in search of gold; William Barentz, 1596, first to winter in the north; William Baffin and Robert Bylot, 1616, region of Baffin Bay, and found the outlet; J. Parry, 1819, 1821–23, made many important scientific discoveries, and in 1827 attempted trip to Pole; J. C. Ross, 1831, north magnetic pole; Charles Hall, 1860, found remains of stone house built by Frobisher in 1578; A. W. Greeley, 1841–4, much data, but all save Greeley and five others perished; R. E. Peary and others, 1891–95, north edge of Greenland; V. Stefansson, 1908–12, spent much time in north to prove one can live off the land, and 1914–15, lived 15 months on the polar ice pack; Donald Macmillan, 1915–17, proved Crocker Land a myth; Com. R. E. Byrd and Floyd Bennett, flew over Pole, 1926. Admiral R. E. Peary reached Pole, April 6, 1908. *Chief disasters:* Henry Hudson and small son sent adrift by mutinous crew and never heard from, 1610; J. A. Ross and uncle, J. Ross, picked up by whaler, 1833, after being forced to spend four winters in the Arctic; Sir John Franklin party all perished, 1847; *Jeannette* crushed in the ice, 1883; Prof. S. A. Andree and two companions in a balloon, lost, 1897, and bodies found by S. Horn on White Is., 1930; airship, *Italia,* lost, 1928, and Roald Amundsen and two others lost in a search for survivors.

AREOPAGUS. Highest judicial tribunal in Athens, named for the meeting spot on the hill of that name. It decided unusual cases, could even bring officials to account; under Draco's Laws, also tried murder suspects; and under Solon could try offenses against public policy or morals. Solon, however, limited its legislative powers, but for centuries the court was greatly respected as an early type of supreme tribunal.

ARGENTINA. After some preliminary explorations by de Solis, killed by Indians in 1516, and by Sebastian Cabot, 1525, settlement was made by Mendoza and 2000 Spaniards at Buenos Aires in 1535. The first colony was broken up, another was planted at Asuncion, and in 1805 the present Buenos Aires was founded. In 1806 and 1807 British attacks were repulsed. The Argentine broke away from Spanish rule

in 1816, but anarchy followed until 1853, when the long tyranny of Juan Manuel Rosas ended in revolution led by his former lieutenant, Urquiza. The latter set up a constitution, held office for six years, and in the battle of Cepeda forced Buenos Aires to join the new confederation. During the World War, Argentina remained neutral, sold huge quantities of supplies abroad, but suffered a depression when the war ended. Passage of the Fordney-McCumber Tariff by the United States, intervention in Nicaragua, and the refusal of the Sixth Pan-American Congress, 1928, to outlaw entirely all intervention caused Argentina to assume an unfriendly attitude toward Uncle Sam. In 1930 President Irigoyen, holding his second non-consecutive term, was deposed by a popular uprising, and the government passed to the conservatives under the new leader, José Uriburu. Though the new administration professed willingness to "cooperate to the fullest extent with the United States," the press continued the attacks on the American tariff and policies. Argentina withdrew from the League of Nations in 1920, and voted to return in 1932, but with the reservation of refusing the sanction of the article approving the Monroe Doctrine. When Pres. Uriburu completed a provisional term, he was succeeded on Feb. 21, 1932 by Gen. Augustin P. Justo, a Conservative.

ARGONNE, BATTLE OF THE. Major battle of the American forces in the World War, with 1,200,000 men in readiness, and 600,000 actually taking part. The offensive, taking the Germans by surprise, began on Sept. 26, 1918, and lasted, in three stages, until early November. Five hundred planes, 200 tanks, 200,000 men began the first assault. The first stage carried the advance seven miles, half through the main positions of the Hindenburg line; the third offensive found the Americans pursuing the Germans back of the line on Nov. 10. Some of the United States troops engaged were the 35th Division, National Guard, of Missouri and Kansas, the 138th Infantry of St. Louis, the 137th of Kansas, and the 70th Brigade, all of which suffered terrible fire for four hours, until only 40 of the 138th were left; the 139th and 140th, which took Charpentry, and resisted a murderous counter-attack by the Germans; and the 35th Division, which stood two days of heavy artillery fire and counter-attack, so that in five days, the loss was 6966. Elsewhere, the 91st Division from various western states and Alaska, after heavy casualties, pressed through the woods near Gesnes; while the 37th (Buckeye) Division from Ohio advanced at night, and by flanking captured Montfaucon, suffering the tortures of high explosive and gas attacks, with 3460 casualties. Other Divisions engaged were the 79th from Virginia, Maryland, and the District of Columbia; the 80th from Pennsylvania, Virginia, and West Virginia; the 33rd from Illinois. In the second and third stages of the battle, the main units engaged were the 1st of the Regular Army; the 32d from Michigan and Wisconsin (National Army), in the battle of the Vesle and Juviny; the 3rd Division or Marines, heard of first at Château-Thierry; the 80th or Blue Ridge Division again; the 77th (Liberty), the 82d (All American), the 78th (Lightning) from New Jersey, Delaware, and New York; the 42d (Rainbow); 89th (Midwestern), and the 90th from Texas and Oklahoma. All these engaged in their own sectors, often against great odds, over muddy ground, through forests, and in counter-attack and cross-fire. The Americans fought in an area of some 500 square miles. Here in the Argonne near Romagne, Congress established a national cemetery, where over 20,000 soldiers now rest.

ARMADA. This Spanish word for military force is now applied especially to the fleet of 129 vessels sent in 1588 by Philip II of Spain to crush the Protestant power in England. Spain had 8000 sailors, and about 19,000 marines; while England had but 80 ships, only 30 being of the line type. Yet the English craft were lighter, and, under the skill of Admiral Howard, with Drake, Frobisher, and Hawkins serving under him, they made quick work of the Spanish vessels. With the portion of the fleet that remained intact, the Spanish admiral decided to return by way of the route around Scotland. Storms and hostile natives completed the destruction, so that only 54 ships, much disabled, returned to Spanish ports. Over 4000 of the attacking fleet were killed and but 100 of the British. Queen Elizabeth had a medal struck, bearing these words: "God blew, and they were scattered."

ARMENIA. No people have suffered more from war and persecution than the Armenians. After centuries of independence, they fell at last in turn to Assyria, Media, Persia, Macedonia, and Rome, with Parthia contending with Rome for mastery from 25 B. C. to 400 A. D. Part went to Greece in the 11th century and part to the Kurds and Turks, and all in 1242 to the Mongols. Russia for centuries protected Armenia and welcomed her exiles. During the Turkish régime, from 1829 to the end of the World War, thousands of Armenians suffered martyrdom, the main pogroms being in 1895, 1901, 1904, and during the World War. At times the nations of Europe, mainly England, and also the United States, protested, but the atrocities continued. In 1920 Armenia became independent with her capital at Erivan, but in 1922 joined with Azerbaijan and Georgia to form the Transcaucasian Republic, a part of the Soviet Union.

ARMS AND ARMOR. Prior to Greek times stone, iron, and bronze weapons were the only ones. Homer mentions the bow, which Egypt and Syria also used. Greek shields were round, Roman oval or rectangular. The Assyrians used chariots with scythes attached to the axles, also catapults or stone throwers, much employed by the Romans in sieges. Northern peoples used battle axes. The Normans had cross-bows, which the English adopted, but the English long-bow was more deadly. Plate armor developed in the 14th century, even horses being so protected, but chain mail dates from very early ages. Many ingenious forms were invented, such as the hauberk,—a kind of mail jacket,—metal skullcaps, closely fitted joints that were comfortable, special breast plates, and greaves or plates for the legs below the knees. Cannon came into England in the 14th century, hand guns 200 years later. Iron plates for ships were used before the Civil War in America, the *Monitor* and *Merrimac* being early forms for gunboats.

ARMY. Most ancient armies consisted of hired soldiers or mercenaries. Rameses II of Egypt built up a warrior class by exemption from taxes about 1300 B. C. For his invasion of Greece, Xerxes from 484 to 480 B. C. levied on all the tribes and nations subject to his dominion. Greece adopted compulsory service, Sparta being most exacting of the cities. The Macedonian phalanx, or solid formation of men from six to 16 deep, for centuries was imitated in Europe, even later in England. Rome commanded military service of all men from 18 to 46, poor men in the infantry, and the rich in cavalry. Soldiers received pay. Each Roman legion, when complete, was made up of 3000 footmen, 1200 light soldiers, and 300 cavalry. Augustus had a standing army of about 300,000. In time the army class, contending with the emperors or the people or both, became one cause of the decline of the empire. Carthage mainly used hired men in her armies. In the feudal ages in Europe, the king demanded fealty and service of the nobles, who, in turn, commanded help from the peasants in return for land and other favors. Scotch and German pikemen gained much renown by 1400, and later both the Swiss and the French had separate infantry and cavalry units. England employed no mercenaries, but her rivals frequently relied on outside help in war. Standing armies became common about 1650, after the Thirty Years' War.

ARNOLD, BENEDICT (1741-1801). After an honorable record in the battles of Lexington, Ticonderoga, and Lake Champlain, and after being wounded at Quebec, Arnold was made a major general by Congress for special gallantry at Ridgefield, Conn. While commandant at Philadelphia, he was accused of extravagance, great ambition, and dishonesty. After being found guilty by court-martial, he was gently reprimanded by Washington, his friend, in 1780. Arnold seemed to feel that he was not appreciated. While commanding at West Point, he betrayed the secrets of the defense there to Major André, acting for the British, but escaped to England when the plot was exposed. As a brigadier general of the British forces, he raided Richmond, Va., New London, Conn., and killed the garrison at Fort Griswold. On being refused a permanent place in the army, Arnold retired to St. Johns, New Brunswick, where he became a merchant. There he was accused of trickery, and returned to England, where he died.

ARRAS, BATTLES OF. Five distinct battles were fought around Arras in the World War. On Sept. 6, 1914, German infantry entered the town, following cavalry, hoping to make this a main point in a line stretching 50 miles to the English Channel. On Sept. 18 the French cavalry arrived, fortified the city, and the Germans withdrew, but again drove the French back upon Arras Oct. 4, and took possession of the

rich coal fields. The French resisted a violent German attack, after a terrific bombardment on Oct. 21, taking Vimy Ridge on Oct. 24. In the second battle, June 1915 (also called Battle of Artois), Marshal Foch began an attempt to rid the region of Germans, and with two months of heavy engagements, he succeeded in straightening the salient and in taking several towns, including the ruined Souchez, Neuville, and the Labyrinth. The French lost 113,000 in these battles. The British fought the other three battles at Arras. In the first, during April 1917, Sir Douglas Haig brought down 46 German planes, smashed the German defenses by long range fire, and on April 9, stormed Vimy Ridge, the work being completed by the Canadians on April 10. Despite strong counter-attacks, the Hindenburg line and all former German positions remained in British hands. The fourth battle, March 1918, constituted an important part of the last great German bid for victory by attempts to break through at Arras, and later north of there. Fifteen German divisions were used up, the Allies retreated, but the lines held. The fifth battle, August-September, 1918, left Canadian and British troops at the gates of Cambrai, with 18,850 prisoners and 200 guns, while the German losses were appalling.

ARTICLES OF CONFEDERATION. See under *United States Government* in Department of Government.

ARTHUR, KING. Legendary or mythical king of the Britons, who later became the hero of a literary and political tradition in France, Wales, Ireland, and England. Arthur was said to have been the son of Uther Pendragon, another valiant king, or to have come across the sea in a fairy boat, or to have been the son of a knight of Uther's court. He was secreted until the time for him to become king. In twelve great battles he defeated various neighboring tribes, such as the invading Angles and Saxons. In some stories his capital was at Caerleon-upon-Usk, on the borders of Wales, where the ancient Britons made a last stand. Early story tellers mention him as a real king, such as Nennius (850), Geoffrey of Monmouth (about 1136) and Sir Thomas Malory, whose *Morte d'Arthur* was one of the first books printed by Caxton in 1485. Later authors to draw upon the Arthur legends were Spenser, Tennyson for the *Idylls of the King*, William Morris, and Swinburne. See *Arthurian Cycle* in Department of Literature.

ARTILLERY, EARLY. Even before Roman times stones were cast by different mechanical devices. The Roman catapult or stone thrower is well known. In the 7th century of our era the Chinese used gunpowder, but the Arabs seem to have first adapted it to military purposes. Ghengis Khan used cannon in China about 1234, the Moors probably in 1343, and Edward III of England first at Calais in 1337, and probably at Crécy in 1346. Roger Bacon, who died in 1292, wrote about the use of gunpowder among western nations. Brass cannon seems to have been used before 1640. In 1529 a cannon on a castle along the Rhine threw a projectile weighing 180 pounds, including 64 pounds of gunpowder. Shrapnel came into use about 1800, siege guns by 1840, and smokeless powder in 1900. The Civil War greatly developed different forms of artillery, but the World War increased the size and range tremendously. Mobile artillery, in three classes, range in size from 75mm. guns to 155. The German "Big Bertha" guns had a range of about 75 miles.

ASSYRIA. Two great empires, Babylon and Assyria, for several centuries, contended for the mastery of central Asia. The Assyrians were a Semitic stock, with long beards and hair, allied to the Hittites politically for a time. Then they were conquered by Sargon I, united with Egypt against Babylonia, and at last conquered the latter in 1100 B. C. The Assyrians adopted horses and chariots for use in battle. Tiglath Pileser was the greatest of their monarchs. Ninevah continued as the capital, for it was built of stone, unlike Babylon, with its flimsy structures of brittle clay. For a time the Arameans kept Assyria away from Egypt, as narrated in II *Kings*, xv-xvii, while Tiglath II was founding a mightier empire. At last Sennacherib, a later conqueror, appeared on the borders of Egypt with a mighty host, which was smitten by pestilence as described in II *Kings*, xix. When the Medes took Ninevah, about 150 years later, Assyria gave way to the new Chaldean or second Babylonian empire.

ATHENS. The pride of all Greek cities for learning and the arts, the ancient capital of Attica, and of modern Greece. Tradition says that Codrus was the last king, or typical of them at least. After the time of Codrus the people chose archons or magistrates to rule them, and set up a more democratic government. After 1000 B. C. Athens veered back and forth between aristocracy and democracy, until Draco established wise laws to help the peasants in 620 B. C., and Solon followed with other reforms thirty years later. For 50 years, however, beginning about 561 B. C., Pisistratus was the first of a line of rulers who divided offices among their friends, and came to be known as tyrants. Today they might be called dictators. After the menace of the Persians had diminished, great prosperity came to Athens, culminating in the golden age of Pericles and ending about 430 B. C. Until after 500 of our era, Athens remained the foremost city in eastern Europe. Schools of philosophy, art, and politics flourished. In the middle ages, while the Turks occupied Greece, little was heard of Athens. In 1578 the population did not exceed 12,000. In 1687 the Venetians bombarded the city, destroying some of the Parthenon. When Greece gained her independence from Turkey in 1833, Athens began to take her place again as the leader among the cities of the Hellenic or Grecian world.

AUSTERLITZ, BATTLE OF. With an army of 65,000, Napoleon in 1805 defeated a combined force of 83,000 Russians and Austrians. The allies lost 37,000 killed, wounded, and missing, while the French lost only 7800. In this battle Napoleon was at his best as a strategist. He forced Austria to conclude the unfavorable peace of Pressburg.

AUSTRALIA. This continent seems once to have been attached to Asia. Centuries ago the island was inhabited by a black race, then by a dark-skinned people, the ancestors of the 150,000 natives there when the British made the first settlements in 1788. Vague rumors about this far-off continent are found in ancient and medieval literature, and numerous maps and explorers described it vaguely before 1750. Captain James Cook explored the east coast in 1770, and, with two companions, landed at Botany Bay on April 28. Here the first settlement was made in 1788,—a penal colony of over 1000 under command of Gov. Philip, where the city of Sydney now stands. A church was erected in 1793, and two years later a *Gazette* was issued. Tasmania nearby was settled in 1803. Then followed an era of interior exploration by many different groups, several of which became lost in the wilds and never again returned. To this day parts of Australia are almost unknown and uninhabited by white people. South Australia was organized in 1836, Victoria in 1851, Queensland in 1859, and West Australia in 1863. After various internal difficulties and failure to agree on any plan of union, all these districts were at last federated in 1901. Meanwhile, the settlers had disputed with France over New Caledonia and with Germany over New Guinea. In 1909 a complete system of defense was arranged. Out of about 10,000,000 inhabitants, Australia sent 575,000 to the World War, of whom 60,000 were killed and 143,000 wounded. The *Anzacs* (so called from the first letters of the words Australian-New Zealand Army Corps) fought gallantly in Gallipili, Egypt, Palestine, and France. Australia afterwards was beset with economic and financial troubles, due mainly to the lack of cooperation among the provinces and to debts of some of the divisions like New South Wales. The recent establishment of a federal capital at Canberra tends to unify the continent.

AUSTRIA. Formerly a part of the dual monarchy of Austria-Hungary, since 1920 Austria has been a federal republic. Much of the older history is that of the component parts of the Austrian empire, including the present narrow limits of Austria, Hungary, Bohemia, Bosnia, Herzegovina, and a few lesser divisions. In ancient times this region was inhabited by the Boii in the fifth century, and then tribes like the Vandals, Goths, Huns, Lombards, Avars, and Bavarians. Once the Danube constituted a natural barrier separating the wild northern tribes from the outposts of the late Roman empire. When Charlemagne subdued the Avars in 796, he set up an East Mark or division, from which modern Austria gradually developed. The Hungarians, who obtained a goodly part of the land, were defeated by Otto the Great in the battle of Augsburg in 955. Otto established the house of Bebenburg, which continued until 1246. Leopold VI, an able general, kept the Huns and Turks in check, but his successor, Frederick, died in battle with the Magyars, and the Bebenburg line ended. Meanwhile, the name *Oesterrich* (eastern rule) was adopted, later changed to

Austria, to distinguish the central Europe people from other Germanic groups. Vienna became the capital in 1160, and for centuries has been a center of culture, science, and the arts.

Various minor divisions were gathered into what became the later empire of Austria. Ottokar in 1251 became duke of the Oesterrich, in 1253 king of Bohemia, in 1261 ruler of Styria, and in 1269 lord of Carniola. Ottokar fell in battle in 1278, and the Habsburgs came to rule without interruption to modern decades. Rudolph, who conquered Ottokar, took the title of Holy Roman Emperor, which the Habsburgs at last relinquished in 1806. Rudolph divided Austria proper and Styria between his sons, Albert and Rudolph, but the former was soon killed by a nephew, who claimed Albert had taken away his lands. When the line of Rudolph died out, Albert II reunited the whole Austrian provinces. By purchase, by marriage, and by conquest, Austria obtained a chief place in Europe. Albert V acquired Hungary and Bohemia by marrying the daughter of Emperor Sigismund. In 1477 Maximilian, of another branch of the Habsburgs, married the daughter of Charles the Bold, and so gained the Netherlands. His son, Philip, annexed parts of Bavaria and Venice, and by marriage to Joanna of Spain prepared the way for his son, Charles V, to become ruler of Spain and also German emperor by election in 1519. The Habsburg power was at its height.

Charles V, in turn, divided old Austria and allowed his brother, Frederick, to become head of the German Habsburgs. John Zapolya contested the claim of Frederick to Bohemia and Hungary. The Turkish Sultan, Solyman, assisted Zapolya, and in the end the territory of Austria shrank to about its original bounds. Yet his son, Maximilian II, obtained again Austria proper, Hungary, and Bohemia; the second son, ruled the Tirol; and the third, Styria and Carinthia. Maximilian proved a wise and just ruler, but his successors were less able and more unscrupulous. The Thirty Years' War ensued when the Bohemians nominated for their king a Protestant, Frederick V. Ferdinand II, third son of Maximilian, conquered Bohemia and Hungary in 1612, and by winning the battle of Prague, 1620, was able to hold Bohemia. Yet the Peace of Westphalia, 1648, gave Alsace to France. In 1683 the Turks besieged Vienna, which was saved by an army of Poles and Germans under John Sobieski and other leaders. In 1699 the Turks were finally expelled from Hungary, but continued to claim that kingdom until 1718.

Meanwhile, the War of the Spanish Succession enabled Austria to regain her power in the Netherlands in 1713, and also a foothold in Milan, Naples, Mantua, and Sicily. In 1740, however, the male Habsburg line became extinct. (See Austrian Succession just below.) Maria Theresa, queen of Austria, by agreement of the European Powers called the Pragmatic Sanction, continued to rule Austria for 40 years until 1780, during which time she lost little save Silesia, at the end of the Seven Years' War. Austria gained part of Poland when that country was divided up by Russia, Prussia, and Austria. Joseph and Leopold II, sons of Maria Theresa and Francis duke of Lorraine, her husband, were unable to maintain the Austrian prestige as of old, and Francis II, son of Leopold, in 1797 lost Lombardy and later the Netherlands. Again, in 1815 Austria became the leader in the German Confederation. Francis I became emperor of Austria, dropped the title of Holy Roman Emperor, and continued to be powerful in European affairs. By the defeat of Austria in 1866 by Germany, under Bismarck, Austria was excluded from the German Confederation, which became modern Germany. Afterwards Austria became more progressive, giving Hungary more freedom, and consolidating the empire in the long reign (1848-1916) of Francis Joseph.

The assassination of Francis Ferdinand, son of the brother of Francis Joseph and heir to the throne, 1914, was the spark which started the European war. Another nephew, Charles VII, succeeded Francis Joseph two years later, but on Nov. 11, 1918 renounced the throne, went to Madeira, and died there in 1922. Austria-Hungary suffered defeat, dismemberment, and national disgrace at the close of the World War. Its present area is about that of the original district of Austria, shorn of all the later additions. Money was greatly depreciated, people in despair, enemies threatening from all sides. Austria suffered privations and financial distress almost unparalleled in modern nations. Her former enemies came to the aid with loans, Herbert Hoover's relief committee distributed $72,000,000 in food and clothing, and the League of Nations finally rehabilitated the finances through work of a commission. Much political uncertainty continued, increased by threats and attacks by socialists and communists, culminating in the murder of Chancellor Dolfuss in 1934. Dr. Kurt Schuschnigg succeeded, aided by Prince Ernst von Starhemberg, who was forced out in 1936.

AUSTRIAN SUCCESSION. When the male Habsburg line became extinct in 1740, Maria Theresa, daughter of the late emperor, Charles VI assumed the throne. Both Frederick II of Prussia and the elector of Bavaria, who was crowned king of Bavaria in 1742, claimed the succession on the basis of old laws which forbade a woman to be queen of Austria. England sided with Austria, and France with the elector of Bavaria, who was chosen as Charles VII, emperor of Austria. In 1742 Maria Theresa gave up Silesia to Prussia in consequence of the war which ensued, called the War of the Austrian Succession. In 1745, Charles VII died, and Francis, Duke of Lorraine, husband of Maria Theresa, was elected Roman emperor as Francis I. By other treaties in 1745 and 1748 Austria gave up certain districts to Don Philip of Spain, but Maria Theresa was not dethroned. Frederick was guaranteed the possession of Silesia, following the Seven Years' War (1756-63.)

AZTECS. Though applied loosely to ancient stock in Mexico and Central America, the name really belongs to the seven tribes who came from the north and settled near what is now Mexico City, but called Tenochtitlan. The Aztecs conquered some of the nearby peoples, and flourished for at least two centuries, until overthrown by Cortez in 1521. Some of their descendants in valleys near Mexico City still speak an ancient Aztec language. These people were highly cultured, but barbarous in war, and indulged in bloody human sacrifices to their gods. Their writing was pictorial, and their year had 18 months of 20 days each.

BAALBEK. The word means City of Baal, the center of worship of Baal, the ancient sun god; a place 35 miles northwest of Damascus in Syria. Noted for its imposing ruins. The sun temple was about 290 by 160 feet, and had 58 corinthian columns, each 75 feet high and over seven in diameter, with entablature 14 feet high. Six columns still remain upright. Great stones held up the mound on which the temple was erected, these being 64 by 14 feet, and hoisted up by a process now unknown. Romans, Arabs, Tatars, and Turks occupied the region in turn. It was taken by the Allies in the World War, and now is in French mandated territory of Syria. Baalbek suffered from warfare, and several times from earthquake, being greatly damaged in 1759. The French have laid out fine roads about the town, which today has about 3000 inhabitants.

BABEL. Recent explorations have revealed a huge temple or *Ziggurat* at Babylon. This was started in early ages, stood for centuries, and was finished by Nebuchadrezzer about 500 B. C. It consisted of six circular galleries or stages, the lowest one being 120 feet high and 300 square at the base. Scholars think this is the Tower of Babel mentioned in *Genesis* ii. Nothing remains now save the stones, which for centuries were used to make lime and later buildings.

BABYLON. This ancient city dated from about 3800 B. C., reaching its height about 2100 in the time of Hammurabi. Assyria destroyed much of the area in 689 B. C., but later monarchs, such as Nebuchadrezzer, again restored its glory. Among the great works were the temple of Baal, the residence of the royal family, and the hanging gardens, one of the seven wonders of the ancient world. Cyrus greatly damaged the city in 539 B. C., but his successors built it up. Alexander likewise began to clear away the ruins of the temple, and his son employed 10,000 men for two months to complete the task.

BADEN-POWELL, ROBERT STEPHENSON SMYTHE (1857-1937), best known as the founder of the Boy Scouts in 1909, and the Girl Guides, with his sister, 1910. He entered the British army in 1876, served in colonial campaigns, and gained considerable fame in the defense of Mafeking for 215 days during the South African War. He was made a major general in 1902, retired as lieutenant general in 1909, and was created a baron in 1929.

BAGDAD. Once a magnificent city, the capital of Iraq, and built on both banks of the Tigris River, the

old town being on the western side. For centuries, before the Suez Canal was opened, Bagdad was on important caravan routes to the east. The *Arabian Nights* picture the great splendor of the city in the age of Harun-al-Raschid, who died in 809. Here the Mohammedan caliphs ruled from 762 to 1258; then the Tatars, who were expelled in 1393. Turkey and Persia afterward contended for domination in the province. In 1917 the British forces under General Maude captured and held the city.

BALAKLAVA, BATTLE OF. The charge of the Light Brigade here on Oct. 25, 1854, when the English allies were trying to dislodge the Russians from the hills about Balaklava in the Crimea, has been immortalized in Tennyson's poem. Russian cavalry was driven back by the 4th Dragoon Guards, but reformed again, and the Light Brigade (13th Light Dragoons) was asked to prevent the enemy from removing their guns. In this attempt, the Light Brigade fell between a cross fire and also met a direct frontal attack. In 20 minutes the Brigade lost 247 men out of a total of 673 engaged.

BALBOA, VASCO NUNEZ DE (1475-1517). Spanish adventurer and explorer, who went with an expedition to the West Indies in 1501, and then settled in Santo Domingo. Failing to prosper, in 1510 he joined a party going to Darien, crossed the isthmus, and discovered the Pacific in 1513. He became governor of the territory for Spain, but later was deposed and was executed after his successor, Pedrarias Davila, whose daughter Balboa had married in 1514, accused him of intentions to rebel.

BALKAN WARS. The Balkan states of southeastern Europe lie between the Adriatic, Aegean, and Black Seas, and between the Save and Danube Rivers. Greece, in her own peninsula, is often included. Today, Balkan countries are Albania, Jugo-Slavia, Bulgaria, Rumania, Greece, and Turkey in Europe. Religious, racial, and political differences have prevented unity among the Balkan peoples for their mutual protection. Often open warfare has grown out of attempts to secure more land at the expense of another Balkan state. For centuries much of this region was dominated by the Turks. Bulgaria has desired expansion into Macedonia; Rumania, more territory to the east of her borders; and Serbia, union with Montenegro and other districts into a great Pan-Slav state, an object brought about after the World War.

Austria for many years sought to create strife between the Slav states of Bulgaria and Serbia against Greece and Rumania. The Austrian annexation of Bosnia and Herzegovina in 1908 was a cause leading to the World War. Bulgaria broke away from Turkey in 1876, and nine years later took Eastern Roumelia after a revolution there. Then Russia withdrew her protection from Bulgaria, and Serbia tried to gain some new territory at Bulgarian expense. Bulgaria maintained her own, but her prince, Alexander, was forced to give way to a nominee, Ferdinand, from Saxe-Coburg-Gotha. In 1912 Serbia, Bulgaria, Greece, and Montenegro waged a successful war against Turkey. Failing to agree over the division of new territory, the three former allies turned upon Bulgaria. After three stages of the conflict, and the breaking of two armistices, a peace conference in London failed to bring about a permanent solution of the Balkan questions in dispute. When the World War came in 1914, Bulgaria and Turkey both allied themselves with the German forces, while the other Balkan countries opposed the central powers. See *Congress of Berlin* and articles on the several countries mentioned.

BANNOCKBURN, BATTLE OF. Three miles from Stirling, Scotland, Robert Bruce, with only 30,000 men, by strategy defeated 100,000 English under King Edward II on June 24, 1314. The English lost 30,000; the Scots 8000. This victory guaranteed the independence of Scotland. Here also James III was beaten by his subjects in 1488.

BARBARY STATES. All north Africa, along the coasts, save Egypt, and including Morocco, Algeria, Tripoli, Tunisia, Fezzan, and Barca. The Mauri, Numidians, and Phenicians occupied these coasts in ancient times; then the Romans set up magnificent colonies there, of which many ruins are extant. The Vandals, Mohammedans, Moors, and Turks in succession held these regions, which from 1300 to 1830 were infested by hordes of pirates that levied tribute on nations seeking to trade in the Mediterranean. (See articles on *Decatur*, *John Paul Jones*, and *Tripoli*). France conquered Algeria in 1847, Tunis became a French protectorate in 1881, and Morocco in 1912. Barca, Tripoli, and Fezzan went to Italy in 1912.

BAREBONE'S PARLIAMENT. Nickname for the little Parliament called by Cromwell in 1653 and in session from June 4 to Dec. 12. Praise-God Barebon, or Barebone was a prominent member. The 140 members came from lists made up by the various Congregational churches. In spite of much contemporary ridicule, this parliament passed many good measures, some of them similar to progressive laws already in force in the New England colonies.

BARNET, BATTLE OF. This final struggle in Hertfordshire, England, decided that the house of York should be dominant and that the barons, supported by the house of Lancaster, should lose much of their power. It culminated the Wars of the Roses. Here and at Tewkesbury, in 1471, Edward IV crushed the Lancastrians and left Warwick, "the king maker," dead on the field.

BASTILLE. This fortress in Paris, the scene of many political struggles, was at last stormed by a mob on July 14, 1789. The seven prisoners found there were released. Charles V erected the Bastille in 1370. Many distinguished persons, at various times, were thrown into the dungeons there, such as Cardinal Richelieu, Voltaire, Cardinal de Rohun, and that mysterious person who always wore an iron mask, and who has been variously conjectured to have been nineteen different persons. On the following day the mob completely destroyed the building.

BATTALION OF DEATH. Regiment of Russian women, so named because of an agreement to die rather than be taken prisoners, who began to serve in 1917 on the Kreva front. They met with no little success. During the revolution in November, they steadfastly guarded the Winter Palace in St. Petersburg from attack by the Bolskeviki.

BAVARIA. Since 1919 a free-state of the German republic, to which in 1920 Coburg, another republic, was joined by popular vote. Occupied before our era by the Boii, a Celtic race, conquered by the Romans, who gave way finally to the Ostrogoths, and they to the Franks. Bavaria was part of Charlemagne's empire. In 1180 it fell to the Wittlesbach family. In 1805 Napoleon made it a kingdom, and the king confirmed by him succeeded in retaining the territory and in obtaining more by the final settlements of 1814 and 1815. A new constitution was written in 1818, Bavaria joined the North German Confederation in 1870, and in 1918 the king abdicated.

BAYARD, PIERRE TERRAIL (1473-1524). This French cavalier, in his time known as the knight without fear and without fault, has become the hero of numerous legends and literary works. Bayard was educated in the household of the Duke of Savoy, distinguished himself in 1494 in the battle of Fornovo, and served in the wars in Italy with Louis XII. He is said to have held back the enemy in France with a small force, and to have checked a host of Spaniards single-handed while defending a bridge. Kings honored him, enemies released him without ransom, his exploits became the pattern of chivalry. Bayard fell while defending Bonnivet against the Spanish.

BAYEAUX TAPESTRY. Scenes from the Norman Conquest, embroidered in eight colors on a band of linen 231 feet long and 20 inches wide. They are 72 in number and were once thought to have been the work of the wife of William the Conqueror, but now supposed to have been made at the request of Odo, bishop of Bayeaux, half-brother of William. The 1512 figures of the tapestry throw great light on the dress, customs, and history of the period about 1066, or beginning with the visit of King Harold of England to Bosham and ending with the flight of the English from the field after the battle of Hastings. The borders of the set contain various small scenes from the *Fables* of Aesop, old legends, incidents of farm life, pictures of birds, and details of the Conquest itself.

BEATTY, DAVID (1871-1936). Created Earl of the North Sea and Brooksby in 1919, distinguished himself during the World War at various times. He was made a rear admiral in 1910, vice admiral in 1915, admiral in 1919. He was in command of the Grand Fleet of England from 1916 to 1919, and in the Battle of Jutland Banks successfully engaged the Germans in 1916. He was made a Grand Officer of the Legion of Honor. Admiral Beatty married Ethel, oldest daughter of the late Marshall Field of Chicago.

BEAUHARNAIS (*bo-ar-náy*), **EUGENE DE** (1781-1824). Celebrated French noble and general, who was made viceroy of Italy by Napoleon and in 1806 married Princess Amelia Augusta of Bavaria. Napoleon made him his adopted son and heir to the crown of Italy, which Beauharnais defended against Austrian attacks. When the French hosts fled from Russia, after the disastrous campaign in 1812, Marshal Ney and Beauharnais saved the army from complete annihilation. Likewise, much of the credit for the victory at Lützen should go to him.

BECKET, THOMAS (1118-1170). English statesman and archbishop, at first a close friend and later an opponent of Henry II, rose from the merchant class to be Chancellor of England in 1155 and Archbishop of Canterbury in 1162. Becket maintained a princely retinue, but finally drew closer and closer to the ideals of the church. At last he was forced to choose between his friendship for Henry and his vows to his episcopal office. He refused his consent to the Constitution of Clarendon, was forced into exile in France for six years, and lost much of his property by confiscation to the crown. He was permitted to return and to take up his office again in 1170, did all he could to avert a final break with Henry, but would not give up what he called his duty to the church. Four knights gained entrance to the Cathedral and put Becket to death before the altar. This sacrilege so shocked the entire realm that Becket was made a saint in 1172. Henry III erected a noble shrine to Becket's memory at Canterbury, and this was the goal of thousands of pilgrims, until Henry VIII despoiled it and erased Becket's name from the church calendar.

BELGIUM. Until 1831 Belgium was known as the South Netherlands, a part of Holland since 1579. Following incidents of the French revolution of 1830, the people of Brussels and other districts rebelled, and the new government then established was recognized by a conference of Austria, Prussia, Russia, and England, in London. Prince Leopold of Saxe-Coburg was elected king on June 4, 1831, and in 1839 the Powers guaranteed the neutrality of Belgium, this being again confirmed in 1870 by a treaty between England, Prussia, and France. Leopold II gained great wealth from trading in the Congo in Africa, which became Belgian territory in 1908. Albert I, nephew of Leopold, succeeded in 1909 and corrected many of the abuses of Belgian occupation in the Congo. He distinguished himself by his democratic ways, his careful study of government, and his gallant service in the World War. Belgium refused permission to Germany to allow troops to cross her borders on the way to France in 1914. In consequence, her lands were overrun, her cities laid in waste, and 80,000 of her soldiers perished defending their country. During the course of the war, the government offices moved from Brussels to Antwerp, then to Ostend, and finally to Havre, France. In the final settlement, Belgium received ample indemnities and Eupen, Melmedy, and Moresnet, with 328 square miles and 65,000 inhabitants. Rehabilitation proceeded rapidly, with some aid from foreign allies. Belgium suffered from dissensions concerning the speaking of Flemish as a separate language in Flanders, from the fall in currency values, which forced abandonment of the gold standard in 1935, the increase in taxations, and threats of Fascism. In 1934 King Albert was killed by falling from a cliff near Namur and was succeeded by his son as Leopold III. Queen Astrid was fatally injured in an automobile accident in Switzerland in 1935. Though political conditions in Belgium, of late, have been varied, the country seems disposed to return as quickly as possible to pre-war stability.

BELISARIUS (d. 565). This Byzantine general in 530 defeated a great Persian army, quelled a severe riot in Constantinople, and saved the city for the Roman emperor, Justinian. He fought the Vandals in north Africa, recovered Italy from the Ostrogoths, 540, again sent an army against the Persians, and in five campaigns barely held his own against the invaders of Italy. He was accused of a conspiracy against Justinian, lost his command, and was imprisoned for a time. Belisarius, though stern in discipline, was greatly beloved by his soldiers and was kind to the conquered. A legend of the 10th century describes him as going about begging in his old age; it has often been told in story and pictures. See Vandals.

BENNINGTON, BATTLE OF. During the Revolution, this village, dating from 1761, became the headquarters of the Green Mountain Boys, soldiers organized by Col. Ethan Allen and others. Gen. John Burgoyne dispatched two detachments of Hessians and Indians to capture a storehouse there. Gen. John Stark, of the colonial militia, defeated them with great loss on Aug. 16, 1777. It is said that the flag raised there was the first "stars and stripes" in the United States. An imposing monument, some 301 feet high, commemorates this victory of the Americans over the British.

BERING SEA DISPUTE. From 1872 to 1911, Canada, Great Britain, and the United States disputed over the unlawful killing of seals by poachers, during the breeding season, off the Pribilof Islands. When Russia sold Alaska to the United States in 1867, the latter contended that the words "adjacent waters" in the agreement made Bering Sea practically closed waters to fishing by other nations. In 1886 three British craft were taken by the United States, but were released after a protest on the part of Canada. Great Britain and the Dominion denied that unlawful taking of seals threatened to exterminate the herds. In 1892 the subject was submitted to arbitration, which went against the United States. Over $473,000 damages were awarded to British and Canadian interests. Pelagic sealing continued to be sanctioned, until in 1911 the United States, Great Britain, Russia, and Japan abolished the practice by treaty. See *Alaska* and *Boundary Disputes*.

BERLIN. Founded as a village in the 13th century, Berlin became an important capital from the time that Prussia was consolidated in 1701. In 1786 the population was only 145,000; today it is upwards of four millions in the greater city, organized in 1920. It is the center of a vast commercial, transportation, and agricultural trade of north Germany. As the capital of the present Reich, Berlin has most of the government departments. The city government consists of 12 unpaid councilors, an assembly of 225 members, a supreme court, various lower tribunals, and 20 voting districts. Twice during the World War revolutions disturbed the city, and the National Assembly in 1919 moved temporarily to Weimar. Berlin is noted for its beautiful streets, such as Unter den Linden; its great art galleries, university of 10,000 students, wonderful botanical and zoological collections, and Academy of Science; its old castles, such as the one enlarged by William II to contain 600 rooms; and its monuments, such as the statue of Frederick the Great and the Column of Victory, celebrating the success in the Franco-Prussian War.

BERLIN, CONGRESS OF. Since Russia seemed to dominate in the Balkans after the treaty of San Stefano in 1878, a conference met for a month in Berlin that year under the Presidency of Prince Bismarck. The resulting Treaty of Berlin gave temporary stability to the Balkans. Bulgaria was to be semi-independent from Turkey, and was promised religious freedom; Rumania, Serbia, and Montenegro were established as separate states; and Austria was to take general charge over Bosnia and Herzegovina. Some other adjustments then made were causes of friction for years, such as the awarding of the Dobrudja to Rumania, and of part of Bessarabia to Russia. Eastern Roumelia, like Bulgaria made autonomous in 1878, was united to Bulgaria in 1885; the Dobrudja to Turkey in 1919; and Bessarabia to Rumania in 1918, after declaring independence the previous year; and Bosnia and Herzegovina annexed by Austria in 1908. See article on *Balkan Wars*.

BERLIN DECREE. One of three decrees made by Napoleon to cripple the commerce of Great Britain. The Berlin Decree declared the British Isles in a state of blockade. England retaliated by forbidding foreign ships to enter France without first touching at an English port. In 1807 Napoleon, in his Milan Decree, forbad ships to land in England. His Bayonne Decree, the same year, commanded that all ships in French harbors belonging to the United States should be seized. Many crews were imprisoned, and for a time the United States was near war with both France and England. These decrees, with retaliatory acts by the United States, helped bring on the War of 1812.

BERNHARDI, FRIEDRICH VON (1849-1930). German military critic and official historian of the army staff, who was born in St. Petersburg, served in the Franco-Prussian War, and as general of cavalry, 1907-1909, at which time he retired to write of military topics. Bernhardi declared war to be a biological necessity, and peace efforts a sign of national

weakness or often cloaks for selfish aspirations. His *Germany and the Next War*, 1912, urged that Germany could obtain a "place in the sun" only by ruthless conquest. Some other books were *Britain as Germany's Vassal* (1914) and *The Heroic Fight of Germany* (1921).

BETHLEHEM. Now known as *Beitlahm*, a town in Palestine, about five miles south of Jerusalem, is frequently mentioned in the Scriptures as the early home of Ruth and of David and the birthplace of Jesus. In early ages a grotto or cave near the town was indicated as the place of the Nativity, but St. Jerome found this spot given over to pagan rights in the second century. Empress Helena erected a convent at Bethlehem, which Justinian and others enlarged, and today this is given to Latins, Greeks, and Armenians for a church. A star in the Grotto Shrine burns incessantly, surrounded by 15 lamps. The Crusaders occupied Bethlehem, and later the town was the seat of a Greek bishop. The British under Gen. Allenby captured Bethlehem on Dec. 8, 1917. Since then much has been done to preserve the Grotto and other religious shrines there, while the village has grown to a city of nearly 8,000.

BILL OF RIGHTS. Declaration by a sovereign to respect certain rights belonging to his subjects; or, statements in constitutions confirming privileges or rights to people. In Great Britain, the Bill of Rights, in a particular sense, refers to the guarantee of the throne to the Prince and Princess of Orange, who became joint sovereigns as William and Mary in 1688. This document summed up provisions already claimed by the British people, but disregarded by the last of the Stuart kings. Of the 13 provisions of the English Bill of Rights, some of them were that the king should not nullify laws passed by Parliament, should not levy taxes without consent of the people, should not maintain a standing army in times of peace, should not interfere with justice or elections, should not unjustly punish offenders, and should not deny the rights of citizens to petition the crown. Many similar declarations have been made in modern countries. During the time of the Revolution in France, particularly from 1789 to 1815, several similar declarations were made by different parties or groups. The Constitutional Convention of the United States discussed many such provisions. The delegates finally agreed to embody them in first amendments to the Constitution. Accordingly, ten such articles were proposed at the first Congress of the new United States, and all were ratified in December 1791. For the text of these articles in our Bill of Rights see the *Constitution* in the Department of Government.

BLACK DEATH. One of the forms of plague that appeared in Asia and sometimes in Europe in past ages. Some of the awful visitations of this deadly scourge were those in Syria in the third century B. C.; in Egypt, about the Mediterranean, and finally in Europe from 542 to after 600; beginning in China in 1333, reaching Europe in 1342, and then northern Africa. During this last, estimates place the dead in China at about 13 millions, in Europe twice that number, including nearly half the people of Italy, and over a million in both Germany and England, 100,000 in and around London alone. One English writer declared that "The sheep and cattle strayed through the fields and corn, and there was none left who could drive them." The pestilence was marked by black spots under the skin caused by hemorrhages, by boil-like eruptions on the surface, and by death of the patient usually in two or three days. Important social changes followed the Black Death, some of them being increase in wages, land grants to the peasants, and the decline of feudalism. See *Wat Tyler's Rebellion.*

BLACK HAWK WAR. In 1804 the United States persuaded the Sacs and Foxes, two Indian tribes, to give up their land east of the Mississippi. Their chief, Black Hawk, objected and joined the British in the War of 1812. Again in 1815 and 1816 the tribes agreed, even Black Hawk assenting, and in 1823 they moved westward under leadership of Chief Keokuk. Black Hawk in 1831 openly rebelled. Gen. Atkinson at Bad Ax River and Gen. Dodge at the Wisconsin River defeated the braves, who finally settled on their land near Fort Des Moines in what is now Iowa.

BLACK HOLE OF CALCUTTA. During the Seven Years' War, the native ruler of Bengal in India sacked Calcutta in 1756, but most of the British residents escaped. Some 156, including soldiers, were taken and thrust into a room that was 18 feet by 14 feet 10 inches in dimensions, with ventilation through one small inside window. Only 23 survived the night. One of the soldiers named Holwell wrote a narrative of their terrible suffering from congestion, thirst, and heat.

BLACK PRINCE. For some reason not known, but conjectured to be from the color of his armor, Edward, the eldest son of Edward III of England, was called the Black Prince. He gained fame in the wars in France, notably at Crécy and Poitiers, and went to Spain to help Pedro, the deposed king of Castile. His campaigns ruined his health, so that he resigned his claims to land in France, and died four years after the siege of Limoges.

BLAKE, ROBERT (1599-1657). Celebrated English admiral, who blockaded Lisbon and forced Prince Rupert to give up the Scilly Islands, Guernsey, and Jersey in 1652. The next year he defeated the Dutch, but ill-health kept him from finishing the campaign. In 1657 he silenced the shore batteries of Spain, burned the fleet off Santa Cruz, but died as his victorious flagship was entering the harbor of Plymouth in England on his return.

BLENHEIM, BATTLE OF. Through his defeat in this battle, Louis XIV lost his chance to become master of western Europe. The French and Bavarian armies, commanded by marshals Tallard and Marsin for Louis, numbering 60,000, engaged the allied British and German forces, numbering about 53,000, and commanded by the Duke of Marlborough and Prince Eugène, on Aug. 13, 1704 near Blenheim in Bavaria. Tallard's army was nearly annihilated, but Marsin's got off easier. The French lost 11,000 men, 100 guns, 200 flags, and 24 battalions surrendered.

BLUCHER, GEBHARD LEBERECHT VON (1742–1819). After serving in the Swedish army, he distinguished himself in the war by Prussia against Napoleon. In 1813 he defeated the French in several battles, ending with the taking of Laon. Napoleon defeated him at Ligny in 1815, but Blücher arrived at Waterloo in time to help the British and to pursue the retreating French all one night. On July 7, 1815, he entered Paris in triumph. In his honor, Frederick Wilhelm III of Prussia created the Order of the Iron Cross. His native town of Breslau erected a giant statue of him in 1819.

BOERS. Dutch word meaning *tillers* or *husbandmen* and pronounced *boors* by the Dutch themselves in early days. Specially applied to the Dutch of the southern part of Africa who farmed and raised cattle. In the 16th century some of the Boers settled near the Cape of Good Hope under influence of the Dutch East India Company. Here they were joined by some refugee Huguenots from France. After Great Britain acquired the cape territory in 1814, the Boers came to dislike the new administration, partly because it favored natives and in 1833 freed the slaves. In 1835 the Boers went on a "trek" or emigration northward. So they occupied Natal, Orange Free State, and the Transvaal in time. Later they again came into conflict with the British in the Transvaal, which led to the South African War. Afterward they settled down, and many of the Boers like De Wet, Smuts, and Botha became influential in the Union of South Africa.

BOHEMIA. With Moravia this land in 1918 formed the main part of the new republic of Czecho-Slovakia. The name comes from the Boii, a tribe of Celts from the east and south, which came to this region about the beginning of the Christian era. Bohemia was once a powerful country before the house of Luxenburg began to rule in 1310. After Wenceslas, who tolerated the reforms of Huss, the emperor Sigismund adopted a repressive policy, which ended when George of Podiebrad, in 1458, was elected as a protestant king. King Louis was killed in battle with the Turks in 1526, and Bohemia and Hungary came under Frederick I of Austria. The election of Frederick V as king in 1618 brought on the Thirty Years' War, during which Bohemia came into the hands of the Habsburgs, and so remained until the World War disintegrated the Austro-Hungarian empire. The Czecks or native Bohemians form 63% of the population, Germans the rest. See *Hungary.*

BOLEYN OR BULLEN, ANNE (c. 1501–1536). This brilliant but headstrong queen of Henry VIII was the daughter of Sir Thomas Boleyn and Elizabeth, daughter of Thomas Howard, the Earl of Surrey. After getting a dispensation divorcing his first wife, Catharine of Aragon, Henry announced his marriage to Anne

at Easter, 1533, though it probably had occurred two or three months before. It was legally confirmed on May 28. The success of Anne turned her head, and Henry began to doubt the wisdom of his choice, one reason also being the lack of a male heir. Their daughter became Queen Elizabeth in 1558. Anne was accused of having several lovers, was tried and condemned by 27 peers, and went to the block May 29, 1536. She had previously admitted she was not free to marry Henry. Four of her alleged lovers were put to death with her. Though Anne's own father testified to her guilt, which was affirmed by many others, no positive evidence of this now exists.

BOLIVIA. This South American country was named for Simon Bolivar, the George Washington not only of Bolivia, but also of Venezuela, Ecuador, and Peru. Bolivar was born in Madrid, came to the United States after studying law, and then gave himself to the freeing of South America from the Spaniards. In 1825 Bolivia proclaimed independence and adopted the constitution proposed by Bolivar. Political conditions there have been much disturbed in recent years, two presidents being deposed since 1930. Trouble with neighboring countries has also kept this nation backward. Bolivia joined with Peru in a war with Chile in 1879, and in consequence lost her seaports, the rich guano beds, and had to pay an indemnity. By an international compromise in 1904, Bolivia was given the right of access to the sea. For many years Paraguay disputed with Bolivia over the Gran Chaco, a rich plain, sparsely populated, and about as large as Arizona. The rival claims of these countries led to war in 1928. Within three years 100,000 soldiers died in battle. The League of Nations tried to force the belligerents to compromise, and in January, 1935, ruled that Paraguay had violated her international obligations. In consequence, an arms embargo against Bolivia was raised, and also tightened against Paraguay. An armistice resulted on June 15, and complete demobilization was accomplished on Oct. 28. Yet a peace conference of South American countries, aided by the United States, finally ended in a stalemate. The ownership of the Gran Chaco remains still unsettled, both Bolivia and Paraguay refusing all concessions or compromises.

BOLSHEVISM. When Nicholas II of Russia abdicated in March 1917, he was succeeded by a moderate government of intellectual Socialists headed by Alexander Kerensky. In October another revolution placed in power the Bolsheviki, or left wing of the Socialists, the name itself meaning "majority." Nicolai Lenin, Leon Trotsky, and other new leaders tried to follow more or less literally the theories of Karl Marx. They believed the land should be distributed or "nationalized," and that the peasants should have a chance under local committees, to enter into affairs of government. Though the minority party or Mensheviki, and the old Russian aristocrats, so far as they could, opposed most of these measures, Trotsky and the Red Army were able to install many of the new methods. Lenin died in 1924, Trotsky was banished in 1929, and more moderate ideals have gradually come into the foreground. Under Joseph Stalin, a disciple of Lenin, the fate of state socialism (often wrongly called Communism), seems to be in dispute. See article on *Russia.*

"BONHOMME RICHARD." See *John Paul Jones.*

BOONE, DANIEL (1734-1820). This intrepid frontiersman was born near Reading, Pa., went with Braddock to the western part of the state, visited Florida in 1765, and was twice captured by Indians. In 1769 he engaged to explore the Kentucky country, purchased of the Cherokees a great tract of land for a company of speculators, and selected some for himself. He failed to register his purchase properly, and the claims were not allowed. Boone retired in 1798 to the settlement called La Charette, then in Spanish territory, and now in Missouri. Here he acted as agent and scout for the Spanish and travelled as far as the Yellowstone. His Missouri titles were also found faulty, but Congress gave him a tract of land in consequence. In 1845 the remains of Boone were removed from Missouri to Frankfort, Ky., where a monument was erected by the state. Boone is hero of many legends, is mentioned in Byron's *Don Juan,* and in Daniel Bryan's poems, *The Mountain Muse.*

BOOTH, JOHN WILKES (1839-1865). President Lincoln was mortally wounded by Booth while occupying a box at Ford's Theatre, Washington, on April 14, 1865. Booth entered from the rear, fired point blank, and then jumped down from the box to the stage, breaking his leg. He had been crazed by his small success as an actor and by the failure of the southern cause, for which he had fought. In the confusion Booth escaped into Maryland, where an unsuspecting doctor named Mudd set his leg. Mudd was afterward convicted of aiding a criminal, sentenced to federal prison, and saved many inmates while an epidemic of cholera raged. He was then pardoned. Booth took refuge in a barn, where he was probably shot, after the barn had been fired. Four others, including one woman, were executed for aiding in the conspiracy.

BORODINO, BATTLE OF. One of the bloodiest battles of history, 70 miles from Moscow, Sept. 7, 1812. Though Napoleon and his allies, numbering 120,000, defeated an equal number of Russians, with losses of over 30,000 on each side, he failed to follow up the advantage, and so had to continue the campaign, which ended in total failure.

BOSS RULE. In the United States a political system under which bosses (from the Dutch *baas,* meaning *master*) have built up a modern practice of handing favors down to ward healers from a central committee or political group, and from the healers to the rank and file. It is to advantage to keep the system going by obtaining contracts for public works, franchises, and other ways of providing jobs and money to circulate. One notorious scandal in New York City resulted in the conviction of William Tweed, known as Boss Tweed, in 1873. He was heavily fined, served in all over three years of a twelve-year term, cut short by his death in 1878. Many others, rightly or wrongly, have been called bosses in their cities or states, some of them being Richard Croker in New York, Nelson A. Aldrich in Rhode Island, Marcus A. Hanna in Ohio, Matthew Quay, William A. Vare, and Boies Penrose in Pennsylvania, Thomas Pendergast in Missouri, and Huey P. Long, of Louisiana. By different methods these are some of the men who have wielded great influence, in their districts.

BORDER RUFFIANS. Border disputes have been known for many centuries in all parts of the world. During the Revolution and before, various quarrels often led to open fighting between the colonies, such as between Vermont and New York, Connecticut and Pennsylvania, Massachusetts and Rhode Island. The border wars between England and Scotland led to the death of countless champions and knights. During the Civil War, some of the border states, like Kentucky, Maryland, Delaware, and Missouri, were scenes of factional strife. When settlers began to go to Kansas and Nebraska, the old question of slavery led to much open conflict. Should these new states be admitted as free or slave territory? Manhattan, Kansas, was raided by a party of sympathisers with slavery; in reprisal, John Brown did likewise at Pottawattamie, Kansas, and his raid at Harper's Ferry, Va., in 1859, was but a larger example of this same border warfare. In the new western territory, the raiders were often called Border Ruffians. See *Green Mountain Boys* and *Wyoming Massacre.*

BOSNIA. See *Balkan Wars* and *Treaty of Berlin.*

BOSTON, EARLY HISTORY OF. Built on a peninsula known to Indians as Shawmut, and to early colonists as Trimountaine, now spelled as Tremont in the name of a street, church, theater, and other local designations. John Winthrop's colonists from Salem settled there in 1630, on invitation of William Blackstone or Blaxtun, who had been there since 1626. Later important dates: first meeting-house, 1632; capital of Massachusetts Bay Colony, 1632; controversy with Roger Williams and Anne Hutchinson, 1636; first post office, 1639; mint coined pine-tree shillings after 1652; first bank of colonies, 1686; printing office, 1674; and first regular colonial newspaper, *Boston News Letter,* 1704; largest town in America by 1705; riots after impressment of seamen, 1747, and other outbreaks leading to Revolution, such as Boston Massacre, Stamp Act, and Tea Party, described below; fortification of Charleston led to battle of Bunker Hill, 1775. Washington's foresight, daring, and skill in fortifying Dorchester Heights, 1776, forced the British to evacuate Boston, March 17, a day still celebrated there. See later history under *Fifteen Largest Cities.*

BOSTON MASSACRE. Resistance to oppressive acts by Great Britain began in 1747 in Boston. An open clash with quartered soldiers occurred on March 5, 1770, when seven "redcoats," taunted by a crowd,

killed three outright and wounded seven, of whom two died later. After a mass meeting of citizens in protest, the two regiments were withdrawn and stationed on Castle Island. When the soldiers were tried for murder in October, John Adams and Josiah Quincy defended them. Two were convicted of manslaughter and given light sentences.

BOSTON STAMP ACT. This was but one of various British acts leading to the Revolution. In 1761 a writ giving officers power to search private houses was passed in England, in 1764 one providing for a tax on sugar, followed the next year by one taxing tea, the last being repealed in 1776. On Dec. 16, 1773 a group of citizens, disguised as Indians, boarded three ships in Boston Harbor and cast into the bay about 350 chests of tea. In retaliation, the British Parliament passed the Boston Port Bill, signed by the king in March 1774. By this act the seat of government was moved to Salem, Marblehead was listed as a port similar to Boston, and commerce was otherwise stifled. The citizens, now completely alarmed, appointed a day for prayer, and the first Continental Congress was assembled to consider these various acts. The sending of more troops to the Boston vicinity precipitated the Revolution.

BOTHA, LOUIS (1862-1919). South African leader, who was born in Natal of Boer parents from Cape Colony. He helped establish the new republic in Zululand, which merged with the Transvaal in 1888. During the war with England, he succeeded Joubert in command of the rebels in the Transvaal, but saw by 1902 that the best method was to make peace with Great Britain. He became premier of the Transvaal in 1907, and of the Union of South Africa in 1910. Botha materially assisted the British during the World War and became one of the dominion delegates to the Conference at Versailles in 1919.

BOUNDARY DISPUTES. Several boundary disputes between states of the Union have occurred, and also between the United States and Canada. Vermont and New York, Connecticut and Pennsylvania came to blows over grants of land. New York claimed all east to the Connecticut River, and Connecticut claimed all west to the Hudson; while Virginia controlled much of southwestern Pennsylvania until after the Revolution. Between 1789 and 1910 boundaries between Canada and the United States, at certain points were only tentative. Disputes as to lines between Maine, the Oregon territory, and Alaska and the Dominion of Canada caused much feeling. From 1814 to 1822 a commission discussed ownership of a number of islands in Passamaquoddy Bay in Maine, three of which at last went to the United States. Maine also claimed territory farther north than the St. John's River; but, in turn, Great Britain wanted all south to the Aroostook River or even beyond. Troops were sent in 1839 to quell a disturbance known as the Aroostook War. Three years later the Webster-Ashburton Treaty gave the United States over 7000 square miles of land, most of it now in Aroostook County, Maine. Yet the northeastern boundary with New Brunswick was finally settled only in 1910. (See map under administration of Harrison and Tyler). In 1818 Great Britain gave up a generous corner of what is now Minnesota and North Dakota, receiving in return a small strip of land that belonged to Montana in the former surveys. The line marking the water boundary in the Great Lakes (for the most part the middle of each) was fixed in 1842. The Democrats in 1844 made the Oregon district boundary a campaign issue. They created the slogan of "Fifty-four Forty or Fight," meaning that they insisted the northern boundary of the United States should be far north. It was fixed at 49° after the election, without much ado or protest. Not until 1903 was the boundary between Canada and Alaska fixed by a mixed commission, which determined that Canada had no rights north of the old 54° 40′, where British territory meets Alaska. In 1819 Mexico received a generous slice of southeastern Texas, which the United States had claimed as part of the Louisiana Purchase. After the Mexican War the Gadsden Purchase (which see in special article) straightened out another dispute. So did the annexation of Texas, which once and for all set the boundary line at the Rio Grande River.

BOURBONS. Two reigning houses both in France and Spain, founded by Henry IV (1553-1610). The French branch ruled until 1848, with interim of the Revolution of 1789 and Napoleon. Leading members of the French or Orleans branch included Philip II, regent of France (1715-1723) for Louis XV; Louis Joseph Philippe, who renounced his rank during the Revolution, took the name of Citizen Egalité (Equality), and died in 1793 by the guillotine; and his son, Louis Philippe, king of the French from 1830 to 1848. Some of the chief Spanish members of the Bourbons were Philip V, placed on the throne by his grandfather, Louis XIV of France, in his desire for more territory; Ferdinand VII (1784-1833); Isabella II (1830-1904); Alfonso XII and XIII, father and son, the latter being dethroned in 1931. Don Carlos, son of Philip V, became king of the Two Sicilies as Charles III in 1735; Ferdinand I was twice king of the Sicilies; and Francis II, dethroned in 1860 when the Sicilies became part of united Italy.

BOXER REBELLION. The Boxers is a foreign name for a Chinese society organized to drive "the foreign devils" from China. In 1900 they killed the German minister to China, a number of missionaries, and compelled 200 refugees to take shelter in the British legation compound, where the revolutionists besieged them for two months. Allied troops from the United States, British, French, German, Russian, and Japanese stations, some 18,000 in all, destroyed the Taku forts, but were repulsed from Peking. On Aug. 14 a second force entered the city after heavy fighting. China agreed to pay 333 millions indemnity. In 1908 the United States remitted her portion of 13 millions for education of Chinese youth in America. When China joined the Allies in the World War, these nations remitted their portions also. China made other concessions, such as the privilege of fortifying foreign legations in Peking and changes in customs inposts as to weights.

BOYNE, BATTLE OF. On the banks of the Boyne in Ireland, William III on July 12, 1690, checked the forces of James II, numbering about half as many as the English army of 40,000. James II fled to France from the field, and so ended his attempts to claim the British throne.

BRADDOCK'S DEFEAT. During the French and Indian War, Edward Braddock, a British general, was sent against the enemy in western Pennsylvania. Near the site of the present city of Pittsburgh, the Indians drew the English force into an ambush. Braddock was mortally wounded and, on July 13, 1755, died at Great Meadows, 60 miles away, where he had been taken. Col. George Washington and others of the expedition had warned Braddock of his danger, but the general relied on English training of soldiers to withstand any tactics of the redmen. Half the English force of 1200 were slain, and Washington led the rest to safety.

BRAZIL. Vincente Pinzon skirted the coast of Brazil in 1500; the Portuguese under Alvarez Cabral took possession of the coast near Porto Seguro that same year. A Portuguese force in 1567 overthrew a Huguenot colony and founded the present Rio de Janeiro. Discovery of gold in 1693, and of diamonds in 1729, stimulated colonization, and the capital was removed from Bahia to Rio de Janeiro. When Portugal failed to protect the royal family against dangers from the French in 1808, the emperor went to Brazil, opened up commerce, and in 1821 returned to Portugal, leaving his eldest son as regent. The latter proclaimed independence in 1822, and ruled as Dom Pedro I until 1831, when he resigned in favor of his son, a mere child, who became Dom Pedro II in 1840. Save for wars with Buenos Aires in 1852 and with Paraguay in 1865-70, his reign was one of uninterrupted peace and prosperity, until the royal family was exiled in 1889, when Brazil became a republic. Dr. Getulio Vargas, failing to win the presidency, in 1930 overthrew Luis Pereira de Souze, the incumbent, by a popular uprising. Brazil withdrew from the League of Nations in 1926. A new Constitution went into effect in 1933.

BRITISH EMPIRE. Six principal divisions, not including mandates, of countries, colonies, districts, protectorates, and small islands comprise the vast British Empire. The total land area of the Empire is over 13,000,000 square miles, the total population exceeds 490,000,000, in both cases more than one-fourth of the globe. These areas are about equally divided north and south of the equator, and nearly so, east and west, so far as alternation of night and day is concerned, though the actual land area lies about two-thirds in the eastern hemisphere. It is therefore literally true that the sun never sets on the British Empire. Most of the lands controlled by

Great Britain rallied to the service during the World War. Since 1918, however, distinct tendencies have caused the government at London to recognize more fully the autonomous character of seven of the dominions. These dominions are regarded as co-equal and self-governing "in the community of nations known as the British Empire." So states the treaty allowing the Irish Free State in 1921. The British Empire has seven members in the League of Nations:—The United Kingdom (Great Britain and Ireland), Commonwealth of Australia, Dominion of Canada, India, Dominion of New Zealand, Union of South Africa, and Irish Free State. Newfoundland is a dominion, but not represented in the League of Nations or British Imperial Council. Below are the names, status, and date of final acquisition of various parts of the British Empire.

If two dates are given, one is of first or part acquisition, the second part that of final; or first, of acquisition, later relinquished, and second date that of final authority.

1. *The United Kingdom,* often miscalled the British Empire, consists of England proper, dating from Edgar, 958; Scotland, claimed early, united to England and Wales in 1603, and parliaments united, 1701; Wales, 1536; Ireland (excluding the Free State, now a dominion), claimed early in 1172, Irish parliament abolished in 1801. The Isle of Man, almost independent, but not admitted as a dominion, finally purchased 1829. Channel Isles came with the Normans to England.

2. *Self-Governing Dominions,* to each of which is sent a governor general who in theory has power of veto in some cases, but rarely attempts to exercise it, his function being mainly social and advisory. Newfoundland, claimed by Humphrey Gilbert in 1583, is the oldest settled territory outside the United Kingdom itself. (In 1933 made temporarily a crown colony). Canada, conquered in 1759, formally ceded by France 1763, organized as a dominion in 1867, and other parts added later. Labrador has always been part of Newfoundland politically. Australia, settled in 1788, parts united as a commonwealth in 1901,—more independent than other dominions,—with new capital at Canberra (1931); includes Tasmania, an island group. New Zealand, 1840; now has mandate over Western Samoa. South Africa, as a union in 1910, and as dominion, 1930, is made up of Cape of Good Hope, 1795-1803, 1806; Natal, 1824, but annexed in 1843; Orange Free State, 1848-54, 1900 (after Boer War), Transvaal, 1877-81, then virtually independent, annexed in 1900 (after Boer War). The Irish Free State, 1921.

3. *Modified Autonomy,* intermediate between dominions and crown colonies. Malta, 1800, constitution suspended, 1930-32; Southern Rhodesia, 1889 organized by South African Company, annexed 1923, asked dominion status, 1932.

4. *Crown Colonies,* without responsible government, and controlled by the Secretary of State for Colonies. In North America: Barbadoes, 1605-25; Bermuda, 1609; British Honduras, 1638; Jamaica, 1655; Bahamas, 1666; Tobago, 1763, 1803; Falkland and South Georgia Is., 1765, 1832; Trinidad, 1797. In Asia: Aden and Perim, 1839; Hongkong, 1842, an island with a "perfect harbor"; Straits Settlement (including Singapore), East India Company, 1819, 1874-95; Federated Malay States, 1875; Weihaiwei, leased from China, 1898. In Africa: Northern Rhodesia, South African Company, 1889, 1923.

5. *Colonies and Protectorates jointly,* midway between protectorates and colonies. Some have resident commissioners. The chief ones are Sierra Leone, 1787; Gold Coast, 1871; Nigeria, 1884-86; Kenya (East Africa), 1888, 1920.

6. *Protectorates,* differing from crown colonies in that they are not officially annexed to the Empire, and their residents are not British subjects. Administration is usually by native chiefs, under English sanction, with aid in case of trouble or foreign encroachments. Some of the chief protectorates are St. Helena, 1651, 1673; Basutoland, 1868; North Borneo, 1881, 1888; Papua, 1884; Somaliland, 1884, 1887; Bechuanaland, 1885-91; Sarawak in North Borneo, land of the hereditary white rajah, 1842-1888; Brunei, 1888; Uganda, 1890-96; Zanzibar, 1890, received from Germany in trade for Heligoland in the North Sea; Nyassaland, 1891; Unfederated Malay States (part), 1909. Scores of small islands, mostly uninhabited, are protectorates, such as the Fiji, 1874; Southern Solomon and others, 1877; Christmas, Fanning, and others, annexed, 1898. See article on *Mandates* for territory allocated to the British Empire.

BRITTANY. This district in northwest France, once called *Armorica,* for many centuries has been inhabited by a Celtic race allied to the Welsh of Wales, the Cornish people, and the ancient Cymri. The Breton language, now used by 1,250,000 people, is often called Armorican, and is like Welsh in many respects. Before 300 Brittany was divided into petty states, later into monarchies, subject still later to the Franks, and then assigned to the Northmen in the 10th century. In 992 Geoffroi, Count of Rennes, became duke of Bretagne, and the duchy was united with France when Charles VIII married Anne of Brittany in 1491.

BROOK FARM. One of over 125 communities established before 1875 in the United States according to the principles of Fourier and other sociologists. Brook Farm contained 200 acres at Roxbury, south of Boston. Each one there was to share in the labor of the farm and to follow his own pursuit, art, or profession half the time at least. The plan failed because of bad management, burning of a large building with no insurance, and the inability of the members to combine practical labors and other work. The scheme continued from 1841 to 1847. Some noted persons who spent time at Brook Farm were Nathaniel Hawthorne, Margaret Fuller, Louisa M. Alcott, Charles A. Dana, George W. Curtiss, and George Ripley, the chief founder. Hawthorne's *Blithedale Romance* is founded in part on life at Brook Farm.

BROWNSVILLE RIOT. On Aug. 13, 1906, colored troops of companies B, C, and D of the 25th Infantry stationed at Fort Brown shot up the city of Brownsville, Texas, on the Rio Grande River opposite Mexico. The army investigation disclosed that no soldier would implicate any of his companions, and so recommendation was made that all be discharged *en masse* without honor, a course followed by President Roosevelt. After much criticism, once more in 1910 a special court of inquiry rendered a verdict that the men of the 25th Infantry were guilty of the outrage. No further action was taken.

BRUMMEL, GEORGE BRYAN (1778-1840). From the time that he was at Eaton and Oxford, "Beau" Brummel was known for his immaculate taste in dress and manners. Fashionable persons used to imitate and quote him in disputed matters of etiquette. For years he was a familiar companion of the Prince of Wales. After temporary estrangements, the Prince at last cut Brummel from his favor completely. The dandy then fell into extravagance, debt, and bad habits. In 1816 he fled to France, where from 1830 to 1832 he was a British Consul. For a time he was helped by his old friends, but at last died in a charity home at Caen.

BUCCANEERS AND PIRATES. Every child has imagined the life of Captain William Kidd, and his bold band of pirates, described elsewhere in this history. He may not know that several associations existed for the purpose of capturing vessels on the high seas, and governments gave commissions to individuals and companies to harry the commerce of rival nations. The Buccaneers were a group of French and English sailors who preyed on the Spanish possessions in the new world. They captured and looted the city of Panama in 1671. From 1525 they took many vessels of the Spanish in the West Indian trade. One of the pirate leaders, Henry Morgan, was knighted and became governor of Jamaica. The French called these men *Filibustiers,* a word that is known today for an illegal expedition or tactic. Later they were called *marooners* from the custom of setting off their captives on desert islands to shift for themselves. Sir Francis Drake, John Hawkins, Sir Walter Raleigh, and others in the age of Elizabeth were given commissions to prey on the commerce of Spain. They were hardly more than legalized pirates. When Great Britain frowned on such practices, and punished those who engaged in them, the privateers turned to actual piracy. Of such men were Capt. Kidd, Blackbeard, and men like Roberts and Avery, other noted marooners. A Dutchman, Esquemeling, who served with Morgan, wrote what seems like a true story of the buccaneers, of whom much fable has been written in later times. Privateering existed as late as Revolutionary days. Piracy existed even among the Phenicians. The Northmen were the great pirates of the Middle Ages in the north. The corsairs of Algiers infested the seas for many years. (See *John*

Paul Jones, and the *War in Tripoli*). Pirates swarmed in the English Channel as late as 1700, long after Great Britain had outlawed them. Austria, Prussia, and Russia passed stringent laws against piracy in 1841. As late as 1864 five men were hanged in London for murder and piracy.

BUENA VISTA, BATTLE OF. General Zacharay Taylor, in the war with Mexico, on Feb. 22, and 23, 1847, defeated 17,000 Mexicans under Santa Ana. The United States forces numbered about 4700. This battle practically closed the northern campaign, which was terminated shortly afterward by the successful operations in the vicinity of Mexico City under Gen. Winfield Scott.

BUENOS AIRES. Capital of Argentina, largest city in South America, and set up as a district of its own politically. Juan de Solis in 1515 and his party sailed up the Platte River, seeking the fabled road to the eastern hemisphere. He and most of his followers were killed by the native Indians. Magellan and Sebastian Cabot sailed up the river, but did not try to plant a colony. In 1535 Pedro de Mendoza landed where Buenos Aires now is located, but returned to Spain, leaving a small colony, which soon went farther up the river. In 1580 the first permanent settlement was made by Juan de Garey. By 1650 the town had several hundred people. Cattle brought from lands across the sea started the great meat and dairy industry of modern times in Argentina. The present city is built in form of squares, with over one hundred parks covering 3000 acres, over 2,000,000 inhabitants, many notable structures, some of them in ornate and uniform French Renaissance style.

BULGARIA. Since 1908 an independent kingdom in southeastern Europe. After 500, the Bulgars migrated from northern Europe and settled in the Danube valley, where they were christianized in the 11th century, and later conquered by Byzantium. The Bulgars revolted successfully in 1186, but in 1393 were subdued by the Turks. After the Russo-Turkish War, the Congress of Berlin in 1878 set up Bulgaria as an autonomous state, but with an hereditary prince subject to Turkey. Alexander of Battenburg became the first prince in 1878, and the last, Ferdinand, became king in 1908. In the Balkan Wars of 1912-13, Bulgaria gained territory, which was also increased in 1916 by taking the Dobrudja, after joining the Central Powers in the World War. The final settlement reduced these conquests, curtailed the army, and forced payment of reparations. When the premier, who led an agrarian movement, was assassinated in 1919, Bulgaria asked and obtained an increase in her army. This was one cause of enmity of Greece and of the invasion of Bulgarian territory in 1925, but the League of Nations forced Greece to pay Bulgaria an indemnity. Much disorder in Bulgaria in 1934 and 1935 endangered the throne of King Boris, who was obliged to submit to a Fascist regime in 1934, but succeeded in forcing out two militaristic cabinets and replacing them by civil officers, after setting up a new constitution in 1935.

BULL MOOSE. Name adopted for the third party led by Theodore Roosevelt in 1912 when he ran for the presidency. Roosevelt's friends declared that he did not come under the custom forbidding a third term, since he had only one full term of his own, besides part of that of Pres. McKinley. Roosevelt received 88 votes, Pres. Taft 8, and Wilson 435. Bull Moose as a name is said to have originated from Roosevelt's remark, "I feel as fit as a bull moose."

BULL RUN, BATTLES OF. First great engagements of the Civil War, on July 18 and Aug. 29-30, 1861. In the first battle, after five hours of fighting, the Confederates started to withdraw, but Gen. T. J. Jackson held them like a "stone wall," and became known as Stonewall Jackson afterward. The Union army lost 2800, and the South 2000. In the second battle, after two days of heavy fighting, the Confederates under Gen. Longstreet drove back the northern army under Gens. McDowell, Porter, and Heintzelman. As a result, Maryland lay exposed to the armies of the South.

BUNKER HILL, BATTLE OF. (Really Breed's Hill). Twice the colonial militia drove back the British regulars to their ships in Charleston Harbor near Boston on June 16, 1775. Most of the town was burned when the Americans had to retreat for lack of ammunition. British loss about 1050, American 450, among them Gen. Joseph Warren. The results greatly encouraged the colonists. Gen. Lafayette laid the corner stone, and Daniel Webster spoke the oration in 1825, when the foundations were laid for a monument, completed in 1843, when Webster spoke again.

BURIAL, ANCIENT. Three methods have been recognized: inhumation or interment in earth or stone; cremation or burning; and embalming and treating to preserve indefinitely. Cave-dwellers buried in grottos and crevices, as in France and America; stone-age people buried in trenches or barrows. Babylonia buried in mounds, later in earth jars, and in regular plots, with weapons, ornaments, and other objects. Egypt first buried in the sand, and later in elaborate pyramid tombs, in which the mummies and property of the dead were kept for many centuries. The Greeks used monuments, tombs, and inhumation in trenches, and later, cremation. The Romans added mourning customs, funeral processions with torches, use of hired mourners, the latter known also in Babylonia. Christians abandoned cremation, used cemeteries rather than single tombs, and resorted to burial in underground chambers, or catacombs.

BURMA. Mongolians succeeded the early inhabitants of Burma, noted for instability of civil rule, but for religious systems of monastic life that endured for centuries. Some of the great dynasties were these: Pagan, from 1054 to 1287, ended by Kublai Khan; then the Shan to 1531, a time of chaos; the Taungoos; next the Alompra (1752-1760), when all the enemies were subdued; Badawaaya (1782-1819), during which age foreign nations interfered; and at last Thebaw (1876-1885), when Burma became a British dependency. In 1930 uprisings in Rangoon, capital of Burma, led to the recommendation of the British Imperial Conference that Burma be set off from India.

BYNG, JULIAN HEDWORTH GEORGE (1867-1935). Beginning with service in India and South Africa, Byng became a major general in 1909. He served as commander in Europe, then on the Dardanelles expedition, next in charge of the Canadian forces (1916), and, after the war, 1921-26, as governor-general in Canada. For skill in the attack at Vimy Ridge in 1917, he was created First Viscount of Vimy in 1926. He served as head of the Metropolitan Police, known as Scotland Yard, in 1928.

BYZANTINE EMPIRE. In the words of the French historian, M. Taine, the eastern Roman Empire, with capital at Byzantium, was "a gigantic mouldiness lasting 1000 years." Yet it at least served to keep back the barbarian hords that threatened to break into Europe from Asia, and at times to check the Huns, Goths, and others from the north. Here Justinian, known for his wise laws, ruled from 527 to 565, but his son proved a weakling, incapable of holding outsiders in check. When Charlemagne became dominant in the west, the dream of uniting both the eastern and western Roman empires came finally to naught. Commenius, during the early Crusades, sought to keep out the wandering and plundering Normans; his successor, John the Good, vainly tried to fight off the Seljuks, Serbians, and other tribes. The rest is a mere procession of emperors in name only, until in 1453 Constantinople, as Byzantium came to be called, fell to the Turks. The city itself was settled by the Dorians in the 7th century B. C. After being influenced, in turn, by Athens, then by Sparta, then by Philip of Macedon, the Celts, and at last the Romans, Constantine made it the eastern capital in 330. In 1929 the name was officially changed from Constantinople to Istanbul. See article on *Constantinople*.

CADORNA, LUIGI (1850-1928). Italian general, who was educated at Turin Academy, commanded divisions in Naples and Genoa, and then, as chief of staff, prepared the Italian army to enter the World War. For two years he directed operations against Austria, then was sent to Versailles as one of the Allied Military Council, but finally in Feb. 1918 gave way to Gen. Diaz. Mussolini restored Cadorna to favor, and made him a field marshal, along with Diaz, in 1924. After that he did much to reorganize the army.

CALCUTTA. Metropolis of India, capital of Bengal, a city on the Hoogly River about 86 miles from the sea. Calcutta is the educational and business center of a vast territory, being chiefly the port for the trade between Europe and the Far East. The Nawab invited the East India Company to establish the city in 1690. Eight years later the Company

purchased it outright of the governor of Hoogly, and held it until 1756 when it was captured by the Nawab of Bengal. At this time the English garrison were huddled into a narrow space called the Black Hole, described elsewhere. One year later Clive and the British captured the city, after which great prosperity followed. In 1876 a new city government was adopted, amended in 1900, and in 1923 changed to a mayor and council form. Over 60 per cent of the inhabitants are Hindus, 30, Mohammedans, and the rest scattered among many faiths. From 1772 to 1912, Calcutta was the capital of British India.

CALIPHATE. Somewhat comparable among the Mohammedans to the Pope among Roman Catholics, but never as powerful. Different dynasties of caliphs ruled in Bagdad and elsewhere. The Ommiads were defeated by the Abassides in 750, and the latter continued to hold sway until 1258. One of the Ommiads set up a rival caliphate at Cordova, Spain, and this grew to great wealth, culture, and power. Being a rival to the oriental caliphate, this helped hold back the Mohammedans from entering Europe from Asia. Turkey assumed the caliphate in the 16th century, and the sultans exercised, in theory at least, both temporal and spiritual powers. The Nationalists or Young Turks, however, deposed the sultan-caliph, Mohammed VI, on Nov. 2, 1922. The sultanate was abolished, and Addul-Méjid was named caliph. For some years previously, the eastern Mohammedan nations had been lukewarm toward Turkish claims to sovereignty. On March 3, 1924, the National Assembly at Angora, the new capital of Turkey, deposed the caliph, and abolished the office. King Hussein of Hedjaz assumed the title, which was said to lapse when he abdicated in 1924. Two conferences in 1926, one at Cairo and one at Mecca, failed to elect a new caliph.

CALVINISM. Following the beliefs of John Calvin, some of the religious sects have held that God "ordains" or "elects" that some persons shall be saved, and others shall be lost. Arminius, a Dutch scholar and opponent of Calvinism, declared that such a doctrine made God the author of sin, and that all efforts to save persons must be futile if some are doomed to be lost, and only the elect are to be saved. The ensuing controversy left the Church of England much inclined toward the tenets of Arminius, and the Scotch Presbyterians inclined toward Calvinism. Early Puritanism, however, was strongly influenced by Calvinism.

CAMBRAI, BATTLES OF. Two great battles of the World War were fought about Cambrai in France, one in 1917 during the British advance and the second toward the close in 1918. In the August retreat of the Allies in 1914, the enemy had taken Cambrai. The British in 1917 planned the use of army tanks on a large scale. Beginning on Nov. 20, two infantry corps and 350 tanks were launched against the Hindenburg lines, all three of which they crossed, but the tanks could not get over the Scheldt Canal. The British took 10,500 prisoners and 142 guns in this advance, which demonstrated the value of tanks in covering ground. In the next two or three months, the Germans gained equally, however, and altogether the British lost about 45,000 men in these operations. The Hindenburg lines about Cambrai were then made supposedly impregnable to tank offensives. On Sept. 27, 1918 another great advance began, which in one day, with 53 tanks, destroyed the Hindenburg outer defenses, took 10,000 prisoners and 200 guns. The final failure of the boasted Hindenburg defense system was a great shock to German morale. The Americans with General Haig, using 175 tanks, and many British Divisions, on Sept. 29, pushed forward. One great feat was the crossing of the Scheldt by rafts, lifeboats, and other means. Thirty British divisions were engaged, two American, and 39 German. The Allies took 36,500 prisoners and 380 guns. It was the greatest of all Allied victories to this point, and perhaps of the war, and was the main cause of the German bid for peace in October and early November.

CAMDEN, BATTLES OF. Lord Cornwallis defeated the Americans under Gen. Horatio Gates at Camden, S. C., on Aug. 16, 1780. Many of the colonials were green recruits, who fled when suddenly attacked by the enemy. The troops from Maryland were commanded by Baron Johann DeKalb, one of the Bavarian allies of Washington, who was mortally wounded, when his force stood their ground.

CAMPUS MARTIUS. One of eight large fields in the city of Rome, which were used as athletic and military training grounds. The name means Field of Mars, and our modern word *campus* comes from this phrase. The Campus Martius was also used for patriotic and civic assemblies. Later it was covered with public structures and residences for the wealthy. Today the district is still known as Campo Margo.

CANADA, DOMINION OF. Some of the early explorers positively known to have visited what is now Canada were John Cabot, 1597, Henry Hudson, 1610, Jacques Cartier, 1535, who sailed up the St. Lawrence to where Montreal now stands, Samuel de Champlain, 1605-35, who spent years in this region, and he was followed by numerous Jesuits, many of whom perished from cold and Indian attacks. By 1666 a mission station was planted on Lake Superior; Joliet and Marquette in 1673 had explored as far as the Mississippi. Montmorenci came to represent the church, and, in his turn, Frontenac, to represent the state, the latter being the only early ruler able to hold the Iroquois Indians in check. For many years England and France contended for preeminence in Canada. At last Acadia went to Great Britain in 1713, and all of Canada in 1763, after winning the Seven Years' War. From 1670 to 1869 the Hudson's Bay Company controlled large tracts, eventually sold to the Canadian government. Because of the Revolutionary War, many loyalists to the mother country emigrated from the United States into Canada, mainly into New Brunswick. Upper Canada (now called Ontario) in 1791 was set off from the district down the St. Lawrence River, known as Lower Canada, with Montreal as the chief city and with customs and language predominantly French. Following a rebellion in 1837-38, both Upper and Lower Canada, were united into a single province, which became semi-independent of British control. Governments were set up in Prince Edward Island in 1851, British Columbia, 1852, and Newfoundland, 1855. With the exception of Newfoundland, these were joined with Upper and Lower Canada to form the Dominion of Canada in 1867. To this day Newfoundland is a separate dominion on the same status as the Dominion of Canada itself. The provinces of Alberta and Saskatchewan were added to the Dominion in 1905. The Yukon Territory was formed in 1898, and Northwest Territory in 1920, with three divisions or districts, Mackenzie, Keewatin, and Franklin, all nominally a part of the Dominion of Canada.

The great political leaders have been Sir John A. Macdonald, who did much to promote the union, Sir Wilfrid Laurier, Liberal leader for 32 years, followed by William L. Mackenzie King, twice premier. Robert L. Borden, leader of the opposition or Conservative Party, has also been twice premier. Since 1921 a new Farmer or Progressive Party has gained much influence. Rebellions were led by Louis Riel in 1869-70 and again in 1885, when he was executed. Canada sent 600,000 men to the World War, of whom 210,000 were killed or wounded. Some of their great battles were Vimy Ridge, Hill 70, the Somme, Amiens, and Cambrai. Canada was allowed to send ambassadors to foreign lands in 1926 for the first time, and given a seat in the League of Nations. In 1925 the Congregationalist, Methodist, and most of the Presbyterian churches formed the United Church of Canada. Some of the great problems of Canada have been fisheries, tariffs, transcontinental railways, water routes, boundaries, and differences in races and religion.

CANNAE, BATTLE OF. By the River Aufidus at Cannae the Romans suffered a great defeat by Hannibal, general of the armies of Carthage, in 216 B. C. Though outnumbered two to one, Hannibal drew up his forces in crescent shape, with artillery on his wings, and a dense center of about 25,000 Gauls and Spaniards. He purposely allowed some of the Roman legions to break through, only to slaughter them, while not more than one-third of the Roman legions could engage the enemy, since the Carthagenians were protected by the solid center.

CARSON, CHRISTOPHER (1809-1868). Commonly known as Kit Carson, an American hunter, trapper, and scout for the government. He was born in Kentucky, saw service in the northwest, and was with Frémont on his expedition to take possession of California during the Mexican War. He conducted parties to California during the gold rush in 1849-50, and four years later settled at Taos, N. M., where he served as Indian agent. For service in the southwest during the Civil War, he was brevetted brigadier general. Once he drove 6500 sheep overland to Cali-

fornia, and again 50 horses and mules over 500 miles to Fort Laramie.

CARTHAGE. Once a great city in northern Africa, near the present Tunis, and early occupied by the Canaanites, who named it Kirjath. First a merchant city, then a great sea power, and by the 5th century B. C. dominant over all the southern Mediterranean lands. At its height Carthage had 700,000 inhabitants. This district was long the battle ground between the Semitic and Aryan races. As a result of the First Punic War, Carthage gave up Sicily and paid a large tribute, and later, while putting down a revolt of mercenary soldiers, the city lost Sardinia and Corsica to Rome. Three great names arise in the conflicts with Rome,—Hamilcar, his son, Hasdrubal, and Hannibal, brother-in-law and successor of the latter in 221 B. C. Carthage, under the first two of these great generals, won victories in Spain, established Cartagena, and took Saguntum in 219. In 202 peace was concluded with Rome, after the great Scipio had defeated Carthage at Zama. At last in 146 B. C. the Romans took Carthage, after a siege of two years. More than a century later, Augustus carried out the plan of his uncle, Caius Gracchus, in rebuilding the African city, which flourished for two centuries. It became the Vandal capital in 439, of our era, fell to Belisarius in 533, and again was razed by Arabs in 647, after which the once proud mistress of Africa, and of parts of Italy and Spain, never attained any prominence. Modern excavations at the site of Carthage have revealed interesting ancient foundations. See *Hannibal* and *Hasdrubal.*

CARTIER, JACQUES. (1494-1557). Like most early westward explorers, Cartier sought a northwest passage to the Pacific and to the riches of Cathay or ancient China. In 1534 he visited the region of Newfoundland, continued on to Cape Breton, Prince Edward Island, and named the Bay of Chaleurs. At Cape Gaspe he raised a cross to claim the land for France. He returned in 1535, proceeded up the St. Lawrence to Stadacona, where Quebec now is, and carried off to France the Indian chief, after proceeding to Mount Royal farther up the river. Cartier was back again as pilot of the fleet that brought the first French governor general in 1541, wintered once more in Canada, and took back some ore that he wrongly thought to be gold. He was granted a manor near his native town.

CASTES OF INDIA. The commercial and social system of India was once so highly complex that over 200 castes existed. The native word is *jâti, race,* and the early traders from Europe called it *casta,* an equivalent word. The Brahmins recognized four chief castes: the priestly, the military, the agricultural and commercial, and servants, including slaves. Remains of the ancient system still hinder the progress of India. The castes once extended into religious, social, and fraternal relations, as the numerous orders, societies, and groups even today testify. Many subdivisions existed, such as in agriculture, where a man might grow vegetables, but not certain specified ones, or fruits or nuts. In marriage, business, and in social life generally, combinations were frowned upon. Even criminal castes or tribes still exist. Other parts of Asia have their peculiar caste systems, such as in Siam. So did the aborigines of Australia, America, and even today in northwest Canada among natives. In the feudal system of Europe, classes, societies, and orders resembled the caste systems in modified forms.

CASTILE AND ARAGON. Separate districts of Spain at last united to form the modern nation, though still differences exist and tend to disunion. Old Castile was the northern portion, so named because of the numerous castles built as protection against the Moors. Other districts of Spain were the Asturias and Leon, ruled by native dukes, until Ferdinand I (1035-1065) united Castile and Leon. In 1465 Isabella became queen. Four years later she married Ferdinand of Castile, and in 1475 modern Spain emerged from the union of all monarchies.

CATHAY, or *Khita,* the name of the Tartars, who before 1100 lived in what is now the northern part of China. In medieval Europe the impression was common in the middle ages that this land was much farther north than it is. It was not until after 1600 that Cathay was recognized as merely part of the great empire, of which the southern part had long been known as *Mangai.* Early voyagers were trying to reach Cathay by a northwest passage from the Atlantic into the Pacific. South China still retained the old Sung culture, while the north was impressed by the Tartars; and so the distinction was not wholly artificial. In Russia and some other lands today, China is still called Khitai or Kitai.

CAVELL, EDITH (1865-1915). An English nurse shot as a spy by the Germans at Brussels on Oct. 12, 1915. She had been, for several years, a matron of the Birkendael Medical Institute in Brussels, and this became a Red Cross station during the World War. She was accused of aiding Belgian, French, and British prisoners to escape, a charge which she did not deny. In spite of protests by the Spanish and American ambassadors in Belgium, the sentence was carried out. A memorial service was held for her in Westminster Abbey, she was buried in Norwich Cathedral, and a monument was erected in her honor in St. Martin's Place, London.

CAWNPORE, INDIA. During the Indian mutiny against Great Britain, in July 1857, hundreds of women and children, with some soldiers under Gen. H. M. Wheeler, were besieged at Cawnpore for 21 days by Nana Sahib, Brahmin peshwa or leader. Though promised safe conduct after surrendering, about 600 were butchered while on the way to embark on the River Ganges. Two hundred more were slain later and thrown into a well, the site of which is now marked by a memorial garden. Nana escaped to Nepal, where he seems to have died three years later.

CEYLON. This island, sixty miles southeast of India, a dependency of Great Britain, was once inhabited by the Vaddas, then by a Dravidian stock, and now by Singhalese. Early writers mention Ceylon frequently. George Tourneur (1794-1843) translated the history of Ceylon from the early Pāli language chronicles in verse. He gives the names of 165 kings in a period of 2341 years, tracing the history down to 1798. In customs, dress, or general culture little change has occurred there since the times of Ptolemy in 150 A. D. The religion is Buddhism and Brahminism.

CHACO, GRAN. See Bolivia.

CHÆRONEA, BATTLE OF. In 338 B. C. Philip of Macedon crushed a force of about 50,000 Athenians and Thebans between the two wings of his army of 32,000. Thus perished the liberties of Greece. Two years later Philip left to his son, Alexander, the task of conquering the rest of the world. Again at Chæronea, Sulla with only 30,000 Romans, 86 B. C., defeated thrice that number commanded by Archelaus of Pontus.

CHALONS, BATTLE OF. Here at last Attila the Hun met his match. The Romans pitted against him had the support of the Goths, and the night before the battle in 451, the Franks broke through the Hun lines, after 15,000 Franks had been slain. His augurs or soothsayers told Attila that he would lose, but the enemy would lose their general. As night was coming on, he prepared for battle, but the Romans drew the Huns out from camp, so that they could fall on one flank, while the Visigoths crushed the other. This old plan, used against Rome by Hannibal, succeeded perfectly. Châlons was the last great battle of the western Roman empire. In revenge Attila invaded Italy the next year, but died before he could do much damage.

CHAMPAGNE, BATTLES OF. See under *Aisne, Argonne, Château-Thierry, Soissons-Rheims,* and outline history of the World War.

CHAMPLAIN, SAMUEL DE (1567-1635). After two years in the West Indies, the results of which were a book advocating a canal across Panama, this explorer in 1603 was sent to Canada. He ascended the St. Lawrence to the site of Montreal, in 1604 turned south as far as Cape Cod, and in 1609 founded Quebec. While seeking a short route to Asia, he discovered the lake in New York which now bears his name. In 1613 with some Indians he attacked the Onondaga tribe near Oneida Lake in central New York. While acting as lieutenant general in New France, Champlain was captured by the British in 1629 and taken a prisoner to England. Four years later, this part of Canada went back to France and Champlain to his old post, where he died in 1635. His kind treatment of the Canadian Indians was of great value to France.

CHANCELLORSVILLE, BATTLE OF. Midway between Washington and Richmond, on May 2, 1863, the

Confederate army under Gen. R. E. Lee engaged a Union force under Gen. Joseph Hooker. The Northern army had been driven back the day before, and Lee sent Gen. T. J. (Stonewall) Jackson to reconnoitre. Jackson fell mortally wounded when fired upon by his own men, who mistook his party for the enemy. When Lee saw that his army was menaced by part of the Northern forces, he advanced against Hooker, who finally withdrew. The Federals lost 17,300 killed, wounded, and missing; the Confederates about 13,000. Gens. Howard, Sickles, Slocum, and Sedgwick commanded divisions under Hooker, who had succeeded Gen. Burnside as commander-in-chief.

CHARLESTON. Historically important city, seven miles from the ocean, the capital of South Carolina, 1783 to 1790. It was founded in 1670, but was moved to its present site in 1680. Here a company of Huguenots settled in 1686, 1200 Acadians from Canada in 1755, and 500 French refugees from Santo Domingo in 1793. In 1775 Charleston was the third seaport in the country, the first southern city to join the Revolution, and the first place to adopt a state constitution. After repulsing two prior attacks, in 1780 the garrison surrendered to 16,000 British under Sir Henry Clinton. In 1784 the first bale of cotton to go to Europe was shipped from Charleston. It was the center of a nullification movement in 1832, the scene of the first nullification convention in 1860, and the scene of the opening battle when Fort Sumter was fired upon. Until Feb. 1865 it was held against attacks by northern troops and fleets. In 1886 much of the city was completely wrecked by an earthquake, which did $8,000,000 worth of damage, with considerable loss of life. Today Charleston is an important commercial port, the site (on Sullivan's Island nearby) of a complete artillery unit, recently much improved, and a large United States navy yard, besides two excellent forts, Moultrie and Sumter.

CHARTER OAK. Sir Edmund Andros was one of the most disliked of the British governors of New England colonies. In 1687 he came to Hartford, Conn., to demand their charter, which contained many liberal principles. A meeting of the colony council was called to hear Andros, but, during the sessions somebody put out the lights, and the charter vanished from the council table. For about two years it was concealed in a hollow tree, later known as the Charter Oak, which was blown down in 1856. When Andros was recalled to England, somehow the charter reappeared. In 1935 a picture of the Charter Oak appeared on the postage stamp issued to celebrate three hundred years of Connecticut history.

CHARTER, THE PEOPLE'S. Magna Carta, the great charter of English liberties, was granted by King John to his rebellious barons at Runnymede in 1215. Various other demands have been made from time to time for the extension of British liberties to the common people. In 1832 the Reform Bill in England gave many rights to the middle class. With the rise of cities, during the new industrial order brought about by the growth of factories, the working men felt they were not represented. Hence, in 1838 they joined in a formidable agitation known as *Chartism*, because they demanded a People's Charter. These demands were: 1, universal manhood suffrage; 2, secret ballot in elections; 3, adjustment of electoral districts; 4, yearly parliaments; 5, abolition of property qualification for members of Parliament; 6, pay of members of Parliament. The monster petitions making these demands were rejected in 1839 by Parliament. No particular changes were made until after the revolution in France in 1848, when many of these demands were granted. Meanwhile, improvement in the economic conditions tended to divert attention.

CHATEAU-THIERRY. Small city on the Marne River, 59 miles northeast of Paris, where the American troops in the World War first saw service on a large scale. It was occupied by the Germans in 1914, but was recovered by the British, and became the scene of heavy fighting in the summer and fall of 1918. In the second battle of the Marne, the Americans fought with the 6th French army. On May 31, 1918, the 7th Machine Gun Battalion of the 3d Division, United States Army, prevented the Germans from crossing the river on the way to Paris, after the French colonial troops had shown signs of weakening. Then the 2d and 3d Divisions were ordered to advance to the lines of battle, relieved later by the 26th American or Yankee Division, assisting the French 43d. Here in July the 28th or Keystone American Division, with the French, were too much for the German batteries. So the great fifth and last German offensive failed. Then Foch used the First American Corps made up of various Divisions, in a pivot, while the 26th and 3d American Divisions swept forward in a counter offensive, and this showed signs of the turn of the tide of the war in favor of the Allies.

CHERRY VALLEY MASSACRE. Walter Butler with about 200 Tories, some English, and 600 Indians under Joseph Brant of the Mohawk tribe, put to death about 50 inhabitants of Cherry Valley, Otsego County, New York, on Nov. 11, 1778. They also treated so cruelly 70 prisoners on the march back to the Canadian settlements that many of them died. Later Brant became a Christian convert, greatly regretted his act, translated the Bible into Mohawk, and went to England to raise money for an Episcopal Church in Canada.

CHESAPEAKE, THE. After the Revolution, Great Britain continued to claim the right to search American ships for possible deserters from the British navy. In April 1807 the British man-of-war *Leopard* overtook the American *Chesapeake* outside the harbor of Norfolk, Va., demanded permission to search the ship, and fired on her when refused. Several of the crew were killed, and four sailors were taken, two of them Americans. Great Britain refused redress and reparation. This, and several similar incidents, led to the War of 1812. On June 1, 1813, the *Chesapeake* was engaged off the coast near Boston by the British *Shannon*. Both ships were badly disabled, but the Americans lost 146 to 84 for the British. Captain Lawrence, mortally wounded, cried, "Don't give up the ship." This became the American rallying-cry during the rest of the war.

CHICAGO. See *Fifteen Largest Cities* in Department of *Geography*.

CHICKAMAUGA, BATTLE OF. Twelve miles east of Chattanooga, Tenn., a fierce battle was fought on Sept. 19 and 20, 1863. Gen. Rosecrans of the federal army, with 55,000 men, prevented Bragg from cutting him off from the city. The Confederates had about 70,000 troops. General Thomas, for the North, resisted a terrific attack on the first day, and again, on the second, stood firm against some Confederates who broke through the federal lines. For this he was dubbed "The Rock of Chickamauga." The North lost 16,000 men, and the South two thousand more. The forces of Rosecrans and Thomas continued to hold the city.

CHILE. Magellan landed on the coast of Chile in 1520, and the successors of Pizarro fought the natives, but wars continued for over 200 years. Santiago was founded in 1542. Revolutionary movements in South America led to the defeat of the royalist or Spanish forces by Bernard O'Higgins, a native Chilean, and José de San Martin. From 1830 to 1861 a dictatorship held power, followed by a liberal government for thirty years. Meanwhile Chile supported Peru in her efforts to gain freedom from Spanish domination, but in 1879-82 fought both Peru and Bolivia over a boundary dispute. In 1891 Pres. Balmeceda was defeated by forces called the Congressionals, and he committed suicide. Jorge Montt succeeded him. President Ibañez, 1930, resisted an attempt to unseat him. After a boundary dispute with Argentina had been settled by arbitration in 1902, both countries agreed on a permanent arbitration treaty. Great Britain arbitrated another dispute with the United States in 1911.

CHINA, ANCIENT. Traditions in China go back to 4000 B. C., but definite records are relied upon only from the Chou period, some 2700 B. C. During the reign of Yu-wang, an eclipse is recorded, which astronomers have checked as correct for Aug. 29, 776. Five states were then set up, with resulting warfare among them, until about the coming of the great sage, Confucius in 551. Other early wise men were Lao-Tze and Mencius. The Chou dynasty continued until 256 B. C. Many rulers, tribes, and influences prevailed, but there were no great periods, until the great T'ang dynasty from 618 to 917 A. D. These rulers pushed the limits of their empire to the Caspian Sea on the west, founded a great library (destroyed by the Boxers in 1900), used printing by blocks, and carried on a very extensive commerce. In the Sung period, from 960 to 1278, the arts flourished as never before, until Kublai Khan, the Mongol chief,

dethroned the last emperor, who cast himself into the sea. Kublai then ruled from his capital near the present Peiping (formerly Peking), not only over both China and Mongolia, but even to the Euphrates. Trade routes became safer, and Europeans commenced to come to Kublai's court, such as Marco Polo of Venice. After the Mongols, came the Ming dynasty in China, 1368-1644, during which Tonking and Cochin China were added; but the Tatars troubled the land. Finally the Manchus were invited in to help China against the Tatars, but they forgot to leave, until forced out by the revolution in 1912. The emperor then deposed became emperor of Manchukuo in 1934. See article on *Manchus*.

CHIVALRY. Though mentioned by the German historian, Tacitus, in early days, chivalry in western Europe flourished only after the Norman conquest of England. No person was born a knight or squire. Boys were early trained to help knights as personal servants, after which at 12 they became squires, by the wish of some knight, but later as a sole honor from a king. The Crusades highly developed the customs, orders, and requirements of knighthood. Before attaining the rank of knight, a candidate had to perform a lonely vigil, as in some church, for prayer and meditation. To test their valor, knights had to conquer in some feat at arms, as in a tournament, or in a joust with another knight, the victor being allowed the horse and armor of his adversary. Sometimes winning knights chose some lady to preside over the sports as Queen of Love and Beauty, or went on quests for some distressed person. Even a king had to go through the regular training of knighthood. A vast literature in story, legend, and poetry grew up in the middle ages, but most of this was laughed out of court by works like the *Orlando Furioso* by Arioso and the *Don Quixote* by Cervantes.

CID, THE. Sometimes called the Cid Compeador, or champion, the hero of the most popular epic of Spain, a poem of 3725 extant verses, written about 1140. Recent investigations show that he was alive in 1064, when Sancho II and Alfonso, sons of Ferdinand of León, quarreled, and the Cid took service with Sancho. When Alfonso came to the throne, on the death of Sancho, the Cid took service with the new king. He was banished from Spain in 1081, fought with different armies, both Christian and Moorish, and at last ruled over Valencia and Murcia. The Cid died in 1099, after being defeated at Ceneca by the Moors. Though the epic poem describing the Cid omits his treachery and cruelty, it gives a good picture of life in Spain.

CINCINNATI. Metropolis of the middle Ohio River district, a large manufacturing and distributing center, Cincinnati is also known for its civic enterprise and good government. George Rogers Clark, the celebrated explorer, established two block houses on the site in 1780, and eight years later the district was bought of the government and was laid out under direction of Col. Israel Ludlow. Here Fort Washington was built the following year. Until 1790 the town was known as Losantiville, and then was named by Gen. St. Clair in honor of the Society of the Cincinnati. Steamboats came up the river in 1811, a city government was set up in 1819, and the opening of the Miami Canal hastened settlement. In 1924 a city manager form of government was adopted. Cincinnati is noted for its beautiful parks, commodious government buildings, and modern public social institutions.

CINCINNATI, SOCIETY OF THE. Founded by officers of the Americans and French who fought in the Revolution, and organized in 1783 at the close of the war. Membership is hereditary, made up from eldest sons in direct line from some officer of the Revolution. Many of the states have their own local officers, who sponsor projects for the good of members and of patriotism. Number of members, about 1200.

CINQUE PORTS. Official designation for five large ports on the southeastern coast of England, Dover, Sandwich, Hastings, Romney, and Hythe. The number was later increased by adding Winchelsea and Rye. Even in Anglo-Saxon times these towns were important in defense of the coast. Edward the Confessor gave them a charter, and William I made the strip of coast including these ports a special district, governed by a warden. In early times these ports had to provide ships for defense of the realm, and in turn their taxes were remitted. In the reign of Edward I, they were obliged to be ready to supply 57 ships on fifteen days notice. From 1200 to 1400, these towns played an important part in the scheme of defense of England. In 1688 some of their privileges were taken away, and in 1835 the number of members to Parliament was reduced from sixteen to three, and since then the district has been merged with the county. The lord warden no longer has civil authority, but still has some local importance, and has today the privilege of carrying the canopy over the sovereign's head when a new monarch is crowned.

CLAYTON-BULWER TREATY. In 1850 Great Britain agreed with the United States that any canal built across the Isthmus of Panama should be internationalized. No one nation should have exclusive control, and no nation should establish a colony along the canal. John M. Clayton, U. S. Secretary of State, and Henry Bulwer, British Ambassador at Washington, negotiated the treaty; hence its name. In 1901 the new Hay-Pauncefote Treaty abrogated these provisions.

CLIFF DWELLERS. Ancestors of modern pueblo Indians of the arid southwest of the United States. Once supposed to be of a different race, but now their dwellings show that man first lived on the ground, then in more sheltered places, and finally for protection in rooms hewn from the solid rock along the faces of canyons. Some pueblos still in New Mexico and Arizona are on high cliffs, like Acoma and a few of the Hopi settlements. In the ruins of Pueblo Bonita, New Mexico, three levels or stages of civilization are represented. Other notable former homes of cliff dwellers are at Mesa Verde in southwest Colorado, in several canyons of Arizona, such as the Canyon de Chelly. Most of these date from before 1500, some possibly from 900.

COLIGNY, GASPARD DE (1517-1572). An admiral of France, who aided Francis I and Henry II in the wars against Spain, but was cast into prison after the defeat of France at St. Quentin in 1557. Then he became a convert to the cause of the Huguenots, the Protestants of France, who were demanding freedom of worship, which Coligny and others secured by a treaty in 1563. Catherine de' Medici, the queen mother, opposed all concessions, and little by little the old intolerance revived, ending in a second war in 1567. When Prince Condé died, Coligny became chief general for Henry of Navarre. Again, Catherine feared his growing influence over the new French king, Charles IX. During the Massacre of St. Bartholomew, 1572, Coligny was murdered in his bed. See *Huguenots*.

CODY, WILLIAM FREDERICK (1846-1917). This American scout and showman was born in Iowa, was one of the riders of the Pony Express across the western plains, and served during the Civil War as scout and later in the 7th Kansas Cavalry. While providing buffalo meat on contract for laborers building the Kansas Pacific Railway, he was called "Buffalo Bill," a name he loved to be known by late in life. Again he served in the army from 1868 to 1872, afterward in the Nebraska Legislature, and in the 5th Cavalry in the Sioux uprising, 1876. From 1883 for twenty years he was engaged in exhibiting western life by his Wild West Show.

COLOMBIA. Ojeda, Vespucci, and Columbus visited the northeastern coast of South America in 1499 and 1500, and Balboa made settlements on the Isthmus of Panama in 1511 and 1517. Until 1718 this district was called New Granada. Independence from Spain was won in 1818, after which Colombia, Venezuela, and Ecuador united, but were unable to agree in 1829. From then to 1863 agitation continued as to whether Colombia should become a federal republic or a mere collection of states with a loose bond of union. Constitutions were adopted in 1858, in 1863 when the federal form was finally chosen, and in 1886. Revolutions occurred in 1860, 1884-86, 1890, and 1901. Panama, which was part of Venezuela from 1821 to 1856, and then united to Colombia, seceded finally under influence of the United States in 1903. Not until the United States paid Colombia $25,000,000 in 1921 did that country acknowledge the independence of Panama. War between Colombia and Peru over seizure by the latter in 1932 of Puerto Leticia, a town on the Amazon, was finally settled by a League of Nations commission, when Peru expressed regret and withdrew from the town in 1934.

COLUMBUS, CHRISTOPHER. See under *Scientists*.

COMMUNISM. The idea of holding property in common did not originate in Russia, nor is it a modern development. Some early Christian sects tried to have a single treasury, and no individual ownership of goods, but they found it did not work. Later it was declared a heresy. The early Cretans and Spartans also tried a form of communism. So did the Franciscan monks, and the Brethren of the Common Lot. Moore's *Utopia* shows the interest in an ideal commonwealth in 1516. Fourier (1772-1837) in France and Robert Owen (1771-1858) in England, Ireland, and America started experiments in common holding of property. Probably absolute communism never was tried for any length of time, nor has it even been a success for long on a limited scale. Fourier proposed *phalanges* or groups of about 1800, these to be self-contained social units in life and business. Scores of similar experiments were made in the United States after 1800. George Rapp, a German, started his Harmony Society in Pennsylvania, in 1803, then went to Indiana in 1815, and back to Pennsylvania to found the town of Equality. Robert Owen bought the property, and founded New Harmony, Indiana, which lasted from 1824 to 1827 only. Brook Farm near Boston, described elsewhere, took up the ideas of Fourier late in its existence. Horace Greeley, in his New York *Tribune*, wrote many earnest pleas for some society like that advocated by Fourier. The North American Phalanx in Monmouth County, N. J., lasted for 12 years, ending in 1856. The Amana Society, of Iowa, once near Buffalo, N. Y., was founded by Quakers from Switzerland and Germany, and exists today as a business organization only. So does the Oneida Community, founded in 1848 in Oneida County, N. Y., by J. H. Noyes, but the sect had peculiar ideas as to marriage, and was broken up as a communistic experiment. All these societies have been inspired by religious and social zeal. Each has had its own peculiar feature, like celibacy among the followers of Rapp, whose idea was to amass much property for Christ to use when he should come again. Some had good business shrewdness; others were totally impractical, and soon this was demonstrated. The control of property by the state, or by a class like the proletariat in Russia, or sharing things under state control is not communism as such but some form of state socialism, or class control. In the early theories of communism, all were to share somewhat alike, but not all necessarily on the same numerical footing. Many societies did not advocate equal distribution.

CONCORD, MASS. The oldest town inland in Massachusetts, settled in 1635. It was the scene of the first county convention ever assembled in the state, 1774, of the first Provincial Congress over which John Hancock presided, and of the memorable battle on April 19, 1775. By the old North Bridge, some 200 "minute men" drove back 800 British regulars, who sought to destroy the great quantity of stores and munitions collected by the colonists in anticipation of war. Several on both sides were killed at Concord, and nearly 300 of the British altogether on the way back to their ships in Charlestown Harbor. While the "redcoats" had gone on to Concord from Lexington, the warning of Paul Revere and others had stirred up the whole country; so that, on their retreat from Concord, the British fell into a nest of hornets, when every farmer shot at them from behind trees, stone walls, and any obstruction in the path. Careful army discipline was no match for such tactics. Concord became for years the literary center of New England, the home of Emerson, Hawthorne, Louisa May Alcott, and Henry D. Thoreau.

CONSTANTINOPLE. Before 330 called Byzantium, and renamed Istanbul in 1929. Constantine beautified this ancient city and gave it his own name. Here for a thousand years was the flourishing capital of the Eastern Roman Empire. In 1453 the Turks took the city, after years of threatening the peace of Europe, and there the seat of empire remained until it was moved to Angora (now Ankara) in 1924. Today even the patriarch of the Greek Catholic Church signs himself "Archbishop of Constantinople, New Rome." Important church synods were held there in 281, 553, 692, 754, and 815. Though often attacked, Constantinople was invaded but three times, twice by the Crusaders in 1202 and 1204, and by the Turks in 1453. Over 20 ancient churches remain, the most celebrated of which is St. Sophia, dedicated on Christmas Day, 538, now the most ornate example of Byzantine architecture, and one of the noblest buildings of the world. The old mosques, bazaars, small ancient buildings of various types, all greatly interest visitors from the western world. Yildiz Kiosk, favorite palace of the sultan Abdul Hamid II, now a public museum, reveals the art, culture, and life of the older Turkey. Beginning in 1912, after the revolution of the Young Turks, the city has been modernized, including electric lights, tramways, widened streets, and a new roof on St. Sophia's in 1927.

CONSTITUTION, THE FRIGATE. Known as "Old Ironsides." Probably the best known of the early warships of the United States. As one of the first real ships of the navy, it was commissioned in 1797 in service against French privateers, later against the pirates of Tripoli. Old Ironsides came out of three battles of the War of 1812 with flying colors. On Aug. 19, 1812, commanded by Capt. Isaac Hull, this frigate left the British *Guerrière* a tangled wreck off the coast of Massachusetts after a hot battle of 30 minutes. When the sailors saw the shot from the British cannon bounding off the sides of the *Constitution*, they dubbed her "Old Ironsides." In charge of William Bainbridge, she conquered the British *Java*, on Dec. 29, 1812, off the coast of Brazil, the battle lasting two hours. Other victories include those over the *Cyane* and the *Levant*, in a battle fought in the Atlantic between the Madeira Isles and Gibraltar in 1815. She was repaired in 1833, following the appeal of Oliver Wendell Holmes in the poem, *Old Ironsides;* also reconditioned in 1877, 1897, and 1927. Except for tours to other ports, she has been on exhibit at the navy yard in Charleston, Mass., since 1897.

CONSULS, ROMAN. When the Tarquin kings were expelled from Rome in 510 B. C., two administrators from the noble class took their place. The name consul was applied to these about 300 B. C. They acted as kings, dressed in a white toga with purple band as a sign of power, each checked the other, and both were checked by the Roman Senate,—an early example of what we now call the "check and balance system" in government. Each consul was accompanied by a band of twelve men, called lictors, each lictor bearing the fasces or bundle of rods, and an ax, the symbols of authority. Modern fascism harks back to the days of the consuls. Later the plebeians, or commons, elected two more consuls. Still later one from each class was chosen, and was ineligible for a second term. In 443 B. C., however, *censores*, somewhat like modern judges, had been elected to pass on certain matters once controlled by the consuls.

CORINTH, MISS., BATTLE OF. On April 6-7, 1862, Gen. Grant won decisive victories during his western campaign at Shiloh and later at Corinth. The union army had taken Corinth in May, and here Grant had his headquarters, because the town was an important railway junction. Early on Oct. 2, the Confederates attacked with 22,000 men, but Rosecrans, with about 20,000, drove them back. When the southern troops at last retreated, the northern generals followed them, inflicting great damage at the Hatchie River.

CORINTH. This splendid city of ancient Greece was located on a hill commanding a wonderful view of the sea beyond the Corinthian isthmus. It was the center of trade from the 8th century before Christ to the conquest of Greece by Rome in 146 B. C. Then the Romans carried off the many art treasures, destroyed the great buildings, and sought to cripple the power of Greece by ruining its noblest city, save Athens and Sparta. St. Paul founded a church at Corinth and addressed two epistles to the people of that city. From 1458 to 1687, and from 1713 to the Greek Revolution in 1823, Corinth was ruled by the Turks, except for the period after 1687 by the Venetians. Both in early and late ages the city suffered much from wars, and in 1848 the city was almost completely annihilated by an earthquake. Since 1926 excavations, carried on extensively at Corinth, have unearthed a civilization as far back as neolithic times, and from then down to 1850. The telltale remains of past civilizations include theatres, baths, statues, coins, wonderful terra cotta, vases, and marble and limestone slabs of great artistic beauty.

COPENHAGEN. Situated on two islands, Copenhagen (Köbenhavn in Danish) is the capital of Denmark, possessed of one of the best harbors in the world, deepened and improved in 1901 and 1921. Its growth dates from about 1167 when the bishop of the town fortified it against pirates. During the late Middle Ages it was often attacked by the cities of the Hanseatic League. King Christopher made it his capitol in 1443. It suffered three formidable at-

tacks,—the first in 1658-59 by the Swedes, but the city resisted and saved the country from foreign domination; by an allied fleet of England, Holland, and Sweden in 1700; and in 1807 by the British. Here Nelson defeated and almost destroyed the entire Danish Navy in 1801, because of an armed neutrality. Copenhagen has a university, dating from 1497, but reorganized two or three times since then, with one of the best modern libraries, collections of manuscripts, and other documents. The Danish Royal Academy, founded in 1472, the Academy of Arts, 1754, and the Royal Antiquarian Society are known among students throughout the world. By establishing a free port in 1894, Copenhagen secured a large part of the carrying trade of the Baltic Sea.

CORN LAWS. This name was applied to various statutes and tariffs passed in Great Britain to govern the importation of grains, often called *corn* there. The first tariffs were arranged in 1360. In 1463 Parliament forbad bringing in corn whenever the price fell under 6s. 6d. a measure. Some export duties were also in force, these being abolished in 1689. In 1773 Edmund Burke secured legislation adjusting the prices according to supply at home. About 1800 bounties were given by the government for exporting grain. Napoleon cut off the supply to England, and the prices became very high. Workmen began to complain. In 1828 the Government, with the Duke of Wellington as Prime Minister, enacted an adjustable scale for import duties based on the home market. His system led to excessive speculation, and many men were ruined, while the price of bread remained too high for poor people. Agitation grew, meetings were held, petitions were circulated, societies were formed. Cobden, Bright, and others formed a League for legislation. Failure of the potato crop in Ireland led to actual famine. Sir Robert Peel became a convert to lower tariffs in 1836, and three years later secured enactment of laws abolishing duties on grains, save for a registration fee, abandoned in 1869. Prices, however, remained high; when they did come down, this was largely due to other causes, such as immigration to America, larger crops, and substitution of new foods.

CORNWALLIS, CHARLES (1738-1805). Though opposed to war with the American colonists, he was sent to command the British armies across the Atlantic. Success of the British on Long Island, in New Jersey, and in South Carolina was largely due to his foresight. Most of the reverses were due to causes which he could not avoid, such as the capture of some Hessians under his general command at Trenton, N. J., Dec. 26, 1776, and the later success of Col. Greene in the South. He once offered to resign his command, but King George refused to permit this. His final defeat and surrender at Yorktown were due to combinations of bad luck, weakness of his position (he had been bottled up on the peninsula by the armies of Washington and Rochambeau), and the feeling that further fighting would be useless, since the French ships of DeGrasse in the bay made his retreat all the more impossible. He served twice later in India, was made a marquis, and put down a rebellion in Ireland so ably as to gain the respect and good will of most of the Irish people. He was a skilled and humane general.

CORONADO, FRANCISCO VASQUEZ DE (c. 1500-1554). One of the numerous Spanish seekers for treasure, who went to Mexico in 1535, and four years later became governor of New Galicia. Hearing of the untold wealth of the "seven cities of Cíbola," he set out with 250 horsemen, 70 footmen, a party of Indian guides, and abundant supplies. He reached a great rock in what is now southern New Mexico, and there to this day may be read the carved names of many of his party. It is now known as Inscription Rock, a national monument. Then his party proceeded westward until they came to Hawikuh, an Indian town, which they destroyed. The ruins now appear not far from the Zuñi settlement, the largest Indian village at present in the United States. Finding no wealth of gold there, he divided his party into three portions. One of them, under Alarçon, went as far as the Gulf of California and up the Colorado River some distance. Others went to the Hopi and Moqui settlements, and the Grand Canyon. Coronado again gathered his forces at the Rio Grande in the autumn of 1540. They still sought in Texas the fabled El Dorado, pressed on into the south central states, perhaps as far as the present Nebraska. In 1542 Coronado, with his dejected followers, again returned to Mexico, only to face fines and disgrace. Yet the leader found some favor afterward, while he continued as governor of New Galicia until 1544.

CORSICA. A rocky, but rather fertile island south of Italy, and north of Sardinia. Political conditions were disturbed until the French assumed control in 1768. The Romans ruled in Corsica for centuries, then the Vandals for 65 years from 649, then the Moors from 811, followed by the Roman Church, and finally Genoa and Pisa after 1138. Aragon reduced the island to subjection in 1347, but again the Genoese returned within the century. In 1768 the islanders cast their lot with the French. Napoleon was born in Corsica.

CORTES, HERNANDO (1485-1547). After studying law at Salamanca, Cortes went to Santo Domingo, and then to Cuba with the expedition of Velásquez. In 1518 he set out with ten ships, 600 footmen, 18 horses, and some artillery, to conquer the Indians of Mexico, which had been recently discovered by Griljava. For a time the natives received the invaders as gods, but Cortes knew that the Spanish did not favor his enterprise. He founded Vera Cruz in 1519, made the emporor Montezuma at Mexico City surrender some natives who had attacked Vera Cruz, and these he burned alive before the gates of the palace. He subdued several districts, defeated the Spanish force sent by the emperor to oppose him, put down a revolt in which Montezuma was killed, and again took Mexico City in 1521. Charles V finally appointed him governor and created him marquis of Oaxaca. After a visit in Spain, Cortes returned this time with a civil governor to share rule with him in Mexico. His last years were spent in Spain trying to explain why he failed to find the great treasure of gold in the new world, why so many fortunes were ruined in the quest, and why so many ships were sunk.

COSSACKS. The Don Cossacks, as they are commonly called, by 1600 were known for their unsettled mode of life, their skill in horsemanship, and valor in battle. They are of Polish, Tatar, and Russian stock, but did not conform to the Russian yoke until about 1650. Gogol and Tolstoy gave vigorous pictures of their life and ideals. For many years the Russian czars relied on their aid in subduing rebellious peasants. The Cossacks helped in the 1917 revolution, but afterward clashed in many ways with the Soviets. Their territory in southeast Russia became the Don Republic in 1918.

COSTA RICA. This smallest country of Central America was visited by Columbus in 1502, settled in 1530, was part of Guatemala until 1821, then attached for two years to Mexico, and not fully recognized as an independent republic until 1848. William Walker, an American, conducted a filibustering expedition into Nicaragua, gained control for a time, and actually made war on Costa Rica in 1856, but was driven out the next year. Costa Rica has had fewer internal disorders than her neighbors, yet trouble came to a head in 1917, 1919, and 1930. Costa Rica gave women the vote in 1920, withdrew from the League of Nations in 1925, and asked for a definition of the Monroe Doctrine in 1928.

COVENANTERS, SCOTCH. Long before the Reformation in Europe, groups of men agreed in writing to conform to certain courses of life or belief. In 1577 many of the Scotch Presbyterians agreed to maintain the evangelical movement there. Another definite Covenant in 1581 bound them to resist reaction in matters of faith. In 1638 this was renewed as the National Covenant. All innovations subversive of the Reformation ideals were condemned. Charles I tried to bring the Scotch Covenanters into line by force; instead of succeeding, he had to promise in 1639 not to oppose whatever the Scotch General Assembly should agree upon. When Charles refused to abide by the Covenant, the Scotch invaded England, and turned Charles over to the English Parliament for trial. When Charles II came to the throne, in seeking to repress freedom of worship, he so embittered the Scotch that they refused the Presbyterian worship restored to them by official act, because the act did not specially recognize the Covenants. Despite their evident fanaticism, these Scotch dissenters kept alive the spark of liberty when oppression became the order of the times.

CRECY, BATTLE OF. At Crécy, northern France, in 1346 the French under Philip of Valois attacked the English, led by Edward III. The British had 3900 men-at-arms, 11,000 archers, and 5000 Welsh

troops; the French had at least double that total. On that day the English showed the great superiority of the long-bow over the heavy cross-bow of the French archers. Little impression was made by at least sixteen attacks by the French on the solid English lines. Some 1542 of the flower of France were counted dead on the field at nightfall, with an estimated total slaughter of at least 25,000. The British loss, in comparison, was paltry. This great victory left the English at the height of their power across the Channel.

CRETE. Also called *Candia*, fourth largest island in the Mediterranean. Recent excavations there have discovered a rich culture remaining from centuries before written history. First, came the Phenicians and Egyptians, then the Dorians with an elaborate life, perhaps the first of the Greek peoples to settle around the Mediterranean. In the Homeric age, second century B. C., Crete had at least 100 towns. Like most eastern small political units, this island fell a prey to various conquering nations. At last, in 1669 the Turks secured a foothold, and held this until 1912, save for a brief period of Venetian influence, and twenty years, 1832-1852, under Egypt, a time of great prosperity. Greece finally annexed Crete in 1912, after some years of uncertainty, during which the Powers tried to maintain the *status quo*. From 1910 to 1932, Eleutherios Venzelos, a native of Crete, took a prominent part in the affairs of Greece. He was several times premier, came to the rescue in times of need, assisted the allies in the World War, and was recognized throughout the world as an able statesman. In 1935 once more he sought to organize a better government in Greece, but his plans failed, he went into exile, and died abroad in 1936.

CRIMEAN WAR. Russia for some time had shown signs of seeking to extend her borders to the south toward Constantinople. In 1853 she professed to wish to protect certain Christians in the realm of the sultan, and Turkey declared war on Oct. 4. Russia and France had been disputing over the guardianship of the holy places in Palestine, particularly the Holy Sepulchre. Great Britain and France declared war on Russia on March 12, 1854; Austria and Prussia remained neutral. The Turks won a few skirmishes, but lost the naval battle at Sinope. The allied French and British forces failed to gain any particular advantages against Russia along the Alma River and also along the Baltic Sea. In Oct. 1854 they began the siege of Sebastopol, making Balaklava a port of the allied fleet. On the land at Balaklava, the British Light Brigade was almost annihilated, as described in Tennyson's poem. Because of mismanagement, the soldiers suffered untold misery in the winter of 1854-55, but the nursing units under Florence Nightingale did much to brighten the distress. The allies had 170,000 in the field, the Russians about 150,000. Russia was defeated on land in August, and Sebastopol fell the next month. By the treaty of peace, she gave up all claims to lands along the Danube, ceded a part of Bessarabia to Moldavia, and allowed the Black Sea and Danube to be free to navigation.

CROWN POINT, CAPTURE OF. The French built a fort at Crown Point on Lake Champlain in New York in 1731 and held this until 1759, when the British under Lord Jeffrey Amherst took possession. The English spent about ten millions on the fortifications, never completed them, and now they are in ruins. On May 11, 1775, Seth Warner, with some of his Green Mountain Boys, as recruits from Vermont were called, seized the fort from the twelve men who composed the inadequate garrison. Crown Point and the fort were made into a public state park in 1910.

CRUSADES. These were numerous expeditions from Europe to some point in Asia, the main design being to rescue the holy places from the control of the Mohammedans. Such was the fever that raged in all christendom from 1090 to about 1300 that rich and poor alike forsook their homes, families, and possessions to go on religious quests. Men like Pope Urban II, Bernard of Clairvaux, and Pope Innocent III urged the multitude to capture the Holy Land. Many princes, kings, and adventurers went on crusades, some of them for the profit as much as for religious zeal. In 1212 two crusades for children were led by mere youths. In the first, many of the children were seized and sold as slaves; in the second, most perished trying to get over the Alps, and adults preyed upon them, while professing to aid. Men like Walter the Penniless, Peter the Hermit, and other leaders, without waiting to make sufficient preparation, rushed off in 1096, and many of them perished at the hands of the Turks.

Seven major crusades were sponsored by nobles and kings. The first one was led by Geoffrey of Bouillon, Robert of Normandy, and the Count of Toulouse. They laid siege to Nicea in May 1097 and to Antioch from October to the next June, and finally took Jerusalem in July 1099. About ten thousand of the original army ten times that size finally got to the Holy City. After sacking the city, killing at will, the band left Geoffrey in charge as "Baron and Defender of the Holy Sepulchre." His brother Baldwin set himself up in Edessa, and another prince took charge of Antioch. Conrad III of Germany and Louis VII of France led the second major crusade, 1147-1149, but, after many delays, deserted their hosts, who perished in droves, and pressed on to Jerusalem with only a chosen band. All who took vows for this crusade were promised remission of their sins, also for any acts committed en route, and freed of any debts they might have incurred,—the last an attractive provision to the medieval princes. The Emperor Saladin recaptured Jerusalem for the Mohammedans and for Egypt in 1187. Frederick Barbarosa, Philip of France, and Richard the Lion Heart of England joined in the next crusade. Frederick was drowned in Syria, the others took Acre, but Philip returned home after a quarrel with Richard, who pressed on, and was forced to make an inglorious peace with Saladin, who now dominated from Egypt to Mesopotamia. Dandolo, the wily doge of Venice, persuaded Baldwin of Flanders, Louis of Blois, and Simon Montfort of England, leaders of the fourth crusade, to change their original purpose of attacking Jerusalem to that of attacking Constantinople. Venice furnished the ships at good rentals, to take the crusaders to Turkey, succeeded in getting her rival city, Zara, put to great disadvantage in commerce, and secured for the time the island of Crete, besides priceless art treasures and a billion in booty from Constantinople and other cities. On the fifth crusade Frederick II of Germany retook Jerusalem; on the sixth, Louis IX of France was defeated in Egypt and made to pay an enormous ransom; on the seventh, Louis IX returned to the East, aided by Edward of England, and both signed a peace in 1272. Many other smaller crusades were started into every corner for almost every purpose. The main results of the Crusades were to check the growth of Mohammedanism in Europe; to learn about the culture of foreign nations; and, perhaps greatest of all, to help the definite breakdown of the old feudal system of Europe, thus giving way to the rise of a new merchant and middle class. Scott's *Talisman* vividly pictures the crusades.

CUBA. Columbus found Cuba on his first voyage, and named the island Juana, on his second, for a son of Ferdinand and Isabella. Some other early names were Fernandina, Santiago, Ave Maria, but the Indian original was at last adopted. Diego, son of Columbus, assisted Velasquez in founding Santiago and other places. For two centuries the island was in terror from the French, Dutch, and other privateers that infested the Caribbean. The French destroyed Havana in 1538 and again in 1554. Cuba revolted against the hard rule of Spain in 1830, 1867-68, and finally in 1898, when the United States assisted in winning complete independence. From 1898 to 1902, American marines kept order in Cuba, and some returned later at four different times. Cuba set up a government similar to that of the United States, but much opposition has arisen, such as the revolt against the methods of Pres. Palma in his second term, 1906; against Zayas in 1924, and against Machado, who was driven from office in 1933, after months of terrorism. In 1934 a new treaty with the United States stipulated that no longer would the American government interfere to quiet internal strife in Cuba. Strikes, disorders, suspension of the constitution, followed by a dictatorship by President Mendieta, finally led to formation of strong opposition parties in 1935. Toward the close of the year, the constitution of 1901 was again put into force, the president resigned, and early in 1936 Miguel M. Gomez became chief executive.

CUSTER, GEORGE ARMSTRONG (1839-1876). One of the brigade commanders in the battle of Gettysburg and a major general at the close of the Civil War. Custer served with Gen. Hancock against the Cheyenne Indians in 1868, against the Sioux in Dakota in 1872, and again in Wyoming in 1876. In

the 1876 campaign, in charge of Gens. Crook, Terry, and Gibbon, Custer was asked to locate the Indians who were led by Sitting Bull. He exceeded his orders, went beyond the line of safety, and was ambushed by 6000 braves near the junction of the Big Horn Rivers. The entire band of 264 soldiers was annihilated. The American troops under Gibbon and Terry arrived a day too late to be of assistance. Sitting Bull fled into Canada, but four years later was allowed to surrender under promise of certain immunities.

CZECHOSLOVAKIA. Settlements following the World War fixed the boundaries of the new republic of Czechoslovakia, which is now made up of all or parts of what were Bohemia, Moravia, Slovakia, Silesia, and Ruthenia. Prague (Praha) became the new capital. Bohemian influence was strong during all the centuries of suppression by the German, Austrian, and other governments. The Czechs settled in the region after 500, Bohemia was won to Christianity about 900, the native dukes became kings about 1150, and so ruled until the Premysl line ended in 1306. Under Ottokar (1253-78), Bohemia was a powerful empire stretching from the Adriatic to northern Germany; but the Austrian Habsburgs reduced the borders considerably after 1300. During the time of the Luxemburgs, mainly in the reigns of Wenceslas and Sigismund, the Hussite wars ruined much of the country. From 1437 to about 1700, the Czechs remained fairly peaceful, but from 1750 on kept the Austrians worried even to the time of the World War. Seeing a great opportunity, the different rebellious peoples of the Austrian empire, mainly the Czechs and Slovaks, raised several regiments for service against Germany. From 1893 to 1918, Prof. Thomas G. Masaryk, a native of Moravia, devoted his energies to improving the conditions of the Czechs. While an exile abroad after the World War began, he secured cooperation in forming a National council, which the Allies recognized as the government of the country in 1918. Masaryk acted as president, —having been elected four times,—from 1918 to 1936, when he resigned because of advancing age, and Edward Benes succeeded him.

DALMATIA. Since 1918 a part of Jugo-Slavia, but from 1814 to the close of the World War a province of Austria-Hungary. As a part of the Illyrian kingdom, Dalmatia was conquered by the Romans in 168 B. C. Diocletian, the Roman emperor, built a palace at Spaleto that is still extant. It was part of the Croatian kingdom from 1102. Between 1115 and 1420 Hungary, Croatia, and Venice fought 21 wars. From 1420 to 1797 Venice held control over part of the coastline. In 1797 Dalmatia and Venice went to Austria, an arrangement confirmed by the peace of 1815. After 1890 the Croats, Serbs, and Slovenes began to think of national unity, an ideal consummated in 1918.

DAMASCUS. Capital of the Syrian republic mandated to France in the settlements following the World War. Some say that Damascus is the oldest, continuous city in the world. It was conquered by King David, by Assyria in the 8th century B. C., when some of the inhabitants were exchanged for Assyrians, and by Pompey for Rome in 64 B. C. Early Christian bishops lived at Damascus. After 635 it was the seat of some of the caliphs of Islam; besieged by Baldwin, the Crusader, in 1148; taken by Nureddin in 1154, and then by Saladin, who died there in 1193. When Tamerlane, the Mongol, took the city in 1401, he slaughtered most of the inhabitants and burned the chief buildings. Selim I took Damascus from Egypt in 1516, but in 1832 Damascus went to Egypt again for nine years, when both Egypt and Syria went to Turkey. Moslems killed about 6000 Christians in Damascus in 1860. Gen. Allenby of the British forces, after defeating the Turks in various battles in Asia Minor, entered Damascus on Sept. 30, 1918, and ended centuries of misrule there. The city has over 200 mosques, 70 of them being large, that of the Ommiad caliphs being very ancient and once a heathen temple, then a Christian church to the 4th century, and finally rebuilt in magnificent Mohammedan style by the sixth Ommiad ruler.

DANES IN ENGLAND. In 787 the Danes first appeared on the English coast, and in 795 they settled in Ireland. By 866, after repeated invasions, they became firmly established. They retained parts of East Anglia, Essex, Northumbria, and Mercia, even after Alfred checked them in Wessex. Ethelred II, the Saxon king, paid tribute money (called Danegeld) until on Nov. 13, 1002, he ordered a general massacre of all Danes. The Danish king, Sweyn, came across to England, ravaged the country, and took possession in 1013. After contending with native rulers, his son became sole monarch of England in 1016. The Danish line continued until 1042. Meantime the Danes, along with other Norsemen (men from the north) paid ravaging visits to the coasts of Spain, Andalusia, Africa, and Italy.

DANTON, GEORGE JACQUES (1759-1794). This brilliant French lawyer, orator, and revolutionary leader opposed the arrest of Marat, who in 1790 was writing against the monarchy, and in consequence Danton had to flee to England. After his return to Paris, he was a member of the notorious Committee of Safety, which instigated the Revolution. He voted for the execution of Louis XVI in 1793, opposed a more radical group than the original Committee of Safety, though he declined a seat on the Committee. Later, when the fury of the Revolution broke forth anew, Danton and some fourteen others were arrested and executed on April 5, 1794. He counseled moderation, and so lost his power with the mob, and also his life, when Robespierre supplanted him in popular esteem.

DANZIG. By the Treaty of Versailles Danzig was created a free city and district on Nov. 9, 1920, and ruled by a commissioner for the League of Nations. Its legislature consists of a diet of 72 members and a senate of 12. Since the 10th century, Danes, Poles, Germans, Prussians, and Teutonic Knights at various times claimed sovereignty over this area on the Baltic Sea. The Knights held it from 1308 to 1434, when Danzig became autonomous with Poland as protector, but fell to Prussia in 1795, and was a part of the German empire until after the World War. Recently Poland and Danzig have disagreed over currency, customs, and holding of offices in Danzig by people of Polish birth.

DARDANELLES. Name of the channel, 40 miles long and never more than four in width, which separates southeastern Europe from Asia, and is the gateway to the Sea of Marmora. It was known in ancient times as the Hellespont. Xerxes made a bridge of boats over which his hordes passed on their way to war against Greece in 480 B. C. Alexander crossed with his army to Asia in 334 B. C. As narrated in Marlowe's poem, Leander swam the Hellespont to meet Hero, priestess of Sestos. Lord Byron swam from Abydos on the Asia side to the same spot in 1810. From 1841 to 1911, by international agreement, no nation could send a warship through the Dardanelles without the consent of Turkey. In the war with Italy in 1915, and during the World War, the Turks closed this strait to navigation. In 1915 the Anglo-French navy attempted to get through to assist Russia, but met with defeat when three cruisers were sunk and three disabled. By the Treaty of Lausanne, the territory about the Dardanelles was demilitarized, but the Turks began to fortify it again in 1936.

DARE, VIRGINIA. First white child of English parentage to be born in the American colonies. Her father, Ananias Dare, married a daughter of John White, who came in 1587 as the first governor to the settlement which Sir Walter Raleigh attempted to plant in Virginia. What became of Virginia Dare is not definitely known. She was born about a month after the party reached the new world.

DEARBORN, HENRY (1751-1829). This notable American soldier, who began his career as a doctor, marched with 60 men to join in the battle of Bunker Hill. He also fought at Stillwater, Monmouth, and Yorktown. Dearborn became secretary of state under Jefferson, 1801-1809; was general in command of the army in 1812, and helped capture York (now Toronto) in Canada and Fort George; and from 1822 to 1824 was minister to Portugal.

DECATUR, STEPHEN (1779-1820). American naval hero, who twice brought to terms the pirates of the Mediterranean, and gained great fame in the War of 1812. His most daring exploit was entering the harbor of Tripoli in 1804, where he burned the frigate *Philadelphia*, which the pirates had captured. Lord Nelson of the British Navy declared this act "the most daring of the age." In 1812 he captured the frigate *Macedonian*, but in 1815, when his flagship, the *President*, was disabled by accident off Sandy Hook, he was captured by the British and taken, with his ship, to Bermuda. Later he commanded a fleet of three frigates, one sloop, and six other craft against

the pirates of Algiers, and made Algiers, Tunis, and Tripoli agree not to molest American shipping or to enslave American sailors.

DECEMVIRS. Ten persons appointed in Rome to replace the tribunes and other magistrates in enforcing laws. In 455 B. C. three commissioners were sent to Greece to study the laws there. On their return in 452 B. C. a dispute arose as to whether the patricians or plebeians were to have charge of revising the Roman laws. In 451 B. C. the task was given to representatives of the nobles, who compiled ten "Tables" of laws in their term of office. Ten others codified two more "Tables" the following year, the notorious Appius Claudius being the only one from the first decemvirs. He and others tried to continue in office beyond their terms; and other acts of tyranny led to insurrection, and the abolition of the office. These twelve sets of laws became the foundation for Roman and many modern legal systems.

DeKALB, JOHANN (1721-1780). Baron DeKalb was a Bavarian, but served with the French troops in the Revolution, having been made a brigadier general in the French army in 1761. He came to the United States first in 1768 with a French mission, and then with Lafayette in 1777. Congress made him a major general, and he was sent to assist Washington in the New Jersey Campaign, and then to be second to Gates in command in the South in 1780. DeKalb was mortally wounded in the battle of Camden, South Carolina, that same year.

DELHI. Since 1912 the capital of India and once the seat of the great Mogul empire, the chief palace of which is now called The Fort. The Moguls built a wall around Delhi, and this was repaired by the British early in the 19th century. The oldest part of Delhi dates from about 1500, after the Mohammedans, Moguls, and Afghans had ruled in succession in the district. Shah Jehan rebuilt the city on a most splendid scale in 1638, the chief features being the Imperial Palace, with its magnificent Peacock Throne, the tail of which contained jewels valued at about 30 millions in our money. Shah Jehan also built the Taj Mahal at Agra, the most princely building erected in modern times, and here he and his wife were buried. Delhi fell to the British in 1803. The city was the scene of a magnificent coronation ceremony, called a Durbar, in 1877 when Queen Victoria was proclaimed Empress of India, again when King Edward was crowned as Emperor in 1903, and King George V in 1911. In 1913 endowments were provided to make Delhi the educational and political center of India, the capital having been moved from Calcutta in 1911.

DENMARK. This small country occupies the Jutland peninsula north of Germany, where the Angles, Saxons, and Jutes settled in prehistoric times. They were followed by the Danes, an active Viking race that pushed out in all directions, doubtless even to the shores of America before 1000 of our era. Three Danish kings ruled in England from 1017 to 1041. Meanwhile, the Danes became dominant in Norway, and in 1397 Denmark, Norway, and Sweden were united under one king. In 1523 Sweden succeeded in breaking away and in becoming, before long, a powerful rival of Denmark. The Danes took the Protestant side in the wars between 1618 and 1648, but allied with France in the time of Napoleon, in consequence of which they were beaten badly in naval engagements in 1801 and 1807. Denmark was forced to give up Norway to Sweden in 1814. With the aid of Austria and Prussia, two southern provinces, Schleswig and Holstein, broke away in 1864; but the former voted to join Denmark again in 1920. When Norway became independent of Denmark in 1814, Iceland remained with the latter. In 1918, however, Denmark recognized Iceland as a sovereign state, joined to Denmark only in that they have the same king at present, and until 1940 Denmark has charge of foreign affairs in Iceland. A joint committee considers bills that are important to both countries. When the United States bought the Virgin Islands of Denmark in 1916, she gave up all claim to the Northern Greenland because of the discoveries of Admiral R. E. Perry. In 1933 the World Court validated the sovereignty of Denmark over East Greenland.

DEWEY, GEORGE (1837-1917). A famous officer in the American navy; born at Montpelier, Vermont; was graduated from Annapolis Naval Academy in the class of 1858. At the outbreak of the Civil War Dewey was commissioned a lieutenant, serving on the Mississippi. He was present when the West Gulf squadron forced a passage up the Mississippi ahead of Farragut in 1862. He attained the rank of commodore in 1896 at the age of 59. In 1898, when war with Spain broke out, he was placed in command of the Asiatic squadron. He sailed from Mirs Bay, China, April 27, 1898, under orders to capture or destroy the Spanish fleet. Admiral Montojo's fleet was in Manila Bay. On Saturday night, April 30, Dewey daringly entered the bay; engaging the Spaniards next morning he defeated them, and completely destroyed their fleet, having only nine wounded and not a single death. Manila, the chief Philippine port, was thus placed in his power. Dewey received the thanks of Congress and a handsome sword, with medals for his men. Rear admiral (1898); rank of admiral re-created to confer it upon him (1899); presided over the Schley inquiry (1901); commander-in-chief of the mobilized naval forces at the naval maneuvers (1902).

DIAZ, ARMANDO (1861-1928). Italian general, who succeeded Gen. Cadorna after the disastrous battle of Caporetto on Oct. 24, 1917. In nine days he checked the Austrian offensive, forced back the invaders east of the Piave, inflicting tremendous losses, and, after months of careful preparations, launched a new drive which crushed the Austrian lines. One week later Austria sued for peace, Nov. 4, 1918. Diaz was regarded as one of the greatest strategists of modern times, as a result of his skill in turning defeats into great victories. In 1922 he became minister of war of Italy, but was compelled to resign because of ill-health in 1924, at which time both he and Gen. Cadorna (now restored to favor) were given the new rank of marshal.

DICTATORS. Between 501 B. C. and 200 B. C., Rome set up 88 different dictatorships; between 216 B. C. and 82 B. C. there were none. Roman dictators were specially appointed for the public good, in times of stress, and for never over six months at a time. They differed from consuls in that dictators were not responsible to the Senate, but they were usually considered responsible to the people. In 82 B. C. Sulla secured the dictatorship for three years. Julius Caesar was made a dictator for one year, then for ten, and finally for life. After his assassination, Mark Antony had the office abolished for good. Dictatorships were uncommon in the middle ages, or at least were not known as such, even though many rulers had the power of life or death over their subjects. In South America military dictatorships have been fairly common. These have come out of revolutions, and often the dictator has been replaced by a counter-revolution. Haiti, San Domingo, Mexico, Colombia, Venezuela, the Argentine, and Paraguay have known more than one dictator. Sometimes these have recently been called provisional presidents. Gen. San Martin in Cuba in 1936 was ruling as a dictator, even though not so named. Cromwell was a benevolent dictator, but Carlisle called his government a directorate. During the French Revolution, the Committee of Public Safety was a dictatorship. In 1848 Gen. Cavignac ruled in France as a dictator. The name came into common use after the World War to designate new rulers of Europe, who governed by decrees, while the constitutions were suspended. In olden time, as in Rome, only certain parts of the law were suspended; now all laws that do not suit the purposes of the dictator. Some of the recent ones have been Pilsudski in Poland, a very popular military idol; Panglos in Greece, by party strength, backed by the military; Mustafa Kemel (now Kemel Ataturk) in Turkey, but as a great reformer; Mussolini in Italy, through catching the popular fancy and by carrying forward difficult projects; Hitler in Germany, through appeals to national ideals and race prejudice. Both Germany and Spain, in new constitutions, provide for dictators in emergencies. In Russia the "dictatorship of the proletariat" is not a real dictatorship in the accepted sense. Bolivia, Cuba, and Latvia also illustrate tendencies toward dictatorships in time of stress.

DISARMAMENT. General disarmament was proposed at the time of the Congress of Vienna in 1815, and reductions were made in European military establishments. Conscription became almost universal, however, in 1870, and budgets for war equipment greatly increased. Two conferences proposed by the Czar of Russia in 1898 and 1907 resulted in some further progress of indefinite nature. Following the World War, the navies of the world were somewhat restricted by slowing up building programs, and by deciding not to replace some obsolete ships. The United States abandoned warcraft valued at over $200,000,000. Denmark sold her most powerful war-

ship in 1929, and curtailed military expenses by two-thirds. In Feb. 1922 a conference of powers at Washington, D. C., fixed a naval ratio of 5-5-3 as between Great Britain, United States, and Japan, the last having the smallest capital tonnage. Various other subjects received attention, but results have been disappointing. Striking examples of disarmament on international borders are agreements between Canada and the United States in 1818, between Norway and Sweden in 1905, and Argentina and Chile many years ago, not to fortify their boundaries. After the World War Germany, Austria, Hungary, and Bulgaria were compelled to reduce their military forces. Article 8 of the Covenant of the League of Nations calls for reduction in arms, but the League of Nations special commission, after exhaustive study, pronounced that disarmament, to be effective, must be general. Since 1930 the tendency has been to increase armaments all along the line.

DISSENTERS. In 1573 the name "dissidents" was applied in Poland to describe Protestants. In England the word was in common use in the next century for those bodies that refused to support the Church of England, mainly the Baptists, Presbyterians, and other independents. Later the Congregationalists and Methodists were considered as dissenters. The Toleration Act of 1688 mentions Protestant Dissenters; Roman Catholics, save in special instances, are not thought of as dissenters. Since 1850 the word "nonconformists" has largely replaced the older designation. During the period of the Commonwealth in England, the Scotch Covenanters often considered themselves not bound by the English form of service. When Charles I tried to introduce the *Book of Common Prayer* into Scotland, the Solemn League and Covenant was formed in 1643 to resist all encroachments on the Scotch forms of worship.

DOMINICAN REPUBLIC. Also known as Santo Domingo. This republic makes up the eastern two-thirds of the island of Santo Domingo, now called Hispaniola on United States maps, as it was in former times. Columbus probably discovered the island in 1492. From then until 1687 the Spanish made it their headquarters for conquest in the new world. Its history under the Spanish and then the French from 1687 to 1844 is that of Haiti, from which government (in the west part of the island) Santo Domingo separated. Changes in government, debts, and disaster have done much to keep the country backward. From 1905 to 1933 a customs receiver from the United States took charge of financial rehabilitation, following threats of European intervention. For several years before 1930, President Vasquez secured much progressive legislation, including a new constitution in 1929, but he was displaced by Trujillo after a bloodless revolution. On Sept. 3, 1900, the island was visited by a hurricane of terrible intensity, and this left all but 400 of 10,000 buildings in the city of Santo Domingo in ruins, with 2000 dead, 6000 injured, and 30,000 homeless.

DOMINIONS, BRITISH. See under *British Empire.*

DOOMSDAY BOOK. Also called Domesday. Results of a survey made by officers of William the Conqueror in England in 1085. A group of deputies visited each county, took testimony by units of hundreds, sworn to by 12 jurors, half Norman and half English. All counties save the northwest of England, not yet conquered, and Durham and Northumberland (omitted for some unknown reason) were accounted for. Some of the towns, like London and Winchester, are also not included. The final results, rearranged according to the classes of landholders, were written in two great volumes. The chief object was to fix the old and new values of the land for the purpose of establishing title and for taxation. The original was kept at Winchester until the time of Henry II, then at Westminster, and since at the Public Record Office, London. It was printed in 1773-1783, indexed in 1811, and supplemented in 1816 with the Exon Book, giving records of southwestern counties. In 1869 it was rebound. This book, though hard to understand, has proved a gold mine of information about early customs and places in England.

DORR'S REBELLION. Voting rights in Rhode Island in 1842 were held only by those who owned land worth at least $137, or a revenue of $7 a year. Thomas Wilson Dorr (1805-1854), who had served in the Legislature from 1833 to 1837, led a group which demanded reforms. Dorr was elected governor by the Suffragists, as his party was named; Samuel W. King was elected by the Landholders. Both were inaugurated, and civil war impended. Indeed, some acts of violence occurred. Dorr fled to Connecticut, but afterward returned voluntarily for trial. He was convicted in 1844 of treason, sentenced to death, but in the end served one year in prison, and then was freed by a general amnesty. In 1851 Rhode Island restored his civil rights, and in 1855 the Legislature declared his trial illegal, but the courts held otherwise. Dorr's Rebellion, however, brought several needed reforms in the government of the state.

DOUGLAS. Prominent Scotch family, beginning definitely with William of Douglas mentioned in charters in 1175 and 1213. Other early members were Sir Archibald, 1190 and 1232, first knight of the family, whose son, William, is mentioned in charters of 1240 and 1273; William, his son, who joined Wallace for a time in the wars against England. Sir James Douglas was the hero of 70 fights, all won but 13; he was slain in Andalusia in 1330 while on his way to the Holy Land, with the heart of his royal master of Scotland. James, his younger brother, defeated Edward Baliol, claimant for the throne, was made Regent of Scotland, but was killed at Halidon when invading England. His son became Earl of Mar, and the direct line ended with his son, James, who fell at Otterburn in 1388. Another line was represented by Archibald, who won estates in France, which went to his son in 1439. After the son was murdered, wars ensued during the next 20 years, at the end of which the earldom was forfeited. The Earls of Angus, Earls of Morton, and in recent times, the Marquis of Queensbury and the Earl of Selkirk are other collateral branches of the Douglas clan.

DRAFT RIOTS IN NEW YORK. Driven by the scarcity of recruits, in 1863 President Lincoln was authorized to draft able-bodied men between 20 and 45. Men could escape by paying $300 for a substitute. Many poor men resented this exemption merely on the ground of being able to buy freedom from service. On July 11 a riot broke out. Before it was quelled by the militia, numerous colored persons had been beaten and robbed, and a few killed; the recruiting office and an orphanage for negro children had been burned; and in all property worth $1,500,000 had been destroyed, together with nearly 1000 lives.

DRAKE, SIR FRANCIS (c. 1540-1596). This English privateer and admiral went on the ill-fated expedition of his relative, Sir John Hawkins, to the West Indies in 1567-68. Because of losses in money incurred by Drake on this voyage, he was commissioned as a privateer by Queen Elizabeth. He made three different trips to the Spanish Main in search of plunder: one in 1572 with three ships and 73 men; the second in 1577, when he took much booty on the west coast of South America, went on to Java, and finally returned by way of the Indian Ocean, being the first Englishman to go completely around the world; and his third voyage, 1585-86, with 21 ships, and on the return voyage he took booty from some of the towns along the coast of Spain. Drake served for three years in Ireland, ending in 1576. He was second in command with Lord Howard, when the Spanish Armada attacked England in 1588, and the following year made a reprisal voyage to the coast of Spain. He was Mayor of Plymouth, England, from 1581 to 1585. Drake died on board his ship near Nombre de Dios.

DREYFUS (drī'fus), **ALFRED** (1859-1935). A French artillery officer who was arrested in 1894 and charged with betraying secrets to the enemy. After being hastily convicted, he was sent to the Isle du Diable (Devil's Island) off the coast of Guiana, and here was treated with much harshness. Through the ceaseless efforts of Emile Zola, who was banished in consequence, Georges Clemenceau, and Col. M. G. Picquart, who was dismissed from office, the case was never allowed to rest. Finally, Col. Henry, an army officer, admitted forging one of the three documents used to convict Dreyfus. The army party continued to insist on his guilt. In 1906 the Supreme Court of France declared Dreyfus innocent. He was at once decorated with the cross of the Legion of Honor, restored to the army and raised to the rank of major, and after the World War a lieutenant colonel. His Legion of Honor was pinned on his breast as he stood precisely on the

spot where he had been when his captain's emblems were torn from his uniform years before.

DRUIDS. Pagan priests who exercised a great influence over the early inhabitants of Gaul, Briton, and Ireland. They appear to have directed the political, as well as religious affairs, of certain tribes. Tiberius and Claudius, Roman emperors, found the Druids particularly stubborn and hard to manage after the conquests of Gaul. They were forbidden to carry on their rites, and in some cases their groves, where they met usually in the open, were destroyed. The oak and the mistletoe were sacred in Druid ceremonies. Many of the priests seem to have been magicians and soothsayers. In Celtic lands stone tables called *dolmens* are found today. Some have fancied that these were altars used by the Druids, but this is not proved. Again, the great stones found erected in order at Carnac in Brittany, Stonehenge in southern England, and elsewhere, though often stated in books as Druid remains, are not clearly shown to be such.

DUBLIN. For many centuries the capital of all Ireland, and now of the Irish Free State. It is a city of unusual charm, with its very wide streets, numerous squares or open spaces, beautiful post-office and Nelson monument, 134 feet high, and many imposing churches. Some of the Protestant Churches are St. Patrick's Cathedral, founded in 1190, and Christ Church Cathedral, founded in 1038; among the Catholic, are St. Mary's, St. Saviour's, and St. Kevin's. Dublin is the seat of Trinity College, one of the most famous among universities. The name comes from Dubhlinn, meaning black pool, for a place in the river Liffey, which divides Dublin into two portions. St. Patrick, who was probably not a native Irishman, converted the king in 448. For two centuries ending in 1170 the Danes ruled almost continuously in Ireland, until dispossessed in the time of Henry II. Dublin was made the seat of a bishop in 1038, and of an archbishop in 1152. James II convened a parliament at Dublin in 1689. The city has been the object of several uprisings against English rule, such as in 1798 when Fitzgerald sought to seize the town and castle or fortification; in 1803 when the party of Emmet sought to gain control; and during the time of the Fenians, 1867, an organization designed to overthrow British rule and substitute a republic in Ireland.

DUELS. Military duels between army champions are ancient. In certain countries of Europe, notably in France and Germany, they were held in the middle ages to determine judicial guilt. In England and Scotland, trial by battle was sometimes invoked, as in the *Fair Maid of Perth*, Scott's novel. Between 1601 and 1609, over 2000 men died in duels in France alone. Louis XIII forbad them, and executed a noble who fought to test the new law; Louis XIV restored duels to favor. England tried in vain to suppress them. In the reign of George III, it is said, 172 were fought in Great Britain, 91 ending fatally. In 1808 Major Campbell was executed for killing Capt. Boyd in a duel. In the United States, a number were fought before 1850. Andrew Jackson killed Charles Dickinson in one of his encounters. Gen. M'Intosh killed Button Gwinnett, a signer of the Declaration of Independence. A great public revulsion against duelling arose when Aaron Burr killed Alexander Hamilton in 1804.

DUMA. Russian legislative assembly which met first in 1906, at which time the Czar promised that no law should be enforced without its consent. In theory this was supposed to end autocracy in Russia. The first three years witnessed conflicts between the Duma, ministry, and organized police. The fourth Duma was largely aristocratic. Direct voting was permitted in only five or six large cities; in fact, representation was in adverse proportion to number of people. Thus 70 million peasants chose only 1168 persons qualified to be electors of members of the Duma; while 200,000 of the landed classes were allowed to choose 2600 electors. The fourth Duma ended in 1912; the fifth was nearing the close of the regular five-year term, when the revolution broke out in 1917.

DUTCH INDIA COMPANIES. The Dutch organized the East India Company in 1602, the West India Company in 1621. These two rich island districts built up the Netherlands as a great world power in commerce. By 1641 the company had gained control of Ceylon and Malacca; in 1652, the Dutch settled at the Cape of Good Hope; and in 1667 they founded a business in Sumatra. In 1690 the company had 150 ships, effective war craft, and about 10,000 soldiers to protect its interests. Sometimes dividends ran as high as 40%. Later rivalries with France and England reduced the influence of the East India Company, which went out of active business in 1798. Today the interests of Holland are paramount in Java, Madura, Sumatra, and other districts of Malaysia. The Dutch West India Company was far less profitable to the merchants of Holland. This came into rivalry with England in the north, and with Spain and Portugal on the coast of South America, and with all three in the islands of the Caribbean. Battlements in Bahia, now part of Brazil, gained some footing. Today the Netherlands are represented in Surinam or Dutch Guiana and in Curacao, with six other small islands in the Caribbean.

EARLY, JUBAL ANDERSON (1816-1894). Eminent Confederate general, who was a graduate of West Point, served in the Seminole and Mexican Wars, and practiced law in Virginia from 1838 to 1861. He became a colonel at the beginning of the war, commanded a brigade at Bull Run and a division at Fredericksburg and Gettysburg. In 1864 Sheridan defeated him in several battles, and Custer at Waynesboro, after which Early was superseded. From 1865 to 1867 he lived in Canada. He returned to the practice of law, became president of the Southern Historical Society, and wrote numerous papers and one book on the Civil War.

EASTERN QUESTION. See under *Near East.*

ECUADOR. Native tradition tells of the kingdom of Quito, which was overthrown by the Caras from the western coast of South America in the tenth century. The Caras ruled until 1475, when the Incas displaced them and added Ecuador to the realm of Huayana Capac the Great. His sons fought each other, until one of them was killed, and Pizarro by treachery conquered the other. Then the vast territory of Ecuador was added to Peru and ruled by the Spaniards. Following the liberation of the South Americans from Spanish rule, Ecuador set up an independent government in 1822. The history of Ecuador since then has been even more stormy than that of other adjoining nations. Prof. Edwin W. Kemmerer, of Princeton, with a staff of experts, revised the financial system of Ecuador in 1926. Before that, in 1910, Gen. W. C. Gorgas, also on invitation of the natives, stamped out yellow fever in Guayaquil, the chief port. After a period of turbulence and dictatorships, Ecuador returned to constitutional government in 1928. Again in 1935 economic distress, fears of a Fascist dictatorship, suspension of freedom of the press, and the unseating of the president kept Ecuador at strife and uncertainty.

EDINBURGH. This picturesque city on hills near the Firth of Forth in Scotland was founded by King Edwin of Northumberland before 800. In the 11th century, the town became a royal residence, and here King David I established Holyrood Abbey. In its present form, the castle of Edinburgh dates from about 1350. For over three centuries Edinburgh was the center of Scottish history. Here in the 15th century the kings took refuge from their rebellious nobles, the capitol was fixed here in 1436, and in 1450 a wall was built around the Old Town. James II and James III granted liberal charters to Edinburgh, the last one in 1482. Here occurred the chief battles in the religious wars of the north; the chief scenes in the turbulent life of Mary Stuart, Queen of the Scots; the union with England in 1707; the establishment of the Free Church of Scotland in 1843, when the Scots seceded from the Established Church. King George V was crowned at Holyrood in 1911. Edinburgh lost its prominence as a capital after the union with England, but gained fame as the Athens of the North with the end of the 18th century when Walter Scott, Jeffrey, and many others made it a cultured center. Notable buildings are the Castle, where the crown regalia is kept to this day, the church of St. Giles, in its original form built in the 14th century, and restored in 1883; the house of John Knox, the religious reformer; the library of the Advocates; the Royal Academy, and National Gallery of Scotland.

EGYPT. Manetho, priest of Heliopolis, in the 3d century B. C. wrote a chronology of the early kings of Egypt, including 30 dynasties. Modern scholars date the founding of the first of these back to 3900, 4455, and 5004 B. C. In the early centuries we hear of irrigation, of the establishment of the ani-

mal worship, the building of many pyramids, the most notable being that of Khufu or Cheops, the rise of Memphis as capital the coming of the shepherd or Hyksos kings from the east to conquer Egypt (about 2000 B. C.), and finally Rameses and his successors in the 19th and later dynasties. Shashank (the Bible Shishak) invaded Israel with 12,000 chariots and 60,000 horsemen. From this time Egypt fought with neighboring nations,—Ethiopia, Assyria, Phenicia, Greece, Persia, and finally Alexander the Great in 332 B. C. Then followed a procession of unimportant monarchs, the best known being Cleopatra, from whom the Romans took Egypt in 31 B. C. In 395 it became part of the Eastern Roman Empire, in 641 fell into the power of Islamites, and then came disorder, luxury, and corruption. At last the Fatimi Caliphs conquered the land and built Cairo, but the line ended with the coming of the Kurds, whose general, called Saladin in English, fortified the city about 1175. He is chiefly known for his wars with the Crusaders. The last of his line established the Turkish bodyguard of the Mamalukes or white slaves. These usurped the throne in 1250 and ruled until 1517. They held their power by force of arms, but built many noble structures in Cairo, the chief glory of the modern city. Then followed three centuries of the Ottomans, with their laxity and lack of progress, until the French took Egypt in 1798, but the English restored it to Turkey in 1801. In 1805 an Albanian soldier obtained control, and his son Ibrahim, between 1820 and 1832, gained a foothold in Nubia, part of the Sudan, Morea, and Syria. His line ruled until 1881, when Arabi Pasha revolted, became dictator, and was at last subdued by the British. General Gordon was sent to quell another revolt in 1884, but was murdered at Khartum two days before a relief expedition reached that city. Great Britain in 1887 helped Egypt regain control over the Sudan, now administered jointly by them. In 1904 France recognized the interest of Britain in Egypt. Great Britain recognized the independence of Egypt in 1922, at which time Fuad I became king. King Fuad died in 1936, and was succeeded by his young son. His son, Ferouk, aged 16, was recalled from his schooling in England to take his place. The Nationalist party poled enough votes to put them in charge of the government in 1936.

ELIZABETHAN AGE. Modern England, as we know it today, developed with an amazing rapidity between 1550 and 1625. During the reign of Queen Elizabeth came the great English Renaissance. The Queen favored exploration, arts, literature, and all forms of learning; her policy was moderate, peaceful, and progressive. In spite of her hesitation as to whom she should marry, and her uncertain temper in her personal affairs, she wisely held the balance between factions, courtiers, and even ambassadors from foreign courts. Under Francis Bacon, experimental science, retarded by the scholasticism of the middle ages, received a great impetus. Elizabeth herself studied the classics, particularly Greek, which for some centuries had fallen into neglect. Some of the continental humanists, like Erasmus, had influenced England in the time of Henry VIII, and the Elizabethans favored the new learning at Oxford and Cambridge Universities. Italian, Spanish, and French literatures, as well as the Latin and Greek, were translated freely. Political writers like Machiavelli, Castiglione, and Sir Thomas More began to influence both domestic and foreign relations.

Englishmen like Sir Philip Sidney, Edmund Spenser, and George Cascoigne sought to preserve the best of British traditions in literature. Sidney and others of his opinion insisted that the English language was entirely suitable to be the medium of instruction and of a native literature for the people. Drake, Oxenham, Hawkins, Sir Humphrey Gilbert, and Raleigh were among the number who sought the cities of gold in America. Navigators also expected to find a short-cut through northern seas to the wealth of Cathay, as north China was called. Several companies were formed to foster exploring, settlement, and conquest of the natives of foreign lands. After the founding of the Virginia and Massachusetts settlements, emigration to this hemisphere increased by leaps and bounds. The medieval logic, philosophy, and religion were giving way to a fresher, more humane view of life and mankind. All in all no age was more alert to possibilities for learning, commerce, and literature.

EMANCIPATION PROCLAMATION. For some months before the summer of 1862, many urged President Lincoln to free the slaves in southern territory. He hesitated until some great victory might justify such a move. His chance came after the North won the battle of Antietam on Sept. 17. On Sept. 22, 1862 he announced that all slaves in territory then in rebellion should be considered free after Jan. 1, 1863. Territory in six parishes of Louisiana, the counties making up West Virginia, and seven counties in Virginia itself, besides the cities of New Orleans, Portsmouth, and Norfolk, were excepted. Freed slaves were enjoined not to commit acts of violence, and to accept reasonable wages. Former slaves might also enlist in the union armies. Lincoln had previously sought to get Congress to appropriate money to buy freedom of slaves in border states. His proclamation again affirmed his determination to preserve the Union at all costs. In the nature of the case, the proclamation did not actually free slaves from southern masters, save in territory controlled by the North; but it showed what would happen if the federals won the war.

EMBARGOES. Any prohibition by a government forbidding its people to ship munitions, agricultural products, or any commodity out of a certain area. Sometimes one nation forbids others from trading with its enemy when at war. Napoleon, for instance, forbad the United States to trade with England during the early years of the 19th century. The North, during the Civil War, asked Great Britain not to buy cotton of the South, and finally got this product declared contraband. Several nations in 1935 forbad their citizens to ship arms to either Italy or Ethiopia. President Roosevelt declared that any resident or firm shipping such articles should have no protection from the United States government. States recently have often forbidden admission of certain products from outside into their territory. Some states have established at times an embargo against shipments of green corn, because of the presence of the corn borer pest in other localities. During the World War both sides established embargoes, which they tried to make effective by naval blockades.

EMMET, ROBERT (1778-1803). An Irish patriot and orator, who retired from Trinity College, Dublin, at the height of his career, because he believed the authorities had no right to question a student on his political beliefs. Both he and his brother Thomas were interested in the United Irishmen, a patriotic group. After an interview with Napoleon in France in 1802, Robert Emmet returned to Ireland, gathered a force of about 100 men, with the object of storming Dublin Castle. Violence broke out, and the mob killed Lord Kilwarden and Col. Brown. Emmet rescued the daughter of Lord Kilwarden, fled to the mountains, and planned to escape either to the continent or to America. He lingered, however, and hoped his sweetheart, Sarah Curran, would consent to go with him. Emmet was caught, tried for treason, and hanged on Sept. 21, 1803. His brother, Thomas, in 1812 became attorney general of New York.

ENGLAND. Phenician accounts mention Britain before the coming of the Romans to conquer under Julius Caesar in 55 B. C. Traces of earlier inhabitants are evident, but not clearly interpreted. Claudius in 43 and Agricola in 78-81 of our era completed the subjugation of the Britons to the Roman yoke, which the Britons threw off in 410. The Romans left many fine roads, walled camps, and forts, but these were not strong enough to keep out the Picts and Scots from the north. So the Britons called the Angles, Saxons, and Jutes, tribes from north Germany, to their aid in the fifth century, but these strangers later crowded out the Britons into Wales, Cornwall, and the north of Britain. Northumbria, East Anglia, and Mercia were held by the Angles; Sussex, Essex, and Wessex by the Saxons; and Kent by the Jutes. Augustine introduced the Christian faith in the 7th century. Under the Saxon Egbert in 827, the country was united for the first time, and the Saxons ruled until 1017. These gave way to the Danes until 1042, when the Saxons again came into power for 24 years until William the Norman arrived in 1066. Alfred the Great (871-901) checked the Danes and conquered some of the surrounding tribes, making Wessex his stronghold.

William the Norman claimed the throne because he was a cousin of Edward the Confessor and presumably his heir. Harold rushed down from the north, where he had been fighting, but was defeated by William at Hastings on Oct. 14, 1066. The Nor-

mans gave England a new form of civil and church government, a type of feudalism adapted from that of the continent, and the Norman-French as the language of church and court. Henry I, 1154, began the Plantagenet line of kings; John granted a charter in 1215; Henry III recognized the idea of a parliament, fully organized in 1295 by his successor, Edward I, who subdued Wales and tried to secure Scotland. Edward III and his son, the Black Prince, carried on a war with France, which lasted intermittently 100 years.

Henry Bolingbroke became Henry IV, first of the Lancastrians, in 1399, through a popular revolution. Henry V and VI continued the strife across the Channel, the first with great success, but the latter suffered defeat after the French had been stirred to their best by Joan of Arc. Henry VI brought on the Wars of the Roses, and the reigns of three kings of the house of York, ending with Richard III, defeated and killed at Bosworth by Henry Tudor, who founded the new line of five Tudor kings as Henry VII. He united the warring factions by marrying a princess of the rival house, put the nobles in their place, and gained much prestige abroad. Henry VIII, his son, favored the Renaissance and founded the new Church of England. His three children, Edward, Mary, and Elizabeth followed him, Mary to attempt the restoration of the Catholic policy, and Elizabeth to advance England in every way at home and abroad. Mary's loss of Calais, 1557, terminated English claims to France, and her marriage with Philip of Spain led to the troubles between the two lands in the reign of Elizabeth, culminating in the victory over the Armada. Otherwise, Elizabeth enforced peace at home and respect abroad. Learning, literature, and especially explorations received a tremendous impetus.

James VI of Scotland, son of Elizabeth's rival, Mary Queen of Scots, now succeeded in 1603; but his troubles with Parliament left a legacy to his son Charles I, together with the imprudence of the latter, which cost Charles his throne and his life. The struggle between people and king over taxes, religious establishments, and prerogatives led directly to the Puritan revolution (1642) and the Commonwealth under Cromwell (1649-1660). Charles II, with his French manners and loose ideals, helped the Stuarts little, and James II completed their final downfall, when he fled in 1688, and William and Mary, his eldest daughter, took the throne.

Parliament was supreme; the people began to hope for a new age, which bore abundant fruitage in the reign of Anne (1702-14). England won great battles on the continent and in America; in 1707 Scotland was united with England. The ministry ruled during the times of George I and II, of the House of Hanover. George III in 1760 took back the royal powers, came into conflict with his American subjects, and England lost her most important colonies because of a stubborn policy. The long reign of Victoria (1837-1901) saw England confirmed as a world power, with a vast good will among her colonies, many of which were gradually given autonomy. (See article on *British Empire*). Edward VII proved a wise diplomatist at home and abroad, George V a man beloved by all his people, and Edward VIII well trained for his task of taking up the reins of government in 1935 on the death of his father. During the World War, England suffered hardships unknown to her people for generations, but at last maintained her place as stabilizer of many lands. See articles on *English Kings, Ireland, Scotland,* and the table of History for detailed events.

ENGLISH KINGS. No complete or reliable list can be made before the time of Egbert. The houses and kings representing each are as follows: *Anglo-Saxon Line:* Egbert (827-39), Ethelwulf (839-58), Ethelbald and Ethelbert, jointly (858-60), and latter alone to 866, Ethelred (866-71), Alfred the Great (871-901), Edward the Elder (901-25), Athelstan (925-40), Edmund (940-46), Edred (946-55), Edwy (955-58), Edgar (958-75), Edward, the Martyr (975-79), Ethelred, the Unready (979-1016), and Edmund, Ironside (1016), who fought against Canute and won many battles, but died before he could confirm his throne. *Danish Kings:* Canute (1017-35), Harold I (1035-40), Hardicanute (1040-42). *Saxons Restored:* Edward, the Confessor (1042-66), son of Ethelred the Unready, and Harold (1066), son of Earl Godwin, who ruled 40 weeks and one day, defeating his brother and the king of Norway at Stamford Bridge, when both were slain. Harold himself died in the battle of Hastings. *Norman Kings:* William I (1066-87), William II (1087-1100), Henry I (1100-35). *House of Blois:* Stephen (1135-54), son of a daughter of William the Norman and the Count of Blois, and a cousin of Henry I. *Plantagenet Kings:* Henry II (1154-89), who was the son of Matilda, daughter of Henry I, and of Geoffrey Plantagenet; Richard I (1189-99), John (1199-1216), Henry III (1216-72), Edward I (1272-1307), Edward II (1307-27), Edward III (1327-77), Richard II (1377-99). *Lancaster Kings:* Henry IV (1399-1413), who was the son of John of Gaunt, who persuaded Richard III in prison to abdicate; Henry V (1413-22), Henry VI (1422-61). *York Kings:* Edward IV (1461-1483), son of the Duke of York, succeeded after Henry VI was deposed; Edward V (1483), said to have been murdered by his uncle, Richard III (1483-85), who was slain at Bosworth, by the army of the Earl of Richmond, who became Henry VII.

Tudor Kings: Henry VII (1485-1509), lineal descendant through his mother, of the house of Lancaster, Henry VIII (1509-47), Edward VI (1547-53), Mary (1553-1558), Elizabeth (1558-1603). The last three were children of Henry VIII. *Stuart Kings:* James I (James VI of Scotland) (1603-25), son of Mary Queen of Scots, Charles I (1625-49) executed, Charles II (1649), Commonwealth under Cromwell and his son, Richard, to 1660; (Charles II restored, 1660-85), James II (1685-88), deposed. *Orange Kings:* William III and Mary II (1689-1702; 1689-94). *Stuart Line* again: Anne (1702-1714), second daughter of James II. *Hanover Kings:* George I (1714-1727), son of Sophia, granddaughter of James I, George II (1727-60), George III (1760-1820), George IV (1820-30), William IV (1830-37), Victoria (1837-1901). *Saxe-Coburg Kings:* Edward VII (1901-1910), name changed by George V (1910-1936) to *House of Windsor* on July 17, 1917, Edward VIII (1936) and George VI (1936——), Windsor Kings.

ENTENTE. Name used for Great Britain, Russia, and France as allied together during the World War. The name originated about 1840 from the phrase, *entente cordiale,* French for an amicable understanding, but not necessarily a formal alliance between nations. France and Great Britain came to an agreement in 1904 regarding Egypt and Morocco, France leaving Egypt to the control of England, and England, the control of Morocco to France. In 1907 Great Britain and Russia came to an agreement in regard to Persia and other parts of Asia. When the World War broke out, France and Russia were more firmly bound by definite military alliance. With Great Britain, they were often spoken of as the *Triple Entente.* Germany, Austria, and Italy were likewise bound in a Triple Alliance, until Italy broke away and joined the allies against the Central Powers in 1915. In 1920 Czechoslovakia, Jugoslavia, and Rumania entered into what many have called the *Little Entente,* the object being to maintain conditions in their region as provided for by post-war treaties. In 1929 the agreement was renewed.

EPHESUS. Famous city in Asia Minor, the seat of the worship of Diana or Artemis, to whom a very magnificent temple was dedicated in the 6th century B. C. This measured 164 by 342 feet, being classed as one of the seven wonders of the world. Ephesus was also the center of the late Greek philosophy and art. Next to Jerusalem and Antioch, it was a favorite Christian city, for a time the home of Paul, and once the seat of Timothy, an early bishop of the church. In 431 and 449 important church councils were held there. In 263 the Goths destroyed the temple of Diana, and the city fell into neglect. Recent excavations have shown the foundations for the temple, a theatre mentioned in *Acts xix,* 23, a stadium said to have been erected by Augustus, and several early Christian churches.

ERICSSON, JOHN (1803-1889). Swedish naval inventor, who lived in England from 1826 to 1839, and then in the United States. In 1890 his remains were carried to Sweden on the U. S. cruiser *Baltimore.* While in England, he invented a new type of screw propeller, which was adapted to the U. S. *Princeton,* 1839-41, the first war craft having a screw propeller below the water line. Some of his later inventions were a water meter, a device for measuring distance at sea, and a fire engine. He attempted to perfect an engine to utilize the rays of the sun. Ericsson is best remembered for his *Monitor,* described as a "cheese box on a raft," the

first iron-clad of the union navy in the Civil War, which defeated the *Merrimac* in 1862.

ERICSSON, LEIF. Hero of the Icelandic sagas, mentioned as the son of Eric the Red. He established a settlement in Greenland, visited the king of Norway, and was commissioned to bring Christianity to Greenland. On the way his boat was driven off course by gales, and he landed on a strange coast. One account represents him as exploring the places called Helluland, Markland, and Vinland. Much doubt exists as to the precise locations, which some believe to be Newfoundland, Nova Scotia, and part of New England; others believe them to be Labrador, Newfoundland, and Nova Scotia.

ERIE CANAL. This waterway across New York state was commenced in 1817, and the first boat left Buffalo for New York in 1825. Most of the emigrant travel to the West for the next twenty years went by way of the canal, the time taken being about three and a half days from Albany to Buffalo, a distance of 352 miles. From 1819 to 1882, when tolls were abolished, the net profit to the state was over $42,500,000. Much scandal resulted after 1862 over contracts for enlargement of the Erie Canal. Gov. Samuel J. Tilden, in 1872, did much to correct a number of abuses. Provision was made in 1903 for enlargement and deepening for boats of considerable size. The eventual cost was over $100,000,000. A yearly traffic of 20,000,000 tons was predicted, but the average has been about 3,000,000.

ERITREA. With Somaliland, one of the Italian colonies along the Red Sea in Africa. In 1870 Italy purchased Assab for a coaling station; later various strips of land nearby were acquired, all of which were united in 1890 to form Eritrea. From 1885 to 1896 intermittent fighting with Abyssinia kept the Italians from developing the country, the end being the disastrous defeat of Italy in 1896, one of the main causes of the war against Ethiopia (Abyssinia) in 1935. In 1900 and 1902 Italy, Great Britain, and Abyssinia fixed the boundaries of Eritrea. Italy gave up claims to all land south of the Mareb, Belesa, and Mina Rivers. In 1897 Kasala was given up to the Anglo-Egyptians. The inhabitants of Eritrea are mainly Arabs and Copts.

ESSEX, ROBERT DEVEREUX, EARL OF (1566-1601). While serving with his stepfather, the Earl of Leicester, in the war in Holland, Essex gained great fame at the battle of Zutphen in 1586. He rapidly won the favor of Queen Elizabeth, who sent him to serve with Henry IV of France against the Spaniards, though in 1589 she forced him to return from Drake's expedition against Portugal. When Elizabeth and Essex quarreled, Francis Bacon reconciled them. While serving as governor general of Ireland in 1598, he made an unauthorized truce with the rebel earl of Tyrone. For this and other offenses, he was sentenced to keep to his house in the country as if it were a prison. Essex appeared in London and raised a commotion because his patent on sweet wine had not been renewed. His old friend, Bacon, was obliged to prosecute him, the sentence being death. Essex was a man of spirit, erratic, but forgiving and always popular with numerous admirers.

ESTAING (aiz-tan'), **CHARLES HECTOR, COUNT D'** (1729-1794). French admiral, who served in India, where he was imprisoned by the British. In 1763 he was made lieutenant general, and in 1777 vice admiral in the French navy. The next year he brought a fleet to aid the Americans in their struggle against England. In 1789 he commanded the National Guard of France, and during the Revolution of 1793 helped Marie Antoinette with his testimony at her trial. One year later he fell a victim to the treachery and unreason of the times.

ESTONIA. Since 1918 an independent republic, made up of former parts of Russia, including some of Livonia, Pskow, and Petrograd. The inhabitants are mainly of Finnish-Urgrian stock. Russia granted freedom from all financial obligations to the old empire and gave Estonia 15,000,000 gold marks in 1920. Constitutions were adopted in 1920 and 1934, the last by an overwhelming popular referendum. The president has wide powers, almost absolute. Martial law was proclaimed in 1934 against Nazi, Fascist, and Communist propagandists. Estonia, Latvia, and Lithuania agreed to common action in matters of tariff and social policies. In 1935 existing political parties were abolished by decree, following a ban on the Workers (Communistic) Party in 1930.

ETHIOPIA OR ABYSSINIA. Native chronicles assert that the first king, Menelik, was a son of King Solomon and the Queen of Sheba. Little is known of actual history before the 4th century, when the Coptic form of Christianity was introduced, followed by three centuries of progress, then by reigns of usurpers until about 1300. Portuguese Jesuits were driven from the country in 1633; little communication with the outside world followed until 1850. The British overthrew King Theodore in 1868 because of his barbarism. King Menelik, who ruled from 1889 to 1913, crushed the Italian army at Adowa in 1896, a defeat that Italy never forgave. Lij Yasu was deposed in 1917, and Zaudita, daughter of Menelik succeeded him, with Ras Taffari as Regent, who provided for the gradual freeing of slaves in 1924. Ras Taffari became king in 1928, and emperor on the death of Zaudita in 1930, taking the name of Haile Selassie. After weeks of preparation and threats, while the League of Nations sought to prevent, Italy began a war on Ethiopia in 1935, under the pretext of wishing to civilize and modernize the country. Emperor Selassie fled to Europe in May 1936, and Italy proclaimed the annexation of Ethiopia.

EUGENE (Eu-Zhain'), **FRANCOIS** (1663-1736). Better known in his time as the Prince of Savoy. Because of the banishment of his mother by Louis XIV of France and the refusal of a commission to himself, Prince Eugène entered service under Leopold I of Hungary and Bohemia, and from that time became an enemy of his native land. Louis offered him great honors and estates if he would consent to serve with France, but all such inducements were refused. He became the most famous general of his age, serving as field marshal of Austria; for the Coalition against France in her claims in Italy, when he expelled France from Italy in 1706: and as head of the German army which aided the British at Blenheim. He defeated 180,000 Turks in 1706, captured Belgrade in 1717, and as late as 1735 once more took the field against France along the Rhine. He also spent much time in reading, in study, and in collecting art objects that were the admiration of his contemporaries.

EVANS, ROBLEY DUNGLISON (1846-1912). While commanding the United States *Yorktown* in Chilean waters when a mob killed some sailors in 1891, he earned the title of "Fighting Bob Evans." On his recommendation, steel was first used for American battleships, his own command, the *Indiana*, 1896, being the first of this type. During the war with Spain, the *Iowa*, of which he was captain, became the center of attack by the Spanish fleet off the coast of Cuba. He also served in Bering waters, as lighthouse inspector, 1882 to 1886, with the fleet in the Far East, 1904, and on a cruise around the world, 1906, from which he was forced by illness to retire when the fleet reached San Francisco. He gave up his command in 1908, receiving special thanks of Congress.

EWELL, RICHARD STODDART (1817-1872). He was a graduate of West Point in 1840, gained distinction in the battles near Mexico City in 1847, and in quelling the outbreak of the Apache Indians in 1857. He joined the Confederate army in 1861, became a lieutenant general and commanded a corps at Gettysburg, Winchester, the Wilderness campaign, and Spottsylvania. Ewell and his entire army were captured by Sheridan at Appomatox in 1865.

EXPLORATIONS, EARLY. The Greek Argonauts explored the shores around the Mediterranean, the Phenicians went as far as India long before the dawn of the Christian era. Herodotus says they settled along the coast of Africa, and crossing the Bay of Biscay, went to the tin mines in Cornwall. Hanno about 450 B. C. planted a colony near the present Sierra Leone; Hamilco went to Ireland. In 320 B. C. Pytheas, a navigator of Carthage, went as far as "Ultima Thule," supposed now to be north as far as the Shetland Isles, end of the ancient known world. Alexander's conquest gave some knowledge of the East to the Greeks. Early records were destroyed by invading hordes like the Tartars, but the Arabians saved all they could. Geographical science found a home at Bagdad when driven from other lands to the west. Some famous medieval travelers were Ibn Batuta, a Mohammedan (d. 1378); Marco Polo of Venice (d. 1324) who brought

marvelous tales back from the court of Cathay, where he was for years a resident; Henry of Portugal (d. 1460) gave all his money and talent for 40 years to explorations; and Columbus, John Cabot, Vespucci, Verrazano, between 1492 and 1524, visited the coast of the new world at various points. Diaz rounded Africa in 1488, Vasco da Gama went that way to India ten years later, and Magellan found that he could reach the spice islands by crossing the Pacific from the west. After his death in the Philippines, his crew completed the first circumnavigation of the world from Spanish ports. Cartier, LaSalle, Champlain, and Joliet explored the north Mississippi basin. Frobisher, Baffin, Hudson, and Sir Humphrey Gilbert were among those who sought the gold of the Orient by making a northwest passage around America. Drake circumnavigated the globe in 1577. Tasman and Van Dieman, Hollanders, in 1642 discovered Australia, Tasmania, New Zealand, and the Fiji Islands. Captain Cook discovered many islands while voyaging in the south seas, and circled the Antarctic continent. Early land explorers were Veronne in the Rocky Mountains in 1740; Hearne in the Arctic, 1771; Bruce, the headwaters of the Nile, 1768-72; Mackenzie the river that bears his name, 1789; Lewis and Clark, the American northwest, 1802-05; Humboldt in the West Indies, 1779-1804; Mungo Park, the Niger country, 1796; Billings, eastern Siberia, 1794; and Schlagentweit brothers crossed the Himalayas and Tibet, 1856-57.

EXPOSITIONS. Italy and other countries held small fairs in early ages. They were known in France about 620, in England in 886; city expositions in Paris, 1789, and New York, 1828. Before 1850 many towns of Europe held annual fairs to display their products, that at Leipzig being held three times a year. Paris had industrial expositions in 1798, 1801, 1803, and 1806, the last with 1422 exhibitors. Some important commercial expositions in the United States have been the Cotton States, Atlanta, 1895; Pan-American, Buffalo, 1901; Lewis and Clark, Portland, Oregon, 1905; Jamestown Tercentennary, 1907; Alaska-Yukon, Seattle, 1907; Panama-Pacific, San Francisco, 1915; Great Lakes, Cleveland, 1936. On a much larger scale, international expositions have been held at Crystal Palace, London, 1851, with 6,000,000 attendants; Paris in 1855, 1867, 1889, 1900, the last with a record attendance of 39,000,000; the Centennial of American Independence at Philadelphia, 1876, with 7,000,000; the Columbian at Chicago, 1893, with 21,000,000; British Empire, Wimbley, 1924-25, with 27,000,000; and the Century of Progress, Chicago, 1933, 1934, with over 39,000,000 and a financial profit. Some of these expositions have contributed permanent buildings to the city where they were held, such as Crystal Palace, London; the Field Museum, Chicago; Memorial Art Gallery, Philadelphia.

EXCLUSION ACTS, UNITED STATES. Before 1850 nations usually recognized the rights of the nationals of other lands to come to their shores. Various problems due to excessive influx of foreigners, economic necessity, and other causes now tend to restrict these privileges. As early as 1845 the United States refused to restrict immigration of persons of other races. The Chinese were first restricted in 1882. From 1840 to 1850 only 35 Chinese came to America; from 1850 to 1860, over 40,000 came, of whom 6,000 returned; in 1870 there were 62,376 in the country, though 67,000 had come in the last few years, of whom, however, 35,000 returned to China. Congress refused to do anything in 1868, but in 1876 both political parties had a Chinese restriction plank in their platforms. A committee in 1880 suggested restriction, which was diplomatically arranged with China in 1882. Chinese immigration was restricted for 20 years, but the time was extended in 1892, 1902, and later. After 1888 no Chinese who left this country could return. Between 1890 and 1920 the total in the United States declined from 107,000 to 61,000, and has never risen higher. San Francisco, 1906, forced Japanese children to attend a school for foreign children, mainly Chinese. Many protests resulted. In 1907 it was diplomatically agreed that Japanese immigration should be restricted by Japan. In 1924 residents of India and of Japan both were finally barred. Since then, both countries have sought to establish a quota basis, at least to save national pride, similar to that applied to immigration into the United States from other nations. When complete Filipino independence is finally established, it is expected that natives of the Islands also will be excluded. In all cases travelers, merchants, and students have special permits to live in the United States. In 1930 the total Japanese population was 139,000, mostly in the Pacific states.

FACTORY SYSTEM. Nothing has wrought greater changes in modern life than the growth of factories. Until 1760 in Great Britain and America, people earned their daily bread by working their land and by making articles in the home, or in the very small shop, for local consumption. Each town was largely independent of others, unless raw material had to be shipped from abroad or a distance, as from a warmer to a colder climate. Since the early 19th century, the domestic or home craft system has given way to the factory, or making articles in large establishments. Today raw material may be produced in Colorado, as in the case of wool, shipped to Chicago, finished, and made into garments, which are shipped back to Denver for people to buy there. In early New England, each home was usually self-subsisting,—even the clothes and shoes being made there. The shoe-maker travelled about, much as the teacher "boarded round." The family furnished the hides, which a local tannery often dressed for the maker of shoes and harnesses. Invention of machinery made Brockton, Lynn, and other towns centers of the shoe industry. This particular trade is now found also in St. Louis, Chicago, New York, and many other places. Manchester, Lowell, and New Bedford made up cotton goods, some of which are now manufactured in the South, near the source of raw supply. Much of the clothing is still made in homes, farmed out from the establishment in the city, under conditions called "sweating," which laws have sought to keep from tending toward domestic slavery. Our inventions like the spinning jenny, processes of making steel, and many other articles have concentrated industries in cities and special communities. Hence, the population is slowly shifting from the smaller towns and the country to such centers.

FAIRFAX, THOMAS (1692-1782). An English lord, son of the fifth Baron Fairfax, came of a distinguished family, which owned eleven counties in Virginia, some 6,000,000 acres. He came to Virginia in 1746, perhaps after disappointment in love. William, his brother, had been in America for several years, and had married Anne, daughter of Lawrence, brother of George Washington. Lord Fairfax engaged the young George Washington to survey some of his Virginia estates. From this time they were close friends. Though Fairfax was an ardent royalist, he was allowed to live unmolested during the Revolution on his estates near Winchester. Albert K. Fairfax, a lineal descendant, in 1908 was granted the title of 12th Baron Fairfax by the British House of Lords. Thomas Fairfax was 6th baron.

FANEUIL HALL. See *Historic Shrines.*

FANNING, EDMUND (1737-1818). Celebrated loyalist during the Revolution in America. He was a graduate of Yale in 1757, settled at Hillsboro, N. C., but was driven away by residents who accused him of partisanship as recorder of deeds. He gathered 460 loyalist volunteers for the "King's American Regiment," which fought the colonial forces in several skirmishes. Later he fled to Nova Scotia, where he became a councilor in 1783. From 1796 to 1805 Fanning served as Governor of Prince Edward Island.

FARNHAM, RALPH (1756-1861). The last survivor of the battle of Bunker Hill, and the first white settler at Acton, Maine. In 1860 residents of Boston honored him by a public concert. When he died the following season, he was aged 104 years, nine months, and 19 days.

FARRAGUT, DAVID GLASGOW (1801-1870). Naval hero for whom the U. S. Congress created two new ranks,—vice admiral in 1864 and admiral in 1866. He came of a family that fought in the Revolution, was adopted by Capt. David D. Porter, and was with him on the *Essex* in the battles with the British in the Pacific, and served with distinction in the Mexican War. In 1861 he moved from Norfolk, Virginia, to Hastings, New York, and offered his services to the North. He carried on with great credit several extremely hazardous exploits: running through the deadly fire from land batteries at New Orleans, April 24, 1862, to sink 13 Confederate gunboats and two ironclads; destroying an ironclad and four gunboats in Mobile Bay, in the

midst of enemy torpedoes, Aug. 5, 1864; running the Mississippi at Port Hudson in a similar fashion; braving fire rafts with his flagship, *Hartford,* badly damaged. He attained the rank of rear admiral in July 1862.

FASCISM. A policy and system developed in Italy, mainly under the leadership of Mussolini, after the World War. In the times of Roman consuls and the later emperors, the fasces were bundles of rods borne (with an ax) as the symbol of authority by lictors, or the personal guards of the rulers. Italian fascism proclaimed the purpose of ridding the land of communism and of magnifying patriotism. Pacific and anti-military organizations have been gradually suppressed. Territorial claims have been advanced, even to the war with Ethiopia. In 1926 fascism developed into a corporate state. In 1929 Mussolini and the Vatican agreed as to the powers of the Pope, but in 1931 fascist youth mobbed the rooms of the Catholic Action Society in Rome and closed 10,000 clubs with a Catholic membership of 50,000. Thirteen separate units were organized by fascism: men's, women's, "Young Italians," university group, and so on, including a fascist militia.

FAWKES, GUY (1570-1606). Robert Catesby engineered a plot to blow up James I and both houses of Parliament on Nov. 5, 1605. Thomas Winter, Thomas Percy, Sir Everard Digby, Francis Tresham, and a few others were drawn into the conspiracy. They found that a vault under the House of Lords, where the joint session was to be held, was about to be vacant. They secured this, and placed in it some 36 kegs of gunpowder. Fawkes, a man known as willing to undertake hazards, was engaged to touch off the powder. Though he heard that the plot had been reported, he stuck to his post in the vault, but was captured when he emerged the next day. He was tortured, confessed, was hanged and quartered. Some person never yet identified wrote a letter to Parliament revealing the plan.

FEDERALISTS. Whether the Union or the separate states should have major powers has often been discussed in America since 1785. Recently the discussion has flared up anew. Alexander Hamilton was the leader of the Federalists, a group who urged that the United States should have control over all save purely local matters in the single communities or in the states. Certain Essays were printed and became known as the *Federalist* in 1787 and 1788. John Jay and James Madison probably assisted Hamilton in the composition of these papers, which did much toward securing the adoption of the new Constitution. Out of these discussions, a new political party arose in 1789. From then to 1801 it was dominant, but after 1815 ceased to be important. Jefferson led the opposition. The Federalists secured such national legislation as the postal laws, internal revenue statutes, and the provisions for taxes on liquors and for a tariff.

FEUDALISM. European system of land holding and society between the 9th and 15th century. In the medieval period men looked to those above them for protection,—the peasant to the baron and the latter to the king. At last a regular ceremony was established called "homage and fealty," when the vassal took an oath to give service and fealty to his overlord, and the latter agreed to furnish men for defense of the monarch. After a time, kings gave certain immunities to the large landholders or barons, such as freedom from interference by tax-collectors, justices of the peace, or military leaders. From this the barons developed great power. Sometimes a holder of land gave the final ownership to the church or to some other body, but held the actual occupation during his lifetime. Gradually, the rights to hold land became hereditary, prophetic of modern absolute ownership in fee simple, or right to sell, will away, or otherwise dispose of it. Kings existed only because they were upheld by powerful lords or local viceroys, called counts in France, and in England, earls. Before the Norman Conquest these were firmly entrenched. The feudal tenants owed several duties to his lord: military service, court service (something like the modern jury), allowing the landlord to settle estates and manage affairs of orphans, and to select husbands or wives for their thanes. In France the last of the feudal system was destroyed by the Revolution of 1793. The Dutch patroon system in New Netherlands was a survival of the European feudalism, and led to the anti-rent riots. described elsewhere.

FIELD OF THE CLOTH OF GOLD. Name for the meeting place of Henry VIII of England and Francis I of France to discuss topics of mutual concern. It was so named because of the magnificence of the arrangements. A temporary castle was set up for Henry and his court, with 2800 tents for the rest of his enormous retinue. Cardinal Wolsey, for the king, opened the formal ceremonies by paying a state visit to the French monarch, after which Francis and Henry met midway between their two camps. The feats at arms, pageants, and other entertainments continued from June 7 to 24, 1520. Little came out of the conferences beyond the promotion of good-will. Henry also visited Charles V, a rival of Francis I, and Henry joined Charles some years later in his contests with France.

"FIFTY-FOUR FORTY OR FIGHT." See *Boundary Disputes.*

FINLAND. Formerly an autonomous duchy of Russia, Finland declared independence on Dec. 6, 1917, and earned her freedom with the help of German troops in 1918 when the Reds were defeated in two battles and driven into Russia. In 1932 an incipient rebellion was crushed by the arrest of the leaders. In 1931 the prohibition law, enacted in 1919, was repealed by a popular referendum. Finland has signed trade and arbitration treaties with various nations. In 1927 she was given a non-permanent seat on the council of the League of Nations. Among the small countries created after the World War, Finland seems the most stable politically.

FIUME. From the Peace Conference of 1919 to 1924, the boundary line between the new Jugoslavia and Italy was the subject of strife and controversy. Fiume had belonged to Hungary, and Dalmatia and other districts to Austria before the war. Italy claimed some of the territory because the inhabitants were mostly Italian. From Oct. 29, 1918 to Jan. 1924, Italian troops occupied Fiume, with a rupture of diplomatic relations in 1923. For over two years from Sept. 1919 Gabriele D'Annunzio, Italian poet and adventurer, held control in Fiume by a military coup, which neither the League of Nations nor Italy could prevent. In the final settlements, Italy gained Fiume, some islands in the Adriatic, and other bits of territory; Jugoslavia gained Dalmatia and seaport facilities.

FLAGS, UNITED STATES. Before the Revolution, a number of flags were displayed in the American colonies. Some of the first in New England were the blue field with white union quartered by a red cross, used as early as 1737. Two flags of somewhat similar design were carried in the battle of Bunker Hill. One of several pine tree flags was displayed at Harvard University in 1770, this being red with a green pine tree sewed upon it. Another design showed a serpent coiled about the base of the tree, and the legend, "Don't tread on Me," a phrase used on several early flags. Another flag from Bedford, Mass., was flown at Lexington and Concord on April 19, 1775. On Jan. 2, 1776, when Washington took command of the army at Cambridge, Mass., a flag was displayed that had 13 stripes (probably the first use of these), with the crosses of St. George and St. Andrew in the upper, left field. On June 14, 1777 the Continental Congress chose a white union on a blue field, with 13 alternative red and white stripes. In 1790 and 1792 stripes were added for Vermont and Kentucky, but the number was later reduced to the original 13. On Aug. 16, 1777 at Bennington, Vermont, a battle flag with a union of nine stripes, and with seven-pointed stars in an arch formation, was displayed. On Sept. 13, 1775 a flag was raised at Ft. Johnson, S. C., having a blue field, with a white crescent in the upper, inner corner. Others like this were used in the South. Before 1780 South Carolina had a rattlesnake flag, New York a white field with a beaver upon it, and Rhode Island a white with a blue anchor. The first flag having the thirteen stripes, in blue and silver, however, was that of the Philadelphia Light Horse in 1775. The Betsy Ross flag, said to have been the first made as authorized by Congress, June 14, 1777, had thirteen pointed stars in a circle on a blue field. It was made for the congressional committee, consisting of Gen. Washington, Robert Morris, and Col. George Ross, by Mrs. Elizabeth Ross, wife of the last-named, in Philadelphia. Mrs. Ross was given a contract to make American flags, and this was held by her daughter until 1857. In 1912 the present ar-

rangement of six rows of eight stars each was officially adopted.

FLANDERS. Powerful principality in the middle ages, made up of the provinces of East and West Flanders (now part of Belgium), some of Zealand (now in Holland), and the Nord district of France. Northmen settled there in the 9th century. Baldwin Bras de Fer (Iron-Arm), one of the first counts, married the widow of Ethelwulf of England, and so the district fell to him in 864. Henry II granted Ghent and other lands to Baldwin IV; Lorraine was acquired by Baldwin V. Baldwin IX, who died in 1206, established his empire at Constantinople. In 1384 Flanders was joined to Burgundy through the marriage of Margaret to Philip the Bold. This district formed an important part of the union of the states of the Netherlands. Flanders passed to the Habsburgs of Spain in 1477, but gradually shrank in size. In 1714 it fell to Austria; in 1795, along with Belgium, was incorporated with France. The Congress of Vienna, 1815, formed Belgium and Holland into the kingdom of the Netherlands, from which Belgium became independent in 1830, with neutrality guaranteed by the Powers.

FLODDEN FIELD. In Northumberland, the Earl of Surrey crushed the flower of Scotland on Sept. 9, 1513. The invaders were led by James IV, who was slain, together with many of the chief nobles, the archbishop of Andrews, and 8000 of the bravest soldiers. James allowed his army to be flanked and to be cut down by the English archers and cannon. The Scots were forced to fight at close quarters, until the personal command of the king was surrounded, and his bodyguard slain. Scott's *Marmion* gives a vivid, even though somewhat fanciful, account of this battle.

FOCH, FERDINAND (1851-1930). One of the marshals of France, became an international figure during the World War as generalissimo of all the allied armies against Germany, to which position he was appointed by the suggestion of both America and England. From 1870 to the time of the war, Foch fought against Prussia, became professor of strategy and tactics and later, 1910, commander of the war college of France. After he successfully withstood the German advance toward Calais, and won a decisive victory at Ypres, and laid some of the plans that aided Joffre at the Marne, Foch became known as a master tactician. He was placed in supreme command of all the allies on March 26, 1918, blocked the fifth German drive on July 18, and gradually forced the German Armies back toward the borders of France. After the World War Marshal Foch was placed in charge of the military preparations looking toward the enforcement of the guarantees made by Germany. On his visit to the United States in 1921 Marshal Foch was acclaimed in the principal cities.

FOOTE, ANDREW HULL (1806-1863). Famous American naval officer, who was with the squadron which made a world tour; cruised in the brig *Perry* along the African coast to help suppress the slave trade; and built the forts at Canton, China, when under command of Commodore Armstrong, and stormed and captured the shore defenses when his party was fired upon by natives. In the Civil War he took Fort Henry on Feb. 6, 1862, and was shot in trying to take Fort Donelson for Gen. Grant. He was forced to resign his command because of his wound, being advanced to the rank of rear admiral. While on his way to relieve Admiral Dupont at Charleston, S. C., he died on June 26, 1863.

FORT DEARBORN. On the present site of Chicago, a fort was built in 1804-05. Here on Aug. 15, 1812 the garrison of 67 men was evacuated by orders of Gen. William Hull. With some 30 of the settlers about the post, the party was being led by 500 Indians supposed to be friendly. The objective was Detroit. When but a short distance from the fort, they were ambushed by Indians, including some of their own escort, and 32 were killed, the rest being captured. On the following day the fort was destroyed by the redmen. It was rebuilt in 1816, evacuated in 1823, occupied again in 1828, and finally demolished in 1856. A replica was erected for the Century of Progress Exposition in 1933.

FORT DUQUESNE. About 1754 the English started to build a fort at the junction of the Allegheny and Monongahela Rivers in western Pennsylvania. When the French captured this, they named it Fort Duquesne. The first battle of the French and Indian War occurred in connection with the unwise and fatal attempt of Gen. Edward Braddock to take this point. Two years later, 1758, Gen. Forbes led 7000 men against this stronghold, but they were beaten off by the small garrison. The defenders blew up the fort, and escaped in boats down the Ohio River. Then the English took possession, and named the place Pittsburgh in honor of the English Prime Minister. Fort Pitt was soon established at this point.

FORT ERIE. Major Buck of the British force surrendered 170 men garrisoned there on July 3, 1813. On Aug. 14, 1814 the British bombarded the fort, but were driven away after they lost 221 killed, 174 wounded, and 186 prisoners. One month later the Americans in the fort made a sortie and destroyed the British batteries. After other losses, the British withdrew, and the fort was destroyed. It was situated on the Canadian side of the Niagara River opposite Buffalo.

FORT HENRY, FORT DONELSON. Fort Henry along the Mississippi River in Tennessee was captured by Com. A. H. Foote on Feb. 2, 1862. The Confederate garrison gathered at Fort Donelson, some 12 miles away. Gen. Grant, with 27,000 men, supported by Foote's flotilla, renewed the attack on Feb. 13; but, within two hours, all the boats of the North were disabled, with a loss of 54 men. Next, the Confederates tried to retreat toward Nashville, but Grant prevented this move, and about 2000 were killed and wounded on each side. While 2600 of the Confederates later got away by night, Gen. Buckner was left to hold the fort. When he invited Grant to a parley, the latter sent back his famous reply, "No terms except unconditional surrender can be accepted." Buckner then surrendered the fort, nearly 15,000 men, 40 guns, and great stores of ammunition.

FORT JAY. Important military post defending the harbor of New York. It is located on an island, was first occupied by the Dutch, then by the English, and in the Revolution by the Americans and British in turn. New York gave it to the national government in 1800 as a permanent fortification. In 1901 it was greatly improved, when the size was increased to 104 acres, and docks, warehouses, and quarters for men were greatly enlarged.

FORT SUMTER. This fort in the harbor of Charleston, S. C., was commenced in 1830, but remained incomplete in 1861. Major Robert Anderson assumed charge of this and Fort Moultrie nearby in 1860. When South Carolina seceded from the Union, Anderson moved his forces to Sumter because it was more secure. When a boat carrying provisions to the fort was fired upon, the North was greatly stirred, and Pres. Lincoln notified the governor of South Carolina that another attempt would be made to relieve the men at Sumter. When Gen. Beauregard demanded the surrender of the fort, Anderson delayed for orders from Washington. Firing on the fort began on the morning of April 12, and continued till afternoon of the next day. Then Anderson evacuated the garrison of 128 men. No persons were killed. During the war attempts to dislodge the Confederates were repulsed, until Sumter was evacuated on Feb. 17, 1865. The former commander, now Gen. Anderson, then hoisted over Sumter the same flag that he had lowered on April 13, 1861.

FRANCO-GERMAN WAR. Prince Leopold, who had been a candidate for the vacant throne of Spain, withdrew when France objected. Diplomatic correspondence published in the papers led to declaration of war by France on Prussia, July 19, 1870. Napoleon III of France supposed his army was ready, and that the southern German states would not support Prussia. In both he was mistaken. The French could raise only half as many as the 500,000 Germany had on the borders very soon. The French were pushed back, little by little, to the gates of Paris. Marshal McMahon of France was defeated near Woerth, and later at Metz. At the decisive battle of Sedan, McMahon was wounded, his successor lacked insight, and the day was lost. Napoleon III also surrendered his own force of 85,000. On Sept. 4 a republic was proclaimed. Leon Gambetta, an opponent of Napoleon, was made minister of defense, and for five months acted virtually as dictator of France. He tried to organize opposition to the Germans, and for a time seemed likely to succeed, but Belfort was taken, and Paris was finally bombed and starved into submission. France ceded Alsace and also much of Lorraine to Germany, except for the district about Belfort.

After an indemnity of a billion dollars was collected, the German troops were finally withdrawn in Sept. 1873.

FREDERICKSBURG, BATTLE OF. This was one of the most disastrous engagements for the Union in the Civil War. Near Fredericksburg, Va., on Dec. 13, 1862, Gen. A. E. Burnside, with about 120,000, attacked the army of Gen. R. E. Lee, numbering about 80,000. Lee occupied the heights along the Rappahannock, which was an impossible place to attack. Realizing this evidently, Burnside delayed the battle until at last he was forced to cross the river. Company after company of the northern men fell under the withering fire of the Confederates. By nightfall Burnside had lost 12,500 men, Lee not more than a third that number.

FREEDOM OF THE SEAS. From early times the sea has been always in dispute among those who seek advantages abroad. Rome, Venice, Genoa, Spain, and England at times have claimed to be masters of the sea. The United States fought three wars on this point,—the brief clash with France in 1798; that with England in 1812; and with Germany in 1917, all caused by interference with the ships of the country. Until the time of the great jurist, Grotius, and his book *Mare liberius*, 1609, the idea that the nation who could command the seas had a right to dictate was rather prevalent. Grotius ably disputes this notion. In later times, several world conferences have discussed matters of the freedom of the seas. In 1856 the Paris Conference declared four principles: 1, privateering and piracy were outlawed; 2, a neutral flag covers enemy's goods,—but not contraband of war; 3, neutral goods are not subject to capture; 4, blockades must be effective, or they need not be recognized by neutrals. This last rule prevents theoretical or mere "paper blockades." International law now recognizes the control of a nation as far as three miles from shore, and in some instances as far out as ten miles. Great Britain recognized the right of the United States to patrol the high seas as far from shore as ten miles in search of rum runners. Several nations declared blockades during the World War,—Great Britain around her shores; Germany in the North Sea; Turkey in the territory about the Dardanelles. Germany, by the necessity of war, asserted a right to use submarines in the open waters, one of the reasons why the United States entered the World War after some of her ships were sunk in the open ocean. For several decades English vessels expected a salute from the ships of other nations, a custom that brought about some conflicts at sea. Now one nation dips its flag when the ship of another is passing.

FRENCH AND INDIAN WAR. After 150 years of strife over colonies in the new world, France and Great Britain came to the final clinch between 1754 and 1760. During the same period, in Europe they were fighting the battles of the Seven Years' War. The policy of France in America was to keep the English east of Ohio by erecting a string of forts along the St. Lawrence, the Lakes, and the Ohio and Mississippi Rivers. The first clash occurred at the origin of the Ohio where Pittsburgh now stands. It finally spread out to include the Great Lakes, the region about Detroit, the Niagara River, the land route to Canada through northern New York, and other strategic points by the water routes. Great Britain gained few advantages during the first two years. When William Pitt became Prime Minister, however, things began to improve. He sent Amherst and Wolfe to take charge in America. The former captured Louisburg in July 1758; while Gen. Forbes, in command in the Ohio region, took Pittsburgh four months later, and so closed the Ohio to the French. Crown Point and Ticonderoga, in New York, fell in May 1759, and Fort Niagara to Lord Amherst in July, and so the French were blocked off from the lakes to the west and from the route to New York by way of Lake Champlain. Next, the campaign was carried into lower Canada. The English stormed Quebec in Sept. 1759, and Wolfe, their gallant commander, met death, and Montcalm, the French general, met defeat and death. When Montreal capitulated in 1560, the war in the colonies virtually ended, but peace was not declared until the war in Europe was concluded. Britain was left free to settle the territory to the Mississippi and down the Ohio River.

FRENCH, JOHN DENTON PINKSTONE (1852-1925). British field marshal in the World War. He commanded a regiment in the Sudan, 1889-93; distinguished himself as a commander of cavalry in the war in South Africa, notably at Kimberley and Pretoria. In 1907 he became a general, in 1913 a field marshal. From August 1914 to December 1915, he led in France the British forces, which bore the brunt of the efforts of the Germans to reach the north coast along the English Channel. He was made Viscount French and commander-in-chief of the United Kingdom. From May 1918 to 1921, he was lord lieutenant of Ireland, after which he was created an earl.

FRENCH REVOLUTION. Between 1789 and 1799, the old French order ended in a series of clashes between parties culminating in a reign of terror that amazed the outside world, and the expulsion of the Bourbon dynasty. The causes, some of long standing, were mainly the lack of confidence in the reigning house, resistance of the nobles to all extensions of democracy, the growing burdens of taxations, and the defeat of the French armies in America and Europe. The discontent came to a climax on June 17, 1789, when the National Assembly was organized. This was composed of nobles, clergy, and one-half from the "Third Estate," or the common people, whose leader was Gabriel Mirabeau, a noble who admired the English constitution. Mirabeau sought to preserve the monarchy, but with concessions to the people. Danton succeeded in 1791, and Robespierre from June 1793 until he was guillotined in the following year.

When the king gathered troops in Paris and dismissed Necker, minister of finance, in whom the people had confidence, on July 14, 1789 a mob stormed the Bastille, for centuries a prison-fortress and symbol of tyranny. Meantime, the business men of Paris had called together a National Guard. Feudal and estate privileges were abolished by the Constituent Assembly, chief legislative body, but this concession came too late. Outbreaks continued throughout France. On Oct. 5 a mob, composed mainly of hungry women, marched to the palace at Versailles. Lafayette and the National Guard rescued the royal family, who took refuge in the Tuileries for protection. The nobility had lost control. New Drafts of a constitution were drawn in 1790, 1791, 1793, 1795, and finally in 1799. The Jacobins, or Friends of the Constitution, exerted a powerful influence as a party; so did the Cordeliers, a club led by Danton himself. Church property was transferred to the state; laws as to royal and other inheritances were changed. On June 20, 1791 the royal party fled to the eastward; the anti-royalists at once were certain that the queen was conspiring with her brother, Leopold of Habsburg. War with Austria and Prussia followed. Violence between classes and parties increased.

The Girondists and the Mountain party, each named from districts in France, grew more powerful,—the first a radical, the Mountain a more conservative group. For a time conservatism held its own. On Aug. 10, 1792 the Tuileries was stormed, and in September political prisoners there were massacred. On Sept. 21 the monarchy was abolished, and on Jan. 21, 1793 the king was executed. On May 31 the Reign of Terror commenced. Danton had been a steadying influence; but under Robespierre, all restraint was brushed aside. Paris became a den of treachery; no man was safe; people were tried in the swiftest manner and executed on slightest pretexts. All Girondists were proscribed, and many went to their doom. The Girondists wanted a federal republic like the United States; the Mountain party wanted a more centralized government. Moderates like Lafayette went into hiding. After 1794 sanity began to return to France, for the fury had worked itself out. The fever of revolution began to subside, when both extreme parties were curbed, but another outbreak in 1795 caused the Mountain party to lose some of its most influential members. At last, Oct. 26, 1795 the Directory succeeded the Constituent Assembly, as the last legislative body had been called, and Napoleon Bonaparte began to shape the destinies of France.

FRIES REBELLION. Congress in July 1798 levied a direct tax upon the states, amounting to $2,000,000, of which sum $237,000 was the share of Pennsylvania. Several counties objected to these assessments, the chief ones being Montgomery, Leigh, Bucks, and Berks. This was sometimes called the Window Tax War, for a tax was levied on houses in proportion to the number of windows they con-

tained. John Fries gathered a party of German farmers who compelled the federal officers at Bethlehem to release 30 prisoners that had been arrested for refusing to pay this tax. President Adams called out the militia, which took some of the rioters to Philadelphia for trial. Fries was twice found guilty of treason, but he was pardoned by the president, April, 1800, and all others were given general amnesty.

FUGITIVE SLAVE LAW. During the colonial government, slaves that escaped their masters in one region and went into another colony were returned to their owners. When the Constitution was written, in article four, section two, provision was made for definite procedure in such cases. In 1793, and again in 1850, Congress made it possible for an owner of an escaped slave to have him arrested, taken before a local magistrate, and thus restored to his master. In 1857 the Supreme Court of the United States decided that Dred Scott, a slave, who had claimed freedom on the ground of residence for two years or more in free territory, was still legally a slave in Missouri, according to laws of that state. Both the Fugitive Slave Law and this decision greatly inflamed opponents of slavery. Escape of slaves to free soil increased. All these conditions helped precipitate the Civil War. See *Underground Railroad.*

FUNSTON, FRED (1865-1917). American soldier; born at New Carlisle, Ohio. After a connection as botanist with the Department of Agriculture (1891), he offered his services to the Cuban Junta (1894), and was there promoted lieutenant colonel for bravery; captured by the Spanish, condemned to death but set free; organized the Twentieth Kansas Volunteers (similar to "Rough Riders") and was made colonel; served in the Philippines (1898); made brigadier general (1899); relieved because of illness and returned home same year; returned to the Philippines (1901); captured Aguinaldo. During the San Francisco earthquake he took military charge of the city and did heroic work.

GADSDEN PURCHASE. After the Mexican war, boundary disputes arose regarding a strip of land north of the Gila River, and now part of New Mexico and Arizona. The Mexicans also presented claims for damages because of Indian raids into their territory in 1848 and 1853. In the latter year, James Gadsden, United States ambassador to Mexico negotiated a treaty with Gen. Santa Anna, which provided for the purchase by the United States of the strip of territory for $10,000,000. This was much needed for building the Southern Pacific Railway. All other claims by each government were cancelled. So displeasing was this bargain to the Mexicans that they banished Santa Anna. See sketch on page 345.

GALLIPOLI, CAMPAIGN AT. Wishing to get supplies to Russia, and to impress the Balkan states, the French and British joined in a campaign at Gallipoli peninsula in 1915. It was a complete failure. The French troops came from north Africa and elsewhere; the British mainly from Australia and New Zealand, and were called Anzacs. The British expedition got a bad start in that the ships had to put back to Egypt to reload before being allowed to land on the peninsula. The Turks were commanded by a German general, and they succeeded in keeping most of the force from making any initial progress. Battles between the British and Turkish troops occurred on May 1 and 6; between the French and Turks, on June 21 and 28. The Anzacs attacked near Suvla Bay on Aug. 6, and almost succeeded in gaining an important advantage, which was lost by delays and failure to join with the French at other points. In December and January the positions already won were abandoned, and the troops went back to their stations or were distributed among various fronts. The British lost about 100,000 killed, and fully that many more sent home because of sickness. The Turkish losses were nearly equal.

GARCIA (*gar-thee'ah*), **CALIXTO** (1836-1898). Cuban patriot, who left a law practice, became a brigadier general in 1868 in the war against Spain, and later succeeded Gómez as commander-in-chief. With 20 of his men he was surrounded by 500 Spaniards; he tried to kill himself, but was taken by the Spaniards and imprisoned in Spain. Again, in the war of liberation of 1880, he was captured and deported to Spain, where they kept him under guard for 15 years. In 1898 he escaped to Paris, then to New York, and finally took a ship to Cuba laden with supplies and munitions. After several victories, he led 4000 Cubans in the important battle of El Caney. Later the same year, he died in Washington, while with a commission to interview President McKinley.

GARIBALDI, GIUSEPPE (1807-1882). Italian patriot and liberator, who joined in the uprising in Genoa in 1834 as part of the Young Italy movement led by Mazzini. He was forced to flee to Brazil, where he married and fought against the emperor, and in 1842 against Rosas of Buenos Aires as an aid to Uruguay in the struggle for freedom. In 1849 he again fought in Italy, trying to help Mazzini, and gained great success in the war against Austria and France. Again forced to leave Italy, he worked for 18 months as a candlemaker on Staten Island, New York. In 1854 he again led troops in Italy, assisted Victor Emmanuel in his campaigns, but was forbidden to take Rome from the papal authority. He drove the Bourbons from Italy, resigned all honors in favor of the king, and went to Caprera. In June, 1862, Victor Emmanuel prevented him once more from taking Rome, but in 1866 he was in the Tyrol and the next year again escaped to Caprera, where his Red Shirts gathered again, but he was defeated by French and other forces. In 1870 he joined the French against Germany in the Vosges, winning some military success. His son fought in the World War, first with the French with his force of 14,000 men, and later with the Italians. On denouncing the Fascists, he was exiled.

GATES, HORATIO (1728-1806). This American general, born in England, came to America in 1755, served under Braddock in Pennsylvania, and took command of the army in Canada in succession to General Schuyler. He forced Burgoyne to surrender Saratoga in 1777, but Cornwallis defeated him badly in South Carolina. Gates was acquitted of misconduct of the campaign by an official commission. He lived for years in Virginia, until in 1790 he sold his estate, freed his slaves, and moved to New York City.

GENGHIS KHAN. See *Mongols.*

GENOA. Powerful city, and once a republic, in central Italy. Evidences of early Greek and Roman culture in prehistoric times have been unearthed on the site. The Saracens plundered Genoa in 936, but Pisa helped expell them, and drive them also from Corsica and Sardinia. Corsica then went to Genoa, and Sardinia to Pisa. For two centuries these cities fought each other, until Genoa won the great naval battle of 1284. One hundred years later the city was humbled by Venice. From 1499 to 1528, the French controlled Genoa, until the Republic was restored by Andrea Doria. During the time of Columbus, a native, Genoa was known for her able navigators. Genoa was forced to take the side of Napoleon and, in consequence, the city was captured by Austria and England in 1800. In 1815, the Congress of Vienna, against the wishes of the Genoese, gave the district into the power of Sardinia. Genoa was one of the states that united in 1870 to form modern Italy.

GERMANY. The Cimbri and Teutones defeated the Romans in 113 B. C., the earliest historical reference we have of the early inhabitants, who were probably allied to the Celts. Tribes like the Suevi, Catti, Cherusci, Batavi, and Alemanni, battled with the Romans at times until the third century of our era. Up to 843 these and their successors held their own, until the empire of Charles the Great (Charlemagne) was divided among three grandsons. The dynasty (known as the Carolingians) survived until 911, only Charles the Fat (876-887) succeeding in uniting the various duchies, the chief of which were Swabia, Bavaria, Franconia, Saxony, and Lorraine. Conrad of Franconia, besides checking the nobles in his own realm, kept within bounds the Danes, Slavs, and Huns that sought to gain a foothold there; Henry the Saxon (919-36) also won Lorraine. Otho I (936-73) conquered northern Italy, and was granted the title of Holy Roman Emperor by the Pope. Disunion followed in Germany, but Conrad the Franconian (1024-39) and his son, Henry III, extended the borders of the land to include parts of Burgundy and Hungary. Henry IV disrupted Germany through his quarrels with the Pope, and the Franconian dynasty ended with Henry V (1106-25). Frederick I (1152-90), known as Barbarossa (bar-

cause of his red beard) again brought the Germans into prominence throughout Europe.

After an interval of anarchy among the various petty princes, Rudolph next began a new line, the Habsburg monarchs. Four years later he defeated Ottokar of Bavaria, and so acquired the districts known as Austria, Carinthia, Styria, and Carniola. After five unimportant reigns, Charles IV (1347-78) was the first of the house of Luxemburg. He gave the people a constitution, fixed the manner of electing emperors to succeed him, and established order in the entire realm. His son, Wenceslas, however, proved a weak king, and the line ended with Sigismund (1410-37), another son of Charles IV. The Habsburgs again ascended the throne with Albert II of Austria (1438-39). For the next 150 years the Lutheran Reformation gave the reigning family much concern, for the Diet favored reform, and the Protestant princes increased in power. With the Counter Reformation, after the middle of the century, the Roman Catholic party prepared for the Thirty Years' War, which broke out in 1618. When this came to an end, Germany was left exhausted, poor, and in places almost depopulated. Prince Eugène opposed Louis XIV of France, who had come to the aid of the Habsburgs. Then followed the spectacular rise of Prussia, with Frederick William, Elector of Brandenburg (1640-88), as the active leader.

In 1701 Frederick William became king of Prussia, and Frederick the Great (1740-86) carried on the idea of national unity. Frederick opposed the Habsburgs, and the War of the Austrian Succession followed (1740-48). During the age of Napoleon Germany was much disturbed by political changes and efforts to defend the various provinces. The Congress of Vienna, 1815, set up a German Confederation. In 1848 a national parliament met at Frankfort, and the King of Prussia in 1849 became German Emperor. Disunion followed, and Austria and Prussia sought to revive the old diet. William I became king of Prussia in 1861, and in 1867, under the power of Otto Bismarck, the confederation was revived, with Bavaria, Baden, and Wurttemburg as new members. Bismarck dominated until William II, following the brief reign of Frederick III, came to rule in 1888. The imperialistic attitude of Germany led to a declaration of war by France in 1870, but the latter was soon beaten. In 1907 another war was imminent, but Great Britain, allying with France in the Morocco dispute, prevented the conflict, or rather delayed it to 1914. During the World War various Socialistic demonstrations, strikes, and other opposition to the Kaiser's policies developed, until in Nov. 1918 he abdicated and fled to Holland. The new German Reich came into being after the World War as a Republic, and so continued until Hitler's rise to dictatorship in 1934. See articles on *Thirty Years War, Austrian Succession, World War,* and biographies of the kings and others mentioned above.

GETTYSBURG, BATTLE OF. Having succeeded at Chancellorsville, in May of 1863, Gen. R. E. Lee of the southern armies decided to carry the battle into the North and crush all opposition. On July 1 the battle of Gettysburg, in Pennsylvania, began prematurely, when the northern commanders and men had not yet taken their final positions. Much of the action on the first day occurred on Seminary Ridge, north of town, in McPherson's Grove, and along the highways. By night the federal troops had been driven from most of their positions. Number engaged on July 1, under Lee, 17,000; under northern generals, 12,000. Gen. G. G. Mead arrived during the night, and by morning the union men were well placed in strategic positions, notably under Gens. Hancock and Howard. Geary, Sickles, and Slocum were the chief union brigade generals; Longstreet, Johnson, Hill, Ewell, and Heth, the Confederates under Lee. The northern line was in form of a fishing hook. Hill's attack on the union center failed; the Louisiana Tigers, under Johnson, were repulsed in hand-to-hand combat, with terrible slaughter; and the union lines, driven over the two chief hills, reformed and came back to original positions. By nightfall, the northern army was in full possession of the best points, and the Confederates were somewhat disorganized. On the third day, after a night council, the Confederates again aimed to crush the union center by using cavalry on both wings. Johnson's southern corps was routed after six hours of desperate fighting. From noon to 3 o'clock a terrific artillery duel prepared for the advance on the union strongholds. In a moment of calm, the gallant charge of Pickett's brigade of 15,000 men, supported by Heth's Confederate divisions, ended in almost complete disaster, when the union fire mowed down the ranks like grass before the scythe. Gen. Lee during the night commenced to withdraw his troops to the southward, leaving the union forces in command of the field, but with tremendous losses. Union casualties were 3072 killed, 14,497 wounded, 5434 captured or missing; Confederate, 2592 killed, 12,709 wounded, and 5150 captured or missing.

GHENT. Capital of the province of East Flanders in Belgium, noted for the cathedral of St. Bavon, begun in 941 and completed in 1554; a town-hall built in 1518-33; and a university founded in 1816. The history of Ghent began before 700. In 866 Baldwin, Count of Flanders, built a fortress here against the Northmen who swarmed to the shores about the North Sea. By 1400 the city could raise 20,000 warriors, contended with the dukes of Burgundy, but in 1540 was reduced to subjection by Charles V, a native of Ghent. For 20 years from 1794, Ghent was the capital of the district of the Scheldt, controlled by France. During 1914, while the Germans occupied the city, Ghent suffered much from allied attempts to regain it. Shortly before the end of the World War, the command of King Albert of Belgium, including the 37th and 91st American Divisions, reoccupied the city.

GIBRALTAR. Town and fortress on marble rock, 1438 feet high, and commanding the western entrance to the Mediterranean Sea. It is 23 miles across the channel from the African shore, naturally a part of the Spanish province of Andalusia, but a British possession since 1704. The Greeks called this point the Pillars of Hercules, and early man supposed the world terminated here. In 711 the Arabs built a fortress here, part of which still remains. Gibraltar passed to Castile in 1309, to the Moors again in 1333, and to Spain in 1462. Charles V fortified the rock about 1540. After helping the English capture Gibraltar in 1704, the Dutch withdrew all claim to permanent possession. From 1779 to 1782 the Spaniards blockaded this fortress, but lost 2000 men to 16 killed and 68 wounded of the British garrison. The residents were given autonomy in 1830. During the World War, British, French, and American ships used the waters about Gibraltar as a base.

GIRONDISTS. One of the political parties of the French Revolution, named because the early leaders came from the department of the Gironde. Louis XIV formed a Girondist ministry in 1792, but it soon dissolved. The Girondists hoped to save the life of the king, but their leader, Roland, became discredited, and the extremists under Robespierre came into power. Not one Girondist was a member of the French Committee of Safety when it was organized in 1793. Marat at last obtained the ear of the mob, and 40 Girondist deputies went to the guillotine during the Reign of Terror. See *French Revolution.*

GLADIATORS. Slaves, malefactors, prisoners of war, or other despised persons were placed in the gladiatorial arenas at Rome. The custom, taken by Rome from the Etruscans, prevailed from 250 B. C. to 500 A. D. Rulers, candidates for office, and sometimes private individuals sponsored the spectacles. Julius Caesar put on a show of 320 pairs; Titus and Trajan entertained for many days when men fought with each other and with beasts. Some of the early Christians died in the arena. The Roman crowds seem to have been callous to human suffering. If a gladiator fell, or lost his weapons, he turned to the emperor or the people for a sign. Thumbs pointed down meant death; concealed meant life. Either was awarded at the whim of the leaders of the crowd. Some later emperors sought to curtail this sport. Constantine in the eastern empire forbad such combats; Theodoric finally suppressed them altogether in 500.

GLASGOW. Next to London, the largest city in the United Kingdom and the chief industrial center in Scotland. Coal, iron, good transportation, and healthful surroundings make Glasgow the pride of commercial Scotland. Except for the erection of a little church there about 560, nothing is known of the early history until King David I, 1116, reestablished the church there. The bishop became an important person not only in the growth of Glasgow, but in all the realm. Wallace defeated the English at Glasgow in 1300, and was also captured there. The University of Glasgow dates from 1451; the

commercial growth from 1707, the time of the Union of Scotland and England. Glasgow became the center of the tobacco, sugar, and cotton trade of Scotland and north England.

GODWIN (d. 1053). A powerful earl of Wessex, ennobled by King Canute of Britain in 1020. He supported Hardicanute against Harold Harefoot for the crown in 1035. The latter was chosen, but Hardicanute reigned after him, from 1040 to 1042, and then Godwin secured the election of Edward the Confessor, who married his daughter in 1045. Godwin also secured titles for two sons and a nephew. He later fell from favor for opposing the Norman friends of Edward, particularly his choice for the see of Canterbury. When Edward asked him to punish some men of Dover, who had created a disturbance in the retinue of the French prince, Godwin refused, and he and all his family were outlawed. He returned to power for a year in 1052 when the English lords objected to the visit of William of Normandy at the English court.

GORDIAN KNOT. Once a peasant named Gordius, so the legends tell us, was chosen king of Phrygia, a land that trusted much in oracles. The chief oracle had declared that the first who rode up in a wagon should be declared king. This happened to be Gordius. Again, the oracle said that, whoever could untie a knot which Gordius used to fasten the yoke to the pole of the wagon, would become ruler of all Asia. Nobody succeeded. Alexander the Great, hearing the legend when he came to Gordium boldly severed the knot with his sword. Thus the modern expression "cutting the Gordian knot" means to accomplish something quickly and directly instead of with much time and effort.

GORDON, CHARLES GEORGE (1833-1885). Known as Chinese Gordon and Gordon Pasha. He served in the Crimea in the trenches, and in 1863 was asked by the emperor of China to subdue the Taiping rebels. The emperor gave him all honors that China can bestow on a foreigner, but Gordon refused the large sum of money offered him. From 1865 to 1872 he was an engineer for the Bulgarian government. He went in 1874 to assist the khedive of Egypt as Governor of the Equatorial Provinces near the upper Nile. The khedive made him a pasha and governor of the Sudan. Great Britain called upon Gordon in 1884 to quell a disturbance caused by Moslems in the Sudan. For ten months his small party was besieged at Khartum, while the British delayed to send relief. Finally, Gen. Wolseley arrived with an army within two days from Khartum. Ferig Pasha betrayed Gordon, who was killed by a mob, and the city fell on Jan. 26, 1885. Chinese Gordon is affectionately remembered in China and all the Far East, and wherever English is spoken.

GOTHS. Pliny and Tacitus, the ancient historians, speak of the Goths before the Christian era. By 300 A. D. they occupied much of the land between the Vistula River and the Baltic Sea. In the next century, they invaded Dacia, a Roman province, defeated and slew the emperor Decius, in 251, continued their plundering as far as the shores of Asia and north Africa, and in 272 were granted Dacia by the emperor Aurelian. *In the East, they were known as Ostrogoths (East Goths); in the west, as Visigoths.* Constantine held them in check in the east, but Valens, the Roman emperor, was slain in the battle of Adrianople, 378, after which the Goths overran much of southeastern Europe. Some of the Ostrogoths were conquered by the Huns. Attila led them against the Visigoths in what is now France, where they were slaughtered by thousands in the battle of Châlons in 451. Theodoric (476-526), their greatest king, obtained important concessions in the Eastern Roman Empire, of which he was consul in 484. He descended into Italy and defeated Odoacer, last king of Italy, in 493 and ruled there until 526. In 553 the Ostrogoths disappear from history. The Visigoths, under their famous king, Alaric, in 395, invaded Greece, in 402 appeared in Italy, and in 410 pillaged Rome. Then Athulf, Attila's successor, withdrew into Gaul and in 412 into Spain. Later rulers helped Rome against the Vandals and Alani. Euric (466-483) drew up a code of laws and introduced the arts of civilization. His successors could not hold out against the Franks, who confined the rule of the Visigoths to Spain, where their power was broken by the Saracens in 711.

GRANADA. Modern Granada is part of the old kingdom of the Moors, which became independent of the caliphate in 1236. Ten years later the king of Castile brought the district to account, and the Spanish conquered it in 1492, at which time Moorish authority ended in Spain. Granada has a cathedral dating from 1529, a university founded in 1531, and the tombs of Ferdinand and Isabella, the monarchs of Castile. The Alhambra, Moorish palace of great artistic beauty at Granada, is described in his book by Washington Irving, who also wrote the *Conquest of Granada* in 1829.

GRAND OLD PARTY. Familiar name for Republican Party. See under *Political Parties.*

GRASSE, FRANCOIS JOSEPH PAUL, COUNT DE (1722-1788). French noble who was sent as admiral of the new French Fleét in American waters, after he had won success in 1781 at Tobago. With 29 ships he reached the mouth of the James River off Virginia on August 30 to assist Rochambeau, blockaded the York and James, repulsed an attack of the British fleet under Graves, and prevented the relief of Cornwallis at Yorktown. Later he was defeated and captured off Santo Domingo by Admiral Rodney of the British fleet. The French court-martialed him for incompetence and carelessness, but he was acquitted in 1784.

GREAT BRITAIN. See articles on *England, Scotland, Ireland, Wales, Irish Free State,* and *British Empire.*

GREECE. Before 1000 B. C. ancient Greece was settled by the Dorians, a branch of the Aryan race, which also colonized Asia Minor. Other colonies, somewhat later, were founded in Macedonia, Thrace, Italy, Sicily, and the islands of the Mediterranean. These colonies insisted on being independent, but they fell easy prey to conquerors like Croessus and Cyrus the Great in the 6th century B. C. Attica and Sparta became most important centers of confederations in Greece, and Athens was able to beat off the Persians in 490 B. C. The Persians returned within five years to ravage Attica, but Themistocles had prepared a large fleet, which at last conquered the invaders in 480 at Salamis. Sparta then joined with Athens to complete the downfall of the Persians on land at Platea in 479. Next followed the golden age of Pericles, which was interrupted ten years later by the outbreak of the Peloponnesian War. Again, Athens was humbled because of lack of leadership, aid given her enemies once more by the Persians, and a disastrous campaign in Sicily. After being supreme for 25 years, Sparta was checked in 404 B. C. by a coalition of allies. Then in 370 Thebes gained the ascendency, but again a combination of Athens and Sparta routed the two able leaders, Pelopidas and Epaminondas in 362 B. C. The Macedonian empire under Philip by 336 B. C. had become master of Greece with the defeat of Athens; and his son, Alexander, in another 15 years had conquered much of Asia at the time of his death in 323 B. C. In 146 B. C. the Romans completed the eclipse of the glories of ancient Greece.

Little was heard of this country in the Middle Ages. At last the Turks ruled in Athens from 1453 to 1828. Then Greece became free with the help of England and other powers. The Treaty of Berlin, 1878, gave Greece more territory, which once more the Turks took away after the disastrous war in 1896, together with an indemnity of $15,000,000. The Balkan Wars 1912-13 gave to Greece Thessaly, parts of the Epirus, Macedonia, and Thrace. After 1910 M. Venizelos became the chief statesman of Greece. He at last forced King Constantine, brother-in-law of the German Kaiser, to abdicate in 1917, after which Greece joined the Allies. Conditions after the World War became much unsettled. Greece could not decide whether to remain a monarchy or become a republic. King Constantine returned in 1920, but again abdicated in 1922, when a Republic was declared. Greece lost a brief war with Turkey in 1922. Greece lost eastern Thrace, Smyrna, and other districts. Under the guidance of the League of Nations, 600,000 Greeks were exchanged with a similar number of Turkish nationals in Greece between 1918 and 1925. Constantine abdicated in 1922 for the second time, and George II, his son, succeeded for one year, when he too went into exile. In July 1935 a plebiscite netted the monarchists only seven seats in the national assembly, to over 285 for Tsaldaris and Kondylis, leaders of the popular party. Yet in November a second vote was strongly in favor of the return of George II, who at once desired to pardon all who opposed him. Kondylis objected, was removed as premier, and died early in 1936. Venizelos, who led an abortive re-

volt in 1935, also died in 1936, but called on his followers to support King George when he was restored. Greece, however, continued to show signs of unrest.

GREENBACKS. After the Civil War, the first U. S. bank-notes were called greenbacks, from the color of some of these. On March 10, 1862 the first of this series was issued, though demand notes had been given out in August 1861. Demand increased for the issuance of more paper money, and a political party advocating this arose in 1874. Some had previously advocated an issue of irredeemable paper currency. Candidates were nominated in 1876, 1880, 1884, but no one ever received more than a fraction of the popular vote, and no electoral vote at all. Many of the old Greenback voters later joined the Populist party, and some adopted the idea of "free silver" as advocated by William J. Bryan.

GREENE, NATHANIEL (1742-1786). American general, who enlisted as a private in 1774, after serving in the Rhode Island Legislature. He rose rapidly to the rank of major general in 1776, and won fame in the battles of Trenton, Princeton, Brandywine, and Monmouth. Greene was president of the board which condemned Major André, the British spy, and he succeeded Benedict Arnold in command at West Point. Though defeated at Guilford in North Carolina, he won back South Carolina and Georgia from the British, and virtually ended the war in the south by his victory at Eutaw Springs. Congress gave him a special medal; the Carolinas and Georgia granted him money and land. He settled on his estate near Savannah in 1785, but died of sunstroke the next summer.

GREENLAND. Eric the Red, a Norwegian, went in 982 from Iceland to find a land reported to the west. He remained three years, and called the land Greenland on his return to induce immigration. The following year, 986, he took a party there for settlement, which finally increased to about 3000 people. Leif Ericsson introduced Christianity in 1000, and a bishop went to Greenland in 1126, but after 1377 the bishops did not live there. Until 1661 Greenland was a republic, and then swore allegiance to Norway. When Denmark separated from Norway in 1814, control over Greenland, Iceland, and other islands went (by default of mention in the treaty) to Denmark. The early inhabitants seem to have died out before new settlement was made in Greenland in 1721. Communication with Norway was infrequent from 1500 to 1700. Until 1917 the control of Denmark applied only to the west coast, but after 1921 Norway objected when Denmark closed the shores to all but Danish vessels. In 1931 coal of fine grade was discovered in East Greenland. The United States, by virtue of the exploration of Admiral R. E. Peary, claimed part of the northwest coast, but gave up all claims in 1916 in connection with the purchase of the Virgin Islands from Denmark. The Danish king visited Greenland in 1921.

GREEN MOUNTAIN BOYS. Failing to conquer the stubborn colonists in the campaigns about Boston, the British in 1775 turned to a bold stroke of separating New England from the rest of the colonies by bringing an army from Canada down into New York by Lake Champlain. The men of New Hampshire organized as the Green Mountain Boys under Ethan Allen. This band captured Fort Ticonderoga on May 10, 1775. The cannon and munitions captured there were hauled across New England and used effectively at Dorchester Heights to keep the British from the shore. The Green Mountain Boys also proposed to keep New York from gaining the territory in dispute between that colony and what is now Vermont. They also held the approaches from Canada into New England.

GROUCHY (*groo-she'*), **EMMANUAL, MARQUIS DE** (1766-1847). One of Napoleon's most able generals. After campaigns in Savoy and elsewhere, he was appointed a brigadier general in 1794. His other successful campaigns before 1810 were at the Danube, Hohenlinden, Friedland, and Wagram. During the Bourbon restoration, his rank of marshal was taken from him, but he offered his services to Napoleon when the latter returned from Elba. He gave valuable assistance to Napoleon against Wellington and the Germans at Waterloo. Napoleon believed that Grouchy's failure to keep Blücher from helping the allies lost the battle for the French. Wellington, however, said this was untrue, and commended Grouchy. During the Second Restoration, Grouchy lived in Philadelphia for five years, since he was proscribed in France and his titles and estates were taken away. In 1819 his honors and lands were restored, and in 1830 Louis Philippe recognized him again as a marshal of France. Grouchy wrote much to defend his conduct in the campaign of 1815.

GUATEMALA. For three centuries Spain ruled in Central and South America, until the various provinces rebelled in 1821. Guatemala was a member of a confederation from 1824 to 1839. Since then the history of that land has been enlivened with the usual number of revolutions characteristic of Latin-Americans. Some of their ablest presidents have been Carrera, 1854 to 1863; Barrios, 1875 to 1885, when he was killed in a war with Nicaragua, Costa Rico, and Salvador; Manuel Cabrera, 1898 to 1920, all of whom were virtually dictators. The Guatemalan revolution of 1906 involved all Central America in war, but Mexico and the United States brought about peace in 1907. Four presidents were overthrown between 1920 and 1931, in which year 57 people were killed in street fighting. Guatemala joined the allies against Germany in the World War. Economic and political uncertainty have kept this country from the progress it should have made in the last century.

GUELPHS AND GHIBELLINES. Two parties or factions that kept Italy and much of Europe in a state of conflict for nearly two centuries before 1325. The name Guelph (perhaps from Welf) came from the German family that opposed the ruling house of Hohenstaufen. Henry the Lion, the most famous champion of the Guelphs in Germany, contended against Frederick Barbarossa, and lost much of his land in 1180. The word Ghibelline may have derived from a rallying cry used about 1140, when Conrad III, a Hohenstaufen, defeated Welf VI, uncle of Henry the Lion. Usually, the Ghibellines favored the emperors or kings in Italy; the Guelphs, the people or the church. Some of the small cities, and often the church, refused to support the parties of the nobles or kings. Sometimes towns took opposite sides, without any definite allegiance to kings or people. Florence, later Bologna and Milan, led the Guelphs; Arezzo, Pisa, and Verona favored their rivals. Italy was deeply involved because of these factional strifes. After the waning of the influence of the German emperors in Italy, the Pope in 1334 forbad the use of the words Guelph and Ghibelline.

GUILDS. Commercial or industrial associations in the middle ages, uncertain as to origin or early purposes. The name, originally spelled *gild*, appears in central Europe in 779, in England in the second half of the 9th century, in France and the Netherlands in the 11th, and in the northern countries between then and the 14th century. Early guilds for definite purposes were those of Cambridge to help members in case of feuds and murder; of Abbotsbury for religious observances; of Exeter for assistance of members in case of fires and also for religious salvation. They were fraternal in character, like the Anglo-Saxon organizations. In 1389 all guilds in England were required to report their purposes, amount of property, and other information. Many guilds gave help in old age, sickness, or poverty. Merchant guilds sprang up in England after the Norman Conquest, evidently in imitation of continental groups. Towns issued licences or charters to these groups allowing them to trade. At first members of the crafts seem to have belonged to the merchant guilds. Before 1250 separate associations for makers of goods grew up. These increased rapidly in the reign of Edward III. In the 15th century all of one craft gathered into an association for mutual protection. *Gild* was the name in north Germany, *Zunft* in south Germany, *métier* in France. One object was to guarantee purity and excellence of wares; another to secure a monopoly for members of the guild; sometimes, especially on the continent, to secure political rights, and later so in England. In the 14th century two new types appeared,—the merchants *guilds*, and the *journeymen*. Sometimes masters and journeymen were in conflict; sometimes, they aided each other. *Craft fraternities*, descendants of the old guilds, flourished in the 18th century. Indeed, they were not deprived of their rights by law until 1835. Though some have tried to connect the modern labor union with the history of the guilds, no real connection or transition from one to the other has been demonstrated. Yet, obviously, they have had ideals of the same general type.

GUILFORD COURT HOUSE. Here was fought one of the last important battles of the Revolution in 1781. Cornwallis defeated Gates at Camden, S. C., but somewhat earlier part of his force had been captured at King's Mountain. Nathaniel Greene, the new American commander in the South, had succeeded in dividing the British forces, part of which suffered defeat at Cowpens early in 1781. Greene drew Cornwallis across Carolina to Guilford Court House, where the Americans suffered a reverse, which proved a real tactical advantage, for Cornwallis could not afford to risk another battle, and so soon went back to Virginia. This stroke by Greene, known as a master of strategy, drove the British right into the region where the Americans, with their French allies, could defeat them at Yorktown, Oct. 19, 1781.

GUNPOWDER PLOT. See under *Guy Fawkes.*

HAGUE PEACE CONFERENCE. Nicholas II of Russia suggested a conference to consider international relations, and Holland invited the delegates to meet at the Hague. One hundred delegates from 21 nations of Europe, and from the United States, Mexico, China, Japan, Persia, and Siam met from May 18 to July 29, 1899. The principal result was the formation of a court to bring about arbitration of international disputes. This court has settled a number of questions that threatened to lead to war, such as the Casa Blanca disputes in Morocco and the fisheries off Newfoundland, both arbitrated in 1909. Agreements were made not to use explosives dropped from balloons, projectiles containing poison or nauseating gas, (not accepted by Great Britain and the United States), or bullets that flatten in the flesh. The second Hague Conference began on June 15 and adjourned October 18, 1907. Some 256 delegates assembled from 21 European nations, 19 from the new world, and four from Asia. During this session the corner-stone for the Peace Palace, a gift of Andrew Carnegie, was laid at the Hague. Declarations were made as to arbitration, naval warfare, rights of neutrals in time of war, use of force in collecting debts owed by other nations, and taking of prizes at sea. The World War prevented a third conference, scheduled for 1915, and also broke most of the declarations previously made. On Feb. 13, 1920, however, the League of Nations selected a committee, which submitted a report for a Permanent Court of International Justice at the Hague. With this and the League of Nations, much progress has been made in recent years. See articles on *World Court* and *League of Nations.*

HAIG, DOUGLAS (1861-1928). This British general, born in Scotland, was educated at Brasenose College, Oxford, and began his active campaigns in the Sudan in 1898. Before the World War, his other important commissions were in South Africa, 1899-1902, and India, 1903-06, 1909-12. He became a general in 1914, was in charge of the British First Army in Flanders, 1914-15, and from then to 1919 commanded the combined British forces on the western front. In the battle of Ypres, 1915, Haig was in charge of the largest army Britain ever assembled for a single contest. Some of his other important engagements were at Neuve Chapelle, Festubert, and Loos. He was created Earl Haig of Bemersyde in 1919, rewarded with decorations by all the allied nations, and granted large sums by the British to buy ancestral lands in Scotland. Following the war, he gave much time to his old comrades in arms, with whom he was immensely popular.

HAITI. This negro republic occupying the western third of the island of Hispaniola or Santo Domingo, was discovered by Columbus in 1492, settled by Spaniards, who imported slaves that eventually supplanted the native Indian population. France obtained the western half of the island in 1697, but in 1791 the blacks revolted and won their independence two years later. When both Spain and England came to the aid of France, Toussaint L'Overture, an able negro general, tried to hold the control for his race, but he was betrayed, captured, and died in a French prison. After years of warfare, Santo Domingo became independent in 1844, taking the eastern part of the island. In 1915 President Sam was murdered. In the resulting anarchy, the United States landed marines, which were withdrawn only in 1934. President Hoover in 1930 appointed a commission to investigate the island, the result of which was the withdrawal of America from participation in the government. In 1936 Haiti and the United States made definite trade agreements of mutual advantage.

HALE, NATHAN (1756-1776). Revolutionary patriot, who was educated at Yale and taught school in Connecticut, and on September 1, 1775 became a captain-lieutenant in the continental army. He entered the British lines on Long Island, and obtained, while disguised as a Dutch schoolmaster, essential information which Washington greatly needed. He was apprehended, recognized, and shot as a spy on Sept. 22, 1776. His last words were "I only regret that I have but one life to lose for my country."

HALLECK, HENRY WAGER (1815-1872). Eminent American general, who was a graduate of West Point in 1839, served in the Mexican War and in California, where he also practiced law, after which he returned to army service. As commander of the departments of Missouri and Mississippi and general-in-chief (July 1862 to March 1864), he did much to maintain discipline among the soldiers and to lay the foundations for the later great successes of Gen. Grant. He became chief of staff, and then, in turn, had charge of the department of the Pacific and that of the South until his death.

HAMPDEN, JOHN (1594-1643). English patriot, a nephew of Oliver Cromwell, and a leader of the parliamentary opposition to the acts of King Charles. In 1626 he helped prepare the evidence against Buckingham. In the following year he refused to pay a tax levied without authority by Charles. Hampden was imprisoned, but released when the king wanted to summon Parliament, which in 1629 was dissolved, and he returned to his country home. He was a popular hero in 1637 when he refused to pay another illegal tax called ship money. For this he was once more put into prison. Because of his prominence in both the Short and the Long Parliaments, Hampden was one of the five men whom Charles tried to arrest in the House of Commons in 1642. In the civil war that ensued, Hampden raised a regiment in his native Buckinghamshire. He was mortally wounded a little later while trying to hold in check a band of marauders under Prince Rupert.

HANCOCK, WINFIELD SCOTT (1824-1886). An American general and presidential candidate in 1880, who was a graduate of West Point and served in the Mexican and Civil Wars. He became a brigadier general in 1864, a major general in 1866. His chief distinction lies in his organization of the Army of the Potomac. Some of his great battles were at Antietam, Gettysburg (before General Mead arrived to take charge of the northern armies), Cold Harbor, and Spottsylvania. Under his command at Spottsylvania, the Union army captured and held what is known as the "bloody angle," which had been stubbornly maintained by the men under Lee. Hancock later commanded the department of Missouri, mainly in the campaign against Indians; then in Dakota; and finally once more in Missouri. He was the Democratic candidate for president in 1880.

HANNIBAL (247-183 B. C.). Famous general of Carthage in north Africa, the son of Hamilcar Barca, and a brother-in-law of Hasdrubal with whom he fought for seven years and whom he succeeded when Hasdrubal died in 221 B. C. Hannibal captured Saguntum after a siege of eight months, but Rome started the Second Punic War in consequence. In 218 B. C. Hannibal set out to carry the campaign to the gates of Rome. He crossed the Pyrenees from Spain, then the River Rhone, and finally the Alps in fifteen days, a remarkable feat for an army. Hannibal defeated a Roman army at Lake Trasimene, met the consuls Paulus and Varro, who had a force of 80,000, of whom 50,000 were left dead on the field and 20,000 were captured, while the Carthagenians lost only 5700. At the battle of Cannae fortune turned against Hannibal. His brother, Hasdrubal, came to his aid, but was defeated and slain by the Roman legions. Scipio at last scattered the forces of Hannibal at Zama, and Carthage then was at the mercy of Rome. At home Hannibal instituted various beneficial reforms, such as cutting down the public debt and ridding the city of corruption. When war again broke out between Rome and Carthage, Hannibal was serving with the king of Bithynia, for whom he gained an important naval victory. He took poison rather than fall into the hands of the Romans, who demanded that Bithynia release him to them.

HANSEATIC LEAGUE. In 1241 Hamburg and Lübeck in north Germany, joined to protect the highways between their cities. Other districts joined

them until, when the treaty of Stralsund was signed in 1370, the Hanseatic League consisted of 85 members. The chief objects were to maintain a trade monopoly, to promote commerce abroad, and to found new colonies. Before 1300 a gathering of merchants in London had organized a similar confederation. In the 16th century the Hanseatic League became so powerful as to be able to depose the Danish king, and to replace him and also the king of Sweden by nominees of their own sanction. Meanwhile, the merchants of Holland broke away and set up an organization of their own making. When the new route to Russia was discovered, the Hanseatic League lost many of its former advantages; the wars in Europe from 1618 to 1648 curtailed business still more. After this time only Lübeck, Hamburg, and Bremen remained in the League.

HABSBURGS. Name of a reigning family in Europe, so called from the old home at the Habsburg or Hapsburg Castle on the River Aar. The Habsburgs became dukes and kings of Austria in 1282, kings of Hungary from 1526, Holy Roman emperors, 1438-1806, kings of Spain, 1516-1700; and emperors of Austria from 1804 to 1918. In early decades the members of the family held their estates and power in common. In 1379, however, the territory was divided, and Albert III took Austria for his share; his brother, Leopold III, took Styria, Carinthia, and the Tyrol. Intermarriage with other ruling families secured for the Habsburgs the control over the Netherlands, Artois, and parts of what is now France, as well as part of Bohemia and Hungary. They also secured the crown of Spain in 1516 and Sardinia, Naples, and Sicily in the time of Charles V. Charles abdicated in 1557 in favor of his brother, Ferdinand. The latter's son, Philip, became king of Spain, the Netherlands, Naples, Sicily, Milan, and Sardinia. From this time the two branches of the Habsburgs ruled separately. When Charles II died in 1700, without male descendants, Spain passed to the Bourbon branch. Charles VI determined a regular order of succession in 1713, and his niece Maria Theresa, 1740, founded the Habsburg-Lorraine branch of the family. Francis II, dropped the obsolete title of Holy Roman Emperor in 1806, after becoming Emperor of Austria in 1804. His son, Ferdinand I, abdicated in 1848 in favor of Francis Joseph, who was reigning when the World War broke out. Maximilian, brother of the latter, was emperor of Mexico from 1863 to 1867, when he was arrested, courtmartialed, and shot. Altogether the Habsburgs exerted a powerful influence throughout Europe for four centuries. See *Rulers and Statesmen.*

HARTFORD, CONNECTICUT. Frequently called "the birthplace of American democracy." On Jan. 14, 1639 the men of Wethersfield, Windsor, and Hartford adopted *"the Fundamental Orders of Connecticut,"* said to have been the first constitution ever written by freemen while organizing a government. It was the basis of the early government of the colony of Connecticut, and some of the parts were suggested by the Bible. The mistaken ideas of the *Connecticut "Blue Laws,"* so called, came from the early government of various towns and districts in this colony; but, in no one place, or time where the infamous "laws" all ever in force. In 1624 the Dutch established a trading post on the site of Hartford. Joseph Hooker, Samuel Stone, Elder John White, and others brought some colonists from Cambridge (then called Newtown), Mass. in 1635. In 1654 the Dutch were expelled from the fort at Hartford. Thereafter, the English were in control of the colony. Hartford was the capital of Connecticut to 1701, shared this honor with New Haven from then to 1875, and then became sole legislative seat. The city was the center of an important literary movement just before 1800, when Joel Barlow, John Trumbull, Lemuel Hopkins, and others were called the Hartford Wits. More than 100 papers and periodicals were established at Hartford before 1920. A fire insurance company existed there in 1794, chartered in 1810. This and other companies in 1906 paid over $15,000,000 in claims because of the San Francisco earthquake and fire. See also *Charter Oak* and *Hartford Convention,* the latter under the administration of Pres. Madison.

HASDRUBAL. Three men of Carthage bore this name, the one best known being the brother of Hannibal, the great leader who fought Rome for years with amazing success. Hasdrubal, trying to assist his brother, defeated Scipio in Spain in 212 B. C., and then crossed into Italy, where he was beaten and slain at the battle of the Metaurus, described elsewhere. Another Hasdrubal was the son-in-law of Hamilcar, the founder of Cartagena; a third defended Carthage in 146 B. C. According to tradition, the emperor Nero ordered the head of Hasdrubal, brother of Hannibal, to be thrown into the camp of Hannibal in Italy.

HASTINGS, BATTLE OF. Six miles from Hastings at Battle in Sussex, England, William the Norman defeated and slew King Harold on Oct. 14, 1066. William, who had visited Edward the Confessor in England, claimed that the latter had promised the English crown to him, and that Harold had at first assented to this plan. When William invaded England, Harold was fighting the men of Norway in the north. He hastened to defend London and his kingdom. The English took their stand with infantry on an eminence, now called Battle Hill and marked by a monument, and the Normans were unable for some time to storm this position. By a ruse the English were drawn down from their advantage, and then slaughtered by the Normans, who had seemed to be retreating. The English fought with Danish battle-axes; the Normans, with full equipment, supported by cavalry. Thus the day was won by superior strategy and more suitable array.

HAVANA, CUBA. Also written *Habana,* the capital of Cuba and chief city of the West Indies, situated on one of the best harbors in the world, land locked and protected for 100 years by forts. Sebastian de Ocampo visited the Bay of Havana in 1508, and the present site was first occupied in 1519, after the name had been transferred from the south coast. Pirates sacked the city in 1538, 1555, and 1563. Drake tried to take it for England in 1568, and the Dutch attacked more than once in the next century, after the two forts, El Morro and La Punta, had been built by Spain. The English remained in control for one year after taking Havana in 1762. One structure in Havana, the fort erected by De Soto, dates from 1538, the public buildings from 1724, including the cathedral, where the remains of Columbus rested until they were taken to Spain in 1898. A new capitol was first occupied in 1928. The university, with about 4000 students, was founded in 1728. The newer districts of Havana are beautiful, picturesque, and known for extensive boulevards.

HAWAII. Discovered by Capt. James Cook, an English navigator, in 1778 and named by him the Sandwich Islands in honor of the Earl of Sandwich. Finding his way to the western coast of America blocked by ice, he returned in 1779 to winter at Hawaii, and there was killed by natives. Explorers and missionaries of the American Board did much to enlighten the natives, who prior to 1800 were hardly removed from the first stage of savagery. From 1782 to 1873 the Kamehameha kings ruled in a benevolent manner. In 1824 Kamehameha II and his queen visited England, but both died of measles in London. After a reign of 17 years, Kalakaua, who was a reactionary, gave way in 1891 to his sister, Liliuokalani. She married John O. Dominis, of Boston, Mass., whose influence in Hawaii created a favorable attitude toward the United States. When the queen began to fear American influence, she was deposed in 1894, after Pres. Cleveland had refused to consider annexing the islands. The Hawaiians, again under American influences, in 1898 cast their lot with the United States, the islands becoming a territory in 1900. Hawaii is ruled by a governor general, who must reside in the islands, and by a house and senate. United States army, navy, aviation, and radio stations are important in the defense of the Pacific coast and in the trade between the continent and Asia. Schofield Barracks and forts can accommodate 30,000 soldiers. In 1935 large appropriations were made by Congress for the further development of equipment and defenses in Hawaii.

HAWKINS, SIR JOHN (1532-1595). An English naval officer, said to have been the first Englishman to engage in the slave trade about 1562. He was knighted in 1588 for services in helping defeat the Spanish Armada. At Plymouth, his birthplace, he enlisted in the service of Francis Drake, whom he accompanied to the West Indies in 1594, but died at sea off Puorto Rico in the following year. Hawkins, with Drake, established a fund for retired seamen and known as "the chest of Chatham." He also established a hospital at Chatham in 1592.

HAY-PAUNCEFOTE TREATY. This pact superseded the Clayton-Bulwer Treaty of 1850, in which

Great Britain and the United States agreed to join in building a canal across the Isthmus of Panama. No definite beginning was made, however, until after the French failed in a similar plan. Following a scandal in the French Panama Canal project, in 1900, Lord Julian Pauncefote, British ambassador, and John Hay of the American Department of State agreed to allow the United States to construct a canal already surveyed and started by the French. It was to be free to all nations, and the districts along the borders were to be neutral. In 1904 the rights and equipment of the old French company were bought, and the canal was finished ten years later.

HEBREWS. Abraham is recognized by both Christians and Moslems as the patriarch of the Hebrew people. He came from Ur of the Chaldees into Canaan about 2000 B. C. Immigration of Semites from the Arabian deserts continued until about 1200. Meanwhile, another tribe of Hebrews had served under difficult conditions in Egypt in the time of Joseph and Moses when Rameses II (it is believed) was the pharaoh. He died, an aged man, about 1225 B. C. Moses led them in sight of the Promised Land, now thought to be Palestine, but he died and was buried on the Egypt side of the Jordan River. The Hebrews found many walled cities belonging to the Canaanites, who may have been of early Semitic stock. The Hebrews adopted the dress and much of the civilization of the people of Canaan. In the north of Palestine, they settled in towns; in the desert south, they continued to be nomads like the Arabians. By 1100 B. C. Egypt was declining, and Assyria not yet risen to great power. So the Hebrews grew and prospered, except for their quarrels with neighbors like the Philistines, who had come from Crete in the Mediterranean. All the early history of the Hebrews is found in *Exodus, Judges* (especially chapter 5), and *Joshua.* Samson was a popular idol then, as *Judges* 13 shows. About 970 Saul, through his prowess, gained the title of king, but the Philistines defeated him and he fell on his own sword and perished.

King David took possession of a strong fortress at Jerusalem, formerly held for 1000 years by the Canaanites, as records found recently in Egypt show. He kept the Philistines away, extended his influence far to the east, and set up a court known for its magnificence. Solomon, his son, began to rule about 960 B. C. He allied himself with Hiram, King of Tyre, became a great merchant like Hiram, and married a daughter of an Egyptian pharaoh. The splendid temple that he built cost so much that his subjects rebelled under his son, and the kingdom was divided into Israel and Judah,—Israel rich and Judah poor, but Jerusalem remained the capital. Israel began to worship the old strange gods instead of Yahveh or Jehovah. Prophets like Elijah arose and dared tell kings like Ahab of their sins; his followers slew the northern royal family and many priests of Baal, their chief god. Amos followed about 750 B. C., a century after Elijah, to denounce the luxury of the northern kingdom. He even told them of the coming of the Assyrians, who indeed invaded Israel in 722 B. C., and carried about 30,000 as captives to Babylon. Then Isaiah arose, denounced the hosts of Sennacherib, the invading king, and they were smitten by pestilence and the Hebrew army. One century later Ninevah, capital of the Assyrians, fell to the Chaldeans, who next in 586 B. C. destroyed Jerusalem and carried off many of the people to Babylon. Thus Nebuchadnezzar put an end to Judah, the southern kingdom. They were delivered by Cyrus, the Persian, who took Babylon in 539 B. C. For the later history of Israel and Judah after the exile, see the article entitled *Jews.*

HEJAZ OR HEDJAZ. Kingdom in Arabia along the Red Sea and important to all Mohammedans as the district in which Mecca and Medina are located. Arab tribes have failed to agree many times since 600 A. D. Some live in deserts and some in settlements; some are strict in their faith, and some are not. In the 19th century the Wahhibis, a rather fanatical sect of Islam, obtained the ascendence, but Egypt intervened, and later Arabia was ruled from Constantinople until after the World War. In 1908 a native chief Hussein or Husain ibn 'Ali assumed the title of Amir of Mecca. Through Col. T. E. Lawrence (Lawrence of Arabia), Great Britain succeeded in alienating much of western and southern Arabia from the rest of the tribes. Hussein was proclaimed king in 1916. In 1924 he made the mistake of assuming control over the religious affairs of the Arabs. Other tribes objected when he assumed the caliphate (religious headship), notably Ibn Saud (Abdul Aziz to his own people), king of Nejd. Hussein at last abdicated in favor of his son, Ali, in 1924. Before long Ibn Saud gained control, for he represented a stricter sect than did Hussein. In 1932 both kingdoms were combined as Saudi Arabia.

HEJIRA OR HEGIRA. This word in Arabic means *a going away, a flight.* Among the Islamites, the Hegira means the flight of Mohammed from Mecca to Medina on Sept. 13, 622 of the Christian era. War and persecution in his own tribe drove him to Medina, which he brought to his will by conquest. Omar, the second caliph or religious leader of Islam, designated the calendar to begin with the first day of the first month of the year of the Hegira. This was July 16, 622, the beginning of the Mohammedan calendar, which is 10 days, 21 hours, and nearly 15 seconds shorter than the Christian year. On March 24, 1936, the 1355th year of the Mohammedan era commenced.

HELLENISM. Name vaguely applied to the influence of Greek civilization and art on other nations. The Hellenes or Greeks never for long were unified into a nation or state like modern ones, but Athens and other cities had their own traits and their own imitators. When independence declined, Greek influence abroad rose to new heights. The Persians went back to Asia with Greek ideas and customs; the Phenicians, after some resisting, adopted Greek art; and the Balkans imitated the best Greek pottery. Alexandria in Egypt abandoned Hebrew culture for the Grecian language and literature. Even Sicily and parts of the Italian peninsula were hellenized, so that St. Paul wrote his *Epistle to the Romans* in the Greek language. Kingdoms in central Asia, like Bactria and Sogdiana, turned to the west for their inspiration. Even under Roman rule, Syria chose Greek literature, art, and general culture. In early Christian times, the cities that dotted the coast of Asia Minor were Greek in their tastes,—such as Ephesus, Smyrna, Pergamum, Antioch, Rhodes, and Cappadocia. Indeed early Christian philosophy bears the plain imprint of Greek ideals and thought.

HEPTARCHY. Name derived from two Greek words, meaning *seven* and *government or kingdoms.* Definitely the name was applied to the seven kingdoms of Kent, East Anglia, Sussex, Wessex, Northumbria, Mercia, and Essex, all of which made up Saxon England. They existed from the 5th to the 9th centuries, but not all at the same time. Hengist, the warrior called in to help king Vortigern, founded Kent in 457; old Sussex and other parts formed Sussex under Ella in 490; Hants, Wilts, Dorset, and Devon made up Wessex under Cerdic in 515; Essex and Middlesex made up East Saxony under Ercewin in 527; the north of England made up Northumberland under Ida in 547; Norfolk, Suffolk, and Cambridge went to form East Anglia under Uffa in 575; and the Midland counties founded Mercia under Cridda in 582. For a time each district had its own language and customs, parts of which are still preserved.

HERCULANEUM. Ancient city of Italy, at the northwestern base of Mt. Vesuvius, damaged by an earthquake in 63 and completely buried in 79 and later by volcanic eruptions from Vesuvius. It now lies below the modern towns of Portici and Resina at a depth of from 30 to 120 feet. Art relics, in beauty and value, far exceed those found in the nearby buried city of Pompeii. Costly marbles, exquisite bronze statues, and mural paintings of great interest are among the treasures found today in Herculaneum. Some of the great statues are those of Hermes, a Silenus, sleeping fauns, a bust taken for Plato, and two discus throwers. Among the paintings and monochromes are Theseus after slaying the Minotaur, Chiron teaching Achilles how to manage a harp, and Leto and Niobe. Much of the art of Herculaneum is now in the museum at Naples.

HERKIMER, NICHOLAS (c. 1728-1777). His father, Johan Herkimer, from the Palatinate (now part of Bavaria), settled along the Mohawk in central New York about 1725. The son became a colonel in the militia of New York in 1775, and brigadier general in 1776. When the British laid siege to Fort Stanwix in 1777, Herkimer was sent to relieve the garrison there. His men fell into an ambush at Oriskany, but they held their lines firm,

and the British were forced to retire into Canada. In the battle of Oriskany, Herkimer was mortally wounded. In 1884 a monument was erected on the spot where he fell.

HESSIANS. Soldiers from two districts in what is now called Hesse-Nassau, part of German Prussia. Frederick II of Hesse-Cassel hired out some 22,000 soldiers to Great Britain for about $15,000,000 to fight against the American colonists in the Revolution. These German mercenaries were called Hessians and suffered much ill-fame in America. They engaged in the battles of Long Island, Trenton, Brandywine, Guilford Court House, Yorktown, and some of lesser importance.

HINDENBURG, PAUL VON (1847-1934). Second president of the Republic of Germany, from May 1925 to his death, succeeding Frederick Ebert. He was born of a noble family in Posen, became a subaltern in 1866, served in the wars against Austria and France, and gained fame at Königgratz and Sedan. He was raised to major general in 1900, lieutenant general in 1903, and retired in 1911. In 1914 he was recalled to take command in East Prussia against the invading Russians, and there won the battles of Tannenberg and Masurian Lakes. During this campaign he and General Ludendorf became fast friends and worked together as few generals have in military strategy. Hindenburg defended his friend in later attacks after the World War. He published his memoirs in 1920. Against his wishes, he was called upon to become president of Germany in 1925. Though he failed to satisfy the national extremists, he won the confidence of the moderate parties and of the world at large.

HINDENBURG LINE. An elaborate system of trenches, concrete positions for machine guns and cannon, canals, and barbed-wire entanglements stretching from Lens to Aisne. Parallel to this ran a second line of defenses from Lille to Metz. During the second battle of Cambrai, in September 1918, the Canadians penetrated the line after desperate attempts. They used scaling ladders, rafts to cross canals, and with other ingenious devices took many artillery positions by complete surprise. Immense booty was captured. From one division of Germans, for instance, 4000 men and 70 guns were taken. American doughboys stormed the lines north of Bellinglise, cut through under fire, and penetrated so far that the Germans reported in Berlin that their lines had been completely broken down. In these operations, Australian troops rendered important aid to the Americans.

HIRAM, KING OF TYRE. According to II *Samuel* 5 and I *Chronicles* 14, Hiram or Hurom of Tyre, a city in Phenicia along the coast, was a powerful and rich monarch. He supplied King David with workmen and materials for the erection of a palace. In the age of Solomon, Hiram again sent some of his best artisans to help build the great Temple, as mentioned in I *Kings* 7 and II *Chronicles* 2.

HISTORIC SHRINES, UNITED STATES. No adequate list can be given of the many revered spots of America. Beginning with the Rock at Plymouth, which was moved back to its supposed original location along the shore in 1920, New England is dotted with ancient shrines. Some of them in Boston are the Old North Church, celebrated in Longfellow's poem, the home of Paul Revere, the old cemeteries on Copp's Hill, the original State House of Revolutionary times, and above all Faneuil Hall, where the patriots spoke their feelings and where their pictures now adorn the walls. The whole Boston area is dotted with reminders of historic events. Hartford has its old churches, New Haven the famous Green opposite Yale College, where one building remains as a reminder of early heroisms. New York City has its Trinity Church, and old burying ground, Fraunce's Tavern, where Washington bade farewell to his officers, the Van Cortlandt and Jumel Mansions, in the latter of which Aaron Burr once lived, the home of Edgar Allen Poe, the old Sub-Treasury building, and others. Philadelphia has its famous State House, Independence Hall, home of Betsy Ross, home where Jefferson wrote most of the Declaration of Independence, and home of Washington. Washington has the White House, Capitol, and of more recent times the sacred soil of Arlington across the Potomac in Virginia. Just below is Mount Vernon, home of Washington and his tomb, visited by thousands annually. Of monuments we have the one at Bunker Hill, Bennington, Vt., Washington in the national capital, Grant's Tomb in New York City, the home and tomb of Lincoln at Springfield, Ill., and the Pilgrim Monument at Provincetown, Mass., these being only a few of the many. St. Augustine, Florida, with the oldest building of historic value in the South; Williamsburg, Va., recently restored to former appearance; and the old quarter of New Orleans; Natchez, Miss.; Richmond, Va.,—are only some of the many cities that have quaint reminders of past glories.

HITTITES. Powerful people in Asia, who dominated about 1100 B. C. from the Euphrates to Lebanon. They fought the Hebrews at the time the latter came into Canaan; troubled Egypt from the 12th to the 20th dynasty. Seti I of Egypt, named "the avenger of broken treaties," attacked them; so did Rameses II, and 100 years later Rameses III carried the Hittite king to Egypt. Tiglath-pileser I, of Assyria, drove them out of his empire; and Sargon II, 400 years later in 711 B. C., took their capital at Carchemish, after which the Hittites declined.

HOBSON, RICHMOND PEARSON (1870-1937). United States naval engineer, congressman, and leader of reform, was born in Alabama, studied at Annapolis, and later in Europe in science. Hobson is best remembered for his daring exploit, during the Spanish-American War, of sinking the U. S. collier, *Merrimac*, across the harbor at Santiago, Cuba, so that the Spanish fleet, in trying to get out, was scattered and disabled. Before Hobson retired from the Navy in 1903, he superintended the raising of the sunken warships of Spain. From 1906 to 1915 he sat in the House of Representatives from an Alabama district. He later engaged in reform movements, particularly prohibition. In 1921 he founded the United States Alcohol Education Association, and in 1926 the World Conference on Narcotic Education.

HOFER, ANDREAS (1767-1810). Patriot of the Tyrol, who in 1796 led a party of sharpshooters against the French; in 1805 stood against Marshal Ney; and in 1809 summoned his countrymen to arms against Bavarian and French encroachments in the Tyrol. After the battle of Wagram in the same year, no provision was made for the peace of the Tyrol. When some 40,000 French again invaded the valleys, Hofer's volunteers cleared them out in eight days, taking possession of Innsbruck. Again, after the Peace of Vienna, no peace came to the Tyrol; but Hofer now was unable to resist the growing tide of Bavarians and French. He fled to the mountains, was betrayed, tried at Mantua by courtmartial, and on Feb. 20, 1810 was shot by order of Napoleon.

HOHENZOLLERNS. Princely family of Germany, named for a hill and castle at Zollern. Two early branches of the family were headed by Burkhard and Wezil or Werner, the latter of which ran out in 1194. The descendants of Burkhard ruled from 1200. His grandsons, Conrad and Frederick, divided the lands in 1227. Conrad founded the Franconian branch, and Frederick the Swabian, the former of which for many years was allied with the Holy Roman emperors. Frederick IV, turning from the Habsburgs, helped elect Louis IV as Holy Roman emperor in 1322. From then the Hohenzollerns rose gradually to power in central Europe. In 1701 the elector of Brandenburg united Prussia and Brandenburg as the kingdom of Prussia. His grandson, Frederick the Great, raised this kingdom to the rank of leader among the German states. At Versailles in 1871 the Prussian king became emperor of united Germany as Wilhelm I, and so ruled until 1888. He was succeeded by his son as Frederick III in 1888, and, later the same year, by Wilhelm II, who abdicated at the close of the World War (Nov. 9, 1918), after which he lived in Holland.

HOLY ALLIANCE. One of the most amazing documents of modern times was signed on Sept. 15, 1815 by Alexander I of Russia, Francis I of Austria, and Frederick-William III of Prussia. These sovereigns called on all rulers of Europe to join with them in "the bonds of true and indissoluble fraternity"; to regard themselves "toward their subjects and armies as fathers of families"; to base their conduct "on the sublime truths which the Holy Religion of our Saviour teaches"; and to remember that "the precepts of Justice, Christian Charity, and Peace . . . must have an immediate influence on the councils of Princes, and guide all their steps." All nations of Europe finally signed, except Great Britain, which approved the principle; the Pope, who declined on political grounds; and the Sultan of Turkey, who

was offended because the caliphate was not mentioned in the document. Whether the agreements were ever taken seriously has been questioned. At any rate, the tradition in Russia came down from Alexander I to Nicholas II, who in 1899 took steps leading to the Hague Conference.

HOLY ROMAN EMPIRE. As Charles the Great (Charlemagne) knelt in prayer in St. Peter's in Rome on Christmas day, 800, Pope Leo II put a crown upon his head and saluted him as Carolus Augustus, emperor of Rome. Thus was revived a dream of restoring the old Roman Empire of the west, which had perished with the last king of Italy, Odoacer, in 476. In the century before, Constantine had assumed spiritual as well as temporary powers. His lead was now followed, with the union of the Franks, Germans, and Italians in one vast empire, each with its own kings and princes. Again, in 962, Otto the Great assumed the title on authority of Pope John XII. From that time the Empire consisted of those lands and princes loosely bound together in recognizing the title. The emperors became so powerful in 1075 that Hildebrand, the Pope, was driven out of Rome, and Henry IV, the Holy Roman Emperor, set up a rival Pope, who in turn acknowledged Henry. By 1100, however, the Popes came back into their own, and so dominated until 1270. For a long time the Habsburgs of Austria bore the nominal title of Roman emperors, until Francis II resigned the honor in 1806, after which no successor was elected.

HOMESTEAD ACTS. In 1860 the Congress passed a homestead act, but President Buchanan vetoed it. In 1862 another was approved granting to each person over 21 a patent on 160 acres of land in the public domain when certain conditions were fulfilled. The grantee must live on the homestead for five years (reduced to three in 1912); or, after residing on the grant for six months, he could purchase it outright for $1.25 an acre. Under the Homestead Act of 1862, the first patent on land was taken near the present Beatrice, Nebraska. In 1872 and 1901, and after the World War, the homestead acts were extended to include more liberal provisions, with special consideration for soldiers and sailors. After 1909 a total of 640 acres could be taken for dry farming or ranching, for which purposes large tracts were necessary. Over 300,000,000 acres have been homesteaded.

HOWE, SIR WILLIAM (1729-1812). British general, who led the regulars at the battle of Breed's Hill, commonly known as Bunker Hill, at Charlestown, Mass., June 17, 1775. Howe had succeeded Gen. Gates in command of the British in America. Later, he won victories over the colonials on Long Island, captured New York City, occupied Philadelphia, and fought at Brandywine. He was recalled in 1778, subjected to an inquiry by Parliament, but was exonerated of incapacity and was made a general in 1793. Howe succeeded his brother in 1799 as Viscount Howe.

HUDSON, HENRY (d. 1611). English adventurer, who made four voyages to America in an attempt to discover a route to China. Under patronage of the Muscovy Company, in 1607 he reached the east of Greenland and followed the north coast to Spitzbergen (now called Svalbard) to beyond 80° North latitude, and on the return trip he found what is now Jan Mayen Island. In 1608, again for the Muscovy Company, he tried for a northwest passage between Spitzbergen and Novaya Zemlya, but the ice of Barents Sea checked his course. To appease a mutinous crew, he sailed southward to explore the coast according to a map made by his friend, John Smith, of the Virginia colony. He touched at Newfoundland, entered the Kennebeck River (now in Maine) for repairs, and at last sailed up a broad river as far as the site of the present Albany, New York. The river was given his name. Thus again he failed to find the route to Cathay or China. In 1610, on his fourth voyage, this one under English patronage, he spent three months exploring the region about Hudson Bay, wintered on James Bay, and in the spring again tried for the northwest passage. On June 22, 1611 his mutinous crew put Hudson and eight others ashore, including the ill and his small son. Nothing was ever heard of them. After some of the ringleaders were killed by Eskimos, and others perished by privations, the remnant of the crew arrived in England where they were imprisoned.

HUDSON'S BAY COMPANY. Corporation formed in 1670 for the purpose of obtaining furs from the Indians of North America for sale in England. The group was given absolute possession of much of the land about Hudson Bay. To 1713 this company had to contend with the French in Canada, and after 1763 with independent hunters and trappers who came into the northwest country. The Northwest Fur Company, a rival concern, was founded in 1783 at Montreal, but this joined with the Hudson's Bay Company in 1821. In 1838 further grants were confirmed or made anew to the proprietors. In 1869, when the Dominion of Canada was being organized, all the claims to territory were assigned to Great Britain for $1,500,000. The land was then annexed to Canada, save for some tracts reserved and later sold at great profit by the Company.

HUGUENOTS. Name for the Protestants of France after about 1560, said to have been at first a term of derision. From the time of Calvin and his Protestant movement at Geneva, the independent faith grew. Admiral Coligny and the Prince of Condé, younger brother of the king of Navarre, took the part of the Huguenots. Civil war broke out in 1563, and in 1569 Condé was assassinated. Coligny marched on Paris, and peace was concluded. On Aug. 24, 1572 came the massacre of St. Bartholomew, in which Coligny and others perished. Outbreaks occurred five or six times before 1621, after which the Huguenots were always promised concessions. Henry of Navarre became the Huguenot champion in 1584, and later succeeded to the throne when the king was assassinated. Henry signed the Edict of Nantes, by which religious freedom was promised. In 1685 Louis XIV revoked this decree, and over 400,000 left France for other lands. Again the French Revolution guaranteed freedom of worship to the Huguenots, but persecution by 1802 had reduced the number of churches from 751,—the number in 1626,—to 171, and pastors from 809 to 121. When church and state were separated in France in 1905, the question was at last settled. In all these years of persecution, the Huguenots had remained loyal to the French monarch, and merely insisted on worship in their own forms.

HUMANISM. One phase of the Renaissance in Europe, by which adherents stressed the elements of human forces, rather than supernatural or mystical, in religion and daily life. The humanists often broke away from medieval traditions of philosophy and theology, chiefly from the domination of authority or scholasticism. Many humanists sought inspiration in the older literatures, such as those of Greece and Italy. Today one form of humanism is called *hominism*, a term adopted by the philosopher Windelband. Protagoras said *homo mensura*, or man is the measure of all things. Some of the humanists adopted this as a motto. In the early 16th century, on the continent, the great Dutch Scholar, Erasmus, became the exponent of humanism; and for a time he taught in England. He found adherents in men like John Colet, Thomas Linacre, William Grocyn, and Thomas More. English colleges began to supplement the study of Aristotle with other readings in Greek philosophy and scholarship. The humanists were much interested in the correct printing and interpretation of the Bible.

HUNDRED YEARS' WAR. Series of wars from 1337 to 1453 between England and France. John (1199-1216) had lost nearly all the parts in France claimed by England. When Charles IV of France died in 1328, the crown went to Philip VI, though Edward of England appeared to have a better claim to succession. The French did not recognize succession through a feminine line, according to the old Salic Law barring all such. Edward claimed the crown, and in 1337 declared war on Philip VI, who had allied with the Scotch and had interfered with English interest in Flanders. No side gained any particular advantage, and a truce lasted for five years, from 1340. Then Edward again ravaged France, marched toward Paris, and won the great battle of Crécy. Again, the Black Prince of England crushed the French at Poitiers in 1356, and carried King John of France to England as a hostage. In 1415 the English again won at Agincourt, and all north of the Loire became English. In 1420 it was agreed that Henry V should be regent of France, for the French kings seemed unable to rule. When things looked the darkest for France, a young girl was having visions and hearing strange voices in her country home. This was Joan of Arc, who

at last aroused her countrymen, raised the siege of Orleans, and drove the English from the field in 1429. England never gained back the advantage then lost. At last in the reign of Queen Mary, Calais, the last British claim across the Channel, was evacuated to the French.

HUNGARY. For several centuries Hungary held in check the encroachments of the Mohammedans in Europe. Some of the important early kings were St. Stephen (997-1038), who set up the first monarchy of the Magyar and Ungri people, embraced Christianity, and did much to improve the land; King Andrew II, who in 1222 protected the people against encroachments upon their rights; Louis the Great, also king of Poland, who held back the Turks that had come after the Saxons, Mongols, and Tartars had tried to take the land; but King Sigismund was defeated by Bajazet, the sultan, in 1396. The great national hero of Hungary is John Hunyadi (Hunyadi Janos), who crushed the Turkish power, and his son, Matthias Corvinus (1458-1490) raised Hungary to its greatest glory in statecraft, art, and letters. Yet from 1526 to 1716, the Turks again were in the ascendency, until set free by Prince Eugène.

In 1558 Ferdinand, Archduke of Austria, became emperor of Hungary; and Leopold I (1657-1705) forced the Hungarians to protect themselves by asking aid of the Turks. Joseph II (1780-1790) sought to suppress all independent spirit among the Hungarians. National spirit smouldered in these years of misrule and oppression. At length, 1848, Louis Kossuth gained a large measure of independence for Hungary, except that Russia wished the Austrians to maintain control. In 1867 Francis Joseph I established the dual monarchy of Austria-Hungary, with each people having its own parliament, local laws, and national institutions. In 1918 an independent state was proclaimed, which became in turn a republic, briefly a Soviet state, a monarchy under a "regent" awaiting the election of a king. By request of Hungary the national finances were stabilized under control of the League of Nations between 1924 and 1926. Allied military control ended on March 29, 1927. The Treaty of the Trianon, 1920, reduced the area of Hungary by giving Transylvania to Rumania and Croatia and Slavonia to Yugo-Slavia.

HUNKERS. Name applied to a conservative faction of the Democratic party in New York and elsewhere in the political campaigns of 1844 and 1848. Their opponents, known as *Barnburners,* in 1848 allied with the Free Soil party in support of Martin Van Buren of New York, who was elected president. In large part, both factions united in 1852.

HUNS. Four groups of tribes of uncertain and nomadic life, one branch of whom invaded the Eastern Roman Empire from 372 to 453. About 200 B. C. one branch invaded China, and went southward, and some to the westward. India and Persia later contended with them. The Magyars, who came into Hungary in 882, may have been related to the Huns. The Huns were swarthy, broad of chest, and rude in manner and speech. In 451 their advance was finally stayed at the battle of Châlons. Meanwhile Belamir had forced the Ostrogoths to pay tribute, which Attila, fiercest of the Huns, compelled them to increase in 447. After the death of Attila about 453, his sons failed to hold their conquests. In Pannonia, in the last great battle, some 30,000 Huns were slain, including Attila's eldest son. Remnants of the Huns settled in Dobruja, Dacia, Pannonia, and South Russia. See articles on *Attila* and *Goths.*

HUNYADI, JANOS (c. 1387-1456). John Hunyadi in English. Hungarian patriot and statesman, who forced the Turks to restore the independence of Hungary. He served in the army of King Sigismund, in the Hussite war in 1420, and drove the Turks out of Semendria in 1437. After several victories, between 1441 and 1444, Hunyadi met defeat, and King Wladislaus III was slain. He compelled Frederick III of Germany in 1450 to return the young king, Ladislaus V, who had been detained in Germany. Hunyadi acted as regent for the king for eight years. In 1455 he equipped a fleet, and, though deserted by most of his countrymen, destroyed the Turkish navy, reclaimed Belgrade in a daring charge, and forced the Turks to leave Hungary alone, as it proved, for the next 70 years. Hunyadi Janos died of plague. He was a man of limited education, but his great honesty, unselfishness, bravery, and undying love for Hungary have endeared him to the people even to this day. See article on *Hungary.*

HUSSITE WAR. Following the death of John Huss of Bohemia in 1415, over 400 nobles formed a religious league that refused to recognize the authority of bishops and the Pope. King Wenceslas gave the Hussites concessions and allowed them many churches. His brother and successor, Sigismund, after his death in 1419 failed to gain the recognition of the Hussites, and a war broke out in 1420. The Hussites for eight years won victories and even carried their battles into foreign territory. In 1431 the Council of Basel was able to reconcile the king and his people, who acknowledged his authority. Yet the radical Hussites, known as Taborites, refused to agree to the peace made with the king and the church. In 1434 they were beaten in the battle near Bohmischbrod.

HYKSOS KINGS. This mysterious race of kings ruled in Egypt for about 500 years, or during the fifteenth to seventeenth dynasties. The Jewish historian, Josephus, thought they were Israelites. Manetho, an Egyptian chronicler of the early kings, mentions "six foreign Phenician kings"; 32 "Hellenic shepherd kings"; and several "shepherd or Theban kings." The Hyksos people had previously established an empire in Syria. In Egypt their chief cities were Avaris, Heliopolis, and likely Memphis. Otherwise, in other districts, they allowed the native kings and princes to rule. The Hyksos adopted Egyptian names, customs, and language. Finally, the Prince of Thebes raised a revolt against the Hyksos rulers, and after a long siege took Avaria, then their chief stronghold. The Hyksos people retired into Judea, and seem to have founded Jerusalem.

ICELAND. Voyagers from Scandinavia brought back reports from Iceland about 850, but earlier the Irish and others seem to have visited there. Prior to 950 three classes of settlers went to Iceland,—from Norway, from Dublin, and vikings looking for freedom from oppression. About 1100 Iceland had 50,000 inhabitants. In the thirteenth century, religious disputes led to civil wars, and finally to union with Norway in 1262, after the country had been a republic for 350 years. In 1388 Norway with Iceland was united to Denmark, and on the separation in 1814, Iceland remained with Denmark. In 1874 the king of Denmark gave Iceland a new constitution; in 1903 a national government, virtually independent; and in 1918 recognized the country as a monarchy, with crown for the time being merged with that of Denmark, with the additional provision that foreign affairs should be in control of Denmark until 1940. Citizens of Denmark and Iceland are recognized as having common privileges. Iceland has no army, no navy, no coast defenses, no deficit, and in 1934 no unemployment.

IKHNATON. The most progressive ruler of Egypt between the 10th and 15th centuries before the Christian era. He turned from the worship of many gods to adore the glowing disk of the sun, set up a new capital at Tel-el-Amarna, and changed his name from Amenhotep IV to Akhnaton, meaning sun's glory, and became chief priest of the shrine of Aton, or the sun. He married a beautiful young Syrian named Tii. The priests of the older cults opposed him, yet he held his own for 18 years against all reaction and attempts to unseat him. His reign apparently ended in 1358 B. C., during the time when the children of Israel were still in Egypt, and the empire of the pharaos began a definite decline in temporal power. King Tutankhamen, whose tomb was discovered in Egypt in 1922, was his father-in-law. Akhnaton is alleged to have been the first monotheist of Egypt, perhaps in ancient times, but his cult died out in the reaction after his death.

IMPEACHMENTS. Procedure in the United States and Great Britain is similar. In early days the House of Lords in England impeached persons in high offices. In 1376 the Commons first so requested an impeachment. Between 1621 and 1688, some 40 impeachments occurred. There was no other way of removing important officers until the ministry became responsible to Parliament. In 1681 the Lords of England impeached Edward Fitzharris, but the Commons refused this right, and won the point. In Great Britain the last impeachments were those of Warren Hastings (1788-95) and Lord Melville (1806). Other famous impeachments by the Com-

mons were Lord Chancellor Bacon (1621), the Duke of Buckingham (1626), Earl of Strafford (1640), and Bolingbroke (1715). In the United States the House of Representatives brings charges, which are tried by the Senate. Causes for impeachment are "treason, bribery, or other high crimes and misdemeanors." Conviction must be by a two-thirds vote. Conviction results in removal from office, without chance of pardon by the executive. Thirteen cases have been brought to date (1936), including President Andrew Johnson, who lacked one vote of being convicted (vote was 35 guilty, 19 not guilty); Samuel Chase, 1804, Associate Justice of the Supreme Court, acquitted; William Blount, Senator from Tennessee, expelled by Senate, then impeached by House, and Senate decided expulsion had removed him from jurisdiction; William W. Belknap, Secretary of War, 1876, acquitted; the rest being all judges of United States courts, with acquittal in three cases, conviction in four cases; proceedings abandoned, 1; resigned, 1. The last case (1936) resulted in the removal of a Florida judge from office.

IMPRESSMENT OF SEAMEN. In his attempts to stifle British commerce, Napolean, by his Berlin and Milan decrees, in 1806 and 1807, forbad any ship to enter an English port. Great Britain replied by forbidding any ship to enter a French port without first touching on a port in England. By these edicts commerce of the United States was greatly crippled. American captains offered high wages, and British seamen, not having employment, often took service on ships of the United States. Our nation was the first to insist upon the principle that a subject may change his allegiance from one nation to a new one at any time he sees fit. John Jay was sent to England and in 1794 concluded a treaty with Great Britain, some compromises of which the Senate refused to ratify. One agreement made by Jay was that England had the right to search American craft for renegade seamen and deserters from British ships. Captains, either over-zealous or taking advantage of the situation, often impressed naturalized American sailors or even men born in the United States. War was narrowly averted when the British *Leopard* fired on the American *Chesapeake* off Virginia in 1807. In the next years, Congress sought both to restrain and to punish England for these practices. Taking advantage of the situation, Napoleon repealed his Berlin and Milan decrees, and the United States followed by passing an act forbidding boats to land in England. These and other disputes, with some conflicts also at sea, led to a demand on the part of Henry Clay, John C. Calhoun, and other "western" men that war be declared. New England was somewhat opposed, for this region had much to lose in restraint of commerce, but war finally was declared in the administration of James Madison.

INCAS. Aboriginal Indians of Peru, who in the time of Columbus had attained a stage of high culture and civilization. They then ruled from what is now Ecuador to the River Maule in Chile. Later the name "Inca" was applied to the monarch, who had the power of life and death over his subjects, whom one historian says he could control even to their thoughts. Huayna Capac left two sons, Huascar and Atahualpa, who fought for control of the empire. Atahualpa, the victor, on his way to Cuzco, capital of the Incas, was attacked by Pizarro and the Spaniards, and later was treacherously put to death while on a visit to Pizarro to negotiate a peace. Three years later, 1536, his successor, Manco, who had escaped at first, was beaten in battle. After this the power of the Inca empire swiftly declined, while the Spaniards took advantage of their wealth, art, and high degree of attainment. The Incas had established an interesting form of state socialism, but this was also combined with religious and autocratic elements.

INDIA. Four separate periods are recognized in the history of this land of mystery and contrast. First, the period when the native Aryans were independent, ending in 1001; second, that of Mohammedan control, ending in 1757; third, that of British dominion over much of India; and, fourth, that of insistent demands for dominion status or even independence since the World War. Records begin with the birth of Buddha in 557 B. C. Alexander of Macedon in 327 B. C. was there, and a later king of India married a daughter of Selucus Nicator, the Greek emperor of the Persians, followed by the Gupta dynasty when art, literature, and commerce flourished. Then from 1001 to 1321 followed three powerful dynasties of Islam, and India reached heights of splendor, followed by the Tughlak kings. Then came Timur or Tamerlane the Great, and his followers of the Moguls, from 1526 to 1707. Babur ruled at Kabul for 22 years, invaded India in 1525, and his descendant, Shah Jehan, was the builder of the Taj Mahal, greatest of oriental monuments of architecture.

In 1739 the Persians sacked Delhi, carried off the celebrated peacock throne, fabulous in jeweled wealth, and India began to decline. Venetians, Genoese, Dutch, and others had carried on a flourishing trade on their way to the East Indies. Lord Clive won from the Moguls the best provinces, Bengal and Behar, in 1757; the East India Company dominated until, after the Sepoy Rebellion of 1857, much of India was ruled by governors sent from Great Britain, with some native states semi-independent and friendly. By 1918, after years of smouldering discontent, Mohammedans and Hindus (the latter led by Mohandas Gandhi, called Mahatma Gandhi by his followers) joined forces in a campaign of non-cooperation and non-military resistance. Reports and commissions, several "Congresses," notably those at Delhi in 1923, another in 1929, and the London conference on India in 1930-31, tended toward agreement and greater freedom for India. Border raids in 1930, religious riots in 1926 and minor ones at other times, and failure of the Indians themselves to unite on settled plans retarded nationalistic movements, while Great Britain came nearer offering autonomy or more.

INDIAN EMPIRE. No adequate description can be given here of that vast empire called India. Politically India is divided into 15 British provinces, some of which are as large as countries in Europe; a multitude of smaller or largest Indian states, in which the rule is by a prince or chief; and frontier districts like Baluchistan and Burma under British control. The chief provinces of British India are Assam, separated from Bengal in 1912, Bengal, Bihar and Orissa, Bombay, Burma, Central Provinces and Berar, Madras, Punjab, and the United Provinces (Agra and Oudh). Of the several hundred native Indian states or districts, the chief are Hyderabad, Mysore, Kashmir, Gwalior, and Baroda. On the northern and northwest frontier are several tribes in the confines of geographical India, but independent in their own affairs, such as Waziris, Afrida, and Mohmands, all nominally attached to the North-West Frontier Province. Nepal and Bhutan, though independent, have commercial relations with India.

British India is in charge of a cabinet secretary, the Indian Office, a Council on which there are three Indian members, and, resident in India, a governor general. Since 1920 there has also been a High Commissioner, with something like the status of an ambassador. Governors of the British states are appointed. Rulers of native states have different grades and degrees of independence. At the outbreak of the World War over 700 native princes and chiefs at once offered themselves and their resources to the British Empire. India is gradually being given greater and greater responsibility in home government, and the princes are held less and less in control by Great Britain. When England took over the government of much of India in 1858, the princes were called to new responsibilities. In 1899 Lord Curzon, the British governor general, spoke of the native rulers as his colleagues. Lord Minto in 1909 sought further to conciliate the princes of native states, with whom conferences were held in 1913, 1914, 1916, 1917, at which time 17 principles were formulated. In 1917 also succession to local rule in native states was also guaranteed without essential interference from British authorities. As proposed by the Maharaja of Bikaner, King George V in 1919 authorized an Indian chamber of princes, which was established in 1921, with the proposer as chairman. Mysore and other native states have set up something like a legislative assembly. The tendency since 1921 has been to unify the opinion in the states. Demand for dominion status continued and at times seemed all but attained. Thus India is a dual empire within the great British Empire, India being composed of the British and the native states.

INDIANS, AMERICAN. Columbus thought he had reached India when he first set foot on an island in the Caribbean; hence, the name Indian for all native tribes of both Americas. The word has no other significance. Ethnologists say they have all but proved the red man, who resembles the Mongolian, came from Asia to this continent over a

bridge to what is now Alaska, or across by sea in early times. In minor characteristics, language, and customs the Indians of the United States have been divided into sixty tribes. About one-half the Indians have lived east of the Mississippi, even though these made up only a tenth of the total number of tribes.

Geographical divisions include the New England states and to the southward, the southeastern, plains areas, southwest, California and northwest, north Pacific, and central Canadian, and with some overlappings. The Iroquois Confederacy, one of few political alliances, comprised the Mohawks, Oneidas, Onondagas, Cayugas, and Senecas, about 10,000 people only. Around them were 35 tribes of the Algonquins, such as lived in Michigan, Indiana, Ohio, Pennsylvania, and to the eastern coast of Virginia. Algonquins and Iroquois were hereditary enemies. To the southward were the Muskhogans, and across the Mississippi the Sioux tribes. The Iroquois dominated once from the St. Lawrence to the Mississippi and south to the Carolinas. The middle Indians best known are the Ojibwa, Potawatami, Sacs, Kickapoo, Ottawa, and other similar small units, noted for clan and ritualistic societies, one having four degrees or orders. The Cherokee, Chicasaw, Choctaw, and Seminoles of the southeast took on some customs of Indians in Mexico, with some arts of cloth and baskets. In the Southwest for centuries the wandering tribes have been hostile to the settled or pueblo dwellers like the Zuñis, Hopis, and Navahos, noted for their kivas, dances, and arts of peace. The nomads were represented best by the Apaches, a wild, warlike tribe.

INKERMAN, BATTLE OF. On a ridge near the eastern end of the harbor of Sebastopol, during the Crimean War, the Russians attempted to dislodge about 8000 British soldiers. The attacking party numbered about 42,000, with support of heavy artillery. Under General Bosquet, the French were to keep the Russian flank occupied, and for this reason they were unable to assist their allies at first. After holding out for over six hours against forces five times their number, some of the English Royal Guards, were relieved by the French, about 7000 in number, after which the Russians gave up the attack. The French lost 939 out of a total of 7000; the English some 2357 killed and wounded; and the Russians nearly 11,000.

INQUISITION. When certain sects after 1100 became troublesome to the church, the Inquisition was set up. In 1231 it was taken under the ecclesiastical law, and judges were often appointed from the Dominicans. Innocent IV, in 1252, provided for stern measures against heretics, and other popes followed with similar bulls. Though first introduced into Spain in 1237, not until Torquemada in the reign of Ferdinand and Isabella did it take on its sternest character in 1478. After 1500 courts were set up in Mexico, Peru, and other parts of the New World. In 1542 Pope Paul III established a Holy Office, or court of appeals in Rome to review cases of violation of church law. Before 1700 in Spain the severity of the Inquisition was greatly abated. Charles III forbad capital punishment without royal warrant, and after 1770 even royal sanction was required for an arrest. King Joseph Bonaparte abolished the Inquisition in Spain in 1808, but it came back with the Restoration, was suppressed in 1820 by the new constitution, and again was in part revived in 1825, to be ended in 1834. In Rome and the Papal States, the Inquisition seldom led to death of the offender. In England but one case is on record, that of the trials of the Templars.

INTERNATIONAL LAW. Relationships and obligations of nations to each other, in both war and peace, have been summed up in sets of principles called international law. Hugo Grotius gave the subject deep study and much impetus in 1625. Hundreds of treatises have appeared since then, all seeking to define the subject more clearly. In 1873 the Institute of International Law was founded, the leading American advocate being David Dudley Field. The Second Hague Conference established some regulations for conduct of nations in war. Following several initial conferences, the first for the codification of international law met at the Hague in 1930. Conflict of nationality, double nationality, and no nationality received considerable attention. A committee was appointed to form declarations as to various subjects for consideration at the next conference. In 1928 at Havana the sixth such conference for American States was held, followed by investigations by three committees appointed to consider codification of international law, private international law, and uniform legislation.

IONIANS. Inhabitants of twelve cities in Asia Minor around the Aegean Sea, perhaps founded by one of the four chief peoples of Greece before 500 B. C. Their language and customs resembled those of Attica. Known for their wealth, artistic culture, and also for their effeminacy, they were conquered by Croesus, king of Lydia (he of the great wealth) about 550 B. C. Next the Persians ruled them, as well as Lydia itself, and after a revolt about 500 King Darius made the Ionians increase their tribute to him. Athens freed them after the first Persian wars, but later they again became tribute to Persia until the time of Alexander the Great. The Homeric poems speak of the Ionians as in Attica, and Herodotus placed them in the northeast of the Peloponnese. In Roman times they formed part of the empire of the East.

IRELAND. Little is known of the Emerald Isle before 350, when the men from Ireland began to trouble the Romans in Britain and even as far as Gaul. St. Patrick, who was probably born in Scotland, escaped from slavery in Ireland about 430, went to Rome, and came back to try to Christianize the inhabitants. Before the year 600 monasteries flourished, the learning of Irish monks was known far and wide, and the arts reached a high stage of perfection. After 200 years of raids on the east coast, the Danes were driven off in 1014. Some of the English princes laid claim to Ireland as early as 1150. After his visit to Ireland in 1172, Henry II distributed some of the land to Norman nobles, and the struggle for the soil began to bother the Irish. By the time of Henry VII a considerable part of Ireland was in the hands of immigrants, many of whom had married Irish girls. In the early part of the 14th century, the Scottish champion, Robert Bruce, tried to expell the English from Ireland. During the Wars of the Roses, the Irish sided with the Yorkist faction. Henry VIII destroyed the Irish monasteries, and in 1451 assumed the title of king over Ireland, but the country was not yet subdued. During the reign of Elizabeth, the forces of the Earl of Tyrone (Red O'Neill) fought two great English armies, and much of the land was laid waste. James I confiscated many Irish estates, Cromwell sent over an army in 1649, and William III, in the Battle of the Boyne in 1690, defeated James, pretender to the throne. Patriots like Robert Emmet, in his abortive rebellion, Daniel O'Connell, with his eloquence, and even Gladstone, with his proposal to give home rule in Ireland in 1886, all tried to help the cause of the Irish people. John Redmond in 1900 and men like de Valera recently served to bring the cause to a focus. See *Irish Free State.*

IRELAND, LAND QUESTION IN. Before 1800 a system of *absentee landlordism* grew up in Ireland. Much of the land was owned by English families, who never lived in Ireland, and some never saw their estates there. Factors or agents wrung from the tenantry the highest possible rentals. It was almost impossible for tenants to buy land, or to pay for their improvements on the tenant farms. Army officers and others often obtained possession of land while on temporary duty in Ireland. In 1727 a tax was placed on those who owned the land, but did not live in Ireland. This helped somewhat to change conditions, but gave little relief. About 1850 demands increased for fair rents, free sale of land to tenants, fixity for tenure for those who could not buy outright. Most of these demands were realized in 1881. In 1885 another act was passed whereby money was lent to tenants to purchase land. By 1921 nearly two-thirds of the soil had passed to actual residents of Ireland, mostly to the actual tenants. Another troublesome question was that of tithes for the support of the Church of England. Most of the residents in the south of Ireland are Roman Catholics, but they had to pay, until 1868, for the support of the English Established Church. In 1868 this arrangement was abolished. Ireland suffered from two great periods of famine and other distress,—from 1845 to 1851, when over 1,000,000 emigrated to other countries; from 1877 to 1880, when internal strife, troubles with England, failures of crops, and congestion of population caused terrible suffering in some districts.

IRISH FREE STATE. On Dec. 6, 1921 a treaty was signed between Great Britain and the leaders in

the south of Ireland who had proclaimed a republic in 1919. One year later the Irish Free State Act made five-sixths of the island into a separate country with dominion status. Dublin is the largest city and the capital. Provinces making up the new Irish Free State are Leinster, Munster, Connaught, and part of Ulster. Six counties in the north declined to join with these, and continue as North Ireland, a part of Great Britain. Prof. Eamon de Valera, leader of the Fianna Fail or nationalist party, which has worked for a republic, became President of the Executive Council of the Irish Free State in 1932, succeeding William T. Cosgrove, who had served since 1922. When the new party in power refused to carry out certain terms as to land purchase in 1932, Great Britain placed a tariff against Irish goods, and this was followed by a similar one in Ireland, which brought protests from various parts of the British Empire. The Irish have made some attempt to revive the ancient Gaelic tongue as the official speech.

IROQUOIS. Highly developed group of Indians in New York state who had a confederation at first of five nations, the Mohawks, Oneidas, Onondagas, Cayugas, and Senecas, dwellers in the finger lake district. In 1715 they admitted the Tuscaroras. All the scores of other tribes in the north to the Mississippi were influenced by the Iroquois. After the Revolution and the settlement of the land by whites, they moved away,—the Mohawks to the shores of the Ontario and Erie in Canada; the Cayugas to different places; the Oneidas to the region about Green Bay, Wisconsin; the Senecas to western New York; but the Onondagas, in part, remained near the present Syracuse, where some descendants are found on their reservation today. Some Onondagas also went to Canada. Today the Iroquois number about 5000, one-fifth their number when the white man dispossessed them. Longfellow's *Hiawatha* describes the romantic side of Indian life.

ISLAM. Name used by the faithful for Mohammedanism, which was founded by the prophet Mohammed in the 7th century of our era. The Islamites recognize Adam, Moses, Noah, Abraham, Jesus, and Mohammed as greatest of 313 prophets. They believe in one God only, in angels, genii or good and evil spirits, in the resurrection, in certain fast days, in praying five times a day, with the face turned toward Mecca, and in warring against infidels of other faiths. They prohibit drinking of intoxicants, eating of swine or any animal killed by accident, eating, drinking, smoking, and all indulgences during daylight for one month a year. The Koran is their law and Bible, and the Caliph is the head of the faith. Formerly the caliphate was joined with the sultanate at Constantinople. Kemel Ataturk in 1924 allowed the caliphate to lapse. During and since the World War the Islamites of Arabia, Turkey, and other countries have somewhat drifted apart.

ISONZO, BATTLES OF THE. Five chief battles between the Italians and Austrians were fought in the vicinity of the Isonzo River, then in Austria, and now in northern Italy. The first battle, opening on June 5, 1915 gave Sagrado, Castelnuovo, and the bridgeheads there, to the Italians. The second battle in July resulted in other gains in the Carso Plateau. Repeated attacks from October to the end of 1915, after the third battle, left Gorizia, the objective, uncaptured. In the spring of 1916, Gen. Cardorna held the Austrian-German forces in check, and in August the fourth battle ended with Gorizia in charge of the Italian army. In May 1917, the Austrian front for ten miles was broken, and it seemed as if nothing could keep Trieste from falling. A vigorous counter-offense by the Austrians won back all the Italian gains. The Italian second army at Caporetto in October was terribly beaten. Italy had sacrificed 500,000 men in these various engagements. Nothing else was gained until the Austrian collapse in the early fall of 1918, which gave the territory to Italy.

ISRAEL. See articles on *Hebrews* and *Jews*.

ISSUS. Here near the sea in Asia Minor, Alexander the Great in 333 B. C. gained a great victory over the Persians led by Darius. The field of battle was surrounded by mountains and entered from three passes. Alexander allowed the Persians to outwit him by entering through one of these passes so as to endanger his communications. Thus he had to attack Darius. This he did by stretching out his front a mile and a half, resting his left wing on the sea shore and the right on the hills. He overwhelmed the enemy by rushing his men forward on a run, but exposed his right wing to danger, covering this by bringing up his reserves. Thus he overcame by knowing how to arrange his phalanxes for battle. Diodorus and Plutarch assert the Persians lost 110,000 men and Alexander but 450.

ITALY. Modern Italy resulted from attempts at various periods to bring the peninsula under one rule. When the empire of the West broke up in 476, Odoacer styled himself king of Italy, but he was slain by the Goths under Theodoric in 489. In turn, Teias, last of the Gothic kings, perished in 553, when the Lombards came into the north and ruled there until Pepin's son, Charlemagne, was crowned in 800. Until 1043 the Greeks held most of southern Italy. After 1000 the counts of Tuscany became dominant in the central provinces. Frederick Barbarosa came down from Swabia in 1154 and suppressed a new Roman republic. In 1220 Frederick II was crowned emperor of Italy, Sicily, Germany, Sardinia, Burgundy, and Jerusalem, but when Manfred, one of his successors, was slain in 1258, the Swabian line ended. For a long time the quarrels between Guelphs and Ghibellines kept much of the country in turmoil and frequent changes. Rudolf of the Habsburgs established the Pope as temporal sovereign over districts in central Italy. From 1300 on for two centuries, Naples, Milan, Florence, Venice, and the Pope divided much of Italy among them. The kingdom of Aragon and the Two Sicilies dominated in south Italy from 1435 for several decades. Various petty divisions and princes followed, until the coming of Napoleon to power in 1797. France was prominent in the north until 1512; Venice rose to power, ending in 1715; and the great noble families like the Medici were at last curbed.

Napoleon partitioned Italy, but the Congress of Vienna restored the conditions of 1804. In 1848 Mazzini came near achieving national unity, but Tuscany spoiled the plan by refusing to join with Rome. In the same way, Garibaldi subdued Naples, but little was accomplished. Finally Victor Emmanuel of Sardinia, assisted by Cavour, declared war on Austria in 1859, but the latter retained control of Venetia. The central provinces united in 1860, and in 1861 Victor Emmanuel was proclaimed king. In other campaigns, Garibaldi won Naples, with the papal states, and the first Italian Parliament met in 1861. Finally, in 1870 all objections terminated, and Victor Emmanuel was proclaimed at Rome as ruler of united Italy. He died in 1878, was succeeded by his son, Humbert I, assassinated in 1900, and succeeded by his son, Victor Emmanual III. After war with Turkey, Tripoli came under full sway of Italy in 1911. The Fascists and Mussolini came into power on Oct. 30, 1922. In 1929 Italy and the Pope signed a Lateran Treaty by which temporal power was restored to Vatican City and state. In 1936 Ethiopia was conquered and proclaimed Italian territory by Mussolini.

JACKSON, THOMAS JONATHAN (1824-1863). Better known as Stonewall Jackson, after the battle of Bull Run, when a Confederate general remarked that he stood like a stone wall in the midst of danger. He was a graduate of West Point, but resigned from the army in 1851 to become a professor at the Virginia Military Institute. He enlisted in the army of the South, became a major general in 1862, and lieutenant general a year later. Jackson forced back two federal armies in the Shenandoah Valley, relieved Richmond when the northern army was almost in sight of the city, virtually saved Lee from utter defeat at Antietam, and on May 1, 1863 drove Hooker's force away from Chancellorsville into the Wilderness. The next evening he was on the way back from an exploring party, when his group was mistaken for the enemy, fired upon, and Jackson received three wounds. Pneumonia followed, and he died eight days later, May 10, 1863. His skill in tactics, bravery under fire, and popularity among his men made his loss a great blow to the Confederacy.

JACOBINS. Members of a club or group, so named because they met in a Jacobin convent, during the French Revolution. The group was formed in 1789, was moderate at first, but gradually became more and more extreme in its demands, after the organization of hundreds of branches throughout France, and after it controlled the election of many members to the Assembly in 1791, which succeeded the National Assembly. It brought about the death of the king, the humiliation of the Girondists, and led to many of the deeds of the Reign of Terror in

1793. Marat, Danton, and Robespierre were the leaders in turn, but the Jacobins broke up after the death of Robespierre in 1794.

JACOBITES. This name was given after 1688 to the followers of the Stuart claimants to the throne, best known of whom was "Bonnie Prince Charlie." Most of the leaders were Scots, two of whom were executed after the battle of Preston in 1745, and five after the battle of Falkirk. The name comes from the Latin *Jacobus* meaning James. Little was done to restore James II after his exile to France in 1688, but his son, who would have been James III, commonly called the "Old Pretender," landed in England after the rebellion in the north in 1715, but he was sent back to France. "Bonnie Prince Charlie," or the "Young Pretender" in 1745 at first gained some victories, but the next season brought defeats, and doomed once for all the Stuart claims.

JAMESON'S RAID. Dr. Leander S. Jameson (1853-1917), was born in Scotland, but had gone to Kimberly in South Africa for his health. There he associated himself with Cecil Rhodes, builder of the empire for the South African Company. In 1895 he exceeded his authority, when he invaded the Transvaal with 600 men, who had been placed with him on the borders by request of Rhodes. After a few days Jameson surrendered to the Boers. President Paul Kruger turned him over to Great Britain for trial in London, where he was sentenced to 10 months in prison, cut short somewhat by illness. He returned to South Africa, fought against the Boers in 1899-1900, from 1904 to 1908 was premier of Cape Colony, and in 1911 was created a baronet. He was also director of several business enterprises.

JAPAN. History is somewhat obscure before the coming of Buddhism from Chosen (Korea) about 552. Certain traditions seem to show the Japanese are a mixed race, and the Ainus at present in the north represent early inhabitants. Buddhism was established by the government in 624 and continued as state religion until 1871. China greatly influenced Japan before 700. After 1000 much strife and change came about, and feudalism was firmly established, with barons in independent power. Iyeyasu defeated them in 1600, set up his seat at Yedo, and his successors ruled until 1868. In 1543 Portuguese traders visited Japan, but in 1624 all foreigners and especially Christianity were banned. Commodore Matthew C. Perry steamed into Urga in 1853 with a squadron of American ships. On March 31, 1854 the shôgun of Japan signed a treaty opening five ports after they had been closed to foreigners for 216 years. So began the modern period in Nippon, or land of the Rising Sun, as the Japanese call their country. In 1874 Japan punished pirates at Formosa, and in 1879 annexed Chee Loo Islands, despite the protest of China. Parliamentary government was established in 1891.

After defeating China in the war of 1894-95, Japan sought to take as her reward Port Arthur, Formosa, and a large indemnity, but Russia, Germany, and France prevented the retention of the first of these. Japan helped the allies in the siege of Peking in 1900, concluded a treaty with Great Britain in 1903, and overcame Russia in the war of 1904-05. Japan guaranteed the territorial integrity of China in 1907 and the *status quo* in Manchuria in 1910, but in the same year annexed Korea. During the World War Japan declared against the Central Powers, took Kiao-Chow, a German protectorate at Shantung, the Marshall and other islands, and assisted with her fleet in the Pacific and with her patrols in the Mediterranean. The League of Nations gave Japan a mandate over all former German territory north of the equator, and in 1920 restored Kiao-Chow to China.

The islands have been subject to earthquakes. Two very disastrous ones in modern times occurred in 1891, when over 10,000 met death, and another in 1923, followed by a tidal wave and a fire in Tokyo and Yokohama, largest of Japan's cities. Fifty square miles of territory were affected, 150,000 killed outright, 450,000 houses completely burned, with 150,000 more washed away or thrown down. Tokyo spent $375,000,000 in restoring the city, 75% of which had been completely wrecked. Japan suffers from congestion of her people, lack of arable lands, and burdensome expenses for military equipment. Seeking an outlet on the continent, Japan aided in the breaking away of Manchuria from China, and in 1933 declared the north province of Jehol part of the new Manchukuo. Discussions of these actions in the League of Nations led to the withdrawal of Japan. Some communistic activities have also given much concern to the government.

JAPANESE EXCLUSION. See *Exclusion Acts.*

JAVA. Before 500 little is known of this island. The faith of Islam was introduced about 1400, the Dutch obtained a foothold in 1610, and gradually extended this until by 1745 most of the northeast coast was controlled by merchant interests of Holland. In 1808 Bantam was joined to the Dutch holdings in Java, but the French and British objected. In 1811 Bantam went to the French, and from 1811 to 1817 all of Java was controlled by the English. Since then Dutch commercial interests have continued to reap wealth from the fertility and extensive resources of Java.

JAY TREATY. After several months of negotiations in England, John Jay signed a treaty on Nov. 19, 1794. At the close of the Revolution several subjects were left unsettled. The new American government had several complaints against Great Britain. The British garrisons had not been withdrawn from the northwestern frontiers along the Great Lakes; property destroyed in the Revolution and many slaves carried away by the army, had not been compensated for; and England still continued to interfere with American shipping on the high seas. The impressment of sailors was a major cause of the War of 1812. Jay secured several agreements from the British. Some of these were that England should evacuate the northwest borders on June 1, 1796, that commissioners later should settle boundary disputes, that United States might trade in the East Indies, but could carry only native products to the West Indies and take from there only similar articles, and at no time could American vessels carry sugar, molasses, coffee, cocoa, or cotton to any part of the world. Jay failed to secure any concessions as to rights of neutrals, as to slaves that had been carried out of the country, and as to searching American ships for deserters from the British vessels. The Senate of the United States, in special session, on June 24, 1795 ratified the treaty, save in regard to West Indian commerce. Loud protests arose in France and America, but in time the treaty provisions gained in favor. Jay was blamed more for what he failed to obtain than for the actual provisions of the treaty.

JELLICOE, JOHN RUSHWORTH (1859-1935). Created Viscount of Scapa after the World War. Admiral Jellicoe was in the Egyptian war in 1881, was wounded in the expedition to relieve Peking in 1900, and commanded the British Grand Fleet in the Battle of Jutland on May 31, 1916. He became First Sea Lord of the Admiralty in 1916, organized the anti-submarine division in 1917, and from 1920 to 1924 was Governor General of New Zealand. Lord Jellicoe was decorated by many nations, including the United States with the Distinguished Service Cross.

JERUSALEM. Little is known of this city before 300 B. C., after which the history is that of the Biblical narrative until near the Christian era. From the beginning to the Babylonian exile, some of the disturbances include the taking of the city after Joshua's rule, 1400 B. C., by David in 1046 B. C., the unsuccessful siege by Sennacherib in 701 B. C., the total destruction of the city in 586 B. C. under Zedekiah. After fifty years of exile, Cyrus allowed the Jews to return in 536 B. C., and for three generations they continued to assemble in Palestine. Then came the centuries of internal strife, and the rule by Persians, Macedonians, Syrians, Egyptians, and Romans until in 70 B. C. when Titus destroyed the city once more. (See under *Hebrews* for history of the people of early Israel). Until 614 of our era monasteries, churches, and other monuments were spread over the country in great profusion. Then the Persians destroyed about all of these, the most splendid of which was Constantine's Basilica. Next the Moslems ruled from 637 to 1099, during which period notable mosques adorned the city, and the few remaining worship places of the Christians were taken over or destroyed, including the Church of the Holy Sepulchre. The third period of Christian times, ended in 1244, after the Roman empire of the East had ruled and the Crusades had all failed to hold the city. From 1244 to 1917 again the Mohammedans occupied the land.

After 1858 a new city grew up outside the old walls to the northwest. Here many noble churches

and other buildings were erected. During the World War, General E. H. Allenby of the Egyptian Expeditional Forces defeated the Turks in the battle of Samaria in 1917, took the city of Jaffa, the seaport 54 miles from Jerusalem, and gradually worked his way inland. On Dec. 9, 1917 the mayor surrendered the city to the British. Jerusalem had been taken 17 times before in her history, but never, until Allenby came without the firing of a gun or the displacement of a stone in the ancient walls. See articles on The *Jews* and *Palestine*.

JEWS. When the Hebrews returned from the Babylonian captivity, they came to be called Jews. At different points, the Jews threatened to throw off the yoke of Rome, until in 135 A. D. the revolt under Bar-Cochba was put down with incredible inhumanity, the land was laid waste, and the Jews again were driven from their Holy City. Over 1000 cities and towns were destroyed, Jerusalem was closed to the faithful, and heathenism reigned where the word of God was once enlightenment, until the time of Constantine in 330. During the following centuries, the Jews in many lands suffered untold persecutions, but somehow they usually prospered in worldly fortune. Throughout most of Europe the Jews were alternately welcomed and later expelled from many countries. Lands when they were treated favorably were in Italy, Sicily, and Sardinia in the Middle Ages; in the city of Rome in most periods, while the Mother Church alternately favored and repressed them; in Moorish Spain, where they rose to wealth and influence, followed by terrible persecutions in other parts of the empire; in Poland from the middle of the 14th to the 16th century; in France after the era of Napoleon (1806); in Prussia from 1812 to recent days; in Denmark since 1814; in some districts of the near East; and in practically all British dominions, and in many countries outside Europe.

The Jews suffered most in the Byzantine empire; among the Franks in the 6th and 7th centuries; in the Rhineland at the time of the first Crusade (1096), when thousands were slain; in England, from whence they were expelled from 1290 to about 1655 under Cromwell; in parts of Spain, where the Inquisition (1478) was set up against them, and they were expelled from the kingdoms of Ferdinand and Isabella in 1492; from Portugal, 1496, from Navarre, 1498, from Naples finally in 1548, and from Milan in 1597; in the 17th and 18th centuries in Poland, after enjoying uncommon favor under Casimir the Great; and under Frederick the Great in Prussia (d. 1786) and in Germany after 1930. After the World War much was done to insure the Jews homes in Russia, Poland, and Rumania, and the Zionism movement aimed to settle them again in Palestine. Before 1928 some 35,000 families had been given homes in southeastern Russia and the Crimea. The Soviets gave $10,000,000, a sum matched by a like amount in America, half of this given by Julius Rosenwald. See article on *Zionism*, and *Palestine*.

JOFFRE, JOSEPH JACQUES CESAIRE (1852-1931). Marshal of France, studied military engineering at the Polytechnical School of France, 1868; left to fight in the Franco-Prussian War; and returned after the peace was signed. Lieutenant in 1872, captain in 1876, brigadier general in 1901. Served in Tongking, Dahomey, Madagascar campaigns, and organized the defenses of Formosa in 1911. At the outbreak of the World War, he was chief of the general staff of France. On the birthday of Lafayette, he ordered the French to halt their retreat and stand to face the Germans, in consequence of which the latter were thrown back at the Somme, and Paris was saved. He was general commander of the French armies from 1915 to 1917, when he came to the United States as a member of the French high commission. Marshal Joffre gained considerable distinction in mathematics. Member of the French Academy from 1918.

JOHNSTON, JOSEPH EGGLESTON (1807-1891). Distinguished Confederate general, known for wisdom and reliability, who fought in the Black Hawk and Seminole Wars, and in the battles around Mexico City in the War with Mexico, receiving two severe wounds and being advanced three degrees in rank for bravery. He resigned from the federal army in 1861, joined the southern cause, won the first notable victory at Bull Run (Manassas), and was severely wounded at Fair Oaks, May 31, 1862. He commanded the army in Mississippi, then that in Tennessee, and stood against Sherman in the campaigns in the Carolinas. For a brief time he was superseded by General Hood, but Lee restored him in Feb. 1865. After the surrender of Lee, President Davis authorized him to surrender on April 26, 1865. In 1874 he published a narrative of military operations of the Civil War; in 1887 he was elected to represent the Richmond, Va., district in Congress; and from 1887 to 1891 he was a commissioner of railways under President Cleveland.

JOLIET, LOUIS (1645-1700). Explorer of the region of the Mississippi River, who was born in Canada, and was commissioned by the French governor, Frontenac, to learn the general course of the Mississippi. Setting out with Father Marquette, and five others, he proceeded from Green Bay, Wis., in 1673, then up the Fox River, and portaged to the Wisconsin, and then on down the Mississippi, until they came to the mouth of the Arkansas. On the return Joliet covered the Illinois-Chicago portage route to Lake Michigan. Near Montreal his canoe was overturned, and some of his papers were lost, but he later wrote a short account from memory. He made one other voyage, this to Hudson Bay and Labrador in promotion of the fur trade.

JONES, JOHN PAUL (1747-1792). American naval hero, the son of John Paul, a Scotch gardener. From the age of 12 he followed the sea, first on a voyage to Virginia, then for a brief time as a midshipman in the British navy, and on a slave ship to Jamaica and Guinea. When he was 21 he left this trade in disgust, took a ship to England, and on the way, when both captain and mate died, brought the boat to harbor safely. The owners of this ship gave him a command on two voyages to Tobago, after which he made one for himself in his ship *Betsey*, which he had purchased. The crew mutinied, and he escaped to the United States, living in obscurity for a time. In 1775 he appeared under the name of John Paul Jones as senior lieutenant in the new Continental navy. He fitted out and commanded the *Alfred* on a voyage to the Bahama Islands, and in 1776 did convoy duty for ships entering New York. Then as captain he obtained a roving commission. In six weeks his ship, the *Providence*, captured six brigantines, one ship, one sloop, six schooners, and destroyed two others. Some of his other services were carrying news to the French people of the surrender of Burgoyne; a raid on the English coast; defeat of the British warship *Drake* near Belfast; and the memorable battle of his *Bon Homme Richard* (named in honor of Franklin's *Poor Richard*) with the British *Serapis*, but his ship sank the following day. He died in Paris, was buried in St. Louis Cemetery. In 1913 his dust was brought to Annapolis, Maryland, and interred in the chapel there.

JUTLAND, BATTLE OF. This greatest naval battle of the World War occurred on May 31, 1916. Admiral David Beatty, while cruising in the North Sea, sighted the advance guard of the German fleet off Jutland. He began firing at a range of some 20,000 yards, shortened later to 16,000. Somewhat later the Germans withdrew to 20,000 yards distance. Then the entire German battle fleet was seen behind a smoke screen coming to the defense of the first line of cruisers. Admiral Jellicoe was some two miles behind the squadron of Beatty with four cruisers of the *Queen Elizabeth* type and other craft. Beatty turned 16 points so that after that his ships were running for some time parallel to the German fleet and going in the same direction. Just before and at the turning, three British cruisers were sunk by mines, and one of the Germans was disabled by fire from the *Queen Elizabeth*. Beatty continued to delay closing in so that Jellicoe could have time to arrive. Visibility became poor, and night was coming on. Before Admiral Scheer withdrew the German fleet southward, the British were in touch with them twice again. For two hours later Beatty continued in the dusk. Trace of the Germans was lost, and they could not be located the next morning. The German fleet never again appeared in the North Sea, until they came out to surrender in 1918. The Germans at Jutland lost 11 of 110 ships engaged, and the British 14 out of 149. The loss in men was, for the Germans, 2863, and for the British, 6617.

KEARNY, PHILIP (1815-1862). An American soldier; born in New York City; graduating from Columbia in 1833, was appointed lieutenant of first dragoons (1837), and in 1839 was one of the three officers sent by the United States government to

Saumur Cavalry School; in 1839-1840 served as a French volunteer against the Algerians and Arabs; as a captain of cavalry he fought in the Mexican War (1846-1847). In 1859 he served with the French in Italy, receiving the cross of the Legion of Honor for his great bravery throughout this campaign. He reëntered the U. S. army in May, 1861, at the beginning of the Civil War, as a brigadier general of volunteers; took a conspicuous part in the Peninsular campaign and the second battle of Bull Run, and was killed while reconnoitering at Chantilly (September 1, 1862).

KEARSARGE-ALABAMA. During the Civil War, the federal government built at Portsmouth, N. H., a small warship, which, under Captain John A. Winslow, was sent to the coast of Europe to watch for Confederate privateers in 1862. The *Alabama* was sighted in the harbor of Cherbourg, France, and the *Kearsarge* was invited to a combat. Both boats moved into the English Channel, where on June 19, 1864, the *Alabama* was disabled, struck her colors, and many of the crew were drowned before they could be rescued. See article on *Alabama Claims.*

KELLERMAN, FRANCOIS CHRISTOPHE, DUKE OF VALMY (1735-1820). A French general born near Rothenburg, Bavaria. In 1752 entered the French army; served throughout the Seven Years' War, and in Polish expedition of 1771. He warmly espoused the cause of the French Revolution, and in 1792 was leader of the Army of the Centre. On September 20, 1792, repulsed the Prussians and delivered France in the famous victory of Valmy; afterwards commanded the Army of the Alps, but was imprisoned for a year on an alleged charge of treason against the republic, and was liberated only by the fall of Robespierre; created marshal of France (1804), and duke of Valmy (1809). After 1812 led the reserves in Germany, and at the restoration attached himself to the Bourbons; created a peer in 1814.

KERENSKY, ALEXANDER. (1881-), Russian moderate socialist leader, born in Siberia, and a member of the Duma in 1912 and 1917. As a lawyer, he always championed the cause of the poor and oppressed. After the revolution of 1917, he became minister of justice in the coalition cabinet, and in July was made premier. He sought to arouse a spirit to continue the war against the Central Powers, checked an uprising of General Kornilov, and counselled a moderate course. The older Russian military class opposed his efforts, and the newer Bolshevik party displaced him in November. Then he visited the capitals of several European countries and settled in Paris as a newspaper editor. Kerensky toured the United States in 1928.

KIDD, WILLIAM (?1650-1701). British navigator and pirate hunter, who assisted the American colonies in the French and Indian War. In 1691 New York City made him a present of $750. Later a London company sent him to Madagascar, a stronghold of French pirates. Word came back that Kidd himself had turned pirate. After two years he returned to the West Indies, having left his ship *Adventure* at Madagascar, and on July 1, 1699 Kidd arrived in Boston. He wrote to Governor Bellomont in New York, who had given him a commission in 1696, that he could justify all his acts. He also sent the governor some of his captured booty. Kidd was arrested, sent to England for trial, and was hanged on May 23, 1701. Fabulous stories of loot cached at different points doubtless grew out of the finding of some treasure on Gardiner's Island off the east end of Long Island. In 1911 Dalton published his *The Real Captain Kidd: A Vindication.*

KING GEORGE'S WAR. Part of the struggle in both Europe and America over colonial possessions and settlements. Following the War of the Austrian Succession, because Frederick the Great had taken some of the territory considered a part of Austria in the time of Maria Theresa, Great Britain and France began a struggle between themselves in 1744. In Louisburg, Nova Scotia, France had built a strong fortress at enormous cost. This was to protect the fisheries along the coast. In 1745 this was taken by American colonial troops under Sir William Pepperell, assisted by a fleet from Great Britain, and again in 1758 by a combined land and sea attack. Some minor frontier fights and naval engagements completed the war, so far as American colonists were involved. When peace came in Europe, the British gave back Louisburg in exchange for the city of Madras, India.

KING PHILIP'S WAR. For over forty years Massasoit, chief of the Wampanoag tribe of Indians, was a faithful ally of the Pilgrims of Plymouth Colony. His second son, Philip, succeeded his older brother and in 1661 renewed the treaties which both sides had kept scrupulously. Ten years later, influenced by the growing encroachments of the whites on Indian lands, he gathered some 10,000 warriors into an alliance. In 1675 King Philip and his braves destroyed thirteen towns and killed 600 white persons. As a reprisal, in December Governor Winslow gathered 1000 men, burned the fort of the Narragansetts, killed 600 warriors and 1000 women and children. In the following summer, Philip's squaw and son were captured, and later he was surprised and met his death.

KING WILLIAM'S WAR. So named because it followed after the British had rejected the claims of James II, and seated William and Mary on the throne in 1688. Louis XIV of France took up the cause of James. Meanwhile, French and English clashed in North America, and so began an intermittent struggle that lasted until after the final defeat of Napoleon in 1815. From Quebec the forts of France stretched down to the Great Lakes and then to Pittsburgh and across to the Illinois and Maumee Rivers. Sorties were made from these strongholds for such attacks as that at Schenectady, N. Y., in 1690, Deerfield, Mass., in 1704, with other raids into New Hampshire and Maine. The colonists sent Sir William Phipps northward to the strongholds of Nova Scotia (French Acadie), and he destroyed the fortifications at Port Royal, but failed to conquer Quebec, which was the gateway to the western positions. Next, the French replied with reprisals and outrages at York and Castine, Maine, and other points, culminating in the terrible massacre at Haverill, Mass., in 1697. The peace of Ryswick ended hostilities in Europe and temporarily in the colonies.

KITCHENER, HORATIO HERBERT, EARL KITCHENER (1850-1916). British field marshal, who commanded the Egyptian cavalry under Lord Wolseley (1882-84) during the expedition for the relief of Chinese Gordon at Khartum. He captured the city, and in 1898 was made governor of the Sudan and a British peer by Queen Victoria. In 1899 he was aid to Gen. Roberts in the South African campaign, after which he arranged the terms of peace. Parliament granted him a large purse, and King Edward made him a viscount. Later he occupied important posts in India and Egypt. When the World War broke out, Kitchener was recalled from Egypt and put in charge of all British forces. He found that Britain had but 200,000 men ready for foreign service. In 22 months he raised over 5,000,000 men and equipped them for the lines in France. While on a voyage to Russia, Kitchener and his staff were lost in the sinking of the cruiser *Hampshire*, which probably hit a mine on the evening of June 5, 1916.

KNOX, HENRY (1750-1806). American general and cabinet member, who was a close friend of Washington. He tried to prevent the clash between the British soldiers and the mob in the Boston Massacre; opened a bookstore in Boston in 1771, read much on military tactics, fought at Bunker Hill, and planned the defenses about Boston. For skillful service at Trenton, N. J., he was made a brigadier general and put in charge of the colonial artillery. He became a major general at the close of the Revolution. He was the founder and first secretary-general of the Society of the Cincinnati, composed of French and American officers of the Revolution, and now of their descendants. Under Washington he was first Secretary of War, 1785-94. He urged a national militia to be made up of all men from 18 to 60.

KOREA (CHOSEN). Both Chinese and Korean accounts place the founding of this country about 2333 B. C. by Dan Koon, whose dynasty continued for over 1000 years. In 108 B. C. Korea became part of the Chinese empire. Three centuries later culture of China was transmitted through Korea to Japan. In 913 Wang unified the country, naming it Korai; his successors ruled until 1392. Jenghis and Kublai Khan caused the Wang dynasty much trouble. Two centuries later the Japanese sent a large army into Korea, but China sent forces to oppose them, and six years of terrible slaughter followed, and the Manchus and Japan dominated for two centuries until 1790. Korea welcomed mission-

aries and made religion unrestricted at an early date. The Sino-Japanese War in 1894 was caused by troubles as to conflict of interests in Korea. On Oct. 8, 1895 troops, aided by Japanese, invaded the palace, killed the empress, and took the Korean emperor captive. He later escaped to the Russian legation for protection. Japan assumed the position of advisor in 1904, but guaranteed the integrity of the imperial family. In 1907 after appealing to the Hague Conference, the emperor resigned in favor of his son. Japan annexed Korea and changed the name to Chosen in 1910.

KOSCIUSKO, THADDEUS (1746-1817). Polish commander, who came to America in 1776, won fame at New York and Yorktown, was made a colonel, and in 1783 was thanked by Congress and presented with a pension and the privilege of citizenship. He took a leading part in Poland in the war that followed the announcement of a new constitution. In being essentially democratic and humanitarian much in advance of his day, he was opposed by the older Polish nobility. On March 24, 1794 he took an oath in the presence of hundreds of people that he would defend Poland against the Russian and Prussian allies. Failure of his subordinates, scarcity of men, and tactics of the enemies put Kosciusco at a great disadvantage. He was wounded, carried unconscious from the field, and taken a captive to Russia, where he was released two years later. In December, 1796, he came to America, and lived in Philadelphia for a year and a half. He refused a commission under Napoleon, settled near Paris, and at various times tried to obtain consideration for Poland. Alexander of Russia and the Congress of Vienna both failed to heed his pleas. Kosciusco was buried in the cathedral of Cracow.

KUBLAI KHAN (*koo-bli kahn*) (1216-1294). Emperor of China; founder of the twenty-third Chinese dynasty; became grand khan of the Mongols (1259). In 1260 he was invited by Si Tsong to aid in the expulsion of the Kin Tatar dynasty. In response Kublai invaded China and established his capital at Kambalu. Completed the conquest of southern China (1279), thus becoming master of the whole kingdom. He was a patron of literature and encouraged industry, agriculture, and commerce. He invited the pope to send Christian missionaries to China, but this was not done. Marco Polo spent 17 years at Kublai's court.

KU KLUX KLAN. From 1866 to 1896 a secret organization flourished in the United States, with the purpose of terrifying the negro. Members were not known in public, where they appeared wearing hoods, and much violence in consequence developed. In 1871 Congress enacted legislation which had the effect of curbing the Klan. In 1915 at Atlanta, Georgia, a similar form of Klan was organized, and by 1924 the membership was said to be 2,500,000, which in 1931 had declined to 700,000. Violence grew out of Klan activities in Texas, Oklahoma, western Pennsylvania, and in a few other places, but in Texas and Oregon the Klan wielded no little political power. Its revived form professed to curb non-Protestant and Negro influence.

KUT-EL-AMARA. While the British were campaigning against the Turks in Iraq during the World War, Kut-el-Amara was taken on Sept. 28, 1915, after a skirmish. After trying to dislodge the forces of General Charles Townshend, the Turks laid siege to the place, and for 143 days starved the British until, relief failing to arrive, they surrendered on April 29, 1916. Meanwhile, General Fenton J. Aylmer compelled the Turks to retire from one position after another, until on April 5, fresh troops arrived from the Gallipoli campaign, but the Turks again retired to a stronger position. General Frederick S. Maude, the new commander-in-chief, opened an assault in the middle of February, and on the 24th had so outflanked the Turks that the town of Kut-el-Amara again was in British hands. Thus the road was opened to the capture of Bagdad.

LABOR PARTY, ENGLISH. Politically a labor candidate in England was first nominated in 1857, but withdrawn before election time. In 1868 three candidates received small votes; in 1874 two were elected; two distinct labor candidates in 1892. Meanwhile, the Socialistic movement gained some headway, but no candidates were put forward. In 1883 the Fabian society was organized, and in 1889 a Scottish Labor Party, which in 1892 ran eight candidates. Liberal and Nationalist candidates were more successful, but Independent Labor broke away from any connection with them in 1893. In 1900 Keir Hardie, who had been elected as independent in 1892, won for the new Labor Party. By 1908, 42 seats were held by this group. The World War led to hesitation and indefinite plans during the time of the coalition government. In 1918 the Labor Party stood against Bolshevism, and in 1918, 61 candidates were seated; in 1922, 142; in 1923, 191. The Labor-Liberal combination defeated the Conservatives in Parliament on Jan. 21, 1924, and three days later a Labor government came into power, but was defeated on Oct. 8 by a combination of the two other groups in Parliament. From June 1929 to August 1931, the Laborites were again in power followed by a coalition cabinet. In a new general election, the Conservatives won most of the seats, and Stanley Baldwin again formed a cabinet, in which Labor and the Liberal Party were much in the minority. See *Trades Unions.*

LABOR UNIONS. See *Trades Unions.*

LADYSMITH, SIEGE OF. During the South African War, 1899-1902, the first important struggle was to hold Ladysmith against the Boers. Having suffered a defeat on Oct. 30, 1899, Sir George White, the commander, decided to hold the city. Sir Redvers Buller sent all his available troops to Natal for the relief, but on Dec. 15 in the battle of Colenso, on Jan. 24, 1900 at Spion Kop, and on Feb. 5 at Vaalkranz, he was unsuccessful in dislodging the Boers. Again attacking near Colenso, he at last worked his way to the city, which had suffered from famine, and once from a severe attack by the Boers on Jan 5, 1900, when the British lost heavily.

LAFAYETTE, MARIE JEAN PAUL, MARQUIS DE (1757-1834). French and American general, known for his democracy and friendship for all the oppressed, was left an orphan with magnificent estates at 13. He was a captain of dragoons when the colonists in America declared their independence. "At the first news of this quarrel," he wrote later, "my heart was enrolled in it." Silas Deane, the agent for America in France, promised him a commission as major general in 1776, but the king and his friends tried to keep Lafayette from going to America. He escaped from custody, joined his ship in Spain, and arrived in America when only 19. He saw the difficulty in claiming his commission, but Congress on July 31, 1777, accepted him and gave him "the rank and commission of major-general." From the start he and Washington became friends for life. He fought at Brandywine, at Monmouth, and was given a division to command. When England declared war on France, Lafayette secured permission to go back, where great enthusiasm awaited him. He returned to America in the summer of 1779, after being abroad for six months, and was given charge of operations in Virginia, where he was present at the surrender at Yorktown. Again he returned to France, became vice president of the National Assembly, and until 1792 took a prominent part in all legislation. In 1790 he refused the command of the National Guard of France. He was found to be out of sympathy with the Jacobins, fled to Liège, and was in prison for five years. In 1799 he returned to France. From July 1824 to September 1825 he visited the United States, was given $200,000 and a township of land. During the revolution of 1830, he again became prominent, this time as commander of the National Guard of France. His last speech urged consideration for the Polish refugees.

LAISSEZ-FAIRE (*lĕ-sā'-fâr*). From the French phrase *Laissez-nous faire* (in English, let alone), first used about 1680, in France a whole political philosophy developed. The idea expressed by Marquis d'Argerson in 1735, possibly sums up the attitude of many economists. He said, "to govern better, it is necessary to govern less." It was found then that, whenever government interfered, monopoly often resulted to individuals or groups, and the people suffered the effects. The doctrine came to mean, however, stabilization of prices, production of goods for the benefit of all concerned, maximum agreement between producer, worker, and consumer. *Laissez-faire*, as a principle, was considered the opposite of what is now called socialism, or government competition with private or individual agencies. Some of the later leaders in England were Bentham, John Stuart Mill; in France, Toqueville, Prevost, and their school of economists. Herbert Spencer strongly favored individualism as against collectivism,

In 1870 the movement reached its climax, after which the tendency was in the opposite direction.

LAKE CHAMPLAIN, BATTLE OF. (1) October 11, 13, 1776. The American fleet of 37 vessels commanded by Benedict Arnold encountered the British fleet of 38 well-equipped vessels under Captain Pringle, on Lake Champlain, near Plattsburg. When the fighting ceased at dark on October 11th, the badly damaged American boats broke through the British line and sailed for Crown Point. Carleton, with a squadron from Quebec, pursued the Americans, and on the 13th overtook them. Only six boats of the fleet escaped after these encounters with the British. (2) September 11, 1814. After General Prevost had been repulsed in his march toward Plattsburg, he led his troops toward Lake Champlain to support the British fleet. On September 11th the British squadron of 16 vessels commanded by Captain Downie met the American fleet of 14 vessels under Capt. Thomas Macdonough. After a severe fight of over two hours every British warship had surrendered.

LAKE DWELLINGS. From prehistoric times certain peoples have built their habitations upon platforms over lakes and streams. Such are now to be seen in the Orinoco and the Amazon in South America, in New Guinea and Borneo, and on the west and center of Africa. Herodotus describes some Peonian lake dwellings in Lake Prasias as early as 450 B. C. During the new stone age, many of them existed in Switzerland, Italy, Hungary, and Holland. Those in Switzerland are numerous and interesting. Foundations have been uncovered for 50 on Lake Neuchâtel, 32 on Lake Constance, and 24 on Lake Geneva. On Lake Geneva at Morges the drouth of 1921 exposed such an arrangement that is 1200 feet long by 150 broad. At Sutz, Switzerland, the settlement covered six acres, and was connected with shore by a gang-way. Some of these were reconstructed on the German side of Lake Constance in 1927, but whether they are historically accurate is not certain. In Scotland and Ireland, some of the chieftains built their defenses in fresh-water lakes as late as the 16th century. In Switzerland the dwellings were set up on piles, some of them on stone foundations, and some on beds of brush and trees going down to some depth. Doubtless they were designed to keep animals and enemies away, just the same as the moats filled with water around castles in the Middle Ages.

LAKE ERIE, BATTLE OF. Near the western shore of Lake Erie, at Put-in Bay on Sept. 10, 1813, the greatest naval battle of the War of 1812 was fought. The Americans had hastily built, at Erie, Pa., a fleet consisting of three brigs, five schooners, and a sloop, having 54 guns, and a crew of 490. The British under Commander Robert H. Barclay, had two ships of war, two brigs, a schooner, and a sloop, 63 guns, and 460 men and officers, all well disciplined. Master Commandant Oliver H. Perry, with the flagship *Lawrence,* was under concentrated fire from the enemy in the first phase of the engagement. When Perry shifted his flag to the *Niagara,* the battle became general. After a stubborn fight, Perry forced the British flagship and two others to surrender, but the rest tried to escape. These were overhauled, and Perry sent his celebrated telegram to General Harrison, his superior in command: "We have met the enemy, and they are ours." In killed and wounded, the American loss was 123, and the British, 135. By this victory the Americans were able later to take Detroit and to carry the war into upper Canada.

LAKE GEORGE, BATTLE OF. On Sept. 8, 1755, a body of English settlers in Massachusetts, Connecticut, and New Hampshire, led by General William Johnson, marched north to Lake George in New York, to capture it from the French. A large force of Canadian militia and Indians surprised the English and drove them in confusion toward the American camp on Lake George. The band of soldiers who were holding the camp opened fire and forced the French and their allies to retreat with heavy loss. In the evening the retreating Frenchmen were attacked by reinforcements from New Hampshire and completely routed.

LATERAN TREATY. Between Italy and Vatican —consisted of three parts, *Political Treaty, Concordat,* and *Financial Agreement,* signed February 11, 1929 by Mussolini and Papal Secretary of State, and by the King on May 27. Exchange of ratification took place June 9, 1929.

The Treaty: Since September 20, 1870, the Pontiffs have been in seclusion in protest against the position forced upon them by the seizure of Papal property throughout Italy by the House of Savoy. Treaty ends the controversy and ends the self-imposed imprisonment of the Pontiffs.

Concordat: Defines and regulates the position of the Church in Italy; provides freedom of action for both Church and State in their respective spheres. Settles the Roman Question, which arose in 1870, with the annexation of Rome to the Kingdom of Italy.

Financial Agreement: Act of justice and remuneration for the properties which passed without remuneration from the Church to the Italian State in 1870.

LA TOUR D'AUVERGNE, THEOPHILE MALO (1743-1800). French popular hero, who joined the army in 1767 and consistently refused promotion all his life. After a campaign in the Pryenees in 1795, his health compelled him to retire temporarily, and on the way home he was captured by the English, serving two years in prison. He settled at Passy, but in 1797 substituted for his friend, with the rank of captain, on the Rhine and in the following year in Switzerland. Carnot called him in 1800 "the first grenadier of France." On June 27, 1800 he was killed in action at Oberhausen in Bavaria. The French army went into mourning for three days. In 1889 he was removed to the Panthéon at Paris. Even to this day his name is kept on the roll of his company. On all occasions when the colors are on parade, his name is called, and someone replies *Mort au champ d'honneur* (Dead on the field of honor).

LATVIA. Since 1918 an independent state in the Baltic region of Europe, but dominated previously by four different governments. From 1158 to 1562 all of Latvia was ruled by the Teutonic Knights and their associates, though Lavonia, one of the two main parts of Latvia, was virtually independent from 1347 to 1494. During this era extensive wars were waged against Poland and Muscovy. Courland, the other large part of Latvia, was ruled by the house of Kettler from 1562 to 1795; while Poland ruled Livonia from 1562 to 1595, and then Sweden from 1629 to 1721. Then Latvia was absorbed in the empire of Russia. The movement for nationalism started about 1850. Karl Ulmanis, who lived for some years in Iowa, and was graduated in agriculture from the University of Nebraska in 1909, returned to his native Latvia, became premier in 1934, and in 1936 assumed the duties also of the presidency. He represents the Agrarian or Farm Party.

LAURENS, JOHN (1754-1782). Son of Henry Laurens, president of the Continental Congress (1777-78), and one of the peace commissioners after the Revolution. The son was educated in England, became Washington's confidential secretary, and was present at all the battles between Brandywine and Yorktown. He challenged and wounded Gen. Charles Lee in a duel because of the latter's disrespect toward Washington. As special envoy to the king of France, he secured aid of the French fleet, and so helped effect the defeat of Cornwallis at Yorktown. Before the peace was formally declared, Laurens was killed in a small skirmish. Washington said of him, "He had not a fault that I could discover, unless it were intrepidity bordering on rashness."

LAWRENCE, JAMES (1781-1813). Naval hero in the War of 1812. He spent five years on the Barbary Coast in the war against Tripoli and later. With Commodore Decatur he helped destroy the *Philadelphia* in the harbor of Tripoli. When war broke out in 1812, he was in command of the American frigate *Hornet,* and on Feb. 24, 1813, he captured the British *Peacock* with the loss of one man killed and two wounded. He was promoted and given the command as captain of the frigate *Chesapeake,* which on June 1, 1813 fought the *Shannon* off Boston. Lawrence was mortally wounded, but cried to his men, "Don't give up the Ship," which became a rallying cry in the United States Navy.

LAWRENCE, THOMAS EDWARD (1888-1935). Familiarly called "Lawrence of Arabia," during the World War, when he assisted the plan of Great Britain to unite the desert tribes against Turkey. He became a close adviser of the Emir Faisal, helped him arrange his successful raids, and the campaign against the city of Damascus. Among the desert tribes of Arabia he was welcomed in the name of his powerful native allies, as perhaps no man has been

in modern times. He refused rank and decorations more than once. During the Peace Conference he spoke for Faisal, later accompanied him on a British tour, and had no little to do with making him king of Iraq. Lawrence often felt, however, that Great Britain had not fully done her duty in allowing the French to obtain a mandate over Syria. Later he held posts in the government service, lived much in seclusion, served one year as a Fellow in Research at Oxford, and shunned the publicity his acts in Arabia had brought. He died in a motorcycle accident. His revision of the *Seven Pillars of Wisdom* was issued as *Revolt in the Desert* in 1927.

LEAGUE OF NATIONS. Early predecessors were the Consort of Powers in Europe, the Peace Conference at the Hague, and the Technical Union. During the World War committees were formed to deal with shipping, raw materials, foodstuffs, fuel, munitions, and several other subjects. For centuries need had been felt for an effective agency to prevent sudden wars between nations. The *Covenant* or agreement to form the League of Nations was made a part of the Treaty of Versailles, and as such became effective on Jan. 20, 1920. The stated purposes were (1) friendly settlement of disputes between nations, and (2) cooperation in matters of world importance. The question of means to prevent wars caused long and energetic debate, and considerable difference of opinion. In the operation of the League, this has been the greatest drawback to complete success.

Four main organs transact the business of the League itself. These are the *Assembly,* composed of all member nations; the *Council,* composed of delegates from Great Britain, France, Germany, Italy and Japan, with nine non-permanent members in addition; the *Secretariat,* composed of a Secretary-General and about 500 deputies and clerks constantly employed at Geneva in the League headquarters; the *International Labor Office,* which has done much toward stabilization of economic conditions throughout the world. Besides there are several permanent committees of the League. The Permanent Court of International Justice, formed and sponsored by the League, is now virtually an independent agency. Some of the standing committees are those on Communication, Health, Intellectual Cooperation, Codification of International Law, and Protection of Women and Children. The original plan called for a meeting of the Assembly once in three or four years; but the small nations, finding this their main chance for expression, have caused meetings to be held at least once yearly. The Council meets three or more times each year,—11 times in 1920 during organization. Necessarily, the Secretariat conducts important League business of continuous or permanent character. Statistics are gathered, notes exchanged between committees, and documents are filed, such as over 2300 treaties, some 2000 of which have been printed in two languages.

The League is housed in a palatial building at Geneva, for which John D. Rockefeller, Jr., contributed $2,000,000 for construction and library. In 1920 the League had 42 member nations; in 1930, 54; and in 1936 only 11 recognized nations were outside. Japan and Germany withdrew in 1933, to take effect in two years. Argentine withdrew in 1919, but returned in 1933. Soviet Russia was admitted in 1934. Brazil was once a member. The United States withheld adherence because of objections to the machinery and *Covenant* of the League.

Most beneficial results have been obtained by agencies that work in comparative obscurity, free from public notice. On the contrary, the failures have been matters of world-wide remark and concern. Both special and permanent committees have secured important international agreements on economic, financial, and social subjects. Trade in arms has been limited, so has the traffic in opium by a budget system, and the international traffic in women and children has been given careful study. International law is being rapidly codified, rights of minorities have been protected, and emergency relief in several disasters has been greatly facilitated. One of the spectacular successes was the financial rehabilitation of Austria, Hungary, Bulgaria, and Greece through League committees. Even non-members (especially the United States, which has served on important commissions) have often cooperated. Several cases involving non-member nations have been settled amicably. The Permanent Court handled 48 cases in the first 10 years, most of them satisfactorily to all parties in litigation; while the Council of Ambassadors treated 30 others, the majority without great friction or refusal to concur.

Some of the international disputes considered by the League have been between Sweden and Finland over the Aaland Islands, 1920; Albania and Greece, 1928, including questions as to Albanians in Greece; between Great Britain and Turkey over oil fields in Mosul, 1924; settlement of the old dispute between Bolivia and Chile over Tacna-Arika, 1921, and the stopping of the war between Bolivia and Paraguay, 1935. Brilliant successes were the exchange of 600,000 Greeks for an equal number of Turks in their respective territories, and the stopping of a war actually begun when Greece, 1925, invaded Bulgaria and killed some of the inhabitants. Conspicuous failures have been in the cases of the trouble between China and Japan, the formation of the new Manchukuo, and the Italo-Ethiopian war. In the latter case, though the nations did not think it worth while to interfere and precipitate another war in Europe, the League late in 1936 again seated two delegates from Ethiopia in the League Assembly over the energetic protest of Italy and threats once more to withdraw. See articles on *The Hague, Mandates, World Court.*

LEE, FITZHUGH (1835-1905). American general, who was born in Virginia, educated at West Point, and entered the United States cavalry. He joined the Confederates, became major general in 1863, and commanded cavalry divisions under Generals Stuart, Hampton, and R. E. Lee. He led the last attack of the Confederates at Farmville, Va., on April 9, 1865. For years he tried to reconcile the South to the outcome of the Civil War. He served as governor of Virginia from 1886 to 1890, and as consul general at Havana from 1896 to the outbreak of the Spanish-American War, when he again became a major general of volunteers. In 1899 he was military governor of Havana and Pinar del Rio. He was a grandson of Henry Lee, and a nephew of R. E. Lee, noted below.

LEE, HENRY (1756-1818). American soldier and statesman; born at Leesylvania, Va. Known as "Light Horse Harry" for his daring and activity in the Revolutionary War; noted especially for his capture of the British post at Paulus Hook, and his service with Gen. Greene's army in the south. Member of State Legislature, 1789-1791; Governor of Virginia, 1792-1795; commanded militia which quelled Whisky Insurrection in Pennsylvania (1794). Federalist representative in Congress (1799-1801), delivering there the funeral oration for Washington containing the famous words, "First in war, first in peace, first in the hearts of his countrymen." Father of General R. E. Lee.

LEE, ROBERT EDWARD (1807-1870). Distinguished American general and one of the great masters of tactics of all time. He came of a Virginia family which gave five members to some distinctive public service. He married Mary Custis, great granddaughter of Martha Washington, who inherited the famous estate of Arlington overlooking the Potomac and the city of Washington. Lee was graduated from West Point with great honors, became a lieutenant in the engineers, and served in the war with Mexico, being advanced to the rank of colonel. He fought against the Comanche Indians and was superintendent of West Point, 1852-55. He was sent from Arlington to arrange the capture of John Brown in 1859, a task quite displeasing to him. Lincoln offered him the command of the armies of the North, but Lee felt obliged to refuse. He had freed all the slaves on his estate, but thought the government had no right to force others to do so. When he entered the war for the South, he faced the task of raising a large force and of defending Richmond. With the aid of Generals J. E. Johnston and "Stonewall" Jackson, Lee drew the forces of the North away from Richmond, the Confederate capital. By similar tactics he later put the federals in awkward positions. At Gettysburg, however, Lee gained no particular advantage in his design to keep the war in northern territory. After Lee surrendered at Appomattox, he refused to capitalize on his experiences by writing of the Civil War. Instead, he accepted the presidency of Washington College at Lexington, Virginia, and here he died five years after the close of the conflict. The name of the college was changed to Washington and Lee University.

LEGION OF HONOR. Only knightly order of France, instituted by Napoleon in 1802, and since

then a general order of merit for civil and military distinction. Napoleon was grand master, with a council of seven administrative officers. Under these were 20 commanders, 30 officers, and 350 legionaires. Hospitals were maintained for the sick and infirm, and both foreigners and women were admitted from the start. In recent times Rosa Bonheur, the great painter, and Madame Curie, the codiscoverer of radium, have been admitted. Except for very extraordinary reasons, like some unusual civil or scientific achievement, one must give twenty years of service to be admitted to the lowest rank. He may progress to a higher one by further service. Salaries are granted in each of the ranks. The president of France is now grand master, and under him is a council, presided over by a grand chancellor. Now the number of members is five times that before the World War. In 1932 the numbers in the various ranks were—grand crosses, 80; grand officers, 468; commanders, 3560; officers, 21,743; chevaliers, 130,994.

LEIF ERICSSON. See under *Ericsson, Leif.*

LEIPZIG, BATTLE OF. Here Oct. 16-19, 1813, in desperate encounters, the allies of Russia, Prussia, Austria, and Sweden decisively defeated Napoleon. The allies had 325,000 men under Prince Schwartzenburg; Napoleon, commanding in person, had about 214,000. From the north of Leipzig, Blücher of Prussia was to advance against the French on the first day, and the rest were to proceed from the south, but hesitated for advantage or for some other cause not explained. In the afternoon of the first day, when the French were beating down the allies by a terrible cannonade, Czar Alexander saved the forces from defeat by withdrawing the Russian and Austrian reserves from Schwartzenburg. Instead of improving his positions, and profiting by an advantage, Napoleon sent a dispatch offering to treat with the emperor of Austria. Meanwhile Bernadotte of the Swedish troops came up to support the allies. After some 35,000 Saxons deserted Napoleon, he sat in a stupor for an hour on the night of Oct. 18, and then gave the command to retreat. By morning the allies found out what was happening, attacked the retreating French and drove hundreds of them into the river, which by this time lacked a bridge, and captured 20,000 more. This reverse for Napoleon began the decline of his fortunes which ended two years later at Waterloo.

LEMBERG (LWOW). Now a city in Poland, once the capital of Austrian Gallicia, the objective of various Russian plans in the World War. Generals Ruzsky and Brusiloff of Russia, after an energetic campaign against the Austrians, captured Lemberg in August 1914. In 1915, however, when Russia evacuated Przemysl, the Germans and Austrians were able to concentrate on Lemberg. On June 8 the Grand Duke Nicholas succeeded in forcing General Mackensen to retreat with a loss of 15,000 prisoners. Six days later, on a front of 40 miles, the Germans renewed the attack, forced the Russians to fall back, and so saved Austria. In this campaign Russia lost 250,000 men, tremendous stores of all varieties, and all the advantages of nearly a year of effort in the Lemberg area. On Nov. 23, 1918, the Poles declared their independence and captured Lemberg. In Oct. 1920 the city was transferred to Poland from the jurisdiction of the Ukraine. Then the name was changed to Lwow. Three American aviators who lost their lives in defending Lemberg as members of the Kosciuszko Squadron, were honored in 1931 by special ceremonies attended by the United States ambassador to Poland.

LEPANTO, BATTLE OF. Fought October 7, 1571, near the Curzolari Islands at the entrance to the Gulf of Patras, between the Turkish fleet and the combined fleets of Venice, Spain, and the papal states which formed the Holy League. It was caused by an effort of Sultan Selim II. to take Cyprus from Venice. The Christian fleet was victorious. The Turks lost 30,000 killed, wounded, and prisoners; the Christians, 3,000. The Turkish naval power in the Mediterranean was broken, though Cyprus was taken by a land force of Turks.

LEXINGTON, BATTLE OF. The first definite skirmish in the War of the Revolution in America. The people of Massachusetts had collected military and other stores at several points, including Concord. Hearing that a detachment under Capt. Smith was proceeding to take these, Paul Revere, William Dawes, and Samuel Prescott set out from Boston to spread the news at Lexington and Concord. Prescott reached Concord, but the other two were captured on the way. When the British "red coats" reached the square at Lexington, they fired on some of the natives who had gathered, and then passed on to Concord, from which they were compelled to retreat. Some troops under Lord Percy joined the British on their return, but the minute men swarmed in from all directions and took many effective shots at the British regulars. The British loss was 273, the American only 93. See *Concord.*

LIBERIA. Negro republic on the west coast of Africa, which was founded by the National Colonization Society of America. This was formed in 1816 and aimed to colonize Africa with Negroes from the United States. After a first attempt in 1820, a treaty was signed with native princes in 1821. In 1834 a town called Edina was settled, with financial aid from Edinburgh, Scotland. Liberia became a republic in 1847. In 1910 an allies committee representing United States, Great Britain, France, and Germany assumed charge of financial and other obligations, including boundaries. The constitution of Liberia is a model of the United States document. After Liberia entered the World War, the capital Monrovia (named for President James Monroe) was shelled by a German submarine in 1918. The republic is a member of the League of Nations. Charges that slavery or enforced labor existed in Liberia were investigated by an international committee in 1932, and various reforms were promised. The United States is represented on a commission designed to see that these are effected.

LIBERTY BELL. So called because it was rung to announce the signing of the Declaration of Independence on July 4, 1776, at Philadelphia. Thomas Lister of Whitechapel in London cast the bell in 1750, but it was twice recast because of brittleness, once in Philadelphia after its arrival there. It was hung in April 1753. While tolling for the funeral of Chief Justice John Marshall of the United States Supreme Court, the bell cracked on July 8, 1835. It has never been recast, and rests now in the Independence Hall, main floor.

LIBERTY PARTY. The first political organization formed to oppose slavery, 1839-1846. At Warsaw, N. Y., in 1839 James G. Birney and Francis J. LeMoyne were nominees. In 1841 Birney and Thomas Morris were nominated for the two chief offices for the 1844 campaign. The total vote in the election was only 62,300, but 15,000 of these came from the Whigs and secured the election of James K. Polk and the defeat of Henry Clay, the Whig candidate. Texas was annexed as an indirect result of the action of the Liberty Party, which in 1848 merged with the Free Soil group.

LIBRARIES, EARLY. Some early collections of clay tablets or other primitive forms of writing were those of Chaldea before 1700 B. C.; at Nippur, destroyed about 1782 B. C.; baked clay tablets in cuneiform symbols at Ninevah, 744 B. C.; library found in the tomb of Osymandias (Rameses II, 1300 B. C.); a public library at Athens, 540 B. C.; and one founded at Alexandria, Egypt, partly destroyed, in 47 B. C. The first real private library was that of Aristotle. Plutarch tells of a library of some 200,000 volumes at Pergamos from which name was derived the word *parchment;* first century B. C., the grammarian Tyrannion had a private collection of 30,000 scrolls; and a public library was set up in Rome in 39 B. C. During the Middle Ages, libraries existed in monasteries, where manuscripts were copied and many preserved for later times. The library of Christ Church, Cambridge, England, in 596 was the first in the British Isles. The great Bodleian of Oxford was established in 1602. In the United States the first library was at Henrico College, established in Virginia, 1621, but destroyed the next year. Harvard Library was founded in 1638.

LIMITATION OF ARMS CONFERENCE, popularly called the Disarmament Conference, called by President Harding, met in Washington from November to February, 1921-22. Though the ratification of plans for limiting armies fell through, other important results followed. Certain agreements were reached regarding the Pacific, the definition of Insular Possessions, American right in mandated territories, the integrity of China, and the customs of that country. Shantung was restored to China afterwards, and Japan was given supervision over the Island of Yap in the Pacific. Most important temporarily at least

of all these agreements was the limitation of naval ratios on the basis of 5, 5, 3. According to this, both Great Britain and the United States were allowed a tonnage of 525,000; Japan 315,000; France and Italy 175,000 each.

LITHUANIA. Little is known of this land or its people before Ringold and his son Mindovg (d. 1263), when wars were waged with their neighbors and the provinces were united. When Poland was divided (1772-1795), Russia acquired much of Lithuania, and the rest in 1814. From 1915 to 1918 control was by the Germans, who of late have been strong in Lithuania, but on Feb. 16, 1918 Lithuania declared independence, to which Russia agreed in 1920. Vilna, with a strip of land, was awarded to Poland by the League of Nations in 1923. Memel was taken from East Prussia, but German influence is strong, and the final outcome is in doubt.

LOCARNO TREATIES. In 1925 the great nations of Europe sent representatives to Locarno for a conference, out of which grew certain agreements:

1. Germany, France, Great Britain, Italy and Belgium agreed to respect the boundaries fixed by the Versailles Conference between France and Germany and Belgium and Germany.

2. Belgium, France and Germany agreed to settle any disputes among them peacefully, with the help of the League of Nations if necessary.

3. Germany, Poland, and Czechoslovakia agreed to arbitrate all political and other serious differences.

4. France, Poland, and Czechoslovakia agreed to join with each other if Germany should provoke another war.

LOMBARDS. Latin authors called them Longobardi. People of uncertain origin, whom the Romans defeated in 5 A. D., while they lived in the vicinity of the Elbe River in what is now Germany. Again the Romans defeated them along the Danube in 165. Little is known of them until after 400. About 500 they were in what is now lower Austria, at which time they threw off the yoke of the Heruli and killed their king Rudolf. Later under the emperor Justinian they settled in Noricum and Pannonia. In 568 they invaded Italy, making Pavia their capital, where their kingdom lasted for 200 years. Under their queen Theodelinda, who chose a native duke for her husband, the Lombards began to be assimilated by the Italians. Gregory the Great confirmed them in the Christian faith. The Lombard kingdom passed under control of the successors of Charlemagne, when Pavia was besieged, and their king Desiderius became a prisoner in 774.
